At last a slide projector...

...smooth enough to sell with

This new KODAK CAROUSEL Projector, Model AV-580, should never get in the way of a sales presentation. Slides don't jam, because they're gravity-fed, not pushed, into the projector. No pause to change trays, because one tray holds 80 slides! No delays to replace or remove a slide, because the top-mounted tray permits instant editing and selective slide viewing. Slide changes are always in step with the script, because there's a full-control remote control, automatically timed changing, and now a color-coded control board. On this new audiovisual model there's even provision for adding a switch to turn the lamp off by remote control during a pause in slide showing. In addition, there's a 3-wire grounded power cord and an automatic lamp safety switch to protect slides when the projector is being used as a repeater in trade show displays. For sound-slide shows, a KODAK CAROUSEL Programmer, which synchronizes the projector with a tape recorder, is available.

SLIDES, SOUND, MOVIES—THERE'S A KODAK AV PRODUCT FOR EACH

© EASTMAN KODAK COMPANY 1964

New EASTMAN Sound Recording Tapes

New DUROL base has great strength, yet breaks clean without stretching in case of equipment failure. New sound clarity, new back-printing. Choice of low-print tape with high output, highest output tape with low noise.

KODAK Cameras and Film

Slides, movies, color or black-and-white, there's a combination of Kodak camera and Kodak film perfect for your purpose. New KODAK INSTAMATIC Cameras feature instant loading—no threading.

KODAK PAGEANT Projectors

Complete line of 16mm sound projectors, all simple to thread and use. Brilliant screening of sound and silent films, with edge-to-edge sharpness. Choose models with regular optical sound, magnetic-optical sound, or new instant-warmup transistorized sound.

ARRIFLEX at work — ONE OF A SERIES *

ARRIFLEX® choice of "shoestring movie-makers"

On a "shoestring" budget and under conditions that allowed no margin for error, Ralph and Bri Brooke, husband-&-wife producing team, created "The Magic Tide," a 32-minute theatrical color film which has met great success. The Brookes wrote, directed, photographed and edited the film, made in San Felipe, a small fishing village in Baja California, Mexico. Following the maxim that "the best is the most economical in the long run," they rented an Arriflex 16, and with only "crash" instructions in its operation, Bri Brooke—shooting in color for the first time—filmed a charming story of childhood adventure. Original footage was blown up to 35mm for theatrical release. Filming was done outdoors under unusually difficult conditions:

searing 120° heat, sifting, penetrating dust and a native cast. Many of the shots were now-or-never, with no chance of retakes, but Arriflex came through for the Brookes, "...a great piece of camera craftsmanship that has never let us down." The interesting story of the filming was reported in the December 1962 American Cinematographer Magazine.

Successful "shoestring" movie-makers and top budgeted film producers in industry, science and the motion picture capitals of the world, share the same satisfaction with Arriflex's production economy, performance and dependability. From missiles to microbes, in studio or on location, you can depend on Arriflex.

From the microscope to the missile range... from spot locations to sound stages... Arriflex professional motion picture cameras are the dominant choice of filmmakers in science, industry, and entertainment. They're lightweight, rugged, tremendously versatile — uniquely suited to a range of applications virtually without limits. Here are some of the features that give Arriflex cameras their remarkable capabilities:

- MIRROR-SHUTTER REFLEX VIEWFINDER • REGISTRATION-PIN FILM MOVEMENT • 21°-DIVERGENCE 3-LENS TURRET • CONTOUR HAND GRIP • FRAMES-PER-SECOND TACHOMETER • COMPLETE ACCESSORY SYSTEM... lenses, standard and special-purpose electric drives, power supplies, time-lapse equipment, film magazines, sound blimps, tripods.

WRITE FOR NEW CATALOG.

*YOU ARE INVITED to send us a description of your special use of Arriflex equipment.

OXBERRY™ "Quality Proven"

ANIMATION AND FILM STRIP STANDS

For all industrial, educational and professional requirements

Designed to exacting professional standards, OXBERRY UNISTANDS offer maximum versatility within a limited budget.

Features:

- Electrically Operated Zoom. (Range permits photographing art work up to 24 inches wide.)
- Table Height Electrically Adjustable. (PEC only.)
- Table Allows Diagonal Pans and Rotation.
- Automatic Focus Available. Adapts to Different Lenses.
- Adaptable for Most Cameras.

OXBERRY CAMERAS BEING READIED FOR FALL DELIVERY

Model 26 — 16mm Animation Camera

... the first low-cost camera designed exclusively for animation.

- Built-in stop motion drive, with automatic forward and reverse operation, single frame or continuous.
- Reflex type superimposition viewing device with large viewing screen.
- Large fade and dissolve scale.

Model 27 Film Strip Camera

... for single and double frame 35mm film.

- Rapid switch over from single to double frame.
- Precision film advancement drive repeats within $\pm .0015"$.
- Independent shutter and film advancement permits double exposure without moving film in camera.
- Adjustable film plane readily permits 1:1 focus.
- Built-in stop motion drive with automatic forward and reverse operation, single frame or continuous.
- Remote projection of reticle onto table top.

Model PEC

Model TE

OXBERRY Model MP-4200 Animation Stand

Now available with Automatic cel cycler, interlocked electronic zoom and pan controls.

OXBERRY Model FS-4300 Filmstrip Stand

Now available with variable timed exposure control for new high quality slow speed color films.

NEW ... Special Pre-Publication Offer

OXBERRY FILMMAKER SERIES

VOLUME I ANIMATION: Procedures and Techniques.

List \$9.95, Hardcover 6 3/8 x 9 1/4, Approx. 416 pages.

"Highball Highway" Hits Drinking Driver Problem

With 55% of all traffic accidents traceable to the drinking driver, there will be few more important pictures this year than *Highball Highway*, a brief but hard-hitting new 12-minute color and sound motion picture just released by Charles Cahill and Associates, Hollywood, Calif. The company is the recent winner of National Safety Film awards for other recent work.

Offered for outright print sale, the new film clearly and dramatically demonstrates that casual or social drinking and driving just don't mix. It shows that drinking before you get behind the wheel is just another bad habit . . . but one which can prove fatal. But the tragedy of a lost life, or even a lost limb, can be avoided through this kind of education, gaining more awareness on the part of every individual viewer. Robert Young recaps with, "if you drink, don't drive; if you drive—don't drink."

Intended for general adult audiences, prints of *Highball Highway* are available at \$140. Previews can be arranged through the producer, Charles Cahill and Associates, Inc., 5746 Sunset Boulevard, Hollywood 28, California. ☐

General Telephone Film on Total Communication

The exciting concept of "Total Communication" is depicted in a new film, *In Touch With the Future*, sponsored by General Telephone and Electronics Corporation and now available for free loan through Sterling Movies U.S.A. offices.

This half-hour 16mm color film examines varied phases of research and invention being explored to increase knowledge and scientific progress in every phase of modern life. It also shows the complex communication systems of Polaris and Atlas missiles, experiments with the laser beam, the futuristic TV-phone and newly-developed giant strobe lights which guide aircraft to safe landings in bad weather. ☐

1 out of every 4 LAB PROCESSORS* sold in the United States last year was built by TREISE!

COMPACT MODEL MT-10
takes only 2' x 4' floor space and processes B&W, neg. or pos., 16mm or 35mm.

EASTMAN COLOR 16/35mm PROCESSOR, built for Wilding, Inc., will process positive film up to 60 f.p.m., and negative film up to 50 f.p.m.

Write for free 4-page Catalog on Treise continuous lab processors and accessories!

BLACK & WHITE REVERSAL PROCESSOR, Model M100R-16, is designed to provide high capacity B&W processing for TV Stations

THESE ARE FACTS . . . Treise has designed, built, and installed more Ektachrome Processors than any other manufacturer of processing equipment. We built and installed the first color processor ever made exclusively to process TV spot news. We built and installed the first truly high capacity black-and-white reversal processor for a TV station. (It will process in excess of 125 f.p.m., using standard formulas and temperatures!)

WHAT DOES THIS MEAN TO YOU? It means that Treise engineers have the specialized knowledge needed to build any size of continuous lab processor . . . from small B&W models to giant 100 f.p.m. color processors . . . and assure you maximum film capacity consistent with high quality and within practicable budget limits.

TREISE GIVES YOU MORE THAN THE BASIC 3 T's—"time, temperature, and turbulation." We offer you the extra quality you can expect only from Treise. Processors built by Treise have such desirable features as precision sprocket drive, Taylor-Fulscope temperature controls, laminated fibre glass tanks, plus the assurance of performance possible only from a manufacturer noted for outstanding laboratory experience.

Naturally, we mean high capacity motion picture processors!

8mm Gets Results for Sponsors in South

Sound Prints on Lightweight Projectors Help Win Sales, Inform Viewers on Wide Range of Products and Services

A VETERAN PRODUCER of both theatrical and sponsored motion pictures, firmly based on a tradition of 35mm techniques and values but equally adept at 16mm film making, has become an enthusiast for 8mm sound motion pictures where this flexible, highly-portable new "tool" can be effectively applied. From original production in both 35 and 16mm, Charles Beeland Productions of Atlanta, Ga. has put 8mm sound color prints to work for a number of clients.

Although sales and sales promotion is the principal theme of many recent films, there is also a notable trend toward the application of 8mm sound for public information.

Showing Them "Coal Pier 6"

A key example was the recent Beeland production, *N & W Coal Pier 6*, an 18-minute Ektachrome commercial subject created for the Norfolk & Western Railway Company. The N&W's problem: to communicate information about a highly-efficient new coal handling facility at the Port of Norfolk,

8mm shows efficient "Coal Pier 6" of Norfolk & Western Railway.

Virginia. The audience: foreign industrialists, export brokers, shipping agents and ship owners.

Coal Pier 6 points up the saving of money through a faster "turn-around" for coal cargo ships. The new pier is so fast that a 50,000-ton super-collier can be loaded in less than eight hours. Working with William A. Lashley (N&W's former Director of Public Relations and Advertising) and C. E. Hash, Administrative Assistant and Vernon K. Little, Advertising Manager, this unique film showed complete details on the road's \$25 million automated coal loading facility.

A 16mm version is being used

for group showings but a 10-minute 8mm sound version is taking the N&W facility story direct to executive desk-tops and at trade fairs abroad. Last fall, a Fairchild "Cinephonic" repeater projector provided continuous showings at the Genoa (Italy) Trade Fair. The exhibit in which this was the central attraction was built in Milan especially for this purpose.

Simultaneously, *N & W Coal Pier 6* has been showing to industrialists in Japan, England, Italy and throughout the Common Market countries. It will be used in an expanded sales schedule during 1964.

Vulcan Sells Concrete Pipe

Two other 8mm sound versions of films produced for the Concrete Pipe Division, Vulcan Materials Company are carrying the story of this company's product advantages to engineers, contractors and purchasing agents.

Product highlights of Vulcan Small Diameter "O" Ring Gasket Pipe are shown in color/sound prints of *Precision in Concrete*; while *Pre-Bed Pipe* tells of another exclusive Vulcan development through which a flat bottom bed on large concrete pipe saves costly ditch bottom shaping required for ordinary round pipe.

Both films are short. Each runs approximately 7½-minutes. Animation is liberally applied to bring out "hidden" facts. Effective? Well *Pre-Bed Pipe* is being sold to prospective users right at their desks!

Vulcan regional sales offices are equipped with 8mm sound prints and Fairchild projectors. Approximately live salesmen are using each machine on a rotation basis. 16mm prints are also available for larger group showings.

And a "Cinephonic" projector accompanied Vernon Kyle, President of the Concrete Pipe Division, on a recent trip to Europe for the purpose of selling "Pre-Bed" licensing agreements to concrete pipe manufacturers. Mr. Kyle says that the film presentation was "particularly helpful in this endeavor."

From coal loading and pipe manufacture to a luxurious resort hotel may seem like a big step but the Hotel Roanoke in the beauti-

8mm sound film in top center panel of Southern Bell display, tells public story of "Electronic Central Office."

ful Shenandoah Valley of Virginia is another ardent enthusiast for 8mm sound-on-film promotion. Sales Manager Fred Walker has been showing an eight-minute sound color picture of the hotel's convention facilities. He calls the results "terrific!"

Lummus Presents Plant Facts

A different problem: how to sell complete plants for the ginning of cotton in the face of stiff competition.

That was the situation faced by the Lummus Cotton Gin Company. The solution: a Beeland picture titled, *The Big Step Forward*, made with the close cooperation of R. L. Drew, Vice-President for Sales and H. C. Lummus, Jr., Technical Advisor.

Lummus officials find the film an "invaluable aid" in making sales presentations to prospects

This Lummus picture is showing latest in cotton gin machinery . . .

for the purchase of their equipment. 8mm sound color prints and "Cinephonic" projectors are located at regional offices throughout cotton growing areas of the U. S. and Mexico. In addition, a 50/60-cycle Fairchild projector with a universal line transformer, loaded with a Spanish version of the film, is going the rounds of Central and South American cotton-growing areas.

Seven Lummus salesmen use each projector on a scheduled basis. 16mm sound color prints are also available for larger groups.

Southern Bell Informs Public

What of public information and the 8mm film? Southern Bell Telephone is using three attractive traveling exhibits with Fairchild repeater projectors as their focal points. Sixteen-inch Polacoat screens were installed to give a more dramatic effect than was possible with the projector's own smaller screen.

But the bright image obtained on this larger surface is a tribute to both the projector's light source and the Polacoat material, according to reports. In most situations, the projectors' "lamp-saver" switch can be used in the "low" position, providing some 100 hours of lamp life.

Working under the direction of Southern Bell's staff Public Relations Manager Joe Burnett, Jr.

Child patients at Selinsgrove Hospital in a scene from "Toymakers."

How We Can Help the Mentally-Retarded

Adjustment, Therapeutic Care for Retarded Is Sensitive-ly Told in "Toymakers" Sponsored by Smith, Kline and French

☆ *Toymakers*, a new film on the experiences, problems and daily lives of typical patients in an institution for the mentally-retarded has recently been released for general showings by the Smith, Kline & French Medical Film Center.

Filed by Vision Associates, Inc. at Selinsgrove State Hospital and School in Pennsylvania, the half-hour motion picture shows Harry, a mentally-retarded young man who has made a successful adjustment to community life and self-support; Pat, who is far enough along in his education that he could leave the school if a job opportunity arose; several elderly patients who have spent most of their lives in institutions; Marie, a ten-year old who is profoundly retarded, and many others.

Toymakers has two purposes. First, it will be used to demonstrate to lay audiences the importance of close ties between the community, community services and many mentally retarded patients. Secondly, professionals in the mental health field will find the film absorbing because it reflects the current emphasis on therapeutic rather than custodial care in treating the mentally retarded.

The causes of mental retarda-

tion are many, the film points out, and only a few are known. Through an accident of heredity, through disease or through injury, the function of the brain has been impaired and mental growth is limited. For many people, it can mean a whole life in institutions doing such work as making and mending toys — work designed to prevent deterioration through idleness.

But for others, such as Pat in the film, there is hope. He must become aware of his limitation and develop confidence in his abilities. The time he has spent at Selinsgrove has helped prepare him to return to the community, but it cannot guarantee that he will succeed. The community must provide him with useful work and a decent place to live. It must accept him, with his limitations. It must offer him a chance to belong. Given this chance, he should succeed.

The original idea for *Toymakers* came from Richard Wurmser, a Harrisburg newspaper man, who submitted a treatment to Smith, Kline & French's Medical Film Center Director, Jack C. Borland. Based on this treatment, a script was jointly prepared by Mr. Wurmser and Vision Associates for production by the latter under direction of Lee Bobker. ■

Below: members of Vision Associates' crew, Richard Wurmser (left) and Ray Long (right) share a production respite in filming of "Toymakers."

(CON'D FROM PRECEDING PAGE) (assisted by Art and Display Supervisor Jack Mallory). Charles Beeland produced a two and one-third minute film on *The Electronic Central Office*.

This "thumbnail" production shows the amazing story of the electronic telephone switching center of tomorrow. Original photography was on 16mm Ektachrome Commercial, with some stock shots reduced from 35mm

Eastman Color negative. Only 8mm sound/color reduction prints have been made of this film.

How is it working? Well, the exhibits have been on tour in Southern Bell's nine state area, showing to hundreds of thousands of people with outstanding results. The *simplicity* and *reliability* of the projection equipment were important factors in the decision to use motion pictures in these traveling exhibits. ■

Precise Handling of Rocket Propellants

Automated Batch Mixing, a Part of "Total System Concept" Developed for Rocket Industry by Toledo Scale & Thiokol

SPONSOR: Toledo Scale Corporation.

TITLE: *Concept for Precision*, 28 min., color, produced by Carl Ragsdale Associates.

* * *

☆ When it became obvious that ever-increasing amounts of fuel would be needed to meet the demands of the massive boosters of the space age, two leading industrial firms in the rocket industry teamed up to solve the age-old problem of mixing propellants by hand.

Working closely with the Thiokol Chemical Corporation, Toledo Scale's Systems and Components Division defined the interfaces and general parameters required for an automated batch mixing system.

Shows Concept Behind System

The new film tells the "total system concept" story behind Toledo Scale's design, fabrication and installation of a system that automatically weighs solid and liquid ingredients precisely, into a mixer, and blends them under programmed conditions.

This latest innovation in the field of material handling employs a unique analog-to-digital computing system, static switching, interchangeable control systems, interlock and fail-safe devices, and one of the most sensitive scales ever developed.

A High-Precision Instrument

The remarkable electronic scale reads increments of 25 hundredths of one ounce, from zero to four thousand pounds. Matching display boards and control panels are human-engineered with graphic representation of the mixing facilities they control. Button logic and color coding throughout the system provides for ease of maintenance, reduced training time for operators, and visually indicates the source of any malfunction.

These panels control the electronic materials handling system used for mixing solid, liquid propellants

• Automated Batch Mixing, installed at Thiokol's Wasatch Division in Brigham City, Utah, is now at work providing the large quantities of high-performance solid propellants required by the multi-million pound thrust missile boosters of the U.S. Air Force. ■

Award Honors North American Picture

Federation Aeronautique Internationale Trophy Is Awarded to "The X-15 Story" at Wright Brothers Memorial Ceremony

THE DOCUMENTARY filmed history of the rocket research airplane designed to carry man to the fringes of space, told in *The X-15 Story*, was the honored recipient on December 17 of the Federation Aeronautique Internationale Film Festival Trophy. The trophy was presented to J. L. Atwood, President of North American Aviation, Inc. at the Wright Brothers Memorial Banquet held in Los Angeles on that date, as part of the national observance of the 60th anniversary of powered flight.

Produced as an Air Force Report over a two-year period by the in-plant motion picture unit of the Los Angeles Division of NAA, *The X-15 Story* was written and directed by W. M. Brose, edited by John L. Glenn and William Wyper. Photography, including

aerials, was by John Glenn, Jack DeLong, Oliver Porter and Jack Freeman; sound was recorded by Martin Halperin.

The film has been widely shown through the USAF "Commander's Call," the NASA Office of Technical Information and Educational Programs and four overseas versions are being distributed by the USIA. Television coverage has included showings on "The Twentieth Century," Armstrong's "Circle Theater," the "Adventure Tomorrow" program and by CBS News.

Other recipients of trophies at the banquet were the Parachute Club of America and Warner Bros. Pictures.

Sound's the Subject in Northern California

Chapter Members Get Expert Counsel from W. A. Palmer Films

The Northern California Chapter held its first meeting of the year on January 17th at Palmer Films in San Francisco. Key theme of the evening session was a discussion of motion picture sound, with three key members of the Palmer organization on the floor as member Jim Campbell, of Syl-

vania Electronics' group at Mountain View, served as moderator.

Bill Palmer, president of the company and an honored "Fellow" of both the Audio Engineering Society and the SMPTE, was joined by Stuart Macondry, Palmer sound engineer and Forrest Boothe, manager of recording ser-

vices, as the trio discussed all applications of sound in motion picture work. Palmer led off with a demonstration on the problems of quality loss from original recording to subsequent transfer to optical track by actual tests made in the studio.

He concluded this useful demonstration with recommendations on how to "live with the limitations" and acquire the best track.

Stuart Macondry discussed the various types of "mikes" and recording systems in use; showed why various conditions dictate the use of special equipment. He also touched on recording problems encountered under adverse conditions such as rain, wind, etc. Mr. Boothe's experience in recording narration and in the selection of library music, was evident as he discussed the most commonly experienced sound problems in both fields. The availability of appropriate music and the potential of original scoring were also outlined.

The Chapter recorded the evening's panel program and is making the tape available to members. The appreciation of all who were present was expressed to the Palmer organization, both for the use of the studio facility and for the participation of their highly-qualified personnel.

"Eclipse of the Quiet Sun" an Historic New Scientific Film

A converted Delta Airlines DC-8 jet aircraft raced into the stratosphere, high above Fort Providence, District of MacKenzie, Canada last year to keep pace with the darkening shadow of the moon. The story of that historic flight is told in *Eclipse of the Quiet Sun*, a 28-minute color motion picture produced by the Film Services Department at Douglas Aircraft, in association with the National Geographic Society.

The flight was undertaken to extend man's knowledge of the life-giving and sustaining energies discharged by the rays of the sun. Its official designation: Project APEQS — Aerial Photography of the Eclipse of the Quiet Sun. Participating were men and equipment representing the most respected names in science, industry, education and research: RAND Corporation, Lockheed, Sperry-Phoenix, Delta, NASA, Pacific Missile Range Hdq., University of Pittsburgh, U. S. Naval Missile Center, Osservatorio Astrofisico of Florence, Italy, Canadian Re-

Three New England Chapter Men at East Coast Conference

☆ Rounding up New England Chapter news: three IFPA members from the Northeast attended the recent East Coast regional conference at Camden, Jack R.

"In-House Film Management" was Jack Smith's Cinemar topic when he moderated round-table discussion at East Coast Conference.

Smith, national executive vice-president of IFPA, moderated the round-table discussion of "In-House Film Management;" he was accompanied by Chapter Chairman Muttitt (senior editor at the MITRE Corporation) and Gene Knight, a writer on the MITRE Corporation Film Services staff and a Chapter member.

THE INDUSTRY FILM JOURNAL

WHDH-TV newscaster John Day (at left) discusses techniques of news broadcast preparation, presentation with New England chapter members. Listeners include (front row, l to r): Bill Muttitt, Paul DeMello, Bill Stirling (MIT), Major A. H. Doc USAF, Jack Smith, and Mr. and Mrs. Paul Snyder. Background (l to r): Dom DiLuca, Gene Knight, Mark Ford and John Bean.

New England Exchanges TV News-Views

Chapter Hears Newscaster John Day at WHDH-TV Boston Studio

The studios of WHDH-TV, Boston's only all-color tv. station were the scene of the final 1963 meeting of the New England Chapter. Members attended a live 30-minute news and weather telecast by John Day, veteran newscaster at the station, followed by a discussion of news program preparation by Mr. Day.

The group then toured the station's facilities, guided by Allan Morris of the public relations staff, host for the evening. Harold Eckman, film supervisor for the station, led a discussion of film use in TV, the broadcaster's film requirements for news clips and feature material, photography, editing and the use of film in the

telecasting of programs.

The program was arranged by Chapter Chairman Bill Muttitt and judged to be one of the most valuable of the season by those attending. Closer cooperation between the television media and a greater use of industrial film by the TV outlets could result, members agreed.

"Local industry is a potential source of a great amount of film which could be used by telecasters," said Muttitt, in discussing the relationship. "We feel a great deal of good will can be fostered by better understanding of each other's requirements and capabilities."

Station people indicated that

Latest in color television cameras at WHDH-TV is demonstrated to (l to r): Mr. and Mrs. Paul Snyder; Bill Muttitt, newscaster John Day, Allan Morris, pr exec; Gene Knight, Jack Smith, Bill Stirling.

such film could also be used to further better local understanding of the industrial structure of greater Boston.

The Story Behind "Reins in the Vigilante"

Skeptics Become Believers as Autonetics' Award-Winning Film Shows Bomb-Nav System Doing Its Job for the Navy

by Lee O. Larew

Autonetics Division, North American Aviation, Inc.

"I'll believe it when I see it, . . . maybe!"

• It was upon this skeptical theme that *Reins in the Vigilante* was launched. And launched it was! But I'm getting ahead of myself.

When Autonetics' management came to Motion Pictures and said they wanted a film that would explain the bomb-nav system being installed in the Navy's Vigilante aircraft, they were open to presentation suggestions. They agreed with us that it could be just another voice-over type film, but they were willing to back something a bit different . . . providing we came up with that "something."

"Old Timers" Were Skeptical

So we rolled up our thinking sleeves and went to work on a treatment. Our research revealed that many of the Navy "old-timers" were skeptical of the claims being made about the bomb-nav system (called, REINS), so after a brainstorming session or two, an idea was born.

"Why not inject a skeptical naval officer into our story?", asked Jay Dresser, Project Coordinator. "Well, why not?" replied Walt Hardy, Chief of Motion Pictures for Autonetics. "We know our system is a good one, but if we toot our own horn too loudly, nobody will believe us."

And so it is, as most of us in the business already know. We had a foundation upon which to build our *Vigilante* story . . . a rapport, if you will, with our audience. An audience that would naturally be skeptical. Skeptical, that is, of the ability of REINS.

It was a case of, "show me."

Hits Targets at Low-Level

"What's entirely different to a pilot using this system is its low-level feature. In fact, a pilot can literally skim the surface of the ocean, blow sand off the beach, and follow land contours at low level. And, at such low altitude, defensive radar just doesn't work. It cannot detect nor help repel an invading craft.

Obviously, a demonstration flight was in order. We would begin aboard an aircraft carrier and fly in low toward the California Coast. Then, to make our point remembered, we'd have the plane

weave its way through the coastal mountain range in fog, and finally skim the tumbling tumble-weed of the desert and blast a target.

The target would be an isolated shack in the middle of the desert where a future Vigilante crew was being briefed on the ability of the REINS System. In the crew would be our skeptical member, a Commander from the "old school" . . . one of those pilots who learned to fly by the seat of his pants . . . and one who just didn't believe all the stuff being claimed for the Vigilante. Naturally, the payoff would come when the shack was hit by the sonic boom from the plane making the demonstration flight.

Close liaison for script development was established with cognizant personnel in COMNAVIAIR-PACK. Depicted procedures and operations met with the Navy's complete approval. Special emphasis was placed upon story and dialogue development to make certain that it truly represented the language, terms and attitudes of pilots in present-day Naval Aviation.

Revised and Ready to Shoot

The usual changes produced a second and third revision of our script, but by the time a fourth revision was typed, it appeared we had satisfied both company management and the Navy. Now we were ready to make our movie.

To obtain a natural flavor, we requested Navy permission to shoot the opening sequences aboard the USS HORNET while she was docked at Long Beach. The reply was affirmative, and we went to work.

Each part was played by a member of the Autonetics Motion Picture Department, with the exception of Commander Lars Swenson, the instructor in charge of the briefing within the shack. Commander White, the skeptical officer, was played by Ed Hayes, a writer-director for Autonetics and an active member of the Naval Reserve. Actual Naval personnel were photographed, too, but only for background and establishing scenes since we were required to operate on a non-interference basis.

In the film, Commander White

On location at China Lake, Calif. Asst. cameraman Bob Dingman (left) as Art Ballinger plays role of Commander Swenson; Ed Hayes, Cmdr. White.

tells the Vigilante crew aboard the carrier that he'll buy the drinks if they pull off this mission as planned. The friendly bet is accepted by the youthful crew members and our story is underway.

Building Up to the Pay-Off

The camera follows the take-off and flight of the Vigilante from the HORNET all the way to the target shack at China Lake. Intercut with the flight are sequences from the shack where the future Vigilante crew is being told about the mission and how REINS will pull it off. Commander White, by facial expression and comment, continues to doubt the words of instructor Lars Swenson and graphically expresses his lack of faith in this "new-fangled toy."

Up to the last minute, the skeptical commander insists, "No sir! They'll never make it!"

Of course, the pay-off comes when the Vigilante slips past all

the defensive radar and rocks the shack with a mighty sonic blast.

Commander Swenson winds things up with a confident smile and says, "Now you know how it feels to get hit by a Vigilante!"

The film has won three awards for excellence and is likely to win more. Although designed to indoctrinate pilots and explain the REINS System, it is also doubling as an effective public relations vehicle. This is a tribute to writer-producer Dresser who gets people to react in front of a camera.

The Navy is making good use of the film for in-service screenings, public relations, and miscellaneous programs. One Naval officer remarked, "It's a good film because it doesn't try to cram anything down your throat. You never know, really, until the last few seconds, if that Vigilante will really pull off the mission . . . and when it does, you believe it when you see it — and I mean believe!"

Cast, crew of "Reins" at China Lake: standing, l to r, Jay Dresser, Lloyd Sayre, Kelly Pyle, Sam Mattison, Lee Larew, Wayne Rapp, Frank Ruttencutter, Bob Dingman, Art Ballinger, Ed Hayes. Kneeling (l to r): Leo Covitt, Mel Eberhart and Bob Chenoweth (seated on dolly).

The Eight Barriers to Communication

by Ernest D. Rose

Production Supervisor, University Extension, University of California

IN RECENT TIMES the term target audience has been banded about rather freely by some of the Madison Avenue set and even by a few "communication experts" a little closer to home. If you haven't thought much about the term it would be well to consider exactly what it means to the film maker.

The only time most of us ever think about this "target" is when we are deciding whether to blast away at it with a shotgun or a rifle. If we are interested in reaching only a few key people we use the rifle and aim at the bull's eye in the middle. If our audience is the general public we pick up the shotgun and blast in all directions at once.

Audience an Elusive Target

But this concept of our audience as a target is highly misleading for it suggests that all we have to do is (1) make a film, (2) put it on a projector, (3) aim it carefully at the target, and (4) throw the switch . . . *BANG!* and your job has been done successfully.

Nothing could be further from the truth, for the target you are aiming at is like no target you have ever known. For one thing it can move away from your arrow just when it is about to reach its mark. For another it can put up a shield and screen out all of the arrows except those that it wants to pass. Furthermore even if you do get past this protective screen, the target's surface may be impenetrable, even to the strongest of arrows.

Or, on the other hand it may be built like a doughnut and allow your arrow to pass right through the middle of it without ever touching the target itself. Worst of all, this target can pick up its own bow and start shooting arrows right back in your direction.

First: Know the Barriers

In order to do battle with a "target" this versatile the first thing the communicator must do is try to understand some of the barriers which his message must overcome before it can begin to have an effect on any audience. There are a number of such barriers and I will attempt to sketch them briefly for you.

Unlike the nice stuffed straw target of the archer, your audience must first allow itself to be *exposed* to your arrow. In the motion picture field we must face the fact that our medium is in competition with other communication media, many of which are less complicated and require less work on the part of the receiver.

In our case being exposed means going to a special room, sitting in the dark, waiting while someone replaces a bulb which may have burned out in the projector, or any number of other complicating factors.

You Have to Win Attention

But even if our audience member takes the trouble to expose himself to the message, it won't mean a thing unless he is *paying attention* to it. If the viewer happens to be worried about his income tax or if he has had a fight with his wife that morning or if he can't think about anything except getting that raise he is after, mere-

ly being exposed to your message won't have very much effect on him.

But even if he is exposed and even if he is paying attention to what you are saying there is always the chance that he may not *understand* everything you are telling him. If you present the information too quickly, if the language is not clear, if symbols you use are too complex, if the exciter lamp in the projector happens to be intermittent, if any of these things happen your message may never get past this third barrier in the communication process.

But let's suppose he does get

Ernest Rose: his presentation was a feature at 1963 Conference.

exposed, he is paying attention, and he can understand you . . . none of it will make any difference unless he *believes* what you are telling him.

Acceptance Follows Belief

You might think that when an audience member believes your message your job is finally done. But a critical step remains to be taken. The message must be *accepted*. You may ask yourself how a person can believe something is true and still not accept it. A simple example will illustrate such a situation. Within the last few years there has been overwhelming evidence concerning the link between smoking and cancer.

There are few people who read these messages who do not *believe* the evidence presented yet they still do not *accept its conclusions for themselves*. Research shows that such people rationalize their beliefs by saying the chances of their dying in an automobile accident are even greater than the chances of getting cancer from smoking, etc., and besides they use a filter and that should take care of everything anyhow.

One would think that belief and acceptance are the end objectives of all film makers, the final steps in the process, yet three more barriers remain to frustrate our efforts even after a film's message has been accepted.

All communication is aimed at changing the status quo. If a person doesn't believe something we're telling him, we want him to change so he believes it. If he already agrees with you but only to a limited extent, we want him to believe in what we are saying completely and unquestioningly. In order for this to happen he must *remember* at least some of the arguments presented in our film and keep them in his mind until he is forced to choose among the alternatives.

The seventh barrier to com-

"Congratulations to you and your staff for an outstanding motion picture . . . None other than Matt Farrell Productions, Inc. could have done so fine a job . . ."

Jack Kleinoder, President, Vidmar, Inc.

This unsolicited compliment from Mr. Kleinoder comes in the wake of wide critical acclaim for "Efficient Industrial Storage," a 20-minute film in color describing the manufacture and merits of Vidmar storage equipment.

The picture was chosen by the National Association of Manufacturers as one of 15 outstanding films to represent

American industry at the 1963 International Film Festival in Madrid.

Not all our films gain the distinction of being selected for international awards, but all of them do pack an extraordinary visual wallop the kind that can sell a company or product; the kind that *moves* prospects to become customers.

Matt Farrell Productions, Inc.
213 East 38th Street, New York 16, N. Y.

munication becomes this choice between alternatives. At some point in time he must actually choose by *taking some action* which binds him closer to one side or the other on the issue. And finally he must be *rewarded* in some way for the action he has taken.

Reward Must Be Worthwhile

Eight barriers between you and your audience. We, the film makers, can't control any of them, but we can shape our message so that it at least has a fighting chance of clearing the barriers that confront us. How can we do this? For one thing we know that where self-selection of content is a factor, exposure to the message is a direct function of the reward the receiver expects and of the availability of the message itself. The greater the anticipated reward the more likely he is to expose himself.

On the other hand, the more difficult it is to expose one's self to the message, that is, the more limited its availability, the less likely one is to bother. Here we have the technology of the motion picture medium with us, because our films are being shown through other more readily available media such as television, and projectors themselves are slowly being redesigned so that they are lighter in weight and more reliable.

Tailor the Film to Audience

As to attention the film maker must rely on his own skills in presenting the information in as dynamic and fascinating a manner as possible. This business of attention is not as simple as one would think. For example, a research study showed that two people don't necessarily see the same thing in the same message. A hidden camera study of an audience watching a movie love scene revealed that, contrary to expectation, the boys tended to watch the men, and the girls tended to keep their eyes on the women. We have a great deal more to learn about attraction and holding the attention of our viewers.

The film maker can do much to make his message understood if he consciously tailors the language, both visual and spoken, to the audience he is trying to reach. This means that you must understand the intellectual capacity of your audience member, his capability of grasping complex information, and a host of other factors which may differ from person to person within the audience. By avoiding illogical argu-

ments one can at least attempt to get the audience member to believe what we are saying.

Concerning the acceptance of the message, we know from research that it is easier to accept something new than it is to change a person's mind about something he already believes. If we are dealing with something old, that is, something he already has feelings about, does it stir up hostility and counter-arguments or will it tie in and fit with his existing beliefs.

Factors Which Aid Retention

Retention of the message, barrier number six, can be aided by the selection of unforgettable images and statements which will be strong enough to remain in the viewer's mind long after he has left the theater.

Repetition of key segments or ideas is also an important element of retention but the repetition is frequently better if varied in style rather than merely saying the same thing over again in a summary at the end. Brochures and follow-ups are also important tools to help in the job of keeping the message alive in the viewer's mind.

No matter how successfully we clear all the other barriers, if we are advocating a choice which is impossible for the viewer to carry out he cannot take the action which is necessary to bind him to the viewpoint being advanced in our films.

All the films in the world about freedom of choice will do little to change a person living under a totalitarian form of government if there is no choice available to him. Where choice is possible it helps if one can force the individual to make some choice within a given deadline, rather than leaving the time of decision at the individual's own discretion.

Finally, the eighth barrier, reward, is something that should be of sufficient strength to warrant the effort required to overcome the seven previous barriers: something that the individual himself is desirous of having and something that will meet the approval of his friends and those whom he values.

Two Most Difficult Barriers

Of all the barriers, Belief and Acceptance are the most difficult to penetrate. But within the past 10 or 15 years a growing body of research has been emerging which may help us to cope with this challenge. It does not supply us with one simple answer to the problem. Rather we must sort out a combination of factors all woven together into the complex texture

another fine CAMART PRODUCT

NOW SHOOT MULTIPLE IMAGES FROM A SINGLE SUBJECT WITH THE CAMART OPTICAL FX UNIT

Produces 2-7 Images in Rotation... Montages... Special Distortions... Unlimited Variations

Create unusual optical effects right in your own camera. Give your films drama and impact. The Camart Optical FX Unit can be used with motion picture cameras... TV cameras... animation cameras. The unit reproduces up to 7 multiple images from a single object. These can be rotated clock-wise or counter clock-wise... fast or slow... or photographed "still."

Camart Optical FX Unit with four surface prism, mount, revolving housing, camera base plate and double arm assembly **\$119.75**

Additional Prisms & Accessories Available. Prices on Request.

ARRIFLEX • BOLEX • FILMO • MAURER • MITCHELL & MANY OTHERS

ROTATOR LENS FOR CAMART OPTICAL FX UNIT FOR

16-35mm & TV Cameras

The Rotator Lens reproduces images upside down, sideways or tilted at any angle. Scenes can be rotated a full 360° in clock-wise or counter clock-wise directions to create a spinning effect at any speed. Or by cranking back and forth, you can create a ship-board motion. Uses and applications are limited only by your imagination. Ideal for animation and live action commercials.

"High Life Sports Thrills" Reviews Major Events of Year

☆ A half-hour panorama of exciting sports events has been added to the Miller Brewing Company's 16 mm. film library. Titled *High Life Sports Thrills*, the new sound film focuses on five major events held in the United States. The color cameras first turn to Churchill Downs for the 89th running of the Kentucky Derby. Never Bend and Candy Spots are the favored horses, but Chateaugay bursts from behind in the closing furlongs to set a new record of 2 minutes, 1 and 4/10ths seconds to win this traditional run for the roses.

Next come the World's High Diving Championships at Grossinger's Country Club in New York. Top professional divers from both sides of the Atlantic are on hand to test their skill off the three and ten meter boards. The highlight is a triple jackknife from the ten meter height caught in slow motion by the Miller camera crew.

Auto Racing at Sebring, Fla.

The cameras swing to Sebring, Fla., for the annual 12-hour endurance race for Grand Touring (sic) automobiles. Will the American Cobra defeat the Italian Ferrari is the question along the pit wall as the world's greatest race drivers sprint from the line in a Le Mans start. All afternoon and long into the night the roar of the mechanical thoroughbreds continue, until John Surtees takes the checkered flag and the Ferraris remain champions at Sebring.

It's a quick hop to another area of Florida — Cypress Gardens — for an exciting demonstration of the water skiing championship. The emphasis is on the unusual as we see kite ski flying, hydrofoil skiing, and even "ski-less" skiing.

All-Star Pro Football Action

All the excitement, color, and pageantry of professional football tops-off the film with a final stop at Los Angeles Memorial Coliseum. The stars of the East are meeting the stars of the West in

what's new in pictures

the NFL Pro Bowl game. Allie Sherman's Easterners romp to an early lead, only to have to fight for their lives as Vince Lombardi's Westerners turn on the power. When the dust settles, the East has the win and the Miller crew has some of the most exciting football ever filmed.

How to Obtain This Picture

Prints of *High Life Sports Thrills* join nearly 2,000 reels of film — some 200 separate titles — covering everything from motor racing to bronco busting. They are all available — free of charge except for return postage — to any social, civic, charitable, or fraternal group by contacting the Public Relations Department, Miller Brewing Co., 4000 W. State St., Milwaukee, Wisconsin 53208.

Reichhold Aids Salesmen With New Alsynite Film

TITLE: *Build It Right with Alsynite*, 12 min, color, produced by Animated Productions.

* * *

This sales film was made from 125 pieces of available still materials from Reichhold files. It was put together in less than three weeks, using Animated Productions' Fotomation technique, on a limited budget, but is doing excellent work in dealer showings by Reichhold salesmen throughout the country.

Alsynite, Reichhold's translucent fiberglass panels, is used for so many construction and decor-

ation jobs that even the company itself has trouble keeping up with them all. People are always sending in slides or snapshots or drawings about how they have used Alsynite in some new way successfully. These, along with brochures, catalogs, prints, photostats, etc., are the basis of the film.

Using all the tricks of the Oxberry animation stand and Animated's special cameras, the film is cut to rhythmic modern music and travels through the mass of different materials gracefully with appropriate zooms, wipes, dissolves, etc. to give a constant effect of movement and action.

The film shows how sun and wear resistant Alsynite is used in heavy industrial construction, in light, airy residential decorations and in hundreds of other ways as well.

Twenty prints are being used currently — eight 16mm prints for large audiences, and twelve 8mm prints to go in Fairchild repeater projectors for direct on-the-desk selling.

Ideas for Flavorful Cookery Shown in "The Enchanted Pot"

☆ Demonstrating quick and easy ways to add flavor and elegance to cooking is the audience objective of *The Enchanted Pot*, a new 13½-minute color film sponsored for women's groups and homemaking telecasts by the Corn Products Company (Karo Syrup). Produced by PGL Productions, the free-loan subject is being distributed by Association Films, Inc.

Content emphasis is on cooking with imagination and without spending long hours in preparation. In musical fantasy form, *The Enchanted Pot* demonstrates how glazes, dessert and meat sauces, cake toppings, fillings, salad dressings and marinades can be effortlessly prepared by varying the amount of basic ingredients.

The color subject is being made and distributed (free loan) to women's clubs and homemaking groups, home economics classes and television stations by AF Films.

NEW YORK WORLD'S FAIR REPORT:

(CONTINUED FROM PAGE 95) grounds. Seattle was our most recent experience and the horizons moved forward there . . . but great advances came out of Chicago's "Century of Progress" exposition of the early 30's and again, at New York's Fair later in that decade.

World's Fair concepts must be developed for mass audiences but

they are less inhibited by problems of space, cost and creative time. All the best of modern-day audiovisual technology is apparently well on its way to the Flushing Meadows. Fortunately, all of it should arrive well before that momentous Opening Day. After that, we'd rather not count on getting through the traffic which will be heading for the Fair!

Previewing the New York World's Fair; at top, the Kodak Pavilion, (center) Electricity's "Tower of Light"; and (third segment) the "Festival of Gas" exhibit area. Below: Albott Labs' "Chemical Man" theater will be there.

E DUCATION is "big business" at General Electric.

The latest symbol of this fact is an ultramodern penthouse classroom which recently went into service at Schenectady, N. Y.

Atop the six-story former headquarters of International General Electric Company (Building 36 at the Schenectady plant), the new classroom is now in almost constant use in the critical job of continuously educating G-E engineers.

Occupying its plush seats are some of G.E.'s brightest men. They come from all over the country to expand their knowledge, to be brought up to date on new developments in mature technologies and to learn the latest technologies.

The new classroom also symbolizes a new breed of engineer that has been spawned by the great explosions of technology in the past several decades.

No longer can we expect to have neatly compartmented "in-series" lives of school, work and retirement. People whose work involves any aspect of any of the sciences now must plan to continue their education throughout their lifetime.

Examples of this relatively new philosophy are General Electric's Advanced Course in Engineering (leading to a doctoral degree) and its Creative Engineering Course both of which use the new penthouse classroom.

Course in Advanced Engineering

The Advanced Course in Engineering was established to supply the General Electric Company with engineers having sufficient breadth and depth of technical understanding to make basic contributions in the development of new or improved products. Its objectives are to increase the abilities of the recent technical college graduate to:

1. Analyze and evaluate engineering problems both for their significance and for the appropriate economic and technical approach to their solution.

2. Apply the fundamental and advanced principles of science and engineering to the solution of actual engineering problems.

3. Present the solutions clearly and concisely so that results can be easily understood and used.

These objectives are aimed at developing highly competent engineers of professional stature, qualified for the total engineering job involved in producing successful products and systems through ap-

MODEL CLASSROOM FOR ENGINEERS

General Electric's new engineering classroom combines, in a single area, the latest in audiovisual aids in a comfortable setting for engineering and management participants. Table and seating facilities are provided for 48 students, arranged on six tiered levels. Together with a raised lecture platform, this room provides an unobstructed view of the lecturer, chalkboards, the document and rear-projection screens in front of room.

by E. H. Freiburghouse,
Manager of Engineering Education
Engineering Services
General Electric Company

plication of available technology regardless of how advanced. Graduates of the course are expected eventually to provide technical management for the engineering work of the company.

Study Plus Practical Experience

The Advanced Course in Engineering is based on the premise that development of competent professional engineers requires a combination of formal study and practical experience. To provide this combination, the Advanced Course in Engineering has five major elements:

1. Design and development engineering work assignments as a member of General Electric's professional engineering staff.

2. Weekly or monthly class meetings for the presentation of theoretical subject material.

3. Homework problem assignments representative of actual engineering situations.

4. Periods of full-time campus residence for a concentrated program of formal graduate courses.

5. A development or design project, together with a thesis based on it, for those students who are candidates for the engineering doctorate.

These elements are fitted together to form a continuous three-year program of work and study, both on the job and on the campus, followed during the fourth year by a work-related engineering project appropriate for the doctoral dissertation.

Creative Engineering: Idea Shop

The Creative Engineering Course is intended to develop the engineer's ability to conceive ideas for designs; to strengthen his technical knowledge so he can better evaluate ideas; to increase his awareness of the scientific and engineering opportunities available; and to satisfy the economic requirements facing his business.

The course emphasizes development of deliberate inventiveness and the perspective necessary to attain product leadership.

Course Covers an Entire Year

Length of the course is one year. It includes weekly four-hour class sessions, held during working hours, from October through May. This course, unlike the Advanced Engineering Course, is designed for outstanding engineers with 5 to 10 years of accomplishment.

Audiovisual tools include a front-screen document projector (at left) and the rear-screen projection system (at right) located behind sliding chalkboard. Two Kodak Model 550 "Carousel" slide projectors and a 16mm Bell & Howell Model 552 auto-threading sound film projector are in daily use.

Samples of subject matter covered are:

The process of creative design — including theories of creativity, "brainstorming", lectures by outstanding inventors.

Mathematics of design engineering — including probability and statistics, differential equations, digital and analog computers.

Fundamental structure of materials — molecular structure.

Except for accent lights on side wall and in projection room, lights are operated from the counter-top control panel.

polymer chemistry, metallurgy, plasma and solid-state physics.

Design of novel electrical and magnetic devices.

Evaluation of new designs — including performance, cost, reliability, producibility, maintainability and marketability.

Also covered are such subjects as the technology of mechanical systems, design and conduct of useful experiments, self-correcting control systems, design of communications systems, industrial appearance design, manufacturing process and new technology.

The era of single-handed engineering greatness achieved by tinkering in basement workshops seems to be passing. Perhaps its modern-day equivalent is the engineering team leader or manager. Many thoughtful people are convinced in light of the trends, that the engineering education process must be radically improved. And that is exactly what we are striving for in our General Electric programs.

Closeup on lighting control panel (at instructor's right hand below). It is on counter-top at the end of the speaker's platform. Sound system is made up of Series 5000 modules made at GE's Audio Products plant.

Magician Bob Sharpe, appearing "live" as well as "on film" at regional meetings of Goodrich dealers, helped provide entertainment as well as further emphasis on serious points in the management presentation.

Goodrich Meets Goals in Dealer Program

THE B. F. GOODRICH TIRE Company set up four basic requirements for its dealer-management meeting programs held during November and December. Determined to make the most effective use of audiovisuals for these Regional and Zone gatherings, Robert P. Dies, Manager of Training and Development at Goodrich, had these key elements to consider:

1. Effective and attention-getting presentation of the 1964 management message, heavy with important content, yet requiring a strong *personal touch*.
2. Deep penetration of the management message to all levels of dealer distribution.
3. The need to accomplish these objectives within the limits of executive time, energy and availability.
4. The challenge to do the best possible job within the limitations of a "reasonable" budget.

Regan Integrates Film and Slides

Motion pictures, color slides and taped sound recordings produced by Regan Productions, Inc., of Detroit, met all aspects of the assignment. Three-screen projection and equipment provided by Visual Techniques, Inc., of Cleveland, helped add interest and action which kept audience attention at a high level.

President P. W. Perdriau of Goodrich opened the dealer program with a realistic and spirited message on color motion picture film that surmounted the widely-varying locations and types of dealerships. Presentation of a new

color film by A. B. Senne, the company's Manager of Dealer Finance and Business Management. This was followed by an outline of the program's purpose and details of its operation were shown on color slides accompanied by taped sound.

Take Program to the Field

Twelve regional meetings, attended by key dealers and BFG wholesale sales personnel were followed by *deep penetration* of the entire dealer distribution organization at local zone meetings conducted by zone managers. These required condensed versions of the program: motion picture and single-screen slide presentations.

For example, slides and sound used in the Business Management Program were converted into a sound slidefilm by Regan Productions. The producer's Vice-President and General Manager had some useful suggestions to offer:

"In making such films, time of the busy executive is conserved by

P. W. Perdriau, President of Goodrich (seated), worked as a "team" with Warren Hart of Regan Productions to get the 1964 management message on film in record time.

having the stage, equipment and crew ready for action," said Warren Hart. "Another important factor is *close teamwork* between the executive and the director during on-set rehearsal. Skill in establishing relaxed and mutual empathy on the stage has a strong bearing on the sincerity and acceptance of the final product," he concluded.

Bob Sharpe's Magic Touch

Leavening the serious message of the new Business Management Program was the role played by magician Bob Sharpe, used as a model in one of the films. After the slide presentation at the regional meetings, Sharpe was presented "live" to the audience and displayed a spectacular bit of magic to prove that he was "real."

He later provided informal entertainment during the refreshment break and put on a complete show after dinner. "Commercials" which tastefully emphasized main meeting points were presented as part of his magic repertoire. ☐

Film Credited With Success of Phoenix' United Fund Drive

A 22-minute film is being given major credit for over-subscribing of United Fund goals for the first time in Phoenix, Arizona.

Many Wonders, is the title of the 16mm, sound, color motion picture, produced by Canyon Films of Arizona for the Greater Phoenix and Scottsdale United Fund.

Civic pride and the seamy side combine to make the film the most effective "coin collector" in the history of Phoenix's United Fund, campaign officials report. After an introduction that is pure Chamber of Commerce, the narrator has to reverse himself and show the

slums, delinquency, poverty, and illness.

This leads into a series of vignettes on what the various community agencies are doing about the problems. There is a final appeal by the chairman of the drive.

After scores of showings in the Phoenix metropolitan area, the film is credited with big results in oversubscribing of the United Fund for the first time in the city's history.

Ex-Cell-O's Staude Division Unveils Packaging Machinery

The Ex-Cell-O Corporation has used the film medium as a tool for public relations and product promotion. But this latest 17½-minute color subject, released by the

Packaging equipment buyers viewed new Staude machinery picture at recent Atlantic City premiere.

company's Staude Division, is a down-to-facts industrial presentation.

Partners in Precision Packaging premiered a complete line of packaging equipment machinery to some 15,000 visitors who attended the recent PMMI show in Atlantic City. They saw key features of a recently-introduced Staude 54, 180-degree, prefolding, straight-line gluer; the Staude Master with corrugated and rotary folder attachments. The film also introduced the Gladiator cellulose window-patch-applying machine with its Flexographic imprinting unit.

Partners also has an 8mm sound, desk-top projection version and is being used to train operators of Staude equipment on correct operating and maintenance procedures for these boxmaking machines. Staude supplies both prints and 8mm sound projectors on a short-term, no-charge basis.

Jack Thomas to Film Effects as Laboratory Superintendent

Jack Thomas is the new assistant general manager and laboratory superintendent at Film Effects of Hollywood. His appointment renews a working relationship which began 30 years ago when he was an assistant to Film Effects president Linwood G. Dunn, then cameraman at the old RKO Studios.

Telling America "Truth About Communism" Rise and Spread of Ideology Pictured by Documentary Films

INDEPENDENT PRODUCER Sid O. Fields has turned to the facts of history for the sober, down-to-earth analysis of the rise and spread of international Communism which he has presented in the long black & white sound motion picture titled *The Truth About Communism*.

The picture has been released for outright print sale (16mm sound) through his company, Documentary Films. Admiral Felix Stump, (Ret.) vice-chairman of the Freedoms Foundation, has said of it:

"This is a very splendid film and one which should be shown widely to mature audiences."

Their Words Are Indictments

The architects of the Communist conspiracy speak for themselves in this dramatic collection of newsreels and still shots which cover three decades of Soviet history. Included are what Fields says are "official films smuggled from behind the Iron Curtain" as well as translated speeches and comments from such figures as Lenin, Trotsky and Khrushchev.

Alexander Kerensky, the aged Russian leader who headed a moderate government for a brief period following the overthrow of the Czar, introduces the film. A statement in English by Trotsky tells of the relentless character of the bloody Stalin regime.

Of Mao Tse Tung and Castro

Latter-day scenes show the Chinese leader, Mao Tse Tung and his Cuban counterpart, Fidel Castro.

Ronald Reagan's commentary brings understanding to the scenes and the narration written by Fields and Leonard Heideman. The film avoids the inflammatory and sensational as it turns to the leaders of Communism themselves to de-

Ronald Reagan narrates this factual exposition of historic scenes in *"The Truth About Communism"*

liver a convincing indictment of their aims.

Within its hour and 18 minutes of presentation, *The Truth About Communism*, has made a highly-useful contribution to community, plant and similar programs. Television stations in 28 markets have thus far purchased rights for its showing. Organizations may acquire the 78-minute sound print for \$260, from Documentary Films, 5437 Laurel Canyon Boulevard, North Hollywood, California.

U.S. Sales of Pyral Magnetic Products by Hollywood Film

Exclusive distribution of quality magnetic film and magnetic coating machines produced by Pyral of France has been given to the Hollywood Film Company. Pyral 16-17½ and 35mm base is included in the agreement.

Complete stocks of magnetic film and specification sheets are available from HFC offices and warehouses in Chicago, Hollywood and New York City.

Mao Tse Tung is one of a number of Communist leaders in the film.

Faraday, Franklin and Edison re-visit Earth to learn about progress in power development in new Bay State film, "Ever Since Edison."

Saga of Investor-Owned Power Companies

Bay State Creates Enlightening Tale in "Ever Since Edison"

IN HIS LATEST FILM, the Edison Electric Institute has turned to the world of fantasy to bring public audiences the story of investor-owned power companies and their importance in community and national growth. *Ever Since Edison*, produced in 16mm and 35mm color by Bay State Film Productions, Inc., makes liberal use of full animation to give a light and fanciful touch to this serious subject. The result is a highly-entertaining as well as informative 25-minute picture.

Ben Franklin flies his kite in a heavenly opening sequence, while Tom Edison switches lights off and on from his nearby cloud. Michael Faraday's magnet pulls the harp from a cherub and the three pioneers of electricity meet to discuss that unhappy incident. Their conversation turns to past achievements and the trio decides to return to earth to see what progress men have made in the 40 years since Edison's time of the 20's.

"Live" Scenes of Today

The story turns to live action as they visit earth and the film shows how investor-owned power companies are doing their jobs, planning for the future. The investment story is stressed by such facts as the ten billion dollar investment in utility companies

made by the American people in the 1930's. Today, they find, that figure has reached the fifty billion mark.

Today's public investment in private power companies represents the largest investment by the most investors in any American industry; these U. S. power firms annually buy over three billion dollars in new equipment. They also rank first in total taxes paid to local, state and Federal governments.

Seen by Theater Audiences

Theatrical audiences are sharing the 35mm prints of *Ever Since Edison*; general showings are being served by numerous 16mm prints. The closing sequence, with Edison, Faraday and Franklin back in paradise and the little cherub happily strumming his repaired harp, will delight these viewers and the solid fare about an important segment of private enterprise is both instructive and most worthwhile.

HOME IMPROVEMENT is the subject of an unusual new 13½-minute color film with a heart-beat and a symphony of construction sounds. Released in January by the Association of Better Business Bureaus in New York, *A House Is a Living Thing*, ably fulfills the title's promise. It was produced by the ABBB's continuing film program by Audio Productions, Inc.

The new picture is the first in this series to tell the story of a specific industry. There were several reasons for the choice. In the U. S., more than ten billion dollars are spent annually for contracted remodeling. The figure may be closer to thirteen billion in 1964. Another three billion goes for "do-it-yourself" materials, not including tools and other equipment.

The Public Is Concerned

Many industries and services are involved — materials and household equipment manufacturers, utilities, financial institutions, large retailers, suppliers, dealers, contractors and sub-contractors in the various building trades. For the past 10 years, Better Business Bureaus have recorded more public interest and concern about home improvement than any other business category.

This does not mean that the bulk of attention is given to consumer complaints. The sheer volume and variety of the field demands that it should be reflected in BBB statistics. On the other hand, those who abuse the privilege of doing business by taking unfair advantage of homeowners find their way into the record. And homeowners themselves invite disaster when they fail to use sound judgment in buying or contracting for home improvements.

Key Theme: "Plan Carefully"

A House Is a Living Thing has the stated objective of helping homeowners to achieve satisfaction in remodeling and maintenance projects. It is not a "scare" picture but a fast-moving, constructive look at remodeling. The message is simple, but emphatic: "Plan carefully."

On the sound track, the strong heartbeat of a healthy house is heard: strong walls, a good roof, doors and windows which work, a well-functioning faucet. But, like people, houses grow older. Aches and pains build up. The film shows that, with careful planning, even a sick house can be restored to vigorous life. Specific examples

Facts on Remodeling for the Home Owner

Better Business Bureau Shows "A House Is a Living Thing"

of successful remodeling are shown.

The best "doctor," says this BBB film, is the expert of good reputation. A companion booklet for viewers contains material of importance to those who plan maintenance and remodeling.

Another Production by Audio

The ABBB's latest film was directed by Erwin Scharf of Audio Productions, in association with Edward J. Lamm, executive producer and a veteran of these Better Business Bureau film ventures. Mr. Scharf also directed the Association's 1962 release, *Too Good to Be True*. It was premiered simultaneously in late January of this year. President Victor H. Nyborg introduced the picture at the annual BBB Sales Conference in St. Louis. In Chicago, at the recent annual winter meeting of the National Home Improvement

The right paint's important. For this you trust the good reputation of the contractor. He's the doctor.

Council's directors, ABBB staff director William Maki accepted the Council's Public Service Award for the film, on behalf of the Association.

Major distribution is being

handled by the 127 Better Business Bureaus in the U. S., Canada, Mexico, Puerto Rico and Israel and also by leading representatives in the remodeling industry.

The Peace Corps: a Mission of Discovery

(CONTINUED FROM PAGE 101) know how to grow vegetables, raise chickens and care for livestock. You meet Volunteer Gerald Rutland, who came to Brazil from Alabama and is helping to organize 4-H Clubs among the rural youth of that country.

And there are Peace Corps architects who have helped to design low-cost housing units for low-income families now living in urban slum areas of Tunisia. More than 300 different skills are included among requests the Peace Corps has received from developing nations. They include mechanics, heavy equipment operators, carpenters, construction workers, engineers, surveyors and geologists.

Corps Will Enroll 10,500

Next September, the roll of the Corps will be boosted to 10,500 and it hopes to put 14,000 Volunteers in the field in 1965. Shortly before taking up new duties in heading President Johnson's "war on poverty" at home, Peace Corps Director R. Sargent Shriver said,

"Qualified Americans are clamoring to join the Peace Corps. The demand from abroad for these Volunteers is now greater than at any other time in our history."

And those who have served and returned to their city and farm homes in America have had their rewards, too. Many have received scholarships and fellowships established by colleges that realized that

the "increased maturity and world awareness which their experience has provided will make them valuable members of our communities."

Sought by Business Firms

Business and industry is aggressively recruiting them for assignments at home and abroad. Some are entering the Foreign Service, the United States Information Service . . . and other branches of government. Career goals for many have been altered. Liberal arts graduates who had never considered teaching, now intend to teach. Nurses plan careers in international health.

Only when Volunteers have returned home do they realize that they have walked on the lip of a volcano . . . that they were in on the beginning of a new world. And that they have answered the late President Kennedy's challenge: "ask not what your country can do for you . . . ask what you can do for your country."

Ansochrome Processing Now Available at Manhattan Lab

Manhattan Color Laboratory has announced the addition of a completely new processing service for all Ansochrome type films, including duplicating 547 and 747 and type D60, D100, T100 and D200 with a 24 hour service available.

The processing equipment was built and designed by the laboratory's own personnel and will process both 35mm continuous film for slides and filmstrips in addition to continuous roll 46mm. The use of 46mm film will provide the first completely automatic production for super slides.

11 Motion Picture Products Managers Announced by Kodak

Managerial appointments have now confirmed the executive line-up in the field for the Eastman Kodak Company's Motion Picture Products Sales Department. They were announced by Gerald B. Zornow, vice-president for marketing and cover coast-to-coast operations of four divisions:

At the East Coast Division (200 Park Avenue, New York), John A. Pistor was named general manager; E. M. Stifle is man-

Donald Hyndman
Kodak Assistant Vice-President

• In the Southern Division, with headquarters in Rochester, N. Y., Gordon A. Chambers has been named general manager and G. H. Tubbs is manager of engineering

John A. Pistor

ager of engineering service; and L. A. Bonn, sales manager.

At the Midwest Division (130 East Randolph Drive, Chicago), Kenneth M. Mason has become general manager; W. A. Koch, manager of engineering service; and J. H. Maynard, sales manager.

West Coast Division (6677 Santa Monica Boulevard, Hollywood) executives are: Norwood L. Simmons, general manager; Vaughn C. Shaner, manager of engineering service; and W. L. Farley, Jr., sales manager. Dr. Simmons succeeds John L. Courcier, a 45-year veteran in the film industry, who died on January 6th.

Dr. Norwood Simmons

service. Sales to Southern Division customers are being handled by the Midwest Division.

Since December 30, Kodak has been distributing its professional motion picture films direct to customers, with no substantial change in operational methods.

Donald E. Hyndman, Kodak assistant vice-president and manager of the Motion Picture Products Sales Department, notes that

Kenneth M. Mason

Gordon Chambers

inquiries about sales or engineering service should be directed to the division office noted, except in the case of the West Coast. Engineering service requests in that area should go to 6706 Santa Monica Boulevard.

Westmoreland Is Consultant at Creative Arts Studios, Inc.

Robert Westmoreland has joined Creative Arts Studio, Inc., Washington, D. C. as Industrial Consultant for motion pictures, animation, filmstrips, art and photography. A former Chief, Photographic Laboratory, Press and Publications Service, U. S. Information Agency, he was recently technical consultant for the Bell and Howell Canon system of photography.

Recently elected to the Board of Winona Trustees, Winona School of Professional Photography, held annually at Winona Lake, Indiana, he began his career as a Marine Corps combat cameraman, seeing action in the South Pacific and later in Korea. Until his release from active duty in 1961, he was Chief of the Pictorial and Graphics Branch, Headquarters, Marine Corps.

Mitchell Appoints D. L. Tucker as Assistant Manager of Sales

Newly-appointed as Assistant Manager of Sales at the Mitchell Camera Corporation is Donald L. Tucker. The announcement was made by R. B. Hill, Director of Sales.

Tucker will also represent Mitchell-Vinten, Inc. as Manager of Sales of aerial reconnaissance cameras and ancillary television camera handling equipment made by W. Vinten Ltd. of London. He was previously Marketing Manager for Herron Optical of Los Angeles and has been associated with D. B. Milliken Company and McDonnell Aircraft.

Donald Ringsred Is President of Alexander Film Company

The election of N. Donald Ringsred of Bloomfield Hills, Michigan as President of the Alexander Film Company, Colorado Springs, Colo., has been announced by Cortlandt S. Dietler, Board Chairman and Chief Executive Officer.

Alexander's new president has been associated with the national film company since 1945. After 12 years in the Colorado Springs

N. Donald Ringsred

office, he moved to Detroit as a sales representative for the firm. He has headquartered there since 1957. Ringsred is also a member of the board of directors and executive committee of Motion Picture Alexander Corp., New Orleans, a leading supplier of theater screen advertising campaigns.

Recently-opened company offices in the Maple Office Center at Birmingham, Michigan will serve as Ringsred's headquarters for an indefinite period.

Henry Strub to Crawley Films as Representative in Quebec

Communication and design expert Henry E. Strub, formerly with the Aluminium Limited companies in Switzerland and Canada, has become exclusive representative of Crawley Films in the Province of Quebec. His office is at 1 Place Ville Marie, Suite 1503, Montreal.

A linguist who came to Canada 12 years ago, Strub served in the British Merchant Marine as an engineer, in the Royal Air Force and in the Political Intelligence Department of the British Foreign Office. His work at Aluminium included sales development, advertising, public relations, film making and design co-ordination. Experience in film planning and production on five continents and his background as a client-user of the medium make his a valuable addition to the Crawley staff.

In Canada It's Crawley

NEWS OF STAFF APPOINTMENTS AND A-V INDUSTRY DEVELOPMENTS

Exec Posts to Rogin, Gregory at MPO Sales Meetings, Inc.

Milton Rogin and Sherman Gregory have been appointed to executive posts at MPO Sales Meetings, Inc. Mr. Rogin will be Executive Vice-President and Mr. Gregory has been appointed Director of Sales.

Milton Rogin was one of the founders and was formerly President of Cellomatic Corp. and is the inventor of the dual overhead method of animation projection which was named for that company. He has produced films, strip-films and live presentations for a broad cross-section of American industry.

Sherman Gregory joined Cello-matic Corp. in 1961 after serving

as President of Pictafilm, Inc., producers of optical animation TV commercials.

Joseph F. Kilmartin, President of MPO Sales Meetings, Inc., points out that the company, which produces industrial shows and communications programs both live and on film, will move strongly into the production of packaged presentations, visuals and closed circuit shows utilizing limited animation techniques and projection.

MPO Sales Meetings is a subsidiary of MPO Videotronics, Inc.

Jessie Adamson to Telic, Inc.

☆ Jessie Adamson, formerly with Peter Elgar Productions, has joined Telic, Inc., as office manager.

Raymond J. Murphy
Joins Holland-Wegman Staff

Holland-Wegman's R.J. Murphy to Head New Rochester Office

A new sales office at 905 Monroe Avenue in Rochester, New York, will serve clients of Holland-Wegman Productions, Inc., in this area. A native of that city, Raymond J. Murphy, Jr., will represent the Buffalo film company out of the Rochester office.

Edward J. Wegman, studio head, commented on the company's expanded sales activities, noting that the opening of the Rochester office is part of a company-wide program aimed at improving client service through a reorganization of account handling and sales responsibilities. The 12-year old Buffalo, N. Y. organization operates the largest sound stage and production facilities between New York and Detroit.

Murphy is the former sales director of Valley Studios, Inc. and also has a background of audio-visual equipment experience. A graduate of the University of Virginia, his family home is at 140 Laburnum Crescent, in Rochester.

* * *

Jerry Diebold Joins EB Films as Director of Production

☆ Now director of production for Encyclopaedia Britannica Films, Inc., is Jerome C. Diebold, for the past 17 years a producer, sales executive and production manager at Wilding, Inc. in Chicago. A graduate of the University of Wisconsin, Diebold is a Fellow of the SMPTE, a member of the Academy of Television Arts and Sciences and a longtime producer of films for government and the armed forces.

During World War II he served in the Navy and in 1945 was head of the Training Film Branch in the capital. He presently holds the rank of commander in the naval reserve.

Harold Lignell

Marvin Bailey

Jan Conrad

Production Specialists Direct Operations at Sarra-Chicago

Five principals have assumed control of the Chicago studio of Sarra, Inc. The founder, Valentino Sarra, has been joined by four active executives, William Newton, Harold Lignell, Marvin Bailey, and Jan Conrad.

Incorporated as Sarra-Chicago in 1963, the studio specializes in the production of television commercials for which its facilities

Sarra's Bill Newton

were designed. Producer-directors work with both 35mm color and black-and-white film, equipped with the latest in camera and editing equipment. A complete internal b&w lab provides for creative and quality control from start of production to the shipment of release prints.

This famed studio has kept much of the "illustration" feel which distinguished Mr. Sarra's work and maintains a topflight still studio and darkroom. Stylists are used on every production, backed by the long experience in still illustration at Sarra.

Robert Harlan in Charge at Kim & Gifford Industrials, N.Y.

☆ Kim & Gifford Industrials, a new division of Kim & Gifford Productions, Inc., has been organized in New York at 342 Madison Avenue, with Robert Harlan in charge.

Mr. Harlan was previously with the American Broadcasting Co.

Dick Durrance Joins Pelican, New York, as V.P. and Producer

Dick Durrance, of Aspen, Colorado, a producer of documentary and public relations films, has joined Pelican Motion Pictures as vice-president and producer. Mr. Durrance will work with Ted Lowry, Pelican's vice-president and executive producer of industrial and public relations films.

Mr. Durrance, a former Dartmouth College and American Olympic skiing star, has been producing films since 1938. His most recent production, *Aspen — Winter Mood*, is one of many skiing films which have brought him fame as a ski photographer. But he prefers to emphasize his non-skiing films which include *Frontiers*, (winner of ten awards and translated into 23 languages), *Wings to Germany*, *Wings to Austria* and *The Air Force on Canvas*, which he co-produced with Pelican's president, Joe Dunford.

Mr. Durrance plans to continue his production activities in Aspen in addition to using Pelican's New York facilities because, "an important segment of my film work is global and individual and Aspen has been my home since 1946 — when I can get there!"

* * *

Hal Marc Arden to the Staff of Sturgis-Grant Productions

Hal Marc Arden has joined Sturgis-Grant Productions, Inc. as Associate Producer and Director of Public Relations.

Mr. Arden was formerly National Radio-TV-Film Director of the American Heart Association. He has an extensive background as writer-director with the major broadcasting networks, and as a specialist in the field of public relations. Most recently he wrote and directed *Of Men and Minds*, a motion picture on research for the American Heart Association and E. R. Squibb & Sons.

Camera Mart Announces Four Appointments to N. Y. Staff

Four additions to the staff have been made at The Camera Mart, New York motion picture equipment company.

Herbert L. Browning, who has been an assistant advertising manager at Sears Roebuck in Greengburg, Pa. and Warren, Ohio, is now Advertising and Sales Promotion Manager at Camera Mart. He is the son of Anna Browning, Secretary-Treasurer of the company, and the late Sam Browning, who co-founded the company more than 27 years ago with his brother, the late Irving Browning.

Robert Roizman has joined the Film Editing and Audio-Visual Department in charge of sales and rentals, having had several years experience in a similar capacity in the field.

Walter Henschski has been added to the camera maintenance and repair division of the Rental Department. He had served four years in a similar capacity in another company.

Leo Rosenberg is a new assistant in the Rental Department.

In addition to the new members of the staff, Samuel Hyman, President of the company, announced the promotion of Tony Matos, Jr. to the position of Manager of the Rental Department. Mr. Matos has been with Camera Mart for almost two years, and had had several years experience in the sound department of another equipment company in New York.

* * *

Lindemeyer Heads Technical Services at Metro-Kalvar, Inc.

A former Navy producer-director who began his film tv career with the Iowa State University film production unit, has been named Director of Technical Services for Metro-Kalvar, Inc. Robert B. Lindemeyer was named to that post by Noel R. Bacon, vice-president of the film maker.

Lindemeyer came to the company in September, 1963 from American Machine and Foundry Company's field operations and engineering division at Santa Barbara, Calif., where he held a managerial post. During his military service, he became officer-in-charge of the tv kinescope films production facility at the U. S. Naval Photographic Center. Following service, he was named tv production director for the color closed-circuit tv facility at Headquarters, Air Force Systems Command in Washington, D.C.

Thomas Barbre, Pioneer Film Maker in Denver, Dies at 57

Thomas J. Barbre, President of Thos. J. Barbre Productions, Inc., died unexpectedly in Denver, Colorado on December 29, 1963. He was 57.

The firm which he founded and built for nearly a quarter century grew out of the demand for a film by one of his customers when Mr. Barbre was a free-lance still photographer before World War II.

A pioneer in many phases of production, Mr. Barbre is said to have produced the first color motion picture shot underground, the

The late Thomas Barbre

first synchronous sound movie shot underground, the first sync-sound color movie of radar equipment operating in a commercial airliner, and the first underground color set for a business film built and photographed in a sound stage.

His films reaped many awards. During the past four years, three of his films — *Prairie World of the Kit Fox*, *By Their Deeds*, and *The Big Idea* — were selected for showing at the American Film Festival. *This is Denver*, produced for Scripps-Howard's Denver newspaper the Rocky Mountain News, won a Newspaper Promotion Award at the National Newspaper Promotion Association's convention at Houston in May of 1963.

Paul F. Emrich, who has been associated with the studio for twelve years, has been named vice-president in charge of operations by Mrs. Anita T. Barbre, widow of the founder. He will direct the staff that Mr. Barbre trained and led, and which includes Harold "Andy" Anderson, director of photography, Toshio Okano, cameraman, Gordon McAlister, editor and director, and Mrs. Jo Ann Shevlin, film librarian.

Talent and technical know-how combine on set at F. K. Rockett Productions during the filming of "As They Really Are" for Univis, Inc.

Sight: the Key to Man's Understanding

Story of Vision. Eye Care Told in a Colorful New Univis Picture

SPONSOR: Univis, Inc.

TITLE: *As They Really Are*, 28 min., color, produced by F. K. Rockett Productions.

* * *

"I see" means "I understand", and the means by which sight provides man's understanding of the world about him is told by Univis, a maker of optical lenses, in an effective blending of animation with live action.

Starting with an explanation of light itself, and of color, the film shows the scope of vision in seeing creatures, from the most primitive to man, the most highly developed. Development of visual capacity in the infant is depicted, and the tendency of the eyes later in life to return to the far-sightedness of babyhood is demonstrated. The point is made that man has transferred much of the burden of life from his back to his eyes.

and nature hasn't yet had time to adapt sight to a tremendous amount of close work nor use of the eyes to the period of time bounded by sunrise and sunset.

Encouraging eye examinations at not less than two-year intervals, the methods by which the doctor determines the need for lenses which help or correct vision are explained. Ease and lack of patient discomfort in examinations is made clear, to encourage those who fear or simply put off visiting the eye doctor.

Clark Howat portrays the doctor and Mona Knox the patient; Lael Jackson and Les Tremayne also have roles. Directed by Albert Kelley from a script written by Sue Coy, the film's music was done by Ed Norton with recording by Jim Fullerton and art direction by Glen Holse. Production was supervised jointly by John J. Hennessy and Stan Webb.

THE ONLY THING BETTER THAN A GOOD SALESMAN

IS A GOOD SALESMAN WITH TABLETALK

Your best salesmen reach a new high... your better salesmen sparkle... former "order-takers" become brilliant "closers", with

Tabletalk
Automatic

by **Viewlex**

Fully automatic operation. Your product or service is presented in persuasive full-color filmstrips, automatically synchronized with a high-fidelity, pre-recorded sales message. Acts as a remote-control or manual unit, as well. Automatic film transport and take-up; never needs rewinding. Really portable, too... weighs only 13 pounds.

No fumbling! Commands attention! Discourages interruptions! Keeps your salesmen as fresh on the day's last call as on the first! Just open the attache case and the 8 x 10 rear-projection screen pops into position. The 4-speed record player with flipover cartridge slides into operating position on drawer mountings. Ready to use in seconds!

GUARANTEED FOR A LIFETIME

Equip your entire sales staff with TABLETALK AUTOMATIC. See the difference it makes in your sales picture.

LOBBY AND TELEVISION INDEX

Architect's sketch of viewing areas in main lobby of Hollywood Museum.

Preview Visit to the New Hollywood Museum:

(CONTINUED FROM PAGE 85) television, of recording, of radio and motion pictures and the discoveries or breakthroughs which made their present forms possible.

The "Sound" area dramatizes and demonstrates the effect of aural communication, the techniques of recording and broadcasting, sound effects, recording systems, mixing and dubbing.

Visual Elements of Production

"The Moving Image" is essentially concerned with light, motion and the visual elements which are the basic concepts of motion pictures and television. Animation, cameras and lighting, photography, lenses, special effects, editing, art direction, costume or wardrobe, makeup and research can all be studied in this area.

"The Interpreters" section pays tribute to people, rather than to processes or discoveries — to actors, directors, writers, producers and musicians who write, compose, perform, and direct the material that is to be communicated.

"Today" indicates dramatically the actual state of each industry, the effect of the four media on today's audiences, the sources from which the basic material is drawn, the technical improvements that are underway, and current and future means of theater exhibition, distribution and broadcasting.

Theaters Seat 1,000 Persons

Theaters, soundstages and libraries are among the "Special Areas" which include the Museum's entrance lobby and its restaurants. For each major area of the complex, a show will be provided. Altogether, these can house a thousand persons at one time. Museum officials estimate that it will handle from 7,500 to 10,000 people per day, giving all of them an opportunity to see the shows.

A collection of business and educational films which have earned the distinction of being housed in the Museum will be drawn upon

for such showings. From the first moment of a visitor's entry into the lobby, he may obtain information about the industries from an international viewpoint. He will be equipped with a lightweight listening device which he can take around the Museum. Without this device, the Museum is silent; with it, the closed-circuit sound system enables him to receive information, to "tune in" on sounds and programs of his own choosing.

You're in Rome, It's 44 BC!

Entering the Museum's "holding area" he passes into a very large elevator with a rear-projection device. The elevator doors close and an illusion of an aerial view of modern Rome appears on the screen. As the elevator moves up, the camera moves in and the scene dissolves to a shot of Rome in 44 BC. When the elevator stops at the next level and the visitor steps out, he finds that he *is* in Rome in the year 44 BC, on a "set" where he can walk through the streets. Tuning in his hearing device, the air is filled with the sounds of ancient Rome; he sees and hears the rumble of chariots, the clatter of horse's hooves on a cobbled street.

By means of sound and photography, the skill of the art director and all the technical and artistic know-how of the various industries within the Hollywood area, the visitor has been transported back in time, and for the first time he himself has been within the picture.

To Show These Historic Films

Along the "Discovery" ramp, which the visitor may then follow, he will be able to hear the voice of Thomas Edison reciting "Mary Had a Little Lamb" on a tinfoil phonograph on which sound was first reproduced. He may see the Edison-Eastman celluloid strip motion picture of 1880 or a print of the first motion pictures in story form, Edwin Porter's *Life of an American Fireman* or Melies' *Cinderella*.

Significant breakthroughs along

the "Discovery" ramp might include D. W. Griffith's first dramatic close-up, made when he devised the cut; the 1915-16 era might bring his scenes from the first "big" movie, *Birth of a Nation*. The Twenties show great progress in all media: the first broadcasting station, KDKA, with the first regularly scheduled radio programs; the first sponsored programs on WEAF; Will Hays speaking from the screen in 1926.

With the advent of "talkies," motion pictures embarked on a series of important advances culminating in Cinerama, CinemaScope and the experimental but ill-fated three-dimension period.

Audiences in Moving Theaters

Beyond the "Discovery" ramp, the shows include the "Moving Image" area with its two large audience theaters, two auditoriums which inter-change levels during the performance. The creation may start with *The Great Train Robbery*, projected on the central screen. At first the show is concerned with the pre-sound and pre-55mm film image. But before going into wide-screen projection, the auditorium starts to move; on the screen the visitor will seem to be moving up the elevator of the Eiffel Tower.

At the end of his "ride" the show expands into wide screen and the camera moves the viewer out of the Tower elevator and reveals, in panorama and around the whole room, the view from the top of the Eiffel Tower overlooking Paris. At this point, all that stereophonic sound and all of the effects of the motion picture will be brought into play for the grand illusion.

View Sound Stages in Action

Finally, the audience has been moved up to the third level . . . into the galleries of the sound stage. Leaving the "Moving Image" show, he will glimpse action on two sound stages from a vantage point behind a one-way wall of glass. On this level, too, are the animation and process photography exhibits, special effects and the entry to the "Interpreters" area . . .

These are the architect's con-

Sketch of "Sound Show" area where new techniques will be demonstrated.

cepts of the Hollywood Museum and they are being brought to life by the dedicated help of many, many leaders in that center of production. As William Pereira puts it:

"The Museum will not only commemorate the work of the greats of the past but will be a testimony to the creativity of the men who will work on it. The story must be told by the talents and the tools that make up these four industries."

* * *

"Island of Pleasure" Takes Viewers on Cruise to Tropics

Take a cruise these waning winter days to five ports in the Caribbean and South America through viewing of *Island of Pleasure*, a 28½-minute color film sponsored by the Grace Lines. The colorful panorama of cruise highlights was produced by Vision Associates, Inc., in association with Film Counselors, Inc.

Island of Pleasure takes viewers both portside and shipside, through a multitude of activities which await the vacationer. In Jamaica, steel bands beat out native melodies and talented dancers interpret calypso rhythms. Colorful Caracas, Venezuela, is viewed from a cable car, high above the city's rooftops. Willemstad, Curacao, displays its sugarbread houses and bright-hued wares. Aruba and Haiti are also featured in the film.

Your "island" for this trip is a 500-foot luxury liner on which shipboard activities provide a festive transition between ports of call. 16mm group audiences and television stations may obtain prints of *Island of Pleasure* from Association Films, Inc.

Shown is the 8 ft. electrically operated Da-Lite Electrol® projection screen installed recently in a conference room in the Apollo Support Department of General Electric's Daytona Beach plant.

DA-LITE

For important conferences, the Da-Lite projection screen at General Electric plays a useful role. Out of sight when not in use, the electrically operated screen lowers automatically at the touch of a button. Superb reproduction of projected pictures on Da-Lite's unique White Magic II® Chemi-Cote® glass beaded surface is further assurance of effective visual presentations.

Experts in the audio-visual field recommend the Da-Lite Electrol for unsurpassed performance. Electrols have been giving trouble-free service for over 26 years.

Da-Lite Electrol screens are available in a wide selection of sizes to fit your needs. They can be recessed in the ceiling or installed on wall or ceiling. Choose a Da-Lite screen—get the Big Difference—and the difference costs you nothing.

Write for specifications, prices and name of nearest franchised Audio-Visual dealer.

New Catalog of Test Films Available From the SMPTE

A new test film catalog is now
available from the Society of Mo-
tion Picture and Television Engi-
neers, 9 East 41st Street, New
York 10017.

Listed are picture and sound
test films for television and for
70mm, 35mm (standard, wide-
screen and anamorphic), 16mm
and 8mm equipment.

These films are being used by
manufacturers for design and in-
spection; by television engineers
for alignment; by motion picture
theatre projectionists and other
persons responsible for in-service
maintenance of projectors and
sound equipment; by equipment
dealers for demonstration pur-
poses; and by audio-visual equip-
ment users for quick performance
checks.

Last year, 4,350 of these films
were supplied to users in the
United States and 28 foreign
countries.

Leonard Dickstein Joins the Florman & Babb Sales Group

Leonard Dickstein has joined
the sales staff of Florman & Babb,
Inc., New York, suppliers of pro-
fessional motion picture equip-
ment.

Prior to his association with
F&B, Mr. Dickstein was with
Permacel for eight years serving as
that company's sales specialist in
the film and tv. industries.

Arthur Florman, president of
F&B, said the rapid growth of sales
of editorial and laboratory splicing
tapes and splicing equipment re-
quires the firm to place additional
emphasis on customer service in
that field.

Helping Improve Corporate Communication

Planned Communication Group Aims to Close Internal Gaps

AT AN Industrial Audio-Visual Association meeting in Rochester last Fall, Gerald Zornow, Eastman Kodak's marketing Vice President, called on the industrial Audio-visual man to develop a broader approach to his job. Audio-visual people, he said, are often not communicators in the full sense, but, rather, experts in a specialized communications technique.

Yet, the communication needs of any corporation go far beyond this traditional view, and the audio-visual communicator is the logical man most experienced in the graphic subtleties of transmitting and creating a favorable climate for the reception and understanding of marketing communications in a company.

Expert Counsel Is Available

Sensing that corporate internal communications will become one of the more important areas of management attention in the next decade, some outside experts have recently set up to provide skilled evaluation and programming for industry in this field.

One of the leaders is a year-old division of MPO Videotronics called Planned Communication. This company, headed by Joseph F. Kilmartin, a marketing man with long experience in the communications fields, has thus far undertaken programs to improve internal communications for almost a dozen of the nation's major industrial firms.

The aim of these programs is to develop an internal communications system to correct the lag that often exists between headquarters strategies and concepts and their understanding and application. The P. C. premise believes that when communications inside the company are short-circuited, misunderstanding, confusion, resentment, indifferent response, and the "We"- "Them" attitude are the likely results.

Analysis Can Halt Breakdowns

The remedy for communications breakdowns, and one which is increasingly concerning audio-visual men in their role as all-around communicators, lies in a careful analysis of the way information is currently channelled through the corporate structure — in written and person-to-person form. More efficient program structure must be developed to implement a company's current communications, and a measure-

ment of effectiveness created on a continuing basis to detect stoppages of information before they become serious.

Planned Communications has succeeded in accomplishing these objectives, Mr. Kilmartin says, because it has a detached or separated outside view of the situation, it has a great deal of experience in diverse industries, and it can act as a catalyst to spur activity on many levels in the company without stirring up resentment in the ranks. Planned Communications does not go into such problems as corporate restructuring, or executive placement, which are the proper concerns of management consultants. Its aim is to format efficient ways of handling the information explosion within the structure as it exists.

The tools of the job vary according to the needs. Basic audio-visual methods have played an important part, but they are by no means the whole story.

"Executive Expression" System

For one large company, Planned Communications has undertaken the conduct of an *Executive Expression* system which has the job of finding good management speakers, preparing speeches and coaching speakers in delivery and the effective use of aids, and finding the right audiences to tell the company story to. The result has been a much better understanding of the aims of the company, a humanizing of the giant corporation all the way up and down the line and out into the furthest reaches of dealer-dom.

For another large corporation, P. C. worked on ways of channeling answers to such questions as these:

"What percentage of your employees buy competitive products and why?"

"Do your employees understand the vital importance of marketing and its role in improving the profit trend?"

"Do your field people understand your marketing philosophy and their individual role and relationship in it?"

"What percentage of your employees understand, believe in, and use your advertising program?"

Meets Needs of A-V Managers

Activities such as this are very logically attuned to the skills of the industrial audio-visual man, Mr. Kilmartin believes. His company has been organized to pro-

vide just such outside services which the a-v man can call on.

It is not Planned Communications' job to formulate marketing philosophies and strategies, but to

make sure that these plans are understood — that the lines of communication within the company are constantly kept open for more effective use of marketing.

Christian Theology Builds for the Future

"Promise for Tomorrow" Being Fulfilled by Seminary's Work

TO THE BEAT OF BONGOS, a coffee-house "type" recites a touchingly satiric "Lament to a Coughdrop" and both on-screen and real-life audiences are genuinely amused. For the latter it comes as a bit of a shock to learn that the three performers aren't beatniks but divinity students appearing in the campus theatre at the San Francisco Theological Seminary in San Anselmo, California.

Narrator James Stewart, himself an active layman, explains the deliberate non-religious opener for the United Presbyterian Church institution by posing the questions of where ministers come from, who they are, what they know about life. He then leads viewers across campus, through classroom, library and chapel; into the home lives of some of the students, a good many of whom are married and have families; into part-time employment needed for the support of those families; and into some of the experiences they obtain in service outside the classroom: counseling at San Quentin Prison, working in a nursery school, in a home for the aged, in interracial situations.

Berger Foundation Met Budget

The background of this sponsored film is unusual. Its production cost was borne by the H. N. and Frances C. Berger Foundation — the Bergers are members of the San Marino Community (California) Church — as something more than a tithe. Its objective is the dual one of supplying public information, and of stimulating contributions to the support and growth of the Seminary, whose single classroom building, now more than 70 years old, is far too inadequate, whose student-aid funds always are far too limited.

Timed for half-hour public service television use, as well as for laymen's and other public meetings, the moving presentation shows the "preparation of young men and women who can confront the modern world with the reality of God . . . who must be at home in this century, able to serve it, able to cope with its strange new situations, in all of

which the Seminary holds forth the *Promise for Tomorrow*."

To this public portion of the film, Stewart adds a postlude for Presbyterians in a direct, brief address from the screen in which he notes that the story is unfinished, "Like the Church," he notes, "the Seminary is building for the future. We need the best leaders obtainable, and here's where they grow . . . Each dollar given represents not just bricks and mortar but the education of a minister. You can help the Church's future."

Directed by Jack Copeland

Promise for Tomorrow was an Allied Artists Pictures Corp. production. Steve Broidy, head of that organization, was approached by the Bergers because of *A Continuing Vision of Greatness*, done for Claremont Colleges in 1961, and other films of similar character, and he made the company's services and facilities readily available.

Production and direction were put in the hands of Jack L. Copeland, whose credits, plus some for writing, include not only the Claremont Colleges film and pictures for the City of Hope Medical

Ministry's Future:

(CONTINUED FROM PAGE 207)
western states for the Methodist Church. Vernon Keays was assistant director. Music was arranged by Gordon Zahler.

Leo Diner of San Francisco was director of photography, with Lou Yates, also of San Francisco, shooting the exterior scenes. Body of the film was made in four days, covering areas of Marin County and the Seminary itself, and editing by Neil Brunnencant rounded out Copeland's objective of capturing with a combination of entertainment and TV directorial

technique the "unadorned realism of teachers, students and the people they work with, without disturbing reality."

Situations Provide Own Drama

Recognizing an obligation not to "hoke up" what people are, the director let the sincerity of the situations being shown provide their own dramatic elements.

That he succeeded was evident in the high praise given by the most critical audience of all, the student body.

Sound for the film was by Harry Lee and Todd-AO. Color was by Consolidated Film Industries.

Great River: the Story of the Columbia

New Interior Picture a Panorama of Power and Flood Control

SPONSOR: United States Department of the Interior, Bureau of Reclamation.

TITLE: *Great River*, 28½ min., color, produced by F. K. Rockett Productions.

"To every thing there is a season, and a time to every purpose under the heaven . . . a time to break down, and a time to build up. . . ."

The words from the Biblical book of Ecclesiastes, in the voice of narrator Art Ballinger, set the pace for the story of the Pacific Northwest's Columbia Basin country, and the *Great River* which surged through it for 700,000 centuries before being ready for man—or man for it.

From arid surrounding countryside to the mountain barrier which reduces rainfall to a few inches to lush agricultural land, from surging water—sometimes flooding disastrously—to taming dams and their power sources to placid waters used for ship-borne commerce and recreation, the film story provides its own color as it moves along like its central subject, the mighty Columbia.

Shown are the first three dams built over a 10-year period starting in the '30s—Rock Island, Bonneville, and "the dam they said couldn't be built", Grand Coulee, which truly put "a bit in the river's jaws", and then some others among more than 140 now helping to control the Columbia and its tributaries. Productive uses of the impounded and open water are seen, with the growth-sustaining power gained from it supporting 5½ million people and yielding benefits which stretch all the way across the nation.

Dramatic though the accom-

plishments are, it is pointed out, two-thirds of the potential still remains undeveloped, and what is being done now in further moves and what will be done in the years racing toward us will shape the future of a big area for many generations to come, completing the transformation of the Columbia and its tributaries into a system serving all the people of the region.

Effective animated cartography of dams and power grids complements the live photography of Basil Bradbury. Stan Webb was executive producer for F. K. Rockett Productions. Script was done by Al Amundson, Stanley Silverman and Joe Denove, who also produced and directed the film. Russell W. Holt was coordinator for the Bonneville Power Administration, and Harry Stivers for the Bureau of Reclamation of the Department of the Interior.

Volume 2 of Production Music Series Available at Capitol

Volume II of the recently-created Production Music Series (background film music) has been released by Capitol Library Services, Hollywood. The new volume includes more than 100 variations of lively modern jazz for use in television commercials, etc.

The selections are pre-cut to standard commercial timing of 10, 20, 30 and 60-second spots. Lead-outs are provided to shorten or lengthen to scripts without diminishing dramatic effects. The volume is recorded in Hi-Q on 12-inch discs and also contains many programming aids.

Individual use of this second volume can be obtained separately at \$85. Write Capitol Library Services, 1760 North Vine, Hollywood 28, Calif. for details.

Videotronic Twin-Lite Projector

Unusual Animation Features on MPO Overhead Projector

A new overhead projector with several unusual limited animation features has been announced for rental by MPO Sales Meetings, Inc.

Called the Videotronic Twin-Lite, the projector is capable of producing a large number of effects on the screen, such as dissolves, wipes, crawls, as well as a unique sparkle effect.

The Twin-Lite can be rented with an operator for use in various types of direct presentations. Twin-Lite shows may also be easily transferred into motion picture format for easy portability. *

Strong Announces the "X-16" 16mm Xenon Projector Lamp

The Strong X-16, a Xenon arc light source for 16mm motion picture projection, has been announced by the Strong Electric Corp. The lamp is adaptable to

a-v equipment trade fair

NEW PRODUCTS & ACCESSORIES FOR PRODUCTION AND PROJECTION

Porta-Lectern Ready to Aid Speaker With Instant Set-Up

Take it to the meeting, set on a table and a really-new Porta-Lectern, developed by McClure

Projectors, Inc. is ready to serve the speaker! This lightweight unit weighs only 17 pounds but has a 20-watt peak power transistorized amplifier with instant warm-up.

And because it uses two standard 6-volt lantern batteries as its power source there's no "plug-in" problem. For travel, it is attachable in size, enclosed in tan Vinyl saddle-stitched material. The unit comes equipped with a removable 8-inch speaker and has a lavalier-type microphone.

Price of the new McClure Porta-Lectern is \$129.95; additional 8-inch speakers are available at \$19.95. Write the manufacturer at 1122 Central Ave., Wilmette, Illinois or call ALpine 1-8520.

LaBelle Tape Strip "Courier"

Sound Slidefilms in Seconds With New LaBelle "Courier"

The trend in audiovisual equipment is to complete portability. Moving that trend a long way is the new "Courier" sound slidefilm projector out of LaBelle Industries, Oconomowoc, Wisconsin. This all-new unit needs no plugs, no cords and requires no outlets. Turn on a button and its nickel cadmium battery-pack supplies power for more than 10 average-length showings a day.

Retractable power cord is available for overnight re-charging or, if you choose, direct operation on AC current. "Snap-in Snap-out" loading makes for a really easy program change. Tape cartridge has 15-minute capacity; the film magazine has 150-frame capacity in continuous coil of 35mm film-strip. Program is stopped automatically when finished; is ready to repeat. An interrupt button will stop the show when desirable.

Battery-pack and all, the "Courier" weighs only 15 pounds, measures less than 6 x 12 x 17-inches. Get the facts you need on this tool from Ed Riccio, sales manager, LaBelle Industries, Inc., 510 Worthington Street, Oconomowoc, Wisconsin. *

Need Film Shipping Cases? Get Industrial Fibre Bulletin

Stock 16mm film cases, constructed of heavy-duty imported Swedish fibre, metal cornered, with buckling web-strap and mailing card holder, are shown and priced in a bulletin available from Industrial Fibre Products Co.

The cases handle one, two, three or four reels; stock sizes take 400, 600, 800, 1200, 1600 and 2000-foot subjects. The firm also provides Videotape cases as well as camera and other holders on a custom basis. For details, write William Bal—3658 S. Main, Los Angeles, Cal. 90007.

Unique Principles, Material in the Lowel-Light Vari-flector

The new Lowel-Light Vari-flector for still and motion picture photography provides a truly portable, light-weight sun reflector. This unit, from Lowel-Light Photo Engineering, 429 W. 54th St., New York, N. Y., involves several unique principles and materials in a design which controls sunlight to shadow contrast.

The Vari-flector mounts on a special stand, has positive "pan," "tilt" and height adjustments. It

Lowel-Light Vari-flector is shown in varying sizes, together with convenient carrying cases.

rolls up in seconds and is encased in a fibre tube (with stand) for transport or storage. Important detail is the "flooding" mechanism which provides continuously adjustable brightness and "spread" control, similar to a spot light. Bright, extremely even, reflected light pattern can be spread out over an area three times larger and the intensity reduced three times by an infinitely adjustable cam lever.

The Vari-flector also doubles as a shadowless indoor "fill," highly suited to fashion or commercial photography when "soft" light is essential. Aluminized Mylar reflecting surface is bonded to resilient aluminum slats. It is rigid in the wind, washable and scratch-resistant. Available in two sizes. Vari-flector prices range from \$24.50 to \$149.50.

HPI Slide Projector-Screen in Museum's Design Exhibit

A self-contained slide projector-screen combination which has been miniaturized for desk-top use and yet is large enough for multi-person viewing has gone into the famed Design Collection of the Museum of Modern Art in N. Y. The "10 Square Slide Theater," designed by Eugene Martinez, a

a-v equipment trade fair

co-founder of Hudson Photographic Industries is believed to be the first photographic product of its type to earn this distinction.

Kalart "Soundstrip" strip-sound projector with continuous attachment.

Scenes and Sound in "Syne" With the Kalart "Soundstrip"

Automatic, continuous operation of sound filmstrips (slide-films) is possible with the Kalart "Soundstrip" projector. This equipment has an entirely new principle, utilizing both color transparencies and optical sound track side-by-side on 35mm strips.

Strips of any length from five pictures with two minutes of sound, up to 100 scenes with 30 or more minutes of audio, can be projected automatically or on electrical cue signal, by means of a continuous loop. Printed on the same strip, pictures and sound track cannot get out of synchronization or sequence. The image can be projected on either front surface or on rear-projection screens. Sound can be amplified through the built-in speaker or heard through one or more accessory headsets.

Kalart notes that "Soundstrip" films are economically printed from existing slides and tape-recorded narration. For further details on this system contact Hy Schwartz, vice-president, The Kalart Company, Inc., Plainville, Conn. Phone him at SHerwood 1-1663 (A C 203).

Low-Cost "Electrolet" Screen Now Available from Da-Lite

The new Da-Lite Electrolet puts electrically-operated projection screens at popular price levels. Easy installation (two screws fasten to wall or ceiling) and operation is switch-touch which rolls new screen down into position ready for showing. Another touch and screen automatically moves up into vinyl-textured steel case. Plug it into any standard 110-120-volt outlet using cord and plug with U-Down switch included.

Electrolet is available in three sizes: 50 x 50; 60 x 60 and 70 x 70-inches and has two screen surfaces, "White Magic II" with chemically-coated optical quality beading or mat white surface. Priced from less than \$55 list.

* * *

Improved Operation, Design for Beseler's "Porta-Scribe"

Design improvements which have added to overall operation as well as the appearance of the Beseler Porta-Scribe Overhead Projector, Model 15710, have been announced by the Charles Beseler Company.

A new focusing system, utilizing a friction-drive knob that moves the head smoothly up and down on the column to provide positive, jar-proof positioning of the projected image is a notable improvement. An improved cooling system which now includes intake and exhaust grills on opposite sides of the chassis are other features. This inhibits the collection of heated air inside the chassis.

A principal safety feature of the Porta-Scribe is a safety interlock switch providing automatic cut-off of electricity when the lid of the chassis is raised. Ask the Beseler Co., 219 S. 18th St., East Orange, New Jersey for a descriptive folder.

SOUND RECORDING at a reasonable cost

High fidelity 16 or 35. Quality guaranteed. Complete studio and laboratory services. Color printing and lacquer coating.

Today's 1964 Arriflex-35 Model II B with transistorized, governor-controlled motor, carrying new 100' color magazine with drive mechanism.

Arriflex-35 Celebrates a 25th Birthday

THIS IS A BIRTHDAY YEAR for the Arriflex-35. The professional motion picture camera which inaugurated a new era in cinematography just 25 years ago (it became commercially available in 1939) is "in focus" in 1964 as its U.S. distributor, the Arriflex Corporation of America, launches a trade-in celebration as its birthday "event."

Through this promotion, any old Arri-35, regardless of operating condition, is worth a sizeable amount of cash (as much as \$2,500) if traded in on a new model through one of the Arriflex dealers participating in the anniversary celebration.

Share Honors for the Design

The masterly design of the Arriflex-35 was the conception of three men: Dr. Robert Richter, Dr. August Arnold and Erich Kaestner, chief design engineer. Many of the camera's original

features were ingenious. One of them, the mirror-shutter reflex system and through-the-lens focusing, has been widely imitated.

Externally, the camera's familiar silhouette has remained basically the same through the years, a tribute to its proper original design. However, there have been many improvements and additions to the camera through the years as its makers kept pace with constantly-changing demands of the industry.

Features Serve Changing Needs

Some of these: a new reflex shutter with an approximately 180-degree opening; magazines with larger capacities for color film; a new film take-up mechanism; a cardioid, cam-driven transport claw for precision film movement; variable shutter; signal generator with start marker; stronger variable speed handgrip motor with "forward" and "reverse" switch-

ing; transistorized, governor-controlled motor; and adjustable matte box with leather bellows.

Happy anniversary, "Arri" and to all who made it possible!

Original Arriflex-35, 1939 vintage. Note simple magazine and turret in this front view of basic camera.

Rotor Converter Power Pak Is New at Camera Service Center

A new power supply and converter for motion picture cameras, the CSC Rotor Converter Power-Pak, to convert 24 volts to 115 volts, is now available from Camera Service Center, Inc., New York.

The converter is enclosed and mounted for silent and vibrationless operation. Features include a trunk construction case, on-off switch, frequency meter, frequency control, pilot light, two twist-lock AC outlets, and 750 watt output (about six amps — sufficient to operate two Mitchell cameras, tape recorder and all accessories for two hours of continuous or eight hours of intermittent shooting). Power requirement for the converter is 24 volts at 80 amps.

The companion power source for the converter features an 80 amp spill-proof storage battery with carrying case, built-in charger capable of replenishing the battery overnight, built-in two-position operating switch, pilot light, and amp and volt meters.

The converter and power source are available for both sales and rental.

New Carrying Case, Screen for Technicolor "Instant" 8

There's a new combination carrying case and screen for users of the 8mm Instant Movie Projector, offered by Technicolor Corporation. New case holds Model 800, 500 and 250 projectors. It takes projector with one

"Slide Sheet" for Mounting of 2 x 2's Offered by Plastican

A new "Slide Sheet" for mounting 2 by 2 inch slides has been introduced by the Plastican Corporation. Each sheet, which is made of tough, light-weight plastic material, holds 20 slides, allowing for easy viewing, cataloging and storage. Sheets are punched along the side so that they may be bound into any standard ring-bind notebook.

This new system of storing slides permits a good-sized col-

lection to be bound into neat convenient notebooks. Slides can be easily indexed, located and viewed in a matter of seconds. Notebooks holding several hundred slides will also be useful for salesmen offering diversified models or many different types of products.

For further information about "Slide Sheets" write Plastican Corporation, Box 157, Butler, N. J.

Groupshow Screen on Stand a Fast Rear-Projection System

A new solution to the weight and bulk problem in traveling and setting up rear projection viewing facilities is offered in a new combination of stand and screen made by Hudson Photographic Industries, Inc., of Irvington-on-Hudson, New York.

The design is actually a refined version of the equipment used by itinerant peddlers who sell their wares out of suitcases while always ready for a fast termination of business.

The screen, the HPI Groupshow, is a rear-projection system, measuring 18 by 24 inches, that

USE THIS DIRECTORY TO LOCATE THE BEST IN EQUIPMENT, FILMS AND PROJECTION

a-v equipment trade fair

HPI Projection Screen, Stand

folds up into a flat case for easy portability. The stand, called the HPI Quadrapod, weighs 4½ lbs., folds to a 4 inch diameter and holds the screen 42 inches above the floor. The system sets up or knocks down in a few seconds. *

Buhl's Koolite Model 7000 for Overhead Transparencies

For overhead transparency projection, the new Koolite Model 7000-R.E.D., recently introduced by the Buhl Optical Company, Pittsburgh, Pa., combines low silhouette design with high head convenience.

New rapid elevating device lets the operator raise or lower the screen image by turning a knob while the machine itself remains perfectly level. Other features include self-leveling spring-loaded feet and positive rack-and-pinion focusing. Net user price of the Model 7000-R.E.D. is \$339.50.

Treise Engineering Announces Compact B&W Film Processor

Recently announced by Treise Engineering, Inc., is the new Model MT-10 Processor for black-and-white, negative or positive, 16mm, 35mm, or 16/35mm combination. The processor takes only 3' x 5' floor space and can be supplied to process 35mm up to 10 feet per minute or 16mm up to 20 feet per minute.

The unit is self-contained and requires only simple plumbing and electric plug-in. Daylight operation. The processor features temperature controls and is especially designed to provide a pro-

Treise B & W Film Processor

fessional quality in-plant processing facility.

Because of its compact size, ease of handling, and quality control, the Model MT-10 Processor is ideal for use in microfilm, radiology, and TV station operations.

Prices on the Model MT-10 start from \$3150.00. For complete literature, write to Treise Engineering, Inc., 1949 First Street, San Fernando, California. Mention BUSINESS SCREEN. *

Sonex Has a Double-System Sound Package for That Bolex

A new low-cost double system sound package for the H-16 and H-8 Bolex cameras has been announced by Sonex Engineering Co. Package contains all elements required for professional quality sound film production. Included are a sound blimp for silencing the camera; a sync motor to drive the camera at constant speed; and a pulse signal kit which makes most ¼-inch tape recorders usable for sound track recording.

Separation of picture and sound track to facilitate editing, most technicians agree, makes a double system superior to single system; in the latter, track is lost as cuts are made. The sound track is transferred from the tape to sprocketed 16mm magnetic stock for editing, then transferred back to picture when editing is completed. Both optical and magnetic sound track may be made from the edited magnetic track.

Two series of sound blimps and sync motors are available. The professional blimp and motor sell for a basic price of \$299.50. A lighter, semi-pro version sells for \$149.50. Pulse signal kits are

Bolex With the Sonex Blimp

\$29.95 for stereo machines and \$99.50 if used on monaural machines for which an extra recording head must be added. Optional follow-focus and external 400' magazines are available in the professional series; the semi-pro series will not accept the magazines.

For full details, write Sonex Engineering Co., Box 1189, Glendale, Calif. Please mention BUSINESS SCREEN. *

The BIG Audience for Your Picture in the Theaters

by Robert Finehout
Vice-President, Association Films

ALL OVER THE COUNTRY there's a ferment of interest in moviegoing. Extraordinary films are doing extraordinary, even record, business. While selectivity is still the rule those films with the right box office chemistry are playing to full-houses.

There's talk everywhere of such films as *Tom Jones*, *Dr. Strangelove*, *Charade*, *Seven Days in May* and, yes, *Cleopatra*. The boom is even more apparent in actual money at the box office. *The Longest Day*, for example, is already the top grossing black-and-white film in history (\$25 million) with its June D-Day reissue yet to be heard from.

Six Million Saw "Europa" in Eight Months

What does all of this augur for sponsors interested in reaching theater audiences? The current 10-minute film *Europa* may provide the answer. This delightful demi-tasse has been seen by more than six million persons in the eight months it has been in distribution.

Sponsored by the European Economic Community, it chronicles the great events — historic and at times histrionic — that have led to the creation of the Common Market. Ideal subject matter for a high-domed, sober-sided documentary for sure. Instead Pelican Films, Inc., the producer, chose to make it a witty, whimsical cartoon that entertains as it informs.

In its first 1,659 playdates, *Europa* has played to an average audience of almost 4,000 persons per theater, or twice the norm for a sponsored short. This is due in great measure to the method of distribution that was followed.

Key Cities Provide 50% of Boxoffice

Working in concert with Harry Willard and his Theatrical Film Distributors, Association Films concentrated initially on the top key cities in the country: New York, Chicago, Los Angeles, Washington-Baltimore, Boston and San Francisco. These cities represent almost 50% of the national box-office gross in the country. For the first four months *Europa* played these keys — and their suburbs — exclusively.

Contacts were made with major circuits, art theater chains, film booking services and important independent theaters. Publicity was sent to all trade magazines, personal letters to theater chain heads and preview prints made available on short notice. The results?

In the jargon of *VARIETY*, it's a "blockbuster!"

Europa has been held-over, shown with reserved-seat attractions, booked into "showcase" theaters and shown as the companion piece to some of the finest foreign and domestic films. In San Francisco it played ten weeks with *West Side Story* and seven weeks with *The Miracle Worker* in two of the largest downtown theaters.

It has had two Broadway engagements, played an "art circuit" with the highly-touted comedy, *Divorce — Italian Style*, and was

"Europa" is showing how the Common Market was born to theatrical audiences. 1,659 theaters have shown it to more than six million people.

held five weeks with *The VIP's* in an affluent New Jersey suburb. This is just a sprinkling of the dates. It has been booked with *The Manchurian Candidate*, *8½*, *Lawrence of Arabia* (in its popular-price engagements), *Barabbas*, *Days of Wine and Rose* and *David and Lisa* (where it premiered in Fairfax County, Conn.).

While much of its success is due to the pattern of playoff, great credit must go to the film itself. Far from being an ordinary film, *Europa* has a charm, distinction and "eclat" all its own.

Written and directed by Ted Lowry, it makes use of woodcuts, engravings, photos and old newsreel footage as background material to some very clever animation.

Joe Dunford, president of Pelican, refers to

Experience is not a Place Experience is People

In film production, quality depends on experienced people working with complete facilities. Film Associates has the people and the facilities.

Film Associates guarantees the result one hundred percent of the time.

FILMS FOR THE THEATERS:

the style as the "Europa technique." The film was shot in 35mm Eastman Color and framed for wide-screen projection, a most important consideration.

What does theatrical distribution hold for other sponsors? The opportunities today are probably greater than ever before. Here are a few points to be kept in mind:

Factors Which Favor Theater Distribution

1. **SHORTAGE OF SHORTS.** With but few exceptions short subjects have never been profitable. Today most major studios have drastically reduced production of shorts. This means more screen time is available for the right sponsored film because theaters are interested in a balanced program: short-trailer-feature.

2. **DEMISE OF THE DOUBLE BILL:** Thousands of theaters no longer play double features; shorts are needed to round out the program.

3. **NEW THEATERS OPENING:** More than 280 theaters have been started during the past two years, of which 183 are indoor and 95 drive-ins. Theaters are beginning to follow population drifts toward the suburbs and exurbs where some 65 new theaters have opened in shopping centers.

4. **FOREIGN FILM BOOM:** Not all imports are successful, but those that are do sizable business, comparable to important American films: *Tom Jones*, for example. The audiences are, in the main, more affluent, better educated and in their twenties and thirties.

5. **NEW DISTRIBUTION PATTERNS:** The so-called "showcase" multi-theater playoff has been very successful in New York and other key cities. This brings first-run films to the neighborhoods and suburbs, simultaneous with the downtown premiere.

6. **MOVIEGOING AN EVENT:** Many theaters and renovated old ones are luxurious, pleasant places to visit, with art shows, free coffee and stereo in the lounge. Going to the movies is something special, a night out!

7. **SOPHISTICATION OF AUDIENCES:** As Americans mature so do their tastes. Good documentaries, cartoons (not the cat-and-mouse type) and travelogs are well received if cliché free and fresh in approach.

PROFESSIONAL USER'S GROUPS

Received after presstime, here are the facts on Britain's foremost user group:

BRITISH INDUSTRIAL FILM ASSOCIATION

OFFICE: Michael Shersby (Secretary), Durrant House, Chiswell Street, London E.C.1., England.

OFFICERS: Sir Ivone Kirkpatrick, *President*; The Earl of Drogheda, The Earl of Halsbury, The Lord Baillieu, The Lord Heyworth, *Vice-Presidents*.

COUNCIL: R. E. Tritton (British Petroleum) *Chairman*; Edgar Anstey (British Railway Board), Clive Barwell (Mullard), Maurice Buckmaster (Maurice Buckmaster Associates), J. Campbell Fraser (Dunlop), W. P. N. Edwards (Federation of British Industries), S. Lyle-Smythe (Pilkingtons), M. W. Pitts-Tucker (Courtaulds), G. B. Still (British Oxygen), Brian French (Shell International).

PURPOSE: To promote the best use of film in the service of Industry and Commerce and in particular (a) to foster the exchange of information and experience among industrial organizations interested in the use of films, and (b) to encourage the wide distribution and use of British industrial films at home and overseas.

MEETINGS AND ACTIVITIES: Monthly meetings in London and cities in Britain, publication of a quarterly "Bulletin" of news and comment items, loan of cinema facilities between members, confidential advice on production facilities and services. Organizers of the 5th International Industrial Film Festival in London, November 1964. Membership restricted to sponsors and users of industrial films, advertising agencies, public relations consultants and non-theatrical film distribution companies admitted as associate members.

This "Wonderful World"

is being enjoyed by audiences
around the world...
in vivid color...in 16 languages

Color and action, well selected and directed, help to develop markets... moving products and moving people mentally and emotionally.

Ask to see successful applications of new color techniques, well applied.

One of the finest examples is "Wonderful World," produced for The Coca-Cola Company.

NUMBER 2 • VOLUME 25 • 1964

THE CASE FOR SPONSORED FILMS:

One out of three is in!

It's a fact. Far more than $\frac{1}{3}$ of the population...one out of every three people...lives or works within easy access to one of Modern's 32 film libraries. This network blankets the country with walk-in convenience (and motivation) for more than 65 million* people who belong to the church, club and educational groups who use sponsored films.

It's one more case for sponsored films...and it's a strong case for Modern's distribution system.

Please pardon a moment of pride

St. Barnabas Hospital in New York needed funds to carry on research in the treatment and care of the chronically ill. The hospital decided to launch a 12 million dollar fund raising campaign, and their agency came to Wilding. We produced a documentary film of great sensitivity on a limited budget. Its title is *To Live Again*. By adapting the film for use on 8mm sound projectors, campaigners show the St. Barnabas story to prospects face to face . . . in an office, over a conference table. Results are gratifying.

Recently, *To Live Again* was nominated for an Academy Award. Wilding is truly honored.

we work with you ...against the clock

Wherever in the world you are, if you're near a major airline, you're close to our laboratory's fast schedule for quality processing. Here are a few typical examples from our files.

In our home town, 35mm or 16mm negative in by 11 p.m., developed and doilies ready 9 a.m. next day. 16mm Ektachrome developed overnight.

Ektachrome in for developing ...color workprints in customer's hands in 3 to 4 days total elapsed time. (Same schedule for Honolulu customers.)

17,000 miles and through customs four times; Ektachrome developing and workprints delivered in 5 days. 35 mm color or b&w negative in 4 days.

Three days round trip for developing and doilies, for 35mm color or black-and-white negative, including four custom stops along the way.

For 35mm or 16mm, anywhere in Puerto Rico or the Canal Zone, the round trip takes three or four days for most processing assignments.

16mm release prints in quantity and top quality, color or b&w, from 16mm A and B rolls through dupe, five to ten working days.

2-8

How about you? Jet transportation, combined with General Film's fast gearing of procedures and facilities, has solved many producer problems.

ask us for complete information

We have a new price list awaiting your request. We will be happy to quote delivery schedules. We believe both the prices and schedules will be to your liking. We know you'll like the quality!

Taste

...stems from a sensitive eye and ends in persuasive logic

Good communications should combine taste, logical thinking and careful planning. Using all three, our objective is to create respect as well as the greatest appeal for your product.

Have you seen "Designs Against the Sky"—one of a series for the American Iron and Steel Institute?

Color Quality through color control. An advanced concept . . . COLOR ADDITIVE PRINTING. Making use of human knowledge, but eliminating human error. □ It begins with skilled Byron people, programming a controlling tape to tell the additive printer what to do. Once the precision equipment has been told, it makes no error. Punched tape automatically adjusts three light vanes—that control the intensity of each primary color—red, green and blue. Gone are the not-always-reliable filters of subtractive printing. The Color Additive Printing method gives a consistency of color and sharpness of image which never varies . . . print, after print, after print. Yours at Byron . . . where film producers from all over the world turn for the finest in 16mm color—Byron "Color-Correct"™ Prints.

HOW DO YOU

MEASURE QUALITY

IN FILM TRANSFERS?

Clarity. Definition. Truest grey scale. All are measures of quality demanded by the most critical buyers we know—our customers! Companies like MGM-TELESTUDIOS, MCA-TV, HEATH De ROCHEMONT, AMERICAN MOTORS, even AMPEX.

We've been perfecting quality for 18 years. To insure quality control all of our work is done under one roof. AND...we offer "in by 9—out by 5" processing—with your transfer jetting back the same night. But, *don't* take our word. Try us and see. Optimum quality always guaranteed. American Science Film Assn. Meets in Washington May 11-13

Science film makers of the United States and abroad will meet in Washington, D. C., May 11-13 at the annual meeting of the American Science Film Association to report on new uses of the motion picture as a research tool, for reporting research results, and for science education. On Monday and Tuesday evenings, May 11 and 12, the public will have an opportunity to view films selected for the first annual Science Film Exposition.

The meeting and the Exposition will be held at the Marriott Motor Hotel (Twin Bridges), U.S. Route 1, Washington, D.C.

The professional sessions, running through Wednesday, May 13, will feature reports on radically new types of brief, single-concept teaching films; included among the research films will be those showing time-lapse studies of dividing cells, living bone, and nervous tissue; high speed studies of the larynx; use of the double-flash strobe in estimating capillary flow rates; and motion picture studies of humans subjected to high acceleration.

Other features of the professional sessions include a presentation on the unique Encyclopaedia Cinematographica in Germany by its founder and director, Dr. Gotthard Wolf, and a presentation on animation by computer.

Registration will begin at 5 p.m. Sunday May 10, in the foyer of the Persian Room of the Marriott Hotel. Registration fee is \$5.00. A number of rooms are being held at the Motor Hotel for pre-registrants, who are advised to write directly to the manager. For further information about the meeting of the American Science Film Association, please write to that organization, 704 Seventeenth Street, N.W., Washington, D. C. 20006.

Announce Offering of Shares of Wilding, Inc. Common Stock

An underwriting group headed by William Blair & Company announced the offering in mid-April of a registered secondary block of 200,000 outstanding shares of Wilding, Inc. common stock, \$1 par value, at a price of \$15.50 per share.

The company will receive no part of the proceeds from the sale of these shares. The shares com-

prise about 50 per cent of the capital stock outstanding and are being sold by certain stockholders. There has been no quoted market for Wilding common stock.

"Day of Visuals" Awards and Seminars in N.Y. June 24-25

☆ The National Visual Presentation Association will hold its Annual "Day of Visuals" at the Commodore Hotel in New York on June 24 and 25.

The two-day program of awards presentations and seminar programs has been organized by Chairman Leon Luxenberg (CBS). *Audio-Visuals: How and Why We Use Them* is the overall theme of the Seminars, which will be applied by practitioners in Public Relations, Training, Advertising and Sales Promotion, on Wednesday, June 24.

The following day will feature workshop meetings, one on graphic statistics and the other on planning a meeting. Representatives from four major companies will demonstrate the various ways which statistics can be made to come alive and tell important stories. Featured in the meeting-planning session will be considerations of conventions, sales meetings, traveling shows and small conferences, hastily called.

"Day of Visuals" Awards will be presented in seven categories of Motion Pictures, Filmstrips and Other Projected Visuals: General Public Service, Sponsored Educational, Employee Relations, Employee Training, Sales Training, Industrial Sales and Sales Promotion, Consumer Sales and Sales Promotion. In addition, awards will be presented in an eighth category which includes all non-projected visuals such as flip charts, flannel and magnetic board programs.

All entries for the awards competition must be in by May 20. Entry blanks can be obtained from NVPA, 19 West 44th Street, New York, New York 10036.

4th International Film Event Moved to Hilton in New York

☆ The Fourth International Film & TV Festival of New York, held in conjunction with the Industrial Film & AV Exhibition trade show, has been moved to larger facilities at the New York Hilton. The three-day event, October 21-23, will again feature industrial films. (CONTINUED ON PAGE EIGHT)

This salesman costs his company \$45.00 a day.

This salesman costs his company \$45.75 a day.
(His sales are 32% higher)

The machine he's carrying is an MPO Videotronic 8, a lightweight repeating motion picture projector. With it, he is able to demonstrate his product in color, with sound. It helps him reach groups of decision-makers on his calls. It continually trains him to do a better job. It presents the company's selling message the same way every time. It costs his company 75 cents a day.

Little enough for the most effective sales tool he's ever had.

Try it on your men. Write to Repeater Sales Division, MPO Videotronics, Inc., 210 W. 65 St., New York 10, New York. Or call TN-7-8200 (code 212).

MPO Videotronic 8 AUTOMATIC REPEATER PROJECTOR

CAN CLOSING START BEFORE A CALL IS MADE?

Yes! Even before a salesman enters a prospect's office, the sale should be made mentally. This color film-strip shows how to accomplish this; how to plan in advance of the interview. It's one of a powerful series.

"Closing the Sale"

demonstrates how to make presentations that keep on eye an closing ... from the moment of the opening. It provides examples of how to pursue the order ... how to counteract a refusal to sign ... and how to resume or continue selling when the prospect appears to have ended the interview.

"SELLING IS MENTAL"

offers six sales training filmstrips oriented on the attitudes and techniques of dealing with people ... to reduce your problems in training.

U.S. Film, Projector Exports Sharply Up During Past Year

Motion picture film and equipment shipments from the U.S. rose about eight per cent to \$42 million in 1963. The U.S. Department of Commerce, reporting these export statistics, also noted an increase of 28 per cent in shipments of still picture equipment and an increase of 23 per cent in still picture film and paper.

Exports of 16mm sound projectors were down slightly with 5,882 units sent abroad in 1963 as compared with 6,151 in the previous year but shipments of 8mm projectors nearly doubled as 51,160 went abroad in '63 as compared to only 25,661 machines in 1962. There was also a slight increase in projection screen exports which totaled \$2,914,339 in the past year.

American Medical Association Catalog Lists 3,000 Film Titles

A major task in collating and indexing of medical and surgical motion pictures, has been completed by a special task force in the American Medical Association, headed by Ralph Creer.

A new catalog of "Medical and Surgical Motion Pictures" (said to be the most complete of its kind) lists 3,000 available films dealing with every phase of the healing arts. It is expected to prove an invaluable reference tool for the training of medical students, nurses and graduate physicians. Aimed at the potential users of films of a professional nature, the catalog includes films for personnel in ancillary fields of medicine.

The film listings are divided into three general categories: basic sciences, clinical medicine and surgery, and para-medical sciences. It is then subdivided into some 600 specialty subjects with films listed alphabetically under each specialty.

Included with the listings is a brief summary, running time, black & white or color, silent, optical or magnetic sound, year of release, language versions other than English, names of authors and

producers, and the name and address of the primary rental source.

Films have been chosen which are readily available in the United States. In many cases, a critical evaluation of the motion picture is included with its listing. Present plans call for the catalog to be updated periodically.

The Catalog of Medical and Surgical Motion Pictures is available at the cost price of \$5.00 to addresses in the U. S., U. S. Possessions and Canada; copies are \$5.50 to other foreign addresses. Write: the American Medical Association, 535 N. Dearborn Street, Chicago, Illinois 60610.

The Script

Yes ... we do have an Ivory Tower (Tower 1-4577). Had it 12 years now. It's important.

It's downtown, but quiet. We can concentrate on your script, give it our best, hit your deadline.

"But outside script writing costs more." I guess so ... initially. And the work is such a privilege, it's a shame to take the money.

Yet ... a bargain script (that won't fly ... play ... sing ... sell ... swing ... or cut together) wastes a fortune's worth of: director; cameraman; sound men; lab men; editors; account execs ... and lost clients.

What's needed on the script is not a mad, precocious genius juggling two phones and three meetings ... but a good imaginative professional who has the time to concentrate intensively on your script ... and through-the-mill understanding that this is a great privilege for a writer. That's how our company of script-writers feels. Hence the importance of an Ivory Tower.

PACK YOUR SALES STORY *into this NEW type Automatic Motion Picture Cartridge*

**Model 700—for Unattended Store Displays,
Windows, Demonstrations and Exhibits**

The New **Technicolor**[®] AUTOMATIC DISPLAY PROJECTION SYSTEM

Magi-Cartridge[®] holds motion picture film of product demonstration in full color. Snaps in to load—no threading, no rewinding. When button is pushed, display light turns off, movie appears on TV-type screen in full daylight. Stops automatically and display light turns on when picture is ended. Compact, rugged, yet easily portable. Requires no operator.

New FREE Booklet tells a complete story. Find out how Technicolor 8mm Instant Movie Projectors can sell for you. It can be important in solving your selling or demonstration problems. Write today!

123 S. HOLLYWOOD WAY • BURBANK, CALIF.

In Stores

Puts life and action into mass displays and demonstrations. Ties in with TV, radio and newspaper advertising. A proven product seller!

In Windows

Attention-getting device stops traffic and sells products any hour, day or night—even when store is closed.

For Exhibits

Requires no attention. Tells story that still pictures can never tell.

TECHNICOLOR WILL MAKE YOUR 8 MM PRINTS, TOO!

Show your product at its best in "color by Technicolor."

Technicolor prints now available in 8, 16, 35 and 70 MM.

THE NATIONAL COMMITTEE on Films for Safety has named sponsors and producers of six motion pictures and of one sound slidefilm series as the recipients of its highest (bronze plaque) awards for the "outstanding safety films produced in 1963." 10 other safety motion pictures, one sound slidefilm and two short television spots were accorded the Committee's Award of Merit certificate for general excellence.

An outstanding series of 27-minute color motion pictures, *Man and Safety*, was the sole winner of a bronze plaque award in the field of general safety. Produced by Graphic Films Corporation for the Directorate of Aerospace Safety of the U. S. Air Force, this series of five films gives recognition to the "built-in" limitations of man as a means of eliminating accident-producing factors. The same sponsor received another plaque award (in the field of occupational safety) for the 22-minute film titled *Passport to Safety*, produced by Filmasters, Inc. This picture shows parachute safety training techniques for airmen.

Two Plaques to Canadian Safety Films

Two Canadian films were the other motion picture plaque winners for occupational safety use. *The Inner Mind of Milton Whitty*, sponsored by the Construction Safety Associations of Ontario and produced by Westminster Films Ltd., deals with construction accidents. *They Called It Fireproof* was produced for the Dominion Fire Commissioner by the National Film Board of Canada. It dramatizes rules infractions which lead to a disastrous fire.

Year's Best Safety Pictures Cited by National Committee

17 Motion Pictures and 3 Slidefilms to Receive Plaques and Merit Awards

✱ Charles Cahill & Associates' film *E.V.O.C.* (*Emergency Vehicle Operations Course*) was one of the two plaque winners in the field of traffic & transportation films. The film was sponsored by the California Highway Patrol. The other traffic plaque winner was *The David Hall Story*, sponsored by Employers Mutuals of Wausau and filmed by Productions of Florida, Inc.

Plaque to American Gas Slidefilm Series

A series of three sound slidefilms, *Nix the Six*, created for the Accident Prevention Committee of the American Gas Association by Fred A. Niles Communications Centers, Inc., won the only plaque award for that medium. The series received top honors in the field of occupational safety. An Award of Merit went to *The Professionals*, a sound slidefilm sponsored by the Clark Equipment Company.

An Award of Merit was given the film *Children at Play — With Poison*, a home safety subject produced for the U. S. Public Health Service by Creative Arts Studio, Inc. Cahill Associates also shared two Awards of Merit in the traffic category for *Freeway Driving Tactics* and *Highball Highway*, both self-sponsored.

Home for the Holidays, another Directorate

of Aerospace Safety-sponsored motion picture, won an Award of Merit. Wilding, Inc. was the producer. Other Merit Award winners: *Ski Sense* (Aetna Life Affiliated Cos.); *Ski-Ways to Safety* (Kiekhäfer Corp.; Telefilm Prods.); *Smartest Kid in Town* (National Society for the Prevention of Blindness — Harvest Films, Inc.), all in the field of general safety. The *Safety Management Series* (eight films) was an Award of Merit winner in the field of occupational safety. This series was sponsored by the National Safety Council and produced by Gilbert Altschul Productions, Chicago. In the same category, *Man Overboard Recovery* won a Merit Award for its sponsor, the U. S. Naval Photographic Center and the producer, Bray Studios, Inc.

Out of the 13 television spots which were finalists, the judges selected a one-minute subject, *Jungle Jingle* (produced for the N. Y. City Department of Traffic by McCann-Erickson, Inc.) and a three-minute film, *So You Don't Use Seat Belts*, produced for The Reader's Digest Association by Vavin, Inc. for Awards of Merit.

Judges Are Leaders in Safety Education

Heads of organizations judging the National Safety Film Contest include the leaders of principal automotive, traffic safety and other national groups directly concerned with this problem. William Englander of the National Safety Council is its secretary. A total of 55 motion pictures and slidefilms (plus additional series titles) and 13 tv. spots were among the finalists in this year's contest.

*Fastest and finest in quality color reversal films
Anscochrome D/200, D/100 and D/50!*

A whole new world of picture possibilities is opened to you with these important new Anscochrome® high speed films!

Anscochrome D 200 is much *more* than an extremely fast color film. It is also a *quality* color reversal film—with exceptional color fidelity, good color saturation and sharpness you have never associated with high speed color films.

In Anscochrome D 100, you get a *fast* color film of magnificent quality. Color rendition is superb, with rich, fully saturated primaries and delicate shadings handled with amazing fidelity. The high acutance of Anscochrome D 100 makes it an excellent choice for assignments requiring big screen images. For work under the lights, choose Ansco-

chrome T 100, the companion film especially balanced for Tungsten illumination.

Anscochrome D 50 brings you superb color quality and sharpness in a 16 or 35mm daylight film with a speed of 50—ideal for many outdoor scenes.

These new Anscochrome films are available in long lengths of 16mm, 35mm and (except Anscochrome D 50) 70mm stock. Be sure to try a test roll soon—and discover how much good color you've been missing!

focus on film safety

Kalart/Victor 16mm projectors have a reputation for film safety. For 35 years, Victor Projectors have had three Safety Film Trips (one for each film loop) as exclusive components of the film transport mechanism. These Safety Film Trips spot film trouble before it happens and stop the projector instantly and automatically. Saves thousands of dollars in film damage annually. Kalart/Victor's large diameter Single Drive Sprocket moves film in and out of the projector smoothly and at one constant speed . . . no chance for film "pile up." These features give even beginning projectionists full confidence, allow them to concentrate on putting on a good show, with no interruptions. And a good show it will be with a clearer, brighter picture and brilliant sound . . . a combination that increases learning power. For full details see your Kalart/Victor dealer or write:

"An abstraction of multiplied wings like brushstrokes against the sky . . ."

Multi-Image Look at the Idea of Seeing

Saul Bass Creates "The Searching Eye" for Kodak's Pavilion

WORKING VISUAL MIRACLES within a brief 20 minutes on the screen, a 70mm color film is one of the first-rate attractions within the Eastman Kodak pavilion at the New York World's Fair. Designer-turned-producer Saul Bass has created what he calls "a film about the idea of seeing." In the appropriately-titled picture, *The Searching Eye*, he turns a small boy's walk along the beach into a cinematographic treat in which ordinary objects (pebbles, dandelions, sea birds and sand castles) reveal unsuspected worlds of intense visual experience.

To awaken this perception in viewers, the Bass film employs time lapse photography, underwater and aerial photography, micro-photography and stop-action filmed at 2,500 frames a second. The finished production was consolidated on 70mm film stock with as many as six frames of motion visible simultaneously. Two projectors are used for the showings.

For one scene in the film (see front cover, left), a sequence shows man's fascination with the idea of flight. An antique flying rig was copied from early photographs. On film, these few seconds in the sequence show the man as he joins a seagull in flight.

The production includes footage by noted aerial photographer Wil-

liam Garnet, who used a 20-year old Cessna for its slowness and stability. Garnet shot sequences at two to four times normal film speeds for a "floating" quality on the screen. There are breathtaking studies of snow crystals forming and melting by Japan's Rukuro Yoshida, the first ever recorded on 35mm film.

Another sequence — a realistic battle of toy soldiers in the imaginary vaulted chambers of a castle — was executed in stop action and employed an entirely new optical technique. To avoid a feeling of "flatness" in the scene, the specially-designed *lens* of the camera tilts and swings.

The film, in retrospect, speaks in terms of the visually perceivable on at least three levels:

1. The immediately apparent.
2. Phenomena which had been perceived only through such optical-mechanical aids as high-speed or stop action photography.
3. The inner vision of the eye and mind in such moods of the intellect as imagination, cultivated aesthetic appreciation, or in chemical combinations with acquired knowledge.

Bass stresses the fact, however, that his technical virtuosity is only a means to an end. "The conception of the film is poetic," he says. "It is concerned with the wonder of seeing. All creatures see, but man has transformed the idea of sight. The difference between the sight of man and the sight of animals is this extraordinary extra thing we call insight."

The result of Bass' philosophy, in *The Searching Eye*, is a moving and startlingly beautiful ode to the everyday world around us. 𐄂

The Attributes of "Total Communication"

Television Bureau of Advertising Shows Them in "Heart Beat"

THE TELEVISION BUREAU of Advertising's recent film, *Heart Beat*, examines the eight physical facets of "Total Communication" which go into television advertising messages. These are summarized as motion, color, the spoken word, the image, time, space, natural sounds and music.

"Only the advertiser who uses television has at his command all of the elements of Total Communication. And, to communicators who use it most effectively, these elements are like the raw colors that dot the artist's palette. Only those are used that will help the artist get the effect he needs to build up to his 'Moment of Truth,'" the Bureau says.

"Moment of Truth" is the moment when the viewer begins to

per cent new material which emphasizes that the "new" commercial is effective because it shows how people react to a product rather than just demonstrating the product — pitchman fashion.

Some of the year's most effective commercials — Xerox's "Chimp", Purolator's girl with the smudged face, Goodyear's staccato "Go", Crackerjack, etc. — are integrated into the film, while Alexander Scourby supplies a soft spoken approach which blends with the visual excitement.

Al Stahl, who put Ken Saco's designs on film, worked with color stock throughout, even though most of the commercials were on black-and-white. This allowed a system of A and B roll printing to be used, resulting in smooth transitions from b/w live commercials to original color abstracts.

Heart Beat makes a strong case for b/w TV as compared to print advertising in color. "For example, what is color?", the film asks. "In print, color is a substitute for reality, composed of millions of dots which may sometimes duplicate reality."

"But when the television camera takes an ultra close-up to record delicate shadings of black and white, continually changing its hues with movement, it produces texture and appetite appeal more real than real, creating an illusion stronger than reality."

This is why, the film says, Procter & Gamble puts 80 percent of the Duncan Hines food products budget in television.

Twenty-four prints of *Heart Beat* will be used initially for showing in the United States, and 15 prints are in use in Canada. □

"feel" the message, the moment of sensory impact, according to TvB.

Heart Beat, which was designed by Ken Saco Associates and produced by Animated Productions, Inc., is a very tricky but well-integrated vehicle which is being shown nationwide to advertisers and their agencies by local TV stations to point up the tremendous power and versatility of television advertising.

It consists of examples of outstanding commercials recently on the air, combined with about 40

Recurring symbol in the "Heart Beat" film — this watch spring is from an award-winning television commercial sponsored by the Timex Company.

and ...

to put a sales message across

Klopman leans on "Moviematic"

Klopman Mills, Inc., a division of Burlington Industries, wanted to show their new color film "Man You Can Lean On" to 4500 top buyers and store training directors across the country, plus about 7 to 8,000 retail sales people. To do this they supplied each of their local representatives — *all women* — with a KALART VICTOR Moviematic Repeater projector loaded with a 16mm sound print of the film. These representatives then carried the convenient Moviematic to the store people. *Wherever* the buyer, Klopman pictured the "Man You Can Lean On" in the best selling atmosphere... and you can do the same for your business. With the Moviematic you're not selling in the dark. You can see what arouses your prospect's interest... then clinch the sale. That's because the last time you showed it, the film was rewinding itself ready for this time. Is Klopman enthusiastic about Moviematic? You bet! More buyers are specifying Klopman, not just any fabric. How about your product? You can purchase, lease or lease-to-buy the Moviematic. Ask your KALART VICTOR dealer or write:

"Manager Wanted" Latest From Roundtable Films

A new film useful in management development programs has been announced by Roundtable Films. The new 16mm sound motion picture, *Manager Wanted*, explores questions of concern to executives concerned with the selection of supervisors and executives and their upgrading.

Why do men of real ability often fail to make the grade as managers?

How does a man come to "feel" like a manager: want to become one?

How much responsibility does a man have for the development of his replacement?

These are the kinds of questions which groups will be discussing after seeing this 29-minute film. *Manager Wanted* is based on the observation that knowledge and skill alone do not make a manager.

Technical advisor R. H. Hamstra notes that the *feelings* and *attitudes* a manager has about himself are of equal importance. Thus, the film is concerned with the psychological aspects of managerial development.

The film's story line takes up the "case" of Mark Elliott, a hard-driving middle-management executive. His opportunity for promotion quickly dissolves when it becomes apparent that Craig Adams, whom Mark had been training as his replacement, isn't ready to step into Mark's job. While giving "lip service" to the aims of management development, Mark Elliott has never allowed Craig to develop his own judgment and decision-making ability.

Mark learns these lessons before the end of the film. Information regarding rental or purchase of *Manager Wanted* is available from Roundtable Films, Inc., 275 S. Beverly Drive, Beverly Hills, Calif. 90212.

Technicolor Plans to Acquire Shares of Company in England

☆ Technicolor Corporation of America, a wholly-owned subsidiary of Technicolor Inc., plans to acquire the issued stock of Technicolor, Ltd., London, England (approximately 49 per cent) not already held by the American firm. Technicolor already owns approximately 51 per cent of the English firm (1,581,496 shares) with the publicly-held stock of Technicolor, Ltd. amounting to approximately 1,540,304 shares or 49 per cent. The purchase price for the acquisition is close to \$4,500,000 at the price of 21 shillings in cash for each stock unit.

Commenting on the planned full acquisition of Technicolor, Ltd., board chairman Patrick J. Frawley, Jr. said, "This move is in line with the management's confidence in the continued growth and expansion of the motion picture industry and in the increased use of color for productions."

The consolidation will make possible full integration of the overseas operations as well as improving research and production facilities.

Changes in Life of Salesman Shown in IBM-Fortune Film

☆ The life of the salesman — and how much it has changed in recent years — is the theme of a new documentary film on selling recently completed by Fortune Films in cooperation with IBM and the producer, Dynamic Films.

The film had its premiere showing at the April 21 luncheon meeting of the Sales Executive Club of New York, held at the Roosevelt Hotel. It was introduced by H. Wisner Miller, Jr., IBM vice-president and head of that company's Real Estate and Construction Division.

Developed under the supervision of the editors of FORTUNE,

the film takes its theme from one of that magazine's articles, "The Salesman Isn't Dead — He's Different!" by Carl Rieser. It traces the altered status and methods of today's salesman.

As FORTUNE noted, "the old time drummer has been replaced by a new kind of salesman. He doesn't sell the product, he sells service. He knows the customer's business almost as well as his own. He is a trouble-shooter, marketing expert and executive all in one."

The film also places heavy emphasis on the changes in the selling job which have come about through U.S. industry's growing reliance on the "total marketing concept." 21-minute black & white sound prints are being made available on a free loan basis to business firms, trade groups and colleges, through Fortune Films, Inc.

Announce Winning Names for "Ideal" Cast, Production Crew

☆ That contest, naming the "ideal" cast and production crew for your next business film, has been concluded by MPO's spritely house publication, THE SCREENING ROOM.

Readers of BUSINESS SCREEN who entered (we told you about it last fall) can rest easy — you won! It was so close that all contestants were proclaimed winners and will soon be hearing from the editor. (Not us, them.) There's something for everybody who competed but first prize is a new Audio-Fidelity record titled *Fast, Fast, Fast Relief from Television Commercials*.

And here's the perfect cast and crew as selected by a hundred or more of MPO friends and clients:

Count d'Overtyme, Producer
Marcus Feate, Director
Hi Keigh, Director of Photography

B. N. See, Camera Operator
Morrie Ziduals, Male Star

people are talking...

ABOUT THE 1963 WORLD'S LEADING AWARD WINNER IN THE NON-THEATRICAL FIELD

According to John Flory, Past President of CINE Council on International Nontheatrical Events, Washington, D. C.), the organization selected eighty Golden Eagle Award Winners from 254 entries. 72 of the Golden Eagle winners were entered in competition with foreign producers at International Festivals in Edinburgh, Cannes, Venice, Berlin, Padua, Vicenza, and Tokyo, to name a few. A Sutherland Educational film, *MUSIC, THE EXPRESSIVE LANGUAGE*, received more top awards than any non-theatrical film produced in 1963:

1. GOLDEN EAGLE AWARD. 2. AWARD OF MERIT, Edinburgh Festival.
3. FIRST PRIZE for "education of the very young," 14th International Exhibition of Documentary Films, Venice, Italy.
4. FIRST PRIZE for films for primary grades at the First International Educational Film Festival, Vicenza, Italy.

At the Second International Festival for Scientific Films, University of Brussels, Belgium, three of our chemistry films won FIRST PRIZE FOR CHEMISTRY and FIRST PRIZE FOR BEST TEACHING FILMS at the college and secondary levels.

In the 1963 film competition of the National Committee on Films for Safety, *SAFE HANDLING OF LIGHT ENDS*, written and produced for the Petroleum Chemical Division of Du Pont, won an award for excellence, and FIRST PRIZE for employee training films at the National Visual Presentation Association "Day of Visuals."

So—when you're talking about making a film, don't forget to talk with

Sturgis-Grant Productions Has 15th Birthday This Month; Leases 1964 Film in Boston Hospital Where It All Began

STURGIS-GRANT PRODUCTIONS, Inc., marks its 15th Anniversary this month with almost no time out for celebration, thanks to a record number of sponsored projects pressing toward deadlines.

One of these productions, a soon-to-be-released teaching film for diabetics, represents a vivid coincidence in the career of Warren Sturgis, President and Executive producer of Sturgis-Grant. Entitled *Diabetes — What You Don't Know Can Hurt You*, the new film is sponsored by Ames Company, Inc., makers of pharmaceutical products, and was recently shot at the New England Deaconess Hospital and the Joslin Clinic in Boston.

Interestingly, the very first professional film by Warren Sturgis was also photographed at the Deaconess Hospital, in collaboration with the late Dr. Joslin. Produced in 1938, it covered identically the same subject, being entitled *The Education of Diabetic Patients*. For this 400-foot 16mm film Mr. Sturgis billed and received the sum of \$75.

Between that early b/w picture, subsidized by a prominent life insurance company, and the new color film which will be launched by Ames with a full-scale, nationwide, promotional program, Mr. Sturgis has been responsible for literally hundreds of medical, scientific and industrial films, the majority of which he has either written, directed, or produced with a closely-knit staff assembled over the years at the Sturgis-Grant studios in New York.

In various stages of completion on the Sturgis-Grant schedule are: *Modern Obstetrics: Normal Delivery* (Ortho Pharmaceutical Company for the American Medical Association and the American College of Obstetricians and Gynecologists), *The Emergency Department* (for the American College of Surgeons), *Dynamics of*

Dental Caries (for Procter & Gamble, through L. W. Frohlich & Co.), *The Administration of Penicillins* (for Abbott Laboratories), and *Pre- and Post-Operative Care* (for Winthrop Laboratories). □

MPO to Exhibit Fine Arts of N. Y. Advertising People

☆ Believing that not all the artists in the advertising business are employed in art departments, MPO Videotronics, Inc., will sponsor a fine arts show which will feature paintings and sculpture produced by people working in any capacity in the advertising business.

Copy writers, account executives and supervisors, agency producers, as well as art directors, are invited to submit their creative work for the show, which will be held from May 13 to 20, 1964, at the MPO studios at 22 East 44th Street, New York.

A jury consisting of three well-known personalities in the art world will award prizes for both paintings and sculpture. Serving on the jury will be Dore Ashton, teacher and art critic of *Arts and Architecture*, Anthony Bower, managing editor of *Art in America* magazine, and Peter Selz, Curator of Paintings and Sculpture Exhibitions of the Museum of Modern Art.

Eligibility requirements state that original paintings and sculpture, in any medium, may be entered, providing they were completed after Jan. 1, 1959. The artists must be associated with the advertising industry, although they need not be employed by an agency. Submissions may be made by anyone who works for an agency or advertiser, regardless of the job they are working at.

Further information regarding exhibiting may be obtained from Shirley Rothenberg, Director of Special Events at MPO; call her at TN 7-8200 in Manhattan. □

BUSINESS SCREEN MAGAZINE

4 reasons why more film sponsors are using United's custom distribution service

How the vast resources of United World Films, Inc.—an affiliate of the only major Hollywood company in the sponsored film distribution field—make possible a program individually keyed to your marketing and public relations strategy

1.

Greater access to prime 16mm audiences

As the only company in the sponsored film field covering every phase of 16mm distribution, United is constantly adding newer and fresher audiences to its lists. An Educational Films Division provides films for thousands of classrooms; a Religious Films Division services churches of every denomination; the Entertainment Division circulates over 1,200 different feature films in 16mm. These audiences are automatically contacted by United for showings of sponsored films, affording clients a bonus circulation otherwise unobtainable.

2.

More extensive television coverage

United has been able to deliver up to 40% more telecasts than any other film distributor—at a net saving in unit costs. Direct-mail and personal contact helps sustain this lead. In addition, United's

News Parade service can now provide all essential services needed to interpret your public relations story for news use and to obtain its release on regular television news programs.

3.

More extensive 35mm theatrical coverage with more first-run showings

Utilizing the experience and theatre contacts of its parent company, Universal Pictures, United World Films, Inc. is uniquely equipped to supply greater exposure in 35mm theatres. Clients benefit from over a half-century of cinema "know how" and close personal ties with motion picture theatre operators. Mass audiences can be reached with the highest degree of economy in print and distribution costs.

4.

Finer handling and service for United and "sponsor-generated" bookings

With a nationwide network of 43 distribution libraries—17 more than its closest competitor—United assures clients the fastest movement of prints to audiences plus a larger circulation with fewer prints. United's quality control system, one of the most comprehensive in the industry, provides the finest professional care of prints, including electronic inspection and their cleaning and care before shipment.

In case after case, United's *custom* distribution, working as an integral part of marketing and public relations strategy, has more than fulfilled the requirements and expectations of film sponsors . . . delivering *more bookings at costs substantially lower than the industry average*.

Judge for yourself what United can do for your films. The full details on *custom* distribution are contained in a handsome, illustrated report entitled, *How United's Custom Film Distribution Can Improve Your Public Relations Program*. It's yours for the asking. Just phone or mail the coupon below...today.

Steel Firm Shows Fast Freight Handling Method

☆ Market development staff men of the United States Steel Corporation are bringing transportation executives and other business men concerned with greater efficiency in freight handling the story of a fast, new method of containerized shipment via a short but effective color motion picture. *A Transfer Concept for Freight Containers.*

This 9½-minute sound film features an operating model which shows how standardized freight containers may be transferred to or from moving rail cars and trucks by means of overhead tracks. For high density traffic points, the system can load or unload carload lots or an entire train while it passes the terminal at a speed of five miles per hour.

The operating model could not be brought to important executive audiences but the film, produced by The Jam Handy Organization, has proved a highly-effective tool for this top-level audience presentation.

* * *

What's So Funny About All Those Lost Sales?

☆ The Maremont Corporation, a leading supplier of automotive accessories, is again using the film medium to help improve service station sales opportunities.

In a light-hearted 15-minute color film, starring the venerable Buster Keaton, station owners are shown how the "funny" situations can turn out like the film's title, *There's No Business Like No Business*. Keaton takes sales "prat falls" on such opportunities as a car that literally rocks like a teeter totter due to worn shock absorbers, misses a muffler sale that falls at his feet as he pumps gas, and fails to see a car that overshoots the service lane because of faulty brakes.

But Buster is content to sell gas, even to the point of removing a slight overfill with a suction bulb. Through these humorous sight gags emerges the serious conclusion — that sales opportunities cannot be laughed away. When Keaton comes to this realization, business picks up. Interlock, Inc. produced.

ARRIFLEX at work — ONE OF A SERIES *

LOCKHEED CINEMATOGRAPHER PREPARES FOR FILMING AS STAR POSES PATIENTLY

ARRIFLEX® eavesdrops on porpoise conversations for Lockheed-California

A study project on marine mammal acoustics—bearing on underwater noise and anti-submarine warfare—was completed in record time for the Lockheed-California Company with the use of Arriflex equipment. Executed under U.S. Navy contract, the experiments were conducted by Lockheed's bio-acoustics research organization, in co-operation with the curator of Marineland of the Pacific, whose porpoise training tank at Palos Verdes, California was the site of the research.

Arriflex equipment was used throughout the program, as quick set-up time and long film runs were basic requirements.

Many scenes were shot at lower-level viewing ports under adverse lighting and confined conditions. When sync sound coverage of the porpoises was required, the Arriflex sync generator system performed perfectly. The project was completed in record time, and the finished picture is providing much insight into the behavior, conversational sounds and echo location capabilities of the tursiops truncatus porpoise.

Whether filming porpoises or people, missiles or microbes...you can rely on the versatile adaptability of Arriflex! Try it on your next assignment and see for yourself!

From the microscope to the missile range...from spot locations to sound stages...Arriflex professional motion picture cameras are the dominant choice of filmmakers in science, industry, and entertainment. They're lightweight, rugged, tremendously versatile — uniquely suited to a range of applications virtually without limits. Here are some of the features that give Arriflex cameras their remarkable capabilities:

- MIRROR-SHUTTER REFLEX VIEWFINDER • REGISTRATION-PIN FILM MOVEMENT • 21°-DIVERGENCE 3-LENS TURRET • CONTOUR HAND GRIP • FRAMES-PER-SECOND TACHOMETER • COMPLETE ACCESSORY SYSTEM...lenses, standard and special-purpose electric drives, power-supplies, time-lapse equipment, film magazines, sound blimps, tripods.

WRITE FOR NEW CATALOG.

*YOU ARE INVITED to send us a description of your special use of Arriflex equipment.

NEW LIGHTS CUT COSTS!

ColorTran's new lightweight, professional quartz-iodine lights help you slash production costs down to the bone. No generators. No cable-stringing. Just plug into 120-volt AC, DC line current, and turn on. ColorTran's exclusive ultra-long life quartz lamps maintain constant intensities and color temperature . . . give up to 8 times longer life . . . drastically lower operating and replacement costs. And there's a ColorTran quartz light and lamp to meet your every need!

MINI-LITE: First quartz light that barndoors 4 ways. Only 1¼ lbs., only 2" deep. Ideal for fill lighting.

BACK-LITE: World's first portable backlight. Fantastic coverage. Weighs only 1½ lbs., stands only 5" high, covers area 17"x29", at 10'.

FOCUSING QUARTZ LIGHT: First fully focusing, variable beam quartz light. Outperforms standard studio 2K, using 1K lamp.

QUARTZ-KING DUAL-1000: Equals 5K of studio light, using 1K lamp. Provides wide and medium flood in single housing. Weighs only 18 oz.

QUARTZ-KING 500 (with B5-32): Produces wide, smooth light . . . and a full 500 hours of life. Outperforms two 1000 watt scoops. Only 21 oz.

HI-SPOT: Produces over 1,500,000 center-beam candlepower using 1000W PAR 64 quartz lamp. Weighs only 7½ lbs., draws only 8.3 amps. Ideal for long throws.

CYC-STRIPS: For high intensity, even lighting of large areas, high backdrops, cycloramas.

Plus a full line of ultra-long life quartz-iodine lamps; lightweight and heavy-duty Light Stands, portable Electronic Dimmers and Remote Controls

SCREEN INTERNATIONAL

European Editor Robinson P. Rigg Reports News of Sponsored Films Abroad

INVITATIONS ARE OUT TO 16 countries to enter films in the Fifth International Industrial Film Festival to be held in London this year (November 2nd through the 6th). Festival organizer Michael Shersby and the sponsoring host, the British Industrial Film Association, expect that over 150 outstanding pictures from industry in Europe and the United States will be screened during that week.

Said Shersby: "We are making plans to ensure that our overseas colleagues will feel at home in London in November and there are plans for a number of receptions and visits so that these visiting guests can meet with Britain's top businessmen and a-v specialists. The Festival is being held in Shell International's new cinema. Hotel accommodations have been arranged at the Strand Palace — in the heart of the historic city.

Special hospitality programs are being worked out for delegate's wives — fashion parades, visits and discussions with well-known personalities. Sizeable delegations representing both sponsors and film producers are expected from the U. S. and Canada.

A delegate "package tour" including attendance throughout the Festival week and a-v study visits in London and Paris, France, is being arranged by the host group, Pan American Airways and the Thomas Cook travel agency. This is expected to provide a 14-day round trip from New York or Chicago to London at a cost of \$450.00, including hotel accommodations. An additional four days in Paris will add \$50, also including hotel.

*Sound Services' Audience is Five Million;
Ford Film Manager Comments on Experience*

☆ Eric Morden, Joint Managing Director, Sound Services Limited, one of Britain's largest sponsored film libraries, recently reported that he is posting over 1,200 films a day to borrowers in Britain and that his annual audience includes over five million people in 100,000 audience groups.

Speaking in London, Morden recalled that in 1947, the library had five clients — the present count is 237 — and today these sponsors have 13 million feet of film in circulation. Discussing the library from a sponsor's viewpoint, Norman Vigers, Film and TV Manager, Ford Motor Company of Great Britain, said that his company had used Sound Services for 25 years to handle their free loan film shipments to schools, clubs, etc. He estimated that Ford films were seen in Britain by over two and one-quarter million people annually. This compares, he noted, with the audience of 380,000 who were seeing them in 1958.

Vigers attributed the growth to active promotion carried out by the library and the deposit of large numbers of prints with Ford dealers, Holiday camps, ships at sea, road shows and selected theatrical distribution. These were all in addition to direct loans made by Sound Services library. Here are the figures

for main audience groups:

School audiences accounted for 39%; adult clubs and adult education groups, 20%; industrial organizations, 14% and motor sport buffs, another 14%. The largest increase was among women's clubs. He noted:

"Now that Britain is moving toward the two-car family status, car buying which once was the sole prerogative of men, is being taken over by the ladies — and they like to see films about cars at their club meetings. We like to show them!"

Speaking on the cost of distribution, Vigers said he based all his figures of production and distribution on a "cost per head" basis. He was satisfied that free loan films represent one of the least expensive of a company's promotional media — and the most effective.

On theater and television release in Britain, Vigers cautioned that, although two Ford films had been accepted on the cinema circuits, they had to be of outstanding quality, made in 35mm (or 35mm prints of theater quality). 30 minutes was a popular length, with a "standard" being 10 minutes for the usual short subject use.

Ford has its eye on the third British TV channel — the UHF non-commercial program sponsored by the BBC. "Many of us are watching with interest the development of BBC 2, where we hope the industrial film may have a valid part to play in TV."

Groups in Netherlands and Sweden to View British Associated Electric Films

☆ Two frequent contributors to these pages, our correspondents in the Netherlands and Sweden, have been appointed distributors of the British Associated Electrical Industries' motion pictures in their respective countries.

Kerst Blaauw's Technical Film Centre at the Hague will serve this company in the Netherlands; Sven Hallonsten's Film Section in the Swedish Council for Personnel Administration will do likewise in Sweden. A. E. I. has associated companies and agents in most of the world's countries and the motion picture program is aimed at a wide international audience, according to R. H. Veysey, General Manager of A.E.I.'s Publicity Department who confirmed these appointments.

This sponsor also plans to establish libraries in Norway and Western Germany during the year to serve audiences in those countries.

* * *

Sponsored Sex Education Films Go to Primary Schools and to Family Audiences

☆ The London Foundation for Marriage Guidance has released a sex education film for primary school viewing and another film subject — on family planning — for adult audiences.

Recognizing the need for well-balanced and authoritative instruction on human sex functions and problems at junior high and even primary schools, the Foundation has sponsored (CONTINUED ON THE FOLLOWING PAGE 62)

Is Your Company Losing Money?

YOUR COMPANY is losing money every month that you don't make full use of a multi-purpose business tool as routinely useful as your telephone or your calculating equipment.

The tool? Industrial motion pictures — business films.

Only a handful of businessmen in the U. S. — this is literally true — have a real grasp of how they can solve many problems, little as well as big; can help achieve all manner of objectives, hard-nosed as well as institutional, with enlightened use of films.

The funny thing is, you *think* you know all about how films can be used. There's the 100th Anniversary movie; there's the big Corporate Image picture; and, oh yes, the funny one with girls in it for the Salesmen's meetings. But the truth is — using business films only for the "glamour" jobs is as wasteful as using your telephone only to call Europe . . . or devoting your whole advertising budget to institutional messages.

Film is TODAY'S way of passing on information — and of instructing, training, *motivating*, persuading, inspiring . . . often inexpensive, always *effective*. Think of film as casually, as unglamorously, as you think of print.

In the next five minutes, you can set up a continuing source of new profit for your company, simply by testing your awareness of the Film-Tool's direct potential — by checking the "Uses" listed at the right.

5 Unique Powers of the Film Medium

WHY FILM? Ask yourself what other medium guarantees *full* attention to your *entire* message. No print advertisement, no TV show, no brochure, not even the most hypnotic salesman can persuade a prospective customer or an unbeliever to sit quietly for 5 to 30 minutes and *concentrate on your message*.

Thanks to this unique environment, film can get your message over in the right logical progression of the message-points — without the prospect being able to interrupt, or, worse, to skip ahead.

Film doesn't need to waste precious time on attention-grabbing "stoppers," because the viewer is already seated and attentive.

Film "carries its stinger in its tail," i.e., in its residual impression, and hence is free to implant important, though sometimes quiet, foundational material up front, with a solid effectiveness impossible in any other medium.

Finally — and perhaps most important — film implants its impressions in the form of *picture-images*. And since people tend to remember what they see better than what they hear, the impressions burned into their minds via film have a better chance to endure — to inform, persuade, inspire . . . and compel action: to *motivate*.

• • •

Ask Parthenon for loan prints of any of the above subjects. Or let our people screen them for you in New York, Chicago, Detroit, or California. (We will gladly suggest competent regional filmmakers in other areas.) Telephone Parthenon Pictures at (213) 385-3911 and ask for Cap Palmer.

BACKGROUND: United World Films was organized in 1946 by Universal Pictures Company, Inc. The latter organization is owned by Music Corporation of America. In 1946 United World Films purchased the Bell & Howell Film-O-Sound library which was the largest film library operating in the United States. In 1946 United also purchased outright, Castle Films, the largest producer and distributor of 8mm and 16mm sound and silent motion pictures for "home movie" use.

SERVICES: Since its organization, United World Films has distributed sponsored films for industry. Distribution is conducted for non-theatrical, television and theatrical audiences through 43 distribution offices located throughout the United States. United also produces and distributes classroom teaching films to the nation's schools. It makes available on 16mm film all of its parent company feature theatrical titles along with selected features from Paramount and J. Arthur Rank. Demand for its films come from clubs, business organizations, colleges, universities, high schools, women's organizations, agricultural groups, etc. These audiences are constantly in-

creasing and United uses this source of fresh new audience contacts for distributing their clients' sponsored films. In the distribution of their clients' 35mm sponsored films, United utilizes the theatrical knowledge, experience and contacts of Universal Pictures, its parent company. By reason of its affinity with MCA, United has the added opportunity to be in constant contact with the program departments of television stations throughout the country. These contacts are used by United in arranging showings for its clients' films.

PROMOTION AND PUBLICITY: United not only produces individual advertising and brochures for each of their clients' pictures, but also has available the extra advertising exposure via listings in other film catalogs produced by the company and distributed to 16mm audiences. United maintains booths and exhibits at the important convention and audio-visual demonstration centers throughout the world.

PRINT SERVICES AND MAINTENANCE: Because it is part of a professional motion picture distribution organization, United maintains the highest standard of inspection. Prints are inspected and cleaned utilizing the latest electronic equipment. Scratched prints are repaired under a special film coating process. United also shares in the cost of replacing any prints damaged during the early years of distribution.

FILM USERS EVALUATION REPORTS: Certified attendance report forms are supplied to the client on every showing.

MONTHLY REPORTS: The sponsor receives detailed performance reports which supply audience information by type and size. A detailed recapitulation of the cumulative total audience is supplied each month together with information on number of showings, bookings and the like.

TELEVISION DEPARTMENT: This department specializes in the distribution of client sponsored films to commercial and educational T.V. stations utilizing T.V. station contacts of MCA.

THEATRICAL FILM DEPARTMENT: Through this department, arrangements are made for quality theatrical distribution dates utilizing the experience and theater contacts of the parent firm, Universal Pictures. The latter company has had over 50 years experience in theatrical distribution and was the first organized motion picture company in the industry. United also makes arrangements for its sponsored clients through its film editing staff to produce 35mm prints from existing 16mm prints via a special process. These 35mm prints are thereafter exhibited in the nation's theaters. Professional advertising is employed by United in the exploitation of its clients' films in the theatrical distribution.

NON-THEATRICAL DIVISION: Clubs, organizations, colleges, universities, men's and women's groups, high schools, agricultural groups, etc. are but some of the audiences supplied to their clients by this division of United. Film showings are arranged, advance booking notices supplied, monthly reports and recapitulations utilizing automatic business machines.

SPONSOR-GENERATED DISTRIBUTION: Where a client wishes to solicit and obtain bookings himself, United provides the physical handling, inspection, storage and distribution of such films utilizing its professional experience and facilities. Additional services include "custom" pro-

motion and national research can also be obtained under this type distribution.

"CUSTOM" SERVICES: United produces a "custom" service which includes promotional kits supplied (under a special contract service with its client) by United to each film audience. This gives the sponsored client the added public relations effect surrounding each local community film distribution. It is accomplished by United's publicity division and advertising staff which prepares special news releases, film guides, advertising mats and special posters for use by local film exhibiting audience.

NATIONAL RESEARCH FACILITIES: United has engaged a national research organization on a permanent basis for the purpose of conducting a detailed research on questions of importance and interest to its clients. Such things as preferred length of films, content and the like is obtained from audiences throughout the country, collected and analyzed by this special research facility.

Mr. Oveste Granducci
St. Thomas,
Virgin Islands

Dear Gran:

The Industrial Film Producers Association recently designed and awarded individual Certificates of Merit for production credits on prize-winning films for 1963. Jack Goetz very graciously forwarded the certificates for "Power For Continent 7" to me. And I now have the pleasure of renewing contact with those who worked with us and who made possible our first place in the IFPA 'Sales and Promotion' Category.

I suppose all films start out hopefully in the producer's mind, but this one had a running start with your script. From that beginning it has become the most successful and widely distributed film produced by the Martin Company. Entered in two festivals, it garnered two first places. Translated in many and alien and strange tongues by the United States Information Agency, it is distributed to our allies and friends abroad. It is also distributed in the United States by the Martin Company; in the services by the Navy Department; and, as a result, "Power..." has been hailed by those severe critics, the Old Ice Hands, as 'the most authentic film produced on Antarctica.

This is heady praise... and it is my great pleasure now to share it with those, like yourself, who have justly earned it.

Very truly yours,

William F. Romeike
Supervisor, Film Presentations

13 Ford Pictures Shown to 28,300,000 Viewers in 1963

☆ The "vacation" theme was dominant among eight of the 12 most popular motion pictures distributed by Ford Motor Company film libraries in 1963. Add an equally popular safety film, the *Smith System of Safe Driving*, and these nine widely requested pictures provide the ingredients for a successful summer outing. And three additional driver training films actually do round out this "top 12" among Ford film viewers.

The titles: *The American Road*, *Grand Canyon*, *Yosemite*, *American Cowboy*, *Pueblo Boy*, *Men of Gloucester*, *The American Farmer*, and *White Thunder* (Niagara Falls) are among 43 Ford films which reached an audience of more than 28,300,000 during 1963.

The company notes that the popularity of travel films indicates the adventurous interest of American audiences; however, a new group of motion pictures released by Ford late in the year are rising rapidly on the popularity list. These depict outstanding automotive performance events, such as *The Monte Carlo Rallye*.

The Ford distribution survey reveals that film audiences are growing younger. About 75 per cent of the viewers were of elementary, high school or college age. The younger group is considered largely responsible for the growing popularity of films showing *The Winning Ride*, *Triumph at Daytona* and the Lotus-Ford Indianapolis race car which is featured in *Milestone at Milwaukee*.

Further evidence of youth interest in automobiles was indicated by the popularity of several films featuring the company's experimental cars, such as *The Mustang*, and a film titled *Secret Door*, which depicts activities of Ford Styling.

Altogether, seven of the 11 new titles added to the Ford film library in 1963 deal with automobile performance events and the styling of experimental cars. The films are made available on a free loan basis to organized groups through company libraries located in Dearborn, Michigan; Oakland, California and New York City. □

Fairs Help U.S. Sales Abroad

☆ Sales of more than \$27.1 million were generated by some 260 U.S. firms participating in Commerce Department exhibitions at eight international trade fairs during the past year. □

SOME 150 FILM SPONSORS, including a few producers and agency people, turned out for a one-day workshop for advertisers conducted by the Film Producers Association of New York, with the cooperation of the Association of National Advertisers, at the Plaza Hotel in New York on April 14.

Working under the basic theme of "How Effective Use and Distribution of Sponsored Films Can Help Achieve Your Marketing Goals," the Workshop produced plenty of solid information for advertisers to take back to their companies.

Informed Experts on Podium

Co-chairmen Robert Bergmann (Filmex) and Peter Mooney (Audio Productions) brought

Co-chairman of FPA-ANA Workshop was Robert Bergmann, president of Filmex, Incorporated.

some of the most informed experts in the country on film distribution and evaluation to the podium during the full-days' session.

Opening with a commercial film distributors' panel in the morning, the Workshop moved on to analysis of the hidden values of TV shows for later school distribution and a survey of cost trends in distribution.

In the afternoon, participants heard specific examples of profitable use of business films, illustrated with film clips. Finally, a preview of films at the World's Fair was presented. Coordinating the operation of the Workshop were Harold Klein, Executive Secretary of the FPA and Herbert Ahlgren, Staff Administrator of the ANA.

Panel on Film Distribution

Don White, Executive Vice-President of the National Audio-Visual Association, presided over a distribution panel composed of Charles F. Dolan, President, Sterling Movies U.S.A.; Carl H. Lenz, Executive Vice-President, Modern Talking Pictures Service and Rob-

Workshop guests hear film distribution panelists at Plaza Hotel program held in New York on April 14.

How Films Can Help Achieve Marketing Goals

Film Producers Association of National Advertisers Co-Sponsor Film Workshop in New York

ert D. Mitchell, President, Association Films.

Mr. White and his panel urged film sponsors to consult with distributors early in the planning stages of a film to insure effectiveness in reaching the right audiences. Mr. White's presentation is summarized elsewhere in these pages.

Cites Use of Science Films

Willis H. Pratt, Jr., Film Manager, American Telephone & Telegraph Company, told about the tremendous use the Bell System companies have made of the extraordinary science series of programs that the companies sponsored on television. An interesting point he made was that almost the same

number and character of audience could have been reached through group and school showings as on television, but it would have taken about five years instead of one hour.

William J. Connelly, Manager of Advertising, Union Carbide Plastic Division, gave a preliminary look at the ANA's new Nationwide Study of Advertiser Practices in Producing and Distributing Business Films, which will be released in full later this Spring.

The Widely-Variied Audience

Among the interesting figures noted was that one film in the study was seen by just 250 people, while another is calculated to have reached 80 million people on tele-

Luncheon speaker was Maxwell Dunn, Chief of Special Projects, TV and Film, at the United Nations.

vision. The greatest number of films, of course, lie at different points in between.

Speaking at the workshop luncheon, Maxwell Dunn, Chief of Special Projects, TV and Film, United Nations, said films are the most potent tool available to reach and help the peoples of the developing countries. His organization has a large library of materials in constant use at this task. He urged businessmen to cooperate in the U. N.'s activities just as the U. N. is always ready to cooperate with them.

Afternoon speakers, who gave case histories of successful programs, and some of whose comments are summarized in these pages, were: David Alman (Smith Kline & French), Leslie Buckland (Co-ordinator of Marketing Presentations, Eastman Kodak Co.), Ted Westermann (Audio Productions) — speaking for Meck Howlett (Director of Sales Promotion, American Airlines),

Organizers of the Film Workshop were (at left): Harold Klein, executive secretary, Film Producers Association of New York, and (at right) Herbert Ahlgren, staff administrator for the Association of National Advertisers.

Public Relations, Pittsburgh Plate Glass Co.) and William Berns (Vice-President of Communications, New York World's Fair.)

Wise Investment in Film Earns Dividends

by Ben Williams, PR Director, Pittsburgh Plate Glass Co.

THERE IS ONE FACET of film programming that never ceases to impress me. We start shows rolling with an investment of time and money and they seem to go on and on paying dividends.

My interest in film, both still and in motion, goes back to those carefree, happy-go-lucky days as a Marine Corps combat photographer during World War II. Then, as now, we had bosses who knew relatively little about visual communications but knew that they wanted results. We were competing then with hundreds of thousands of feet of movie film, thousands of still pictures and millions of words to get our particular story across.

Economic Survival at Stake

Well, we're still competing — but on a different basis. The stakes are not *ideological* survival but *economic* survival. Also, we're competing with better quality, and this is where the thought, the planning, and the use of professional help becomes so very important. That great faceless thing we call "the public" is brutally quick to separate the thoroughbreds from the plow horses.

I say this in spite of the shocking number of bad films which spew out each year, to the detriment of the industrial film medium and those companies who are doing a good job.

Film Reports to Management

Now to our case history. Most of the film activity at PPG comes under the Public Relations Department. As a part of our custodianship of this responsibility we make both periodic and annual reports to management. We make no secret of the fact that this is a selling job, not just for films, but for our entire Public Relations operation.

One part of this 15 to 20 page report deals with the activity we call "Films and Special Programs". Taking each program, we detail specific numbers of shows and audience and then evaluate, in terms of management interest, what these figures mean.

As an example, we point out that *An Architect At Work* has,

by almost any frame of judgment, returned its cost many times over. We go on to enumerate and to refresh management's mind. We say that this 28-minute color film, produced for us by Dynamic Films, and distributed by Association Films, has been in constant demand since it was first offered late in 1962.

A Very Effective Audience

We emphasized that at the time of the report it had been shown to approximately 2,000 select live groups with more than 175,000 persons in the audience. A great many of these 175,000 persons have been men who can influence contracts, determine the design of buildings, and in other ways mean anywhere from \$50,000 to \$500,000 to \$5,000,000 in business for us. We have ample evidence in the form of letters and interdepartmental memos attesting to direct business generated by this film and we remind management.

Hopeful that we already have our people nodding in agreement and smiling at their wisdom in authorizing the expenditure, we go on to point out that during 1963 this film had more than 220 free

television showings. A number of these were on prime time in major markets. We estimate the minimum television audience at 11,000,000.

Not being one to quit while I'm ahead, I go on to quote Association Films as saying that this was one of the most active films of its type in their library and then report that *Architect* received its share of awards and certificates.

Film for Our Paint Division

With our Glass Division taken care of, for the time being, we went on, last year, to do something for the Paint Division. *Adventure In Color*, was the result.

This film runs 13½ minutes. Like every other film we make, this one has both live and television audiences in mind. Because it's different, even experimental, for us, we wrapped a program around *Adventure In Color*. We have a complete program package for the program chairman. We give him opening and closing remarks, informative brochures to distribute and suggestions for obtaining publicity on the meeting. We also suggest that he can get a PPG color expert to participate in the program by consulting the yellow pages of his phone book.

After reporting all of this to management we went on to say that in the few months following its release, in the Fall of 1963, *Adventure in Color* received five awards or certificates out of the five in which it was entered.

If your management wouldn't like to read reports like that, about

Ben Williams, PR exec. of Pittsburgh Plate Glass Company, gave a case history of current films.

films that contain both corporate and product values, they're different from any I've ever encountered. I'm convinced that similar opportunities are available to the vast majority of business and industrial operations.

A Long and Useful Career

I mentioned earlier the long life of some films. For instance, our film, *Your Home As You Like It*, offers a pleasant, light pitch on the enjoyment and individuality that paint and color can bring to your home. This was made eight years ago and is nearing the end of usefulness if you compare the value of the audience with the cost of distributing the film.

We are about ready to retire *Home* although bookings are heavier than ever before. The reason for this is that we have run through the adult audiences, made the film available to college level and are now booking high school and junior high. These final groups are almost insatiable in their demand for film.

In the final analysis, however, much as we realize the value of developing future markets, the youngsters don't buy much paint or glass, fiber glass or chemicals, and our available money can be better directed to adult consuming groups.

This is one of the areas in which to be cautious when you play the "numbers game." 50,000 youngsters in the audience have less potential direct sales for us than five architects, 50 contractors or 500 home owners. Play up the *select nature* of your audience, and plan ahead to be sure you reach as many of your company audiences as possible.

Since we're talking about audiences, there are two other motion picture techniques used at PPG that I consider second and third generation descendants of the tra-

(CONTINUED ON PAGE 58)

Sponsoring hosts and speakers at FPA-ANA Workshop are (left to right): Walter Lowendahl, Dynamic Films; Lowell McElroy, Association of National Advertisers; Don White, National Audio-Visual Association (moderator of distribution panel); Herb Ahlgren (ANA); and Carl Lenz, Modern Talking Picture Service, a member of the panel on distribution.

HIDDEN VALUES

in a Film Series Produced for Television

by W. H. Pratt, Jr.

Film Manager, American Telephone & Telegraph Company

THIS CASE HISTORY reviews the "hidden values" obtained from the Bell System Science Series — produced originally for television — and then used as films after their value on television had been realized.

While the lessons learned in attaining this additional "visibility" have their interesting differences, the idea of getting more for your production expenditure by using television material as film is not new. Some outstanding related examples are the DuPont Company's *Calvalcade of America* programs, seen by millions as films, and the Prudential Company's *Twentieth Century* series, currently being distributed in 16mm film format.

Cites Objectives of Series

Our own case history actually begins in 1954. Dr. Warren Weaver of our Scientific Advisory Board stated the objectives quite concisely when he said:

"The Bell System's television series is an effort of unique character, not only with that section of the public which, for its own peace of mind, must come to understand what science is doing to us all.

"The course of events in recent years has been such that there has developed a broad and serious gap of misunderstanding between scientists and the rest of the public. The public treats science with a paradoxical mixture of over-confidence, suspicion, awe, wonder and fear. Science is conceded to be a tremendous potential force for good; but it is also distrusted as a horrible potential force for evil. Even young people are disturbed and we have a serious problem of recruitment of science students."

Logical Sponsor of Message

The Bell System seemed to be a logical organization to bring this message to the public. Certainly with our reliance on research and our continuing need for recruiting topflight engineers and scientists, we had every reason for presenting such a program.

But what form should this message take and how should we go about presenting it? After much serious thought, it was decided that:

1. The program would be in the

nature of a public service presentation.

2. We wanted to develop interest in all branches of science, not just communications, so the series would be comprehensive.

3. Each program would portray the excitement and challenge of scientific experiment and discovery and, at the same time, be educational.

4. Television was the medium chosen because it presented a mass audience — we would reach a large number of people in the shortest possible time.

5. A Scientific Advisory Board was formed to guide the selection and preparation of each subject. Experts were brought in to advise in specialized areas. Dr. Bown, former vice-president of the Bell Laboratories, was the Chairman. But the Bell System would not be the sole arbiter of material to be presented. The authentication of the material as indicated by the names of the Advisory Board appearing on the credit titles, has proved to be most helpful in obtaining acceptance by educators.

Nine Films Released to Date

To date, nine films have been prepared, starting with *Our Mr. Sun* in 1956. The most recent, *The Restless Sea*, was released this year. The first four films were produced by Frank Capra; the next four by Warner Brothers; and the latest by Walt Disney Productions.

* * *

As the first program, *Our Mr. Sun*, went into production, we began to consider the possibility of gaining additional audience visibility by showing the program as a film to school and adult groups. It was not long before we realized that to take advantage of these additional audiences — the "hidden values" — the problem should have been thought through long in advance of the start of production.

We sent the script and an early answer print to the Wayne University Audio-Visual Bureau for evaluation as an educational tool. Indiana University has performed a similar service with later titles.

They were most helpful.

1. They told us the grade levels
(CONTINUED ON NEXT PAGE)

Members of the distribution panel (left to right): Charles Dolan, president, Sterling-Movies U.S.A.; Carl Lenz, executive vice-president, Modern Talking Picture Service; Robert Mitchell, president, Association Films; and Don White, executive vice-president, National Audio-Visual Association.

Robert Dunn, Ford Motor Company, presided at the Workshop luncheon held at the Plaza.

New York World's Fair films were previewed by William Berns, Fair's vice-president of communications.

Arthur Railton, public relations manager, Volkswagen of America, described company's successful films.

Speaking for Meek Howlett of American Airlines was Ted Westermann, v.p. of Audio Productions.

David Alman told Workshop guests about Smith Kline & French films for public, professional audiences.

Leslie Buckland, coordinator of marketing presentations, Eastman Kodak Co., spoke at the Workshop.

ADVERTISERS' FILM WORKSHOP:

Hidden Values in Film Series for Television:

(CONT'D FROM PRECEDING PAGE)
and the curriculum areas in which the film would be most helpful.

2. They prepared a suggested teacher's guide and wall poster.

3. It was pointed out that the usual auditorium period was 40 minutes long. The film, which ran 55 minutes without commercials, should be split in two.

4. It was suggested that an introductory title be prepared for the second part and that the content be repeated at the beginning to create an overlap so that students could see part two at a later date without losing continuity of thought.

Review Contract at Outset

Production wise, we ran into trouble at this point. The contract had not been drawn up with these additional audiences in mind. We also found that when a producer divides his film into reel lengths, he does not necessarily do this on the basis of continuity of subject matter.

Considerable renegotiation was required, with attendant delays and the expenditure of considerable time and effort. When the film was finally released for TV network telecasting, additional 16mm prints were sent to the Bell Telephone Companies for school and adult audiences. Educators and program chairmen were invited to special previews. The Wayne evaluation was presented. The film was also featured in the usual catalogs and "give-aways" through which Bell System films are normally promoted.

There was an immediate demand for showings from public groups. But an even more overwhelming response came from educators. This has been repeated again and again as each new film has been released. Acceptance has come in the form of favorable comments from students, teachers and administrators.

* * *

A very solid indication of their popularity is that these films are booked solidly for months ahead.

The Telephone Companies tell us that they wouldn't meet the demand even if they doubled their supply of prints. Here are the totals of prints now in circulation:

Film	Released Prints
<i>Mr. Sun</i>	Nov., 1956 1684
<i>Hemo</i>	Mar., 1957 1389
<i>Cosmic Rays</i>	Oct., 1957 548
<i>Goddess</i>	Feb., 1958 912
<i>Gateways</i>	Oct., 1958 688
<i>Alphabet</i>	Jan., 1959 401
<i>Thread of Life</i>	Dec., 1960 436
<i>About Time</i>	Feb., 1962 273
<i>Restless Sea</i>	Jan., 1964 100

We are pleased with the audience. Since these nine films have been released they have been seen by over 94 million persons — a "hidden value" that cannot be overlooked. Notice also, that in 1963, even on the older films, the attendance increased in each case over that of the first full year after release. Add "000" to the audience figures below:

Film	1st Year	1963	Total
<i>Mr. Sun</i>	3,574	3,750	23,629
<i>Hemo</i>	1,711	3,575	19,998
<i>Cosmic</i>	599	1,900	10,252
<i>Goddess</i>	1,658	2,900	14,898
<i>Gateways</i>	1,861	2,500	11,489
<i>Alphabet</i>	1,406	1,700	7,904
<i>Thread</i>	2,008	2,281	6,233

Grand Total 94,403

These Were "Hidden Values"

Well, what are these "hidden values?"

1. An audience of over 18 million each year. An increase in viewership which cannot be discounted.

2. We sincerely hope that the public better understands Science and the Scientist.

3. A tremendous amount of good will from the public in general, and educators in particular — many of them important molders of opinion.

4. An improved image as a forward-looking, progressive business, and, in the words of Dr. Weaver, "a company that accepts its role as an instrument of public trust." This is a climate that cannot but help us in achieving our Service and Marketing goals.

Sharing Lessons We Learned

But, in our quest for the "hidden values" we have learned some lessons which I gladly share with you for whatever help they may be:

1. Examine each program dur-

ing its earliest stage to determine possibilities for gaining additional and supplemental values. For maximum "values" there may be need for relatively minor changes in format and content.

2. Draw up a flexible contract that provides for all the rights and clearances you may need to prepare promotional material, leader's guides, give-aways posters, etc., including necessary modification of script and distribution rights.

3. If schools are a possible audience, by all means have educators evaluate the material and offer comments and suggestions.

4. Validate the material where appropriate by including in the credit title the name of the consultant or review board that is recognized as an unbiased authority.

5. Be sure that enough prints are available to meet the demand without an exorbitant waiting peri-

od. This can create annoyance and irritation and may negate the good which the program otherwise could create.

Yes, our search for "hidden values" has been quite successful and I imagine will be for some time. But the most rewarding experiences are the frank and sincere letters which come to us from school children throughout the land. Like this one:

Dear Bell Telephone Laboratories and Doctor Research:

"I would like to thank you for the wonderful films. I have never seen such good ones. They have taught me a lot. The ones I liked best was "Gateway to the Mind" and "Alphabet Conspiracy." I have learned a lot about inside us. I never knew we were so exciting inside us. If we did not have your films, I would not know about inside of us."

THE FILM DISTRIBUTOR A Partner in Film Success

by Don White

Executive Vice-President, National Audio-Visual Association

THOSE OF US who work in the field of audio-visual communications know how motion pictures can motivate people to take action, can persuade them to a point of view and influence their decisions.

Like the shoemaker and his barefoot children, however, professional communicators are often at a loss in communicating the strengths of their own craft. The best explanation I've seen to date of the magic of motion pictures is in a film — not about motion pictures — but about television. This is *Heartbeat*, sponsored by the Television Bureau of Advertising.

For me, this film makes a most eloquent case for visual communications. But the best film of the year, most dramatic and persuasive, and perhaps an award winner, can be an economic dud unless it is seen and heard by the people it was intended to reach. This is the function of distribution.

The Audience Must Want It

No distributor, though, can create a demand for films the audience doesn't want to see. A film must be produced to satisfy a need or an appetite — existing or potential. A film can inform or cajole or entertain . . . but it can do so only when its production is based on a sound knowledge of the intended audience . . . who

they are . . . where they are . . . how they behave . . . and how to reach them.

Sponsored motion pictures are widely used in the schools as teaching tools. They're used in industry to train and to inform employees. They're used in churches of all denominations. They're used by TV stations to provide audiences at home with interesting, entertaining public service programs. They're used in motion picture theaters to complement the feature film. And lastly, they're used by service clubs, fraternal orders, special clubs and community organizations too numerous to mention.

Resources of Distributors

Commercial distributors have the sources and resources for reaching these audiences. And since it's their business, I urge you to consult a distributor before the camera rolls. He can advise you on the approach most acceptable to a given audience, on possible duplication of subject matter, treatment or title. He can suggest preferred running time by teachers or TV film directors. He can analyze your need for color and many other key factors.

At his fingertips, the distributor has countless "case studies" of films in distribution, with facts,

evaluations and details that add up to a "profile" of a film and its audience. This information can help guide you before you commit one foot of film.

Which channel of distribution would best help you reach your audience goals?

Three Channels of Circulation

Basically, there are three channels of sponsored film circulation: One, schools and community organizations; two, television and; three, motion picture theaters. Each is *unique*, each has *its own special requirements*, and each has *its own audience potential*.

Every organized group that owns or can borrow a 16mm projector is a potential user of sponsored films. A better understanding of these 16mm audience groups can be found in an analysis of projector ownership in the U.S.

The major groups are: Education — 234,000; churches and church-affiliated groups — 133,000; governments, which includes Federal, state and municipal — 76,000; civic, social and recreational groups — 53,000. All of these are part of the 765,000 16mm sound projectors estimated as currently in use in the U.S.

Utilization, however, is not proportionate to projector ownership. Educational groups own 234,000 projectors, or about 30% of the total, but account for somewhere between 50 and 65% of all sponsored film utilization.

Reaching the Adult Audience

Adult groups are a much-desired channel of circulation. This is so because the men and women representing leadership on a local level are the people who are active in community affairs — the "action people" who are the audience most often reached with sponsored films. They are the business people, the home owners, the wage earners, the parents, the taxpayers — and they are members of one or more community audience groups.

One small town in suburban New Jersey with an adult population of about 2,000 has a total club enrollment of some 6,000 adults — all residents of that same town. The list of active groups include one service club, ten church-affiliated adult groups, a library association, taxpayer's association, a women's club and twelve other groups. Project this kind of community activity across the country and you begin to get an appreciation of the numbers and scope of adult audiences!

These groups will request those

films which are of particular interest to their own membership. This is one of a number of unique features of community audiences that make them a most highly-desired category. This quality of acceptance (the group has *selected* a film for their viewing) indicates a high order of interest and the group's favorable predisposition to the sponsor's message.

There's also a certain amount of *flexibility*. Distribution can be controlled *nationally, regionally, or by local areas and by audience categories*. Merchandising possibilities are available. For instance, community audiences are receptive to supplementary literature and

discussion guides. Take-home pieces and other materials are used when provided by the sponsor.

Those of us who work with schools or who are parents of school-age children, or pay school taxes, know that the population explosion is a very real and potent force. Consider this. Right now, fully 50% of our total population is under 25 years of age. The peak year of first marriages for women is at age 18 — for men, before their 22nd birthday. More than one-third of first-born children are to mothers who are 20 years or younger in age, and a baby is born every seven seconds.

The Ford Motor Company, which has an active youth marketing program, uses a film to explain to dealers why this market is so important . . . Teen-agers, from 13 to about 19, are in their most formative years and are at a point in their lives just before becoming fully responsible members of the community.

The Influence of Teen-Agers

They are for many companies, the most important segment of the youth market — because of the twelve billion dollars they spend yearly and because of their influence on family attitudes and purchases. The Gilbert Market Research Group recently asked some 1,100 high school students some pertinent questions about sponsored film.

Here's what happened. 342, or about 30%, of the respondents

ADVERTISERS' FILM WORKSHOP:

(CONTINUED FROM PAGE 35) recalled having seen a sponsored film at some time during the school year. But when the students were asked to name a company or agency that has sponsored a motion picture, every one of the 342 students who saw a sponsored film were able to identify at least one sponsor and 88.6% of the sponsored films were seen in school.

U. S. television reaches 92% of the 51.4 million homes in the U.S! Its 646 commercial and educational stations serve 180 markets.

The top 50 markets, with an average of 400,000 sets apiece, reach an audience of 50 million people. The average household watches television more than five hours a day.

How does this relate to the use of sponsored public service films by television stations? 99% of TV stations use sponsored films and some 75% of the 646 stations in the U. S. use a sponsored film at least once a week. Of the remaining 25%, 15% will program a sponsored film once a month.

The free-film distributor has many public service films available in his library. They often represent the best materials available to the stations in terms of content, coverage and production values.

Long Life for Good Pictures

The interesting thing about good PR films is their longevity. Films like *How to Catch a Cold*, *Hail the Hearty*, and *Fitness for Leadership* have been shown by television stations for as long as six years. They have racked up as many as 2,000 telecasts. They are "living proof" that a *meaningful* subject, well-produced, comprises an excellent PR investment for industry and that station programming people responded by using them repeatedly.

Distribution is a business — a *service* business that depends on energy, drive and imagination. The film distributor must be aggressive if he is to move ahead. The pro-

gressive distributor uses personal calls, telephone contact, and direct mail to a heavy extent in reaching the stations. Series programming is a major service offered by the professional distributor.

Stations Like Filmed Series

Stations program in cycles of 13, 26 and 39 weeks — or at least they prefer to. Knowing this, distributors group films on a given subject — travel, for instance and offer the stations cycle programming. Series programs like these cover just about all the available topics, from sports and topical subjects to children's and women's programs. The use of short-length films on TV news programs and as "clips" in local shews is another and growing opportunity for sophisticated use of film. You can jot down in your minds the important note that short features ranging from two to five minutes are in high demand today.

A word about trends and preferences. Sports and travel films remain most attractive to stations generally. Science, especially new technological advances in industry and breakthroughs in medicine, has high impact value. The growth of interest in subjects dealing with government and politics is one of the more significant recent signs. It suggests that producers might well try to influence their clients to a broader PR approach. An example of this is Continental Insurance Company's recent and popular film on the causes of the American Revolution.

Theater Attendance is UP!

Consider the motion picture theater channel. Average weekly attendance at the movies has increased about three million persons, from the low of about 40 million in 1958. For the first time in years, new theaters are being built. Almost 300 have been started since 1962, some 65 have opened in suburban shopping centers.

The opportunity for sponsored films in these theaters has probably never been better. For one thing, there is a serious shortage of short subjects. With audiences far more selective and the number of domestic productions down to 150 to 200 a year, double features are fast disappearing in many first run houses. This means that theaters need shorts to round out their programs.

Commercial distributors, aware of the changing theater screen

(CONTINUED ON PAGE 58)

Jean Cameron, 20, is one of 30 young men and women who will guide visitors through Johnson's Wax pavilion at New York World's Fair, help direct them to the 500-seat, disc-shaped theater where a three-screen motion picture, "To Be Alive" is one of the main attractions of exhibit.

New York World's Fair Preview

Three Screens Full of Happiness

Inspiring Vision of "To Be Alive" Draws Press Ovation at Johnson's Wax Showing in 500-Seat Circular Theater

ONE OF THE MOST exciting exhibits seen at the New York World's Fair previews last month was the Johnson's Wax "Golden Rondelle" pavilion featuring a three-screen motion picture entitled *To Be Alive!* Following a showing to general and trade press representatives, on April 7, the audience accorded the sponsor and producers of the film a standing five-minute ovation — quite a tribute, coming from not too easily enthused newsmen.

18 Months in the Making

The 17½-minute motion picture is the creation of veteran documentary film makers Francis Thompson and Alexander Hamid. These two were co-directors, working under the production firm of Francis Thompson, Inc.

To Be Alive! was photographed in color over the past 18 months in Europe, Africa and the United States with a rig of three 35mm Arriflexes mounted together. It is projected on three 18-foot-wide screens (not butted together) by a projection system called "Tri-Arc

335" in the 500-seat theater in the Johnson pavilion.

Although frankly intended to excite viewers with the richness and diversity of its scenes and sounds — which it certainly does — *To Be Alive!* also contains a message: There is an abundance of happiness in the world for those who will look for it.

The Joy of Simply Living

"Although life appears to have become a frustrating round of meaningless activity for millions of people in today's complex society," Mr. Thompson said at the preview, "we've suggested that there are other millions who preserve a sense of the underlying wonder of our world, have a capacity to delight in everyday experience, and find intense joy in simply being alive."

Much of the emotional impact of the film is the result of skillful editing and the choice of sequences of related and contrasting pictures on the three screens. At times the scene is a single, panoramic image and at others a rapidly changing series of multiple impressions. The

film has no commercial message and is projected without even the customary titles and credits.

The narration was written by Edward Field, a young New York poet who won the 1962 Lamont Award for poetry. The musical score is an original composition by Gene Forrell, widely known for his film scores, ballet, opera and as a musical director for television.

Related to Theme of Fair

Thompson was commissioned to produce the film for Johnson's Wax two years ago with instructions only to "make a film that will contribute significantly to the World's Fair theme of 'Peace Through Understanding'".

It is being shown free to Fair visitors in the Johnson pavilion's circular, air-conditioned theater designed by Lippincott & Margulies. Reevesound, Inc. has provided projection equipment and is supervising the engineering of the theater for projectors, screens, sound and other equipment. Color processing of the film was by Movielab, Inc.

Work of Talented Producers

A one-time painter, Francis Thompson holds a long list of film awards including a 1958 Cannes Film Festival for his film, *N.Y., N.Y.*, in which he created an abstract image of Manhattan composed of floating skyscrapers and whirling streets.

Hammid is also widely recognized in the film world as director of *Hymn of the Nations* with Arturo Toscanini, an amusing *Private Life of a Cat* and a television series on Pablo Casals and Jascha Heifetz.

EDITOR'S NOTE: the "Tri-Arc" projection system designed for this exhibit will be discussed in detail within the Special Report on the New York World's Fair now being prepared by the Editors as a valuable reference tool for our readers in the months ahead.

Standing before the three 18-foot wide screens in the Johnson's Wax Pavilion theater are Alexander Hammid and Francis Thompson, the men who filmed the 18-minute color motion picture.

Rig of three 35mm Arriflex cameras used in filming three-screen sequences for the Johnson Wax theater attracts audience of curious Africans as Alexander Hammid and Francis Thompson (at right) prepare for shooting.

Below: this African river sequence from "To Be Alive" is "grouped" to show general effect of the three-screen, "Tri-Arc 335" projection system used in this 500-seat, disc-shaped theater at the New York World's Fair.

THE FAIR FILMS

☆ Correspondent-at-large Phil Murphy reminds us (after an evening's perusal of the Official Guide) that 43 of the 150 pavilions at the New York World's Fair have listed motion pictures as a regular part of their exhibits; some are using two or more separate film programs.

Yes, films are at the Fair and in a big way! They're showing in all dimensions — from 8mm up to 70mm — on "the largest projection screen in the world" (GE); on-multi-screens (IBM); and surrounding viewers with sight/sound (NY Port Authority).

Meanwhile, all across the land (and overseas), thousands of other sponsors are using the film medium in an equally spectacular way. The Department of Agriculture's 70mm program (see page 40) has to be one of the year's most important ventures as it bids for more trade between Europe and the U.S.A.

Drivers test reactions at Mobil Pavilion, the only audience participation show at the New York World's Fair.

Hit Show at the New York World's Fair:

Mobil Puts Drivers to the Test

Fair Visitors Operate Simulated Autos for "Economy Run"
Test of Driving Reactions Staged by Dramaturgy and Dage

A UNIQUE DRIVER REACTION sampling test which uses a film-fed television set seen through the windshield of a simulated car is now the main feature of the Mobil Oil Pavilion at the New York World's Fair. It will function in conjunction with an electronic data processing system designed and operated by Dramaturgy, Inc., of Cleveland, and Dage Television Co., of Michigan City, Indiana.

The reaction sampling test was developed expressly for Mobil to determine a driver's mileage-per-gallon and his ability to drive safely through all weather and road conditions. It was first used at the Seattle Century 21 Exposition by record crowds who wanted to test their actual driving ability against their imagined skills. Contestants are scored electronically and the really excellent drivers will get a score of 23 miles-per-gallon over a test run that lasts four minutes. The test is based on Mobil's annual cross-country economy run.

"Windshield is a TV Screen

Each participant is provided with a driving station complete with operating controls including steering wheel, gas and brake pedals and a completely assembled dashboard. The units are supplied by the Dodge Division of Chrysler Corporation. The competing driver views the road through the "windshield" which is actually a 21-inch television screen.

The instantaneous positions of steering wheel, brake and gas pedals are converted to electrical signals which are constantly being compared with like signals previously recorded by a group of expert drivers over the same run. Should the contestant driver's signals exceed the allowed margin of error of that of the experts, points will be deducted from his starting "perfect" score of 23 miles-per-gallon. His score will continue to be reduced as long as he exceeds this margin of error.

How to Have an "Accident"

Should the game driver make ever greater errors his generated reaction signals may exceed a second wider margin of error limit. Then, not only is his score further reduced, but he experiences an "accident" by seeing and hearing it on his individual TV monitor. The accident scene that develops is keyed to the type of error made at given critical moments in the filmed set of driving episodes. The accident logically follows the error committed and tends to discourage "show-off" drivers who are not seriously competing in the game.

Two film projector-TV camera chains run simultaneously in synchronization, one for normal driving and one for accidents. When a driver's error causes his accident relay to be tripped, his TV monitor is switched from the normal to the other TV camera. Actual road noises and sounds have been recorded on the film's optical sound track for each. Each film is also provided with a magnetic sound track on which the expert's reactions and accident susceptibility and timing cues are recorded.

In this manner, voltages proportional to the experts' control positions are recreated during each (CONTINUED ON PAGE 58)

Below: a young housewife tests her ability to react quickly and safely under simulated traffic conditions in the Mobil exhibit's driver reaction test. The hostess (upper left) directs the licensed driver. Test unit is a modified Dodge, comparable in every respect to the actual car, except that the "windshield" is a television screen on which the driver encounters scenes depicting actual conditions along the road.

K EYNOTE SPEAKER of the Fifth Annual IFPA Conference, opening on Thursday, June 4th at the Disneyland Hotel, Anaheim, California, will be General Joseph J. Cody, Jr., Vice-Commander, Air Force Space Systems Division. Other featured speakers on the three day program, which concludes on Saturday, June 6th, are film producer-title designer Saul Bass and Norman Dyhrenfurth, leader of the American expedition which conquered Mount Everest. Cinema industry "Cindy" awards for the best industry-produced films of 1963 will be made at the annual awards banquet on the final night of the Conference. On the occasion, the Jay Gordon Memorial Award will also be given for the outstanding individual contribution to the industrial film medium.

To Present Special Awards

Several special awards will also be made for other important achievements in the industrial motion picture and television fields.

The IFPA national board of directors is working closely with Conference vice-president Joseph M. Gulli as plans near completion for a thought-provoking and entertaining annual program. According to Chapters' vice-president Kenneth J. Maurer (chairman of the awards program), the 1964 film competition will be broader in scope than in past years. It will again involve the voting participation of every IFPA chapter, coast-to-coast.

Maurer feels that national participation makes the "Cindy" awards more representative of the judgment of the entire IFPA organization.

Chief of Vandenberg Base

☆ His top-management role in military space programs has climaxed an impressive Air Force career for General Cody, IFPA's keynote speaker of the Conference. Chief of the Ballistic Missile Field Office at Vandenberg from 1958 to 1963, he managed the direction and growth of this bustling missile and space launching base from a small office to a giant military and industrial complex exceeding one billion dollars in value.

General Cody's generation of Air Force service has spanned fighter pilot training, assault landings in Normandy, participation in nuclear tests, and extensive management experience with the Air Research and Development Command, forerunner of the Air Force Space Systems Command.

IFPA JOURNAL

INDUSTRY FILM PRODUCERS ASSOCIATION, INC.

General Cody, Saul Bass to Address Members at Fifth Annual Conference, on June 4th-6th

A Leader in Creative Design

☆ As a creative designer, Saul Bass has won international recognition in the fields of graphic, industrial film and exhibition design. The recipient of the American National Society of Art Directors' designation as "Art Director of the Year," he was also cited by the Museum de Arte Moderna in Rio de Janeiro with an award for "The High Artistic Value in All Work."

A citation by the Philadelphia Museum of Art acclaimed him for "Distinction Brought to the Profession." Examples of his work are in the permanent collections of the Museum of Modern Art (New York); the Library of Congress; the Smithsonian Institution (Washington, D. C.) and the Prague Museum in Czechoslovakia.

But Saul Bass is best known to our field for his design contributions through titles and special sequences for outstanding entertainment films. His epilogue for *Around the World in 80 Days* and the prologues to *Walk on the Wild Side* and *Mad, Mad, Mad, Mad World* are classics in our time, as are his title designs for *The Man With the Golden Arm*, *Exodus*, and *The Cardinal*.

Most recently, Bass completed a 20-minute color motion picture, *The Searching Eye*, a major attraction at the New York World's

Artist-designer Saul Bass, who will be one of featured speakers at the Fifth Annual IFPA Conference.

General Joseph J. Cody, Jr., Vice-Commander, Air Force Space Systems Division, will deliver the keynote address at 5th Conference.

Fair, where it is being shown to some 35,000 people each day in the circular theater of the Eastman Kodak pavilion.

The film's mission is to show these viewers that "vision may be honed to new heights of sensitivity on a motion picture screen."

His understanding of "visual impact" was evidenced in Alfred Hitchcock's *Psycho*, where he used visual impact to bring screen terror to the audience-routing level in memorable murder scenes.

Norman Dyhrenfurth to Speak

☆ A photographer, director and producer whose fame as an explorer and mountain-climber has nearly eclipsed his professional ability in our field of interest, Norman Dyhrenfurth was made head of the motion picture department of the University of California at Los Angeles in 1948. He was only 30 at the time of his appointment, held the position for five years.

His impressive record as a Himalayan explorer, mountain climber and documentary film maker was highlighted in 1955 when he organized the international expedition which made an assault on Mount Lhotse, world's fourth highest peak. The expedition made thirty-one ascents of unclimbed peaks and produced the first pro-

(CONTINUED ON PAGE 64)

Europe Gets Widescreen Look at U. S. Agriculture

A Multi-Panel 70mm U. S. Department of Agriculture Film "Bounty Without Boundaries" is Showing at Large Trade Fairs to Remind Europeans of the Benefits of Two-Way Trade

A UNIQUE 70MM "multi-panel" motion picture produced for the U. S. Department of Agriculture has been playing to packed audiences throughout Europe at trade fairs and similar events.

One of the most technically complex documentary 70mm motion pictures ever produced, the film reflects the rapport between the American farmer and his European counterpart by showing their common heritage, common problems and similar aims.

Tariff Negotiations in May

Its purpose is to pre-condition European public opinion to the benefits of two-way trade with the U. S., particularly in agriculture. Formal tariff negotiations with the European Common Market on agriculture and other commodities begin in May.

The film was produced by the Fred A. Niles Communications Centers, Inc., of Chicago, New York and Hollywood.

First Showing in Amsterdam

Ten minutes in length, in Technicolor, the film, titled *Bounty Without Boundaries*, was first shown in November, 1963, at the 16-day U. S. Food and Agriculture Exhibition at the Amsterdam Trade Fair in Holland, where more than 135,000 persons saw it free of charge. It is currently being shown at other trade fairs, including one in Verona, Italy, and is scheduled for many other showings throughout Europe during 1964 and 1965.

To facilitate distribution, the Agriculture Department had the Niles organization make 35mm copies for anamorphic projection. 16mm copies are masked top and bottom of the picture frame to maintain the 1-2 format.

Scenes on Both Continents

In some scenes as many as six images are seen on the screen at one time in various configurations.

According to president Fred A. Niles, it was felt that the best way to manifest the common elements between the U. S. and Europe was to shoot similar scenes on both continents, and then show them on the screen at one time. In this way, a maximum comparison could be made. These comparative scenes form the focal point of the

film, which does get into other areas.

Jack Whitehead, BSC, and Rudy Wright, both of Niles staff, were the cameraman and director respectively.

"Problems Were Enormous"

Whitehead pointed out that the problems encountered in composition, exposure, color balance, editing, optical printing, etc., were enormous.

"Similar problems have been presented in other films, of course," said Whitehead, "but in this case we had to shoot on two continents, under different weather conditions, using two film sizes, and under an extremely tight deadline."

Shooting started in July, 1963, with the U. S. scenes being shot first. The most minute details of exposure, lighting, set-up, etc., were recorded after each scene. After shooting was completed in the U. S., the crew went to Europe with these records and the workprints.

Mostly Shot on Location

According to Whitehead, the more unusual shooting problems boiled down into the following:

1. Setting up: The bulk of the film was shot on location. The basic problem here arose in finding outdoor farm locations in Europe

that would be identical to the locations shot in the U. S. Time was at a premium. At one location, Whitehead reported, he was able to retain good composition while maintaining an extremely tight reference between the frame and various telephone lines. He would rather have done the shot somewhere else, but there was no time.

Composing Multiple Scenes

2. Composition: Each shot had to be considered according to its format as framed within the final composite. Shots were to be masked in blatant horizontal, sharp vertical, or other highly unusual configurations. Whitehead had to follow the plotting that was set down for each scene ahead of time. Depending on the configuration of the frame, either a 70mm or a 35mm camera was used. Where people were used in a scene which would ultimately have to be masked, Wright would plot their action in the appropriate segment of Whitehead's camera view-er.

3. Color balance: The normal consideration given to scene-to-scene color balance was here compounded by the fact that as many as six scenes appear in the projected area at one time, most of them shot on different locations. As much as could be was done on location. Raw film stock of the

Shooting a location interior for "Bounty Without Boundaries" with the big 70mm camera (foreground) focused on a rural wedding reception as Nile's cameraman Jack Whitehead checks set-up and lighting (background).

same emulsion coating was used and camera records were closely followed.

Keeping Balance in Color

As nearly as possible, the photography was planned to produce a negative wherein, for instance, a tobacco field in the U. S. could segue with a tobacco field in Europe with as little change in color balance as possible. Additional efforts would be expended in post-production optical printing.

With this in mind, Whitehead elected to use negative color separation masters so that maximum control in panel-to-panel quality balance could be maintained when optically printing the final composite internegatives.

Complications of Editing

4. Editing: The editing and film line-up problems were complicated by the number of inserts in each frame and the use of color separation master prints for duping. A full-screen master cue-film was used as a guide in determining scene changes, with each panel area being edited one at a time, until one complete composite scene was finished. In many cases, there would be scene changes within the panel areas, again compounding the editing problem.

5. Optical printing: As in most involved composite printing, there was a myriad of problems, not the least of which was a looming deadline. Only four weeks remained in which to make all of the special mattes and complete the 70mm composite optical printing.

Opticals by Linwood Dunn

This project was assigned to Film Effects of Hollywood, with Linwood Dunn, ASC, president and founder of the firm, supervising the job. *Bounty Without Boundaries* was the first 70mm film to make use of involved multi-panel frame areas which required the development of unique matting techniques and the use of highly specialized optical printing equipment.

Most of this equipment was designed and constructed by Dunn and his staff of special effects technicians. All of the film had to be printed to exact frame counts.

40 Passes Through Printer

Because of the use of color separations to permit optimum control of color balance, some of the composites were not completed until the internegative had made more than 40 passes through the printer. There are actually 20 minutes of photography within the film. Further, according to Dunn, referring to color balance, all of

the panel areas in each scene required correct relative color balancing since the final composite internegative would, of course, be release-printed on just one color-corrected printing light.

All told, actual shooting lasted from July through early September. Editing and laboratory work went from early September to just before the deadline of November 4th set for delivery.

70mm Showings at Fairs

In Amsterdam, at the Verona Fair, and at most other major trade events, the film will be shown with a 70mm projector. For theater and other showings, 35mm and 16mm will be used. The 35mm film is now available in seven different languages.

The Agriculture Department is calling the theaters in which the 70mm version is shown, "Multi-Vision Theaters."

Shown to President Johnson

One of the first to view the film was President Lyndon B. Johnson, who cut the ribbon to open the fair in Amsterdam on November 7. It was one of his last formal acts as vice president.

Orville L. Freeman, U. S. Secretary of Agriculture, was also present for the preview presentation of the film. He has since been encouraging its mass distribution throughout Europe. Plans are also being made for distribution in the United States.

Not all of the film is devoted to farm practices and life. Sizable segments show end products of the farm such as high-fashion cotton outerwear. In one scene, that of a U. S. rural community, the bridal gift table is seen, showing such things as Danish cutlery, Swedish crystal, a German radio, etc.

U. S. Products in Process

Multi-panels are used in this scene which show the products actually being made in their country of origin.

The Department of Agriculture wanted these segments in the film in order to bring home to the people in Europe the tremendous number and the wide variety of European products imported by the United States.

The original score for the film was composed by Sid Siegel, Niles musical director. Script was written by a Niles staff writer.

* * *

EDITOR'S NOTE: a definitive article on the techniques of optical effects and the wide range of film sizes in use for business films is in work.

MULTI-PANEL IMAGES SHOW MUTUALITY OF INTERESTS

The scene above depicts fabrics woven and designed in Europe with American cotton. It was actually shot in one operation, using double background-process slide projection (rear screen).

Another frame in a composite "multi-panel" sequence for the film "Bounty Without Boundaries." Three panels at left show the hatching of an egg; center panel: an egg grading machine. Panel at right shows the U. S. Department of Agriculture seal. In all, five panels were utilized.

This five-panel sequence was "overlaid" with animated graphs and arrows. Three panels at top show scenes (left to right) in Antwerp, Rotterdam and Brussels. Horizontal panel at the bottom depicts Wisconsin wheat field. Over these, a moving graph and arrows show the growth of overseas trade.

Working with equal facility to entertain, instruct and promote, Halas employs the full range of techniques in his productions . . .

A new method of animation with colored lights was depicted in Halas' film presentation for an "integrated" production "Is There Intelligent Life on Earth" combining film sections with a musical stage presentation.

Halas: Innovator in Animation

The Founder of Halas & Batchelor Cartoon Films Has Made Many Widely-Variied Contributions to the Art of Animation

WHENEVER FILM BUFFS, sponsors, advertising men, motion picture technicians, Festival organizers or film distributors and exhibitors meet together in any city in the world, you'll find at least one person will be a friend of John Halas.

This modest, warm hearted, intense man has won international recognition for the animated film as a serious art form as well as for its obvious uses in entertainment, instruction and promotion.

John Halas came to London

from Hungary in 1936. Joy Batchelor first met him in London, worked with him during his early days as an animation director in that city and in Budapest. 24 years ago they married and established their company. Halas and Batchelor Cartoon Films Limited. Their beginning was enmeshed with the outbreak of World War II.

Informing Britons at War

The new company was fully employed on short films calculated to inform and inspire the spirits of Britain's civilian population

The trials and tribulations of aviation were depicted in Halas' film "The Power to Fly" created for the British Petroleum Company library.

under fire. These cartoons, with a simple, subtle style, were distinguished by imaginative musical scores. From time to time. John Halas took time off from sponsored work and drew a film for himself. The first I remember, as a soldier in a remote field cinema, was *The Pocket Cartoon*. This 1941 subject poked gentle fun at the political figures of the day.

To help explain the British Government's post-war reforms — the birth of the welfare state — Halas made films about a certain "Charley," a hard-working British citizen who had trouble understanding what was going on around him. It was at this time that Halas also made his first film for industry.

hoven to promote the sale of film projectors. *The World of Little Ig* told the story of a little boy in prehistoric times for an NBC cartoon program. His facile treatment revived *Popeye*, the indefatigable sailorman, on American television.

Sequence in Monsanto Film

Wholly different was his work for MPO and Monsanto Chemicals in special sequences for *The World That Nature Forgot*, explaining the structure of plastics. *Speed the Plough* helped tell a story of agriculture for British Petroleum; *The Candlemaker* revealed the nature of Christian stewardship for the United Lutheran Church in America. In this period, too: animation inserts for Seagram's *The First 99*

The history and development of the motor-car are shown in "Moving Spirit," produced on behalf of the Anglo-Iranian Oil Company. Story: by Allan Crick. Direction: Bob Privett.

As *Old as the Hills*, produced for Anglo-Iranian Oil, explained the origins of petroleum.

First Full-Length Cartoon

Halas realized his dream — the production of a full-length cartoon film — when he collaborated with Louis de Rochemont in the creation of *Animal Farm*, adapted from George Orwell's political fable. It was the only full-length animated dramatic subject ever to have been produced in Britain.

During those 10 years between 1950 and 1960, Halas and Batchelor's work expanded in many different directions, including hundreds of television commercials, public relations, sales and training films for industry. All this time, John Halas was seeking new ways to express himself in the animated film medium.

This was the period of the riotous *History of the Cinema*, subsequently bought by Philips of Eind-

and a cartoon, *Dam the Delta*, in which the Netherlands Government explained the age-old fight against the invader sea.

There were light-hearted films, like *For Better, For Worse*, created for Philips — and serious films like *To Your Health*, made for the World Health Organization to combat alcoholism.

Theatrical Film Continuity

The millions who saw *Cinerama Holiday*, viewed Halas & Batchelor's work in the continuity sequences. For the feature film, *The Guns of Navarone*, Halas drew the map effects. In fact, his work can be found in the animation inserts, titles and special effects of more than 20 other feature productions.

Between 1947 and 1960, Halas and Batchelor films gained six first prizes at the Venice Film Festival and numerous awards in other major events.

Halas has always sincerely be-

"AUTOMANIA 2000" CARTOON FILM OF THE YEAR

This film shows the state of traffic congestion throughout the world foreseen as it will be by the end of this century. The new cave dwellers trapped in their cars seventeen stories below the earth's surface, adjust themselves to their new living standards. This cartoon won first prizes for animation at the Moscow, Barcelona and Locarno Festivals during the past year. It is the first Western comedy to be generally released for showing in cinemas throughout the Soviet Union and has also just received the Luther Rose Medal for its "spiritual content."

A scene from "Dam the Delta" a Halas & Batchelor film which helped the Netherlands Government Information Service to explain the age-old fight against the invader sea through public showings in theaters throughout the Lowlands. Halas has created many such informational cartoon films.

lieved that animation is a new art form and that it cannot be confined in style or in the materials used. He pioneered in the use of paper sculpture in animation, as in the *Snip and Snap* series about two little dogs for British television. Recognizing that the rising costs of animation were inhibiting the use of cartoon films for industry, he devised new animation techniques which cut drawing board costs to one-tenth.

60-Minute Children's Film

In 1961, he made his first live-action film, significantly, for children. *The Monster of Highgate Ponds*, a 60-minute picture under the direction of Calvacanti, tells of a tame and charming monster which is befriended by some children and rescued from the clutches of an unscrupulous fairgrounds man.

In the same year, he made an outstanding combination live-action/animation film, *The Wonders of Wool*, which was sponsored by the International Wool Secretariat to demonstrate the chemical properties of woolen fabrics for clothing.

8mm Single-Concept Series

Still a pioneer, John Halas then turned to the exciting medium of 8mm as a means of furthering visual instruction. In collaboration with Sir Charles Snow, famed British scientist and author, he has produced a series of single-concept, silent teaching films for use with the Technicolor 8mm "Instant" movie projector.

But he has never lost his love for cartoon and satire. At a recent meeting of Britain's press to hear the details of a government plan to reorganize the road system, newsmen viewed a Halas and Batchelor film, *Automania 2000*, which provided viewers with a frightening, yet amusing, predic-

tion of what will happen to all of us if the number of motor cars continues to increase at its present rate!

No one could have set the stage more adroitly for the announcement of the Government's "better roads" plan. *Automania 2000* was no sponsored film, however. It was just an example of John Halas' uncanny instinct for making the right film for the right time. The Press loved the picture and it has just completed the longest run of a short film in London's West End, playing more than three months in one theater. It is now being shown throughout Britain, paired with *The Victors*.

Wins a \$600 Cash Award

In fact, the only other British-made cartoon film ever to have received such widespread showing was Halas' *Animal Farm*. *Automania*, by some curious twist of fate, is also the only British cartoon ever to be released in Russian cinemas. It probably helps the Kremlin point out to Ivan the benefits of not being able to buy one of these "future problem" vehicles.

As this piece was written, *Automania 2000* had just won a \$600 cash award at the Oberhausen Short Film Festival in Germany; it has also been the honored recipient of the Luther Rose Medal, given by the jury of the International Evangelical Film Center for "the film with highest spiritual content and the deepest humanity."

The John Halas "Formula"

That phrase would describe a good deal of John Halas' films. Add liberal portions of "pioneering effort" and "artistic integrity" and you have a formula which comes very near summing up Halas and Batchelor Cartoon Films Limited.

JAPAN'S FACTUAL FILM industry was practically non-existent 15 years ago. Today, some 215 specializing producers are turning out an annual total of 1,100 industrial and educational films. The last reported figure was 1,127 titles in both fields. This is how it all happened.

Before and during World War II, the sole important outlet for informational films was the commercial, entertainment theater where they were shown on a compulsory basis with regular feature films. With the coming of peace and the resurgence of the Japanese entertainment film industry, factual film producers lost this outlet. A noteworthy factor contributing to this decline was the absence of acceptable product from the changed ideological point of view.

Not Enough 16mm Projectors

There were all too few 16mm sound projectors within industry or the school to provide an immediate market for the newly-reborn factual film industry. Most of the companies went out of business but the few who held on joined forces with teachers, school administrators and the manufacturers of film stock and a-v equipment to form Japan's Audiovisual Education Association in 1946. Despite this valiant attempt, little progress was made. There were

Eiichi Kanazashi is the author of this report from Japan.

A Note of Introduction

This exclusive report on the factual film in Japan is provided by one of that country's foremost audiovisual specialists. Mr. Kanazashi is President of Toyko's Educational Film Exchange, Director of the Japan Audiovisual Education Association, of UNIJAPAN (the Association for the Diffusion of Japanese Films Abroad); and of the Federation of Japanese Film Industry. He is also a member of the Japan National Commission for UNESCO.

BUSINESS SCREEN INTERNATIONAL

Report on Recovery: Japanese Producers Are Creating 1,000 Factual Films a Year

by Eiichi Kanazashi, President, Educational Film Exchange

too few projectors and not enough films available.

In 1948, the Occupation Forces made available 1,300 16mm sound projectors and a large number of documentary films. These were distributed to the regional (Prefectural) governments and formed the basis of today's Prefectural Film Libraries. These films, of foreign origin, stimulated interest in Japanese subject matter; films dealing with everyday problems in familiar settings were in demand.

Beginning of the Road Back

From that period on, the Japanese factual film movement began its steady upward growth. The pattern of growth took shape slowly, at first, with many frustrations. But gradually conditions began to improve.

The Educational Film Producers Association was formed 10 years ago, with 80 of Japan's 215 production companies in its membership. Educational and industrial films are made entirely by private enterprise, without any subsidy or control by the Government. It is a highly-competitive industry. One third of all films made in Japan are produced by approximately 12 companies. The rest of the output is shared by the other 200 production units.

Business Films in Theaters

Many industrially-sponsored films are lensed in 35mm color (including Wide-screen) and are bound for showings in commercial theaters. For example, in 1961, 29 business-sponsored films were exhibited with feature motion pictures and in newsreel theaters. Films intended for schools or directly to 16mm-projector-equipped audiences are shot in 35mm or 16mm and projected on this highly-portable equipment. There is also some 8mm projection and it is growing.

Distribution of factual films on a national level is entirely by private enterprise. Approximately 100 audiovisual dealers and distributors are engaged in this work throughout Japan. There are a few companies who operate nationwide distribution networks as well as maintaining their own production facilities. Two of the largest of these firms have a combined in-

ventory of over 10,000 prints.

In addition, there are 692 regional and local film libraries operated by non-profit and governmental organizations. Here is a representative breakdown:

1. The Prefectural Governments maintain 104 film libraries with an inventory of 10,748 prints.
2. Municipal film libraries total

208 with a print inventory of 15,103.

3. City, town and village co-operatives have 158 film libraries and house 8,177 prints.
4. Miscellaneous private, industrial and dealer libraries total 222 with an inventory of 20,588 prints in service to their clientele.

With some 55,000 sound prints in circulation, Japan has a sizeable audiovisual activity serving its fairly well-concentrated audiences.

\$226 Million Spent in 1961

According to a Ministry of Education survey in 1961, the total annual expenditure was \$226.4 million; total income (including Government aid in school purchases and rentals, etc. of \$184 million) was \$213.2 million.

The inventory of 16mm sound projectors last reported for Japan totaled 13,653 machines in use in schools and public organizations. 6,357 of these were in primary schools; 3,250 were in secondary and advanced high schools, accounting for 63.4% of the available 16mm sound equipment within these school categories.

Another 3,921 16mm sound projectors (22% of the total) are

in public auditoriums on a community level. About 125 (3.9%) are in kindergartens, serving the very young. As an indication of the future potential for 8mm sound-on-film, nearly 400 machines of this type were recently introduced into the schools on an experimental basis, with a starting inventory of 500 8mm sound titles. Considerable growth in the use of 8mm optical sound projection is anticipated.

Aid from Education Ministry

Japan's Ministry of Education takes a lively interest in informational and educational films, although it does not participate in either production or distribution. However, the Audiovisual Education Section promotes and develops the use of films and the Film Evaluation Committee assists teachers and adult education group leaders in their selection of suitable material.

In 1961 the Ministry purchased seven million dollars worth of film prints for free distribution through the public libraries and appropriated nearly two million dollars to subsidize one-half of the admission fees for entertainment programs at commercial theaters which offered films thought to be beneficial to youth.

Sponsors "Short Film Festival"

In order to promote international understanding through the film medium, the Ministry of Foreign Affairs sponsors an annual International Short Film Festival in conjunction with the Educational Film Festival. Award winners at this event seem to be well-distributed throughout Japan.

The aim of the annual Contest of Cultural & Documentary Films on Japan is to select the best Japanese industrial and cultural films to be shown abroad.

Useful Data on Large-Screen Shown in a Genarco Portfolio

☆ Write for a useful portfolio containing several brochures which describe the complete line of Genarco 3,000-Watt Slide Projectors and Electric Slide Changers for 3 1/4" x 4" slides.

The colorful literature explains the use of slide projectors for rear projection in large auditoriums and at sales meetings, etc. as well as useful data on the projection of giant images on outdoor screens and four-foot images in displays.

The portfolio is free on letter-head request from Genarco, Inc., 97-04 Sutphin Boulevard, Jamaica, New York 11435. Mention BUSINESS SCREEN.

a show stopper?

never!

Your show is one smooth, continuous performance from lights off . . . to the end, with this new KODAK PAGEANT Sound Projector.

No awkward setting-up exercise at the beginning. No embarrassing mid-performance interruptions. Everything exciting that happens will happen on the screen.

This could be the first movie projector you've ever really liked.

It's the first projector with a sound system that has no electronic tubes to burn out . . . no fragile photocells to fail . . . no touchy exciter lamp to quit on you. Not even any static, or hissing, or crackling noises.

The sound system in this PAGEANT Projector is entirely different from those in other projectors you've used. It's transistorized. Its circuitry is built to shrug off bumps and jostling. It should never require fixing. It should never cost you any money. You don't carry spare parts for it. You don't need any.

Power?—enough to pump good sound through an auditorium P.A. system and be heard crisply from first row front to last row balcony.

Fidelity?—clean, commanding, steady sound, played through its own large, 11 x 6-inch speaker. The sound this system reproduces encompasses the entire range it is possible to record on film.

Putting the show on the road is no project with this projector.

It sets up anywhere. Threading film is as easy as following a red line. Throw a lever, push a but-

ton, come back when the movie is over.

The lever you throw does everything but turn on the sound.

The button you push turns on the sound. Instantly!

No waiting for warm-up. The sound comes on full and clear, the moment you push the button.

This projector operates so quietly it never calls attention to itself. Never distracts. Never interferes with the mood of the performance. In fact, all your audience will notice is the performance.

The brilliance of the picture, the beauty of the sound, the projector itself—all of these will be taken for granted.

The name of this new projector is the KODAK PAGEANT 16mm Sound Projector, Model AV-126-TR. We've written a booklet about it which you may have simply by writing your name and address here:

KODAK PAGEANT 16mm Sound Projector
(Model AV-126-TR)

Then send it back to us at the address below. Check this box ☐ and we'll have a Kodak dealer call you to arrange for a convenient demonstration of this new machine. No obligation, of course.

Scene in the Audio production "Atlantic City"

Funfare for Atlantic City

Wordless Color Film on Beach Resort Lets Sheer Pleasure Do the "Selling"

SPONSOR: The Atlantic City (N.J.) Convention Bureau.

TITLE: *Atlantic City*, 10; 13½ min, color, produced by Audio Productions, Inc.

☆ Atlantic City, one of the nation's oldest and most favored beach resorts, is on display in a delightful new film now reaching theater, television and group audiences through the sponsorship of the Atlantic City Convention Bureau.

Atlantic City, as it is succinctly titled, is another in the same vein as the extraordinarily successful narration-less film, *New York, New York*, which Audio Productions made for American Airlines last year. It, too, is short on words — there are only a few at the opening and close — but long on the light, airy attractiveness of the place, enhanced by good color photography and skillful editing.

Pleasure Spots "Speak" for Themselves

The reason of being for this kind of film with almost no narration is that it must be completely lacking in any attempt to *sell*, yet be so attractive in itself that audiences are charmed and captivated. Atlantic City's Convention Bureau is so diffident about any hard-sell approach that even its own title credit has been omitted.

In 271 scenes, the film covers just about all the fun that Atlantic City has to offer — the long sloping beach, water sports of every kind, golf, the fabulous boardwalk, fishing, the big amusement piers, racing, night-life, and, of course, the razzle-dazzle of the annual Miss America contest.

Wholesome Place With Appeal to Young

Audio's camera crews, under the direction of Producer-Director Hans Mandell, started shooting in late spring last year and continued through the fall. The philosophy used throughout was to show the resort as a wholesome fun place with a special appeal for young people. No continuity was used during production, just a scene list, which resulted in a real

EXPLORATION: THE GOOD LIFE & OUTER SPACE

adventure in the editing of both film versions.

Mr. Mandell believes that it is all too easy to become "arty" in this kind of motion picture. This might please a few far-out film enthusiasts but just puzzle the great majority of viewers and destroy the effect it was designed to produce.

Through straightforward, sometimes amusing, but always logical transitions this picture

moves continually and fast, giving a feeling of on-the-spot immediacy. Sound effects, used almost subliminally under the music score, also help to achieve this feeling of reality.

Showing in Theaters and on Television

Atlantic City will be presented in a ten-minute version for theaters, and a 13½-minute film for television and group audiences through Modern Talking Picture Service.

The Flight of Ariel II

Film Saga of Satellite Ready to Show Within Minutes After Launch Success

SPONSOR: The National Aeronautics and Space Administration.

TITLE: *Ariel II*, 27 min, produced by MPO Productions, Inc.

☆ Minutes after the National Aeronautics and Space Administration announced the successful launch of Ariel II on March 27, a motion picture telling the whole story was ready for simultaneous release in England and the United States. The picture, titled *Ariel II*, deals with the history of the second international satellite and how it was created and placed in orbit by Americans and Englishmen in an effort to gain new knowledge about the structure of the universe. The 27-minute film was sponsored by NASA's Goddard Space Flight Center.

Ariel II features Alistair Cooke as host-narrator to guide the audience through the three years of planning and research required to develop, pre-test and launch the 145 pound package of complex scientific instruments.

Advance Planning Assures Timely Film

To be able to deliver a timely film, MPO Productions, Inc., which produced *Ariel II*, and the Goddard Space Center planned their production schedule well in advance.

The script, by MPO staff writer-producer, John L. Washburn, was delivered in February, 1963.

In May, 1963, photographic crews under the direction of Andy Gold, head of MPO's Special Projects Division, visited England and photographed the British sequences. These

Below: MPO president Judd Pollock (left) and narrator Alistair Cooke study script of "Ariel II" with a model of the satellite in the foreground.

Shooting a sequence for the "Ariel II" film within the facilities of Radio News Central of the Voice of America in Washington, D. C.

included scenes with Sir Harrie Massey, Chairman of the Royal Society's Committee on Space Research, filmed at the Royal Society headquarters in London.

Other locations were the BBC, Cambridge University, the Air Ministry's meteorological offices at Bracknell, and Jodrell Bank, site of the world's largest radio telescope. In addition, one United Kingdom sequence was filmed and forwarded by MPO to scientists in Australia.

Narrator Has Versatile "Viewing Window"

In the United States, shooting took place at the Voice of America's Radio News Central in Washington, at the Goddard Space Flight Center and the Westinghouse Defense Electronics Plant in Maryland. Launch footage from Wallop's Island in Virginia was provided by NASA.

To tie so many widely dispersed events together in logical continuity, Alistair Cooke was filmed as a narrator in command of a versatile viewing window that could transport the audience immediately to any corner of the globe.

These process shots were filmed in the MPO studios in August, 1962, by staff director Joseph Lerner. Since at the time no one could be sure of the actual launch date, alternate endings were written and shot for use by MPO Special Projects Division editor Bob Lynch.

Right Ending Ready at the Launch Date

By December 1, 1963, three months prior to the launch of Ariel II, a final interlock screening was approved by NASA officials in Washington. On February 20, 1964, the launch date was set and MPO was able to select the right ending for the picture.

THE INTERLOCK

(or) Shooting Would Be More Merciful . . .

by Charles (Cap) Palmer*

A brief commentary to be read to sponsors' representatives who are sitting in an interlock session for the first time . . .

TO THOSE AMONG US who, up to this moment, have been spared the trauma of an Interlock session, we extend welcome and sympathy.

In the narrow view, an Interlock is the occasion at which an in-work film is projected via two strips: the spliced-together visuals on one machine, and the dialogue or narration on another, hopefully in synchronization.

But, in the broader view, the Interlock is the occasion in the development of a film project where everybody wishes he were dead — and out of which he walks, or is carried, wondering how he ever let himself get tangled up in such an obviously ill-fated enterprise.

All we can tell you by way of comfort is that, as with motherhood, many have survived this experience and achieved complete recovery.

To stretch the motherhood analogy, a motion picture at this point of development is akin to a human embryo at around four months, at which stage only a doctor or producer can have confidence, based on past experience, that anything good can come of this.

But perhaps you may find a little reassurance, as you look at the Interlock version of the pic-

ture which is about to be screened for you, if you know specifically some things to allow for at this stage of the embryo's development.

In the first place, the scenes you will see are on "work print," which has been cut and re-cut, spliced and re-spliced by the editors, until it is inevitably dirt-specked and jumpy. And of course there is no color or brightness correction. (But the original footage is still in the vault and will not be touched by human hands until all the cut-and-try is over with and the original goes directly into the printer.)

Secondly, there are no "opticals" in this version. Technically, opticals are dissolves and fades, super-impositions and the like. But more graphically, opticals are the film's punctuation — and looking at a movie at this stage where the shots are spliced together butt-to-butt is like reading a book with no paragraphs or chapter separations, not even periods or commas.

And the immediate effect is going to be one of very disturbing abruptness, since it's the film "punctuation" that will give the final version its ebb and flow of pacing; indicate time lapses, changes of locale, and so on. Incidentally, the crayon marks which you will see sliding across the screen periodically are the cutter's indication of where dissolves and fades are planned to take place.

You will see a few "slugs," stretches of emptiness where vis-

uals are still to be secured, and the slug has been inserted temporarily for timing purposes.

Except for actors, in synchronized dialogue, the voice which will eventually be that of the narrator is "temporary." Listen to the *content*, not the delivery.

No Effects or Music Yet

This sound track carries only the voices. The "sound effects" are still to come . . . and you will be surprised later on when you see how much more an automobile crash, for example, means when the visual is accompanied by the scream of brakes and the rending of metal. Also, you will not hear the conventional music scoring, and this is really a rather disturbing lack, because music will later give us transitions from one subject to another, will bridge time-lapses, signal retrospect, supply mood behind the narrator's vocal discussion.

But the present lack of score will add to the temporary feeling of abruptness and stark emptiness.

The voices will come out of the speaker here at the levels at which they are recorded, so there will occasionally be a wide variation in volume between one voice and another. This will all be balanced when the voices are combined with the sound effects and musical score in the subsequent "dubbing session" or "mix," so for now, try to listen around it.

And also, don't be concerned about environmental noise under synch dialogue in the location scenes; the microphone is a tin ear which picks up everything. But before the dubbing session these location-recorded tracks will be put through a noise-suppressor and whatever environmental noise is left will often be covered by the music score or will be down far enough to sound simply like natural environmental sound effects.

Now . . . all of this sounds as though the production has been sloppily done. This is not true. As with the expectant mother, the work has been properly done for the stage it is now in.

If Changes Are Needed . . .

But there is a strong financial reason for bringing you here at this interim point. This is the last time at which any really substantial changes can be made at minimum or no cost. Later on, when you see the "answer print," the camera original will have been cut, which drastically limits the possibility of change. The voices and sound and music will have been combined in the dubbing session and everything

put together into the first composite print.

Obviously, except for certain types of deletion, changes at that stage will be expensive. So let's try to pick up at the Interlock session all the inaccuracies, the policy problems, the target-audience considerations, and so on. Now is the time to decide what items, if any, are important enough to justify changes.

Actually, there will probably not be very many, because the project has been constantly monitored all the way along; first at the script stage, where many of you had a crack at it, then by technical advice during actual production.

Now then, we asked you to look at this performance critically, through a microscope. May we amend that slightly, by suggesting that we run the Interlock version twice at this meeting.

Actually, you have two judgments to make. The first is on the overall effectiveness of the final picture in terms of the job which you, as the sponsor, want it to do. So, on the first runthrough, we ask that you try to overlook all the interim crudities and look only for what will be *good* in the final picture.

You're investing a substantial amount of money, and you will show a profit not on the faults of this picture, but on the things about it which are good, and on which you will capitalize with your customers, employees, dealers, legislators, general audiences, and whomever you want to influence.

So, on the first run, try to be a bunch of wide-eyed optimists — "the picture is wonderful," says you, "and here's why." With this mood in mind, we would like to run this first time continuously, without stopping, so that you get something of the same overall impression which your target audience will ultimately get.

But then on the second run, we'll go "stop and start." That will be the time not only for important changes, but for the fly-specking and nit-picking. And don't worry about your comments seeming petty, because the thing we're ultimately selling to the audience is *conviction, believability* . . . and to that end we can't afford anything, no matter how minor, which undercuts that believability.

One final word. The Objective which was set forth at the beginning of the project was and still is —

(here recap the thumbnail objective and target audience)

**Gates Sales Picture Wins
Denver Ad Club Award**

The sharp contrast between sales methods of the 1900's and today has been brought to the screen in a 22-minute sales training film for Gates Rubber Co. *Like Father, Like Son*, produced by Marshall Faber of Denver, Colo., was recently awarded top honors in the motion picture division of the annual awards made by the Advertising Club of Denver.

The film is being used by Gates for sales clinic showings throughout the country. Old fashioned sets of the 1900's set the mood for a sequence in which a salesman

"Personality kid" gets his come-uppance. Circa 1900.

sweet talks a receptionist and then tries the "hard sell" personality treatment on a purchasing agent. The same actors portray the scene in the 60's with the "personality kid" salesman making almost the same errors.

In a completely different set another salesman epitomizes the considerate vendor who neither undersells nor oversells, respects his customer and his company and draws out his purchasing agent customer about the qualities he likes in a salesman.

Film technique employs good sound and visual tricks; ragtime piano melodies parody both salesmen, good and bad. Earlier sequence is done in sepia, with action in the tempo of the silent movies. Remaining sections of the film are in color with synchronous sound.

A Report on World's Fair

☆ A definitive report on films and exhibit techniques at the N. Y. World's Fair is now in preparation.

what's new in pictures

THE INTER-RELATED use of motion pictures and a live presentation on sound dealer management was successfully employed by the motor truck division of International Harvester Company in recent new model showings to its dealers.

The latest information on improved business practices was given Harvester truck dealers, after they had first seen introductory sequences of a 90-minute sound and color film, coordinated by the creative services division of the IH advertising department and produced by Wilding, Inc.

Two Segments Are Interlocked

The film was divided into two main segments, with distinctive themes but with an interlocking story line. The first section, shown in morning sessions in the company's 45 truck sales districts, depicted problems typically encountered in expansion and modernization of an International dealership.

Between these two film segments, a thorough analysis of an actual dealership was reported in detail by voice and film strip. The dealer's sales, service and management strengths and weaknesses were probed minutely to answer questions which had been posed by film actors in the roles of an International dealer and his family.

Circus Motif for New Models

The second half of the film, depicting a behind-the-scenes circus atmosphere, cleverly employed an assortment of performers to introduce models of the company's trucks. On floor display were current International trucks, shown side-by-side with competitive models for on-the-spot comparison of major mechanical and styling features.

Facts on Wire Reinforcement for the Construction Industry

☆ How contractors save building time is the subject of *Structural Fabric — Time Saver for Builders*, a new motion picture now available for free use by the construction industry. The 24-minute color film was produced by the Wire Reinforcement Institute, and is being distributed in the United States and Canada for free loan by Modern Talking Picture Service, Inc.

The new film tells by case history how construction time and money was saved by use of welded

wire fabric, and reports also on the increasing use of *structural fabric* with big wires up to half-an-inch in diameter.

The case histories shown range from high-rise apartments in New York to warehouses in Colorado — from a field house in New Hampshire to a jail in Michigan — to an airline terminal in New York to an auditorium in Tennessee. Throughout the film emphasis is on the *time saved* on the projects through the application of wire fabric.

The Wire Reinforcement Institute, which represents the manufacturers of over 85 percent of U.S. and Canadian wire fabric production, prepared the film as part of its continuing program of information and service to the building field.

Construction firms — their engineers, superintendents and foremen; local, state and provincial contractors' associations; private and public awarding authorities; and other groups interested in building construction may use the film without charge.

Bicycle Institute Sponsors Two Pictures for Safety Programs

☆ *Play It Safe*, a 26½-minute film that promotes interest in community-sponsored bicycle safety programs, is now being offered for free loan use by civic and service groups and TV stations by the Bicycle Institute of America. It is designed for adult viewing. Based on the actual experiences of a New York community, the film shows why and how parents and other responsible community leaders should conduct bike safety programs for youngsters.

Play It Safe shows how lives can be saved and delinquency avoided if parents and community leaders exercise their responsibility by teaching bicycle safety and courtesy. Sportscaster Red Barber narrates and appears in the film.

Another motion picture on the subject of bicycle safety is also sponsored by the Institute: *Bicycling Safety Today*. Directed at the youngsters in their own terms, it tells how bicycling can be fun and safe at the same time. This 20-minute b/w motion picture is available for free showings to schools, clubs, churches and TV stations.

Both films are being distributed by all offices of Association Films, Inc.

Technology of Natural Gas Told in "Energy on Move"

The new technology moving natural gas energy from the Gulf of Mexico to major consuming markets of the nation is the principal story line in a color motion picture, *Energy on the Move*, just released by The Columbia Gas System, Inc. Columbia Gas is a major supplier in this burgeoning pipeline industry.

Unusual scenes of industrial gas uses are provided in the documentary film, filmed at some 57 different locations in eleven states. Joseph Julian narrates the picture; an original music score was supplied by modern composer Phillip Lambro. Nelson Case, Jr. was the writer-director.

The picture is being distributed by Modern Talking Picture Service, Inc. within the company's operating areas. Prints may also be obtained through the public relations department of Columbia Gas companies in Columbus, Ohio; Pittsburgh, Pa.; Charleston, West Va.; and Houston, Texas.

There are two versions of *Energy on the Move*. The longer (27½-minute) picture is especially useful to schools, civic groups and for industry. A shorter version, 14½ minutes in length, is available for public service showings by television stations. Gas companies may obtain prints of either version directly from the Columbia Gas System, 120 E. 41st Street, New York, N. Y. 10017 or through the film library of the American Gas Association.

BNA Offers Free Catalog of Films for Management

There's a new illustrated catalog of the first 10 films produced by the Bureau of National Affairs, Inc., of special interest to executives responsible for internal communications or supervisory-training programs. These 10 pictures serve a variety of situations in business education.

The films, all in 16mm sound and color, are described in detail. Write (on your letterhead, please) to BNA Incorporated, 1231 24th Street, N. W., Washington, D.C. 20037. Mention BUSINESS SCREEN in your request.

"POLAROID" AND "COPYMAKER"®

It makes slides.

(Perfect ones, in 10 seconds, for 55¢ each.)

So why do we call it The Copymaker?

Because it also makes perfect 10-second copies. And we didn't want to hang a complicated name on such a simple machine.

The Copymaker has a Polaroid Model 160 Land Camera precision-mounted above an easel. It will copy charts, maps, printed text or even objects, in any size from 11"x11" down to 2¼"x3¼" (or 1:1). Correct camera settings for all field sizes are listed for you. Two fluorescent lamps light the board evenly. And with the built-in electric timer you can clock exposure and development accurately.

Ten seconds is all it takes to shoot and develop copy prints or "line" slides. Continuous tone slides take 2 minutes.

And anyone can do it. You focus. Push a button. Pull a tab. Wait a moment and remove the transparency or the copy. (After a quick hardening, transparencies snap into frames, ready for projection.) That's all there is to it. Slides in 10 seconds for 55¢. Copies in 10 seconds for pennies.

Now. Would it make sense to call a machine that's that easy to use "The Slideandphotographiccopymaker?"

The Polaroid Copymaker

Ted Sack Named Vice-President of Reela Films, Inc., Miami

F. F. "Ted" Sack has been promoted to vice-president and general manager of Reela Films, Inc., Miami, Florida studio organization. His appointment to this dual

Reela Exec. . . . Ted Sack

executive post was announced by Reela president Stanley Stern in April.

Sack has served as general manager at Reela since December, 1962. During a year's leave of absence he produced educational films in Peru and prior to that period, served in the production department of WTVJ. He came to that post from the CBS television network.

The Miami studio is a division of Wometco Enterprises, Inc. and is located at 17 N. W. Third Street in the Florida metropolis. *

SOS Photo-Cine-Optics Names Irv Turvey as Western Mgr.

Irv Turvey is now western manager for SOS Photo-Cine-Optics, Inc., New York and Hollywood. His appointment was announced by Alan C. Macauley, SOS president. Turvey will cover the 13 Western states, including Alaska, Hawaii and Western Canada, from the company's Hollywood branch.

Until recently a sales engineer, the new western chief was director of photography at KSBW-TV and KOLO-TV. He also had his own motion picture unit until called back to Brooks Institute of Photography to conduct motion picture and general photographic courses. *

Stephen Colhoun Forms N. Y. Film Counselling Organization

A new company, set up to provide design and supervising services on business films has been organized in New York City by Stephen D. Colhoun and carries his name. *

Veteran Ad Exec John Russo Joins Better Selling Bureau

Veteran ad executive John Russo, a former vice-president of the J. Walter Thompson Company, New York, has joined the Better Selling Bureau, Los Angeles, as executive vice-president in charge of sales. The appointment was announced in April by Richard Westen, president.

Better Selling Bureau, a wholly-owned subsidiary of Rocket Pictures, Inc., specializes in sales training aids. It has been especially successful in the insurance field and has developed seven programs for sales recruiting, sales training and selling.

These programs are now being projected into other fields where

a need exists for the proper development of sales personnel and training aids. Russo, with more than 20 years' experience in this highly-specialized field, noted that failure in this area has often sabotaged the best advertising, merchandising and selling plans.

The Bureau is located at 6108 Santa Monica Boulevard in Los Angeles. *

Clara Grossman on Production Staff of Kim & Gifford, N. Y.

Mrs. Clara Grossman has joined the promotion staff of Kim & Gifford Industrials, Inc., New York City. She was formerly U.S. film promotion and sales manager for the National Film Board of Canada, located in Manhattan. *

For over a quarter-century, leading film producers have turned to Mecca for the finest 35 mm and 16 mm black and white laboratory services. How about you? Drop in, write, wire or phone for information.

Lane Heads Int'l Sales Division as DeMallie Retires at Kodak

Richard B. DeMallie, Eastman Kodak assistant vice-president and general manager of the company's international sales division, retired on May 1st after nearly 40 years of Kodak service.

Succeeding him as general manager of the international sales division is William P. Lane, whose appointment was announced in April by Gerald B. Zornow, vice-president for marketing.

DeMallie joined the company's export shipping department at Rochester in 1924. Two years later he moved to Kodak Brasileira, Ltd., in Rio de Janeiro and, after serving as manager of Kodak companies in Cuba and the Philippines, he was appointed manager of Kodak Japan, Ltd. in 1930. He returned to Rochester in 1939 as a member of the export sales department, becoming general manager in 1957. He was elected an assistant vice-president of the company in 1960.

Lane also joined Kodak in 1924. From his first post at Eastman Kodak Stores, Inc. in Des Moines, Iowa, he moved to the Kodak accounting department in Rochester and, in 1926, became a member of the export sales department. He later served in Mexico City and Cuba, became assistant manager of Kodak's branch in Shanghai, China in 1928. He was named manager of Kodak Philippines, Ltd., in 1930.

After serving as a member of the company's government sales department during World War II, he returned to the export field. In 1946 he was appointed manager for the Far Eastern Area of the company's international division and manager for Latin America in 1957. In 1958 he became assistant general manager of the international sales division. In 1962 his duties were extended to supervision of Kodak units in Africa and the Middle East. *

Terry Hatch to Niles' Staff as a Supervisor of Accounts

A former resident vice-president of the Alexander Film Company (at Chicago), Terry Hatch has joined Fred A. Niles Communication Centers, Inc. as account supervisor. His appointment was announced by Norm Lindquist, sales vice-president of the Niles firm.

Hatch will headquarter in Chicago where he will service major accounts in Chicago and Detroit.

by Jack Campbell*

I THINK ALL OF US sense the tremendous power of film. Most of us have lived through the days when films like D. W. Griffith's *Intolerance* caused riots, or when film sent thousands weeping to Valentino's funeral, or when film trained millions in war. We've grown up with movies at the Saturday matinee, sensing their force in society, how they have literally changed the concepts, the ideals, even the course of humanity.

We realize these things, almost instinctively. Through this early conditioning, there is in all of use a deep-seated, sort of terrifying knowledge of just how powerful this medium really can be, of just how strong are the emotions that film can arouse.

Controlling the Latent Power of Film

We use this power of film to sell. That's the business we're in: using the motion picture to sell a product, a concept or an 'image.' And yet, because of its vast latent power, like dynamite, we handle film with fear. Unless we say exactly the right things about a product or concept, we might persuade our fickle audience NOT to buy.

To put it plainly, the sponsor is afraid that the producer, if left on his own, might innocently say the wrong things about the product. Therefore, the sponsor wants FULL CONTROL over what the film says.

Now, since the sponsor is paying for the film, he has absolute right to this control. No question about that. But let's see what effect this control has on the film's quality.

Words Are A Principal Area for Control

First of all, in what area is this control applied? It is principally applied to the WORDS that are written for the sound track, the narration, the commentary.

I remember once I showed a rough cut picture to a sponsor before we had scored any words to it. The silent picture alone told a good story of the construction of a hydro-electric plant. There were about a dozen sponsor people at the show, and there wasn't a single adverse criticism. They liked our images, they liked the editing, the pace, they liked the continuity. In other words, it was perfectly acceptable — silent, that is. It wasn't until we wrote a commentary that controls were applied.

The Power of Words . . . and a Real Hazard

Now, why are words picked on for control? Well, there are several reasons.

First: all of us are familiar with words. We're at ease with them. We probably speak, write or read several thousand words every single day. So we naturally turn to words in our film.

Second: words in a film commentary can give different meanings to a scene. Take a scene, for example, of a house. The scene itself can be neutral, inert. Yet, through the commentary, we can talk about everything from the cost of wood shingles to the influence of Frank Lloyd Wright. Words do offer this kind of flexibility.

Third: words in a film commentary offer the cheapest form of control. In a rough script

The picture's the thing, especially when well-constructed sequences are used to build a true film.

Do Your Talking Pictures MOVE ...or Just TALK?

draft, you can change the word "edifice" to "building" and it won't cost you a cent. You can rewrite whole paragraphs, make any changes you want. But if you change the picture, either by reshooting or re-editing, it costs money. Words are cheap.

And fourth: words offer the opportunity to make last-minute changes. You can re-write in the recording session, and even at the mix, the editor can trim out words in the narration track.

Now this dependence on words offers some very real advantages, no doubt about that. But it presents one very great danger: that you won't have a film at all, just an illustrated lecture.

Per se, there's nothing wrong with an illustrated lecture. It is limited, but it can be interesting, informative and entertaining. It can sell, too. I'm using the term to describe films that are talky, that are held together by narration alone, that have no strong visual continuity, that make no sense with the sound off, that use stock library music that competes with the narrator throughout. It is this kind of film that arouses no emotion, that squelches and squanders the wonderful power of the motion picture. Let me try to illustrate the difference between a true film and an illustrated lecture.

Do the Pictures Tell You the Story?

First, look at the group of three shots in Figure 1. You can see that it tells a story by pictures alone. It has all the elements of good drama. To get technical, it begins with exposition, it has rising action, a climax and a denouement.

Figure 1 (at right): this sequence of pictures tells its own story, has elements of good drama.

* President, John Campbell Films, Inc.

Do Your Talking Pictures MOVE...or Just TALK?

ment. In other words, it has a beginning and an ending — it tells a story.

You could add narration or sound effects and gain some additional information. But basically, this three-scene film stands alone, **WITHOUT** sound.

In this example, and in others to follow, think of each group of three scenes as an entire film. The principles that we're talking about apply just as well.

When Visuals Have to "Lean" on Words

Now look at Figure 2. If this film is run silent, we have a series of attractive pictures, but with no meaning. There is no story. The scenes gain meaning only if narration is added.

This is the "illustrated lecture" — a series of visuals put together almost at random, and achieving unity only through words.

The curious thing about the illustrated lecture is that you can reassemble the visuals in almost any order you want, and the sequence gains or loses nothing. See Figure 3.

If you try the same thing with a properly-constructed film sequence — one that is built carefully, with a true beginning and a true end-

ing — you wind up with a meaningless sequence, a jumble, as in Figure 4.

Here the continuity has been completely destroyed. Of the three scenes A, B and C, B no longer logically follows A, C no longer grows out of B, and so on, as they should.

Let me illustrate this another way. Imagine a bunch of blocks, stuck together at random, so that they make a single structure, but without form or pattern. Think of each of these blocks as a scene, a visual, without sound.

The structure will have no real "beginning": you could stand it in several different positions. You could move blocks — or scenes — from one section, and add them to another, without seriously changing the form of the whole. So it is with the illustrated lecture.

Tricks Are No Substitute for Continuity

Now, as we've seen, we can give this jumble of scenes a sense of unity with the help of narration. We can even use some tricks. If we start the lecture with an extreme **LONG SHOT**, an aerial view of a factory, for example, or a map of the world, we are fooled into thinking that this is a true beginning. Or, toward the end,

we can gradually bring in our music, and let it come up to a big ending.

But these are devices that are too often used to make up for lack of continuity in the visuals.

Let's use our blocks again, in the shape of a pyramid, to illustrate a correctly-built film.

We start with a foundation, the first layer of blocks. Technically, this is called the exposition — the facts and information which will be necessary later for the understanding of the whole.

We continue building the pyramid. This part is called the rising action: the building toward the climax — one scene on top of another, each scene growing out of the other, as they did in the three-scene film of Figure 1.

Finally, we come to the climax — the sequence that "makes the point" of the pyramid — the point of the whole picture. Sometimes, this can even be a single scene with a terrific wallop, the one scene that gives meaning to everything that lies beneath it.

This is true dramatic construction, and is the only type of construction that will psychologically permit emotion to develop.

Like a good film, the pyramid has stability. It rests solidly on its base. You can't remove

Figure 2: a series of attractive scenes with little meaning unless narration is added . . .

Figure 3: re-assemble the visuals any way you want; sequence neither gains nor loses . . .

Figure 4: try the same thing with a well-constructed film sequence and you get a jumble.

scenes from here and try to add them over there, without jeopardizing the whole. Every block — every scene — is **ESSENTIAL** to the whole, every block is doing its job. It has form and style. It's a nice, tight film.

The Test: Run Your Own Films "Silent"

Try this test with some of your own films. Run the film silent. See if it makes good story sense without the sound. Look for a sequence at the end of the film that "makes the point" — that really "wraps it up" — that gives a strong sense of completion, and I repeat, without narration.

If you don't find these things, the chances are that you have a picture that at least leans toward the illustrated lecture, that you're depending too much on words to tell your story.

Let me emphasize again right here that I'm discussing the sales film, the public relations film, the one designed to sell a product, concept or 'image.' I'm not talking about the teaching film, the training film.

Words Are Cheap; Good Design Worth Price

Now, let's be honest. There are a couple of disadvantages to making this properly-built film. One, it's going to cost more. You can't design and build an original structure — which is what every film should be — without spending more money. The illustrated lecture is a cheaper film because it is comparatively easy to make. It's been done thousands of times before, the pattern is well established. It uses a lot of words, and words are cheap.

Second, the correctly-designed film is going to take more time to produce. You can't bang it through, you can't rush it to meet a fantastic deadline. If it's going to be a really original piece, it's going to take time.

Third, you're going to need some courage. That fear that we talked about before is going to come up, because you'll be dealing with something fresh and original, but as yet untried.

But if you want to make more efficient use of your film dollar, if you want to sponsor truly exciting films that will persuade your audience, arouse it, charge it with the emotions that will make it buy, you've got to take these risks.

A Producer's View of Film Procurement

Well, you say, how can we reduce these risks? How can we be reasonably sure that we're going to have this kind of film, instead of a costly flop?

Let me try to give you some practical suggestions.

FIRST, select a few producers who are reliable, financially stable, and who have experience. To save your time, you might want to get them all together in a group meeting.

Tell them why you believe you need a film, and what job you want the film to do.

Then, tell them what your budget is. Don't make a secret of this. This, I think, is of a paramount importance.

Because if you request competitive bids, a lot of bad things happen. The producer tries to guess how much money he'll have to work with, and then tries to design a good film to fit it. But he's not sure he guessed right. And so, to safeguard his profit margin, he falls back on the old, sure control of using words, words that

Do Your Talking Pictures MOVE...or Just TALK?

are cheap to change, instead of telling the story with pictures. And so you wind up with the same, tired illustrated lecture.

Furthermore, you're liable to receive bids that range all over the place. This has confused many a sponsor. It shouldn't. There are an infinite number of ways to film any given subject.

But instead, if you state your budget, the amount of money you will pay for the picture, the producer is on sure ground. He will compete not on the basis of price, but on the basis of quality. In this way, you can be sure of getting the highest quality film for your money.

In this meeting with the producers, ask them to select the writer and director who will work on your picture.

Get to Know the Writer and Director

This is the **SECOND** step: interview the writers and directors they have selected. Spend time with them, take them to lunch. Do a real depth interview of them, and see some pictures they've written and directed. It doesn't matter whether they were produced by their present employers, as long as they worked on them.

Now I'm assuming that the writer has the talent and the experience to give you a good film. But over and above that, where the writer's concerned, try to find a writer with some genuine **INTEREST** in your subject, or better still, **CONVICTION**. If he hasn't this, you'll never get any feeling into your film, any emotion. Try to find a writer who is really dedicated to your subject and who can get excited about it.

Just a word of caution: some excellent writers are pretty poor talkers. You have to try to get inside them, sort of sense them out. It may not be easy, but by all means, interview the writer.

Need an Outline or Treatment? Buy It

By this time, you'll probably have a pretty good idea of who your producer is going to be. **THIRD** step: Perhaps, before you award him the job, you might ask him to submit his outline, or film treatment. Naturally, you should expect to pay for this, because he'll be well into the creative when he does a treatment.

Let's say that you accept his treatment, and award him the contract.

Many producers at this point go right into script. Personally, I prefer to go into storyboard, with only suggestions of what the narration might be. Doing a storyboard at this point forces the writer to think in terms of visuals, and that is what you want. Let the shooting script come later.

Here's Place to Analyze the Visuals

The **FOURTH** step, then, is to analyze his storyboard very carefully. This is the first visual presentation of your film, and it's an excellent index of the things we discussed before. Test the storyboard for good, strong visual continuity, its ability to tell the story without narration. See that the scenes follow each other logically, that one grows out of the other. See that each scene is essential: you can test this by just covering it up, and judging if it's really necessary. If it doesn't advance the story, then it's

so much dead weight. And finally, look for a sequence at the end that will wrap up your story, giving meaning to the whole, like the punch line of a good joke. If this end sequence is correct, it will deliver the emotional punch you want.

By the time you've approved storyboard, you should be prepared to relinquish just about all further controls. You've guided the producer up to this point. You've pointed the writer in the correct direction during the talking stages, you've applied controls during the outline and treatment stages. By the time the writer is into storyboard — and by the way, this is still in the writer's province — the form of the film should have taken pretty definite shape. If you start to make extensive changes at this time, you may be upsetting some delicate planning.

Really Good Pictures Have a Style

Now, just one more point, but it's a big one: the question of **STYLE**.

A good film must bear the stamp of **ONE MAN**, and that man is usually the director. If the director's the writer too, so much the better. But it is principally the director who will give your film a style.

Style in film is a subtle thing that most people won't even notice. But they'll notice the lack of it, and they'll sense that something is wrong. Style will give your film unity.

• • •

A quick summary:

Buying is an emotional act, and the well-made film is one that arouses the emotions to buy.

There is a fear, however, that a film will say the wrong things, arouse the wrong emotions.

Consequently, control is applied.

This control is applied in the area of words, because we are familiar with words, and they are inexpensive.

This results in films that are top-heavy with narration, the illustrated lecture.

But the illustrated lecture squanders the true power of film; its structure does not permit emotion to develop.

The true film is one that tells a story without words: it has a beginning and an ending, it has form and a punch line.

And the practical suggestions, how to be sure to get a true film:

Select a few reliable producers, and tell them your budget.

Don't ask for competitive bids.

Interview the writer, and try to find one who has a particular interest in your subject, even a conviction about it.

Test the storyboard carefully for visual continuity, and a punch line.

And finally, don't apply too much control. A film must bear the stamp of one man if it is to have style and unity.

One added thought. There is terrific competition today for the public's time. Don't squander your film dollar. Take courage, and put faith in your producer, your writer and your director. Make an outstanding film that appeals to the emotions. It will sell for you. 

Valerio Directs Audiovisuals for the Schering Corporation

The Schering Corporation has named Daniel J. Valerio as advertising service manager with responsibility for all audio-visual activities of that leading pharmaceu-

Schering's D. J. Valerio

tical manufacturer. He replaces Bernard Sherman, recently appointed Pittsburgh division manager of Schering.

The appointment was announced by Herman W. Leitzow, vice-president for marketing. In addition to film projects, Valerio's duties include the planning and administration of all scientific and technical exhibits and displays for medical conventions and similar expositions.

A native of Boston, Valerio holds a B.S. degree from Northeastern University College of Pharmacy, was in the retail drug field in Boston before joining Schering as a professional sales representative in 1955. He was named top salesman in the Albany Division in 1959 and appointed audio-visual coordinator in 1960.

Ruth Hendler Joins MPO as Administrative Coordinator

Mrs. Ruth Hendler is now administrative coordinator and manager of office operations for MPO Videotronics, Inc. at New York headquarters. She will be responsible to Arnold Kaiser, vice-president in charge of sales and production.

Prior to joining MPO, Mrs. Hendler was office manager and personnel director of Fletcher Richards, Calkins & Holden advertising company; manager of the AGVA Welfare Trust Fund and office services manager and purchasing agent for the Mutual Broadcasting System.

George A. Sauppe

of automatic slide-changing projection, in which the company is now pre-eminent, began when he was the Leica's first salesman in the U. S.

When the first production model of that famed camera was introduced in 1924, Sauppe first tried illustrated charts to demonstrate its unique features; then turned to a Leitz manual slide projector. Finding himself still limited in his talks, he saw the need for a projector that would work *automatically*, freeing the speaker to concentrate on his audience. The new tool must also insure a properly *focused* and *well-lighted* image.

Kodachrome film, introduced in the 30's, offered further potential for color slides in advertising and lecture exhibition. Out of these challenges, the Selectoslide slide changer was born in 1939. Many were used at the New York and San Francisco World's Fairs of that era.

One of the important features incorporated was the radial interchangeable magazine using spring steel slide holders to insure accurate focus and precision operating, while also acting as a slide file. The projector was designed, from the outset, as an "industrial"

BEN WILLIAMS REPORTS:
(CONTINUED FROM PAGE 32)

ditional industrial film. These are the television news spots and featurette releases. Although designed for TV, we do make other use of them, primarily in merchandising the support they give to dealers and distributors. We get a very nice reaction from these groups by telling them of our television and other publicity activities, both before and after the fact.

Other Groups Originate Films

Another quick case history. While we produce, or cause to be produced, the company public relations films, other groups do originate advertising, sales and other special purpose films. We try to see all of them and, where possible, to have a minor hand in their creation.

Not long ago we saw a 7½ minute sales film on a new high strength glass the company perfected for sliding glass patio doors and similar uses. It was pure sell, but had some exciting scenes in it.

We were able to salvage about 4½ minutes of film, put a new sound track on it and come up with a very attractive featurette on the research and development and application of this product.

We looked around for a way to get this film shown and found the Sterling Films' Bob Considine, Fran Allison show, *For Your Information*. This is a package of featurettes in 15 and 30 minute segments with Fran and Bob as hosts. It seemed like a nice spot for our film so we booked space, had one of our marketing men interviewed by Considine, and led up to his offering to show Considine the film.

The Television News Release

Far from being last in the list of film opportunities available to industry is the television news release. While not every company event that justifies a written news release is suitable for TV treatment, it is surprising how many good subjects are overlooked.

For example, our Public Relations Department was recently asked to set up dedication ceremonies for a new float glass plant at Cumberland, Maryland. We built our plans around a press tour and press conference, flying two plane loads of national and trade press to the plant. The nature of the event and this representation virtually assured us of good print coverage.

But we wanted to get everything we could out of this industry

ADVERTISERS' FILM WORKSHOP:

"first", so we planned on television, also.

While getting aerial views of the plant for the press kit we had the photographer shoot some movie footage as well. We also had him take scenes of company executives and press during the plant tour, shooting from a pre-written news script.

Labels had been prepared and mailing cans containing script and usage report cards were waiting. The exposed film was flown to the lab and 50 one-minute prints rushed to selected stations. We expect better than 50% pick-up, with one station reporting use on two news shows Friday and a week-end round-up on Sunday afternoon.

Let me emphasize that you have heard less than half of the story.

Our use of film goes beyond motion pictures. We have a broad and continuing program of slide and strip films — are utilizing the "Filmograph" technique with good results and use both photographs and art to illustrate home subjects offered to women's clubs and television personalities with their own conversational-type shows.

There you have it: one company's approach to a film program. We will be the first to acknowledge that it is not the final answer, but even in its present form, we feel it is one of the wisest items in our annual budget.

Our film programs are in constant use by our own people in the field *because they reach the people they want to reach, over a long period of time and at low cost per viewer.*

DISTRIBUTION: PARTNER
(CONTINUED FROM PAGE 36)

trends, are booking short subjects into some of the best theaters in the country, accompanying many top-grossing, long-run attractions. One short reached an average audience of almost 4,000 persons per playdate (or theater booking). Remember, these were people sitting in a darkened house, looking at a big screen, concentrating on the sponsor's message!

For a sponsored film to play in theaters there are a few guidelines that should be followed: it should be no longer than 10 minutes, the ideal running time. It should preferably be produced on 35mm film, although with the new 16mm color films, satisfactory blow-ups are obtainable. The entertainment quotient should be high. This doesn't mean that theater audiences won't sit still for a meaningful message, but it helps if the film is *interesting, fast-moving and colorful* — accent on *color*.

Commercial content must be tasteful, in keeping with the subject matter or storyline, and as unobtrusive as possible. Remember, theater managers can still feel the wrath of an irate patron! And just as the feature films of the mid-60's are more mature and sophisticated, so should the sponsored short subject.

SOCONY-MOBIL AT FAIR:
(CONTINUED FROM PAGE 38)

replay of the film and form the standard of comparison for all contestant drivers. These, along with the contestants' control position voltages are fed to three comparator circuits for each car, a comparator being required for each of the three functions. Here, the difference between the experts' control positions and those of the contestant is sensed. If the difference exceeds the adjustable threshold, or allowed error margin, a relay is closed which periodically reduces the contestant's score for as long as the error is maintained.

A second set of voltage comparator circuits for each car is used to sense a greater magnitude of error for an accident-causing condition. These accident detectors, however, are energized only for specific control errors at appropriate times in the film. This timing and control selection is accomplished by a second set of times magnetically recorded on the film.

More than nine million visitors are expected to view the Mobil test during the 1964-1965 Fair.

Chief Grip for "New Interns" series (Homer Plannette) sets up ColorTran Focusing Quartz Light in basement of LA County General Hospital.

Right Lights Can Trim Film Production Cost

ANYTHING THAT CAN TRIM production costs while improving film quality is all to the good, independent film producers would agree.

Evidence that the use of the right lights can do just that, now comes from a veteran film producer currently doing a feature film for Columbia Pictures.

One of the sequences for *The New Interns*, being produced by Robert Cohn, required shooting down a long, winding passageway in the basement of the Los Angeles County General Hospital. Because of the high, vaulted ceiling and narrow walls, a number of lighting problems quickly became evident to Cohn and Chief Cameraman Lucien Ballard.

Their best estimate was that, using standard studio lights and bringing in a generator for power, it would take approximately eight men working a day simply to string cables down the long passageway and rig up the lights. But the shooting schedule was tight and Cohn, like any other producer, was concerned with keeping costs down.

Recalling a demonstration he had seen of new quartz lights by ColorTran Industries, Cohn arranged to bring in several ColorTran Focusing Quartz Lights, as well as Quartz-King Dual-1000's, and Quartz-King 500's. These are lightweight, compact quartz-iodine lights that weigh only a fraction of standard studio lights. More important, they operate directly from 120 volt line current, draw-

ing only 5.4 amps for the 650 watt lights and 8.3 amps for the 1000-watters. They require no generator or heavy cables, and can be plugged directly into a wall outlet, producing motion picture lights of high, constant intensity and constant color temperature.

In a fraction of the time it would have required to rig studio lights, the ColorTran quartz lights were plugged into baseboard outlets and positioned for proper coverage. Filming took place the very same day. When the time came to strike the set, the lights were simply plugged out of the wall, swiftly disassembled and carried back to the lot in a light station wagon.

Later, when fill-in shooting was required at the hospital, ColorTran quartz lights were again brought out and used to light windows, hallways and elevator entrances where space limitations (PLEASE TURN TO PAGE 64)

Small cart brings load of lightweight ColorTran quartz lights to hospital site for TV filming.

Admatic 1964 Model Cabinet

Admatic, Sonomatic, Cinematic in '61 Rear Projection Line

Self-contained, automatic sight/sound projection has already proven its useful role on the dealer's sales floor, in exhibits, for lobby and window displays. The familiar, dependable Admatic, manufactured by the Harwald Company, has a long record of service in this field. It has a 30-slide capacity on its standard disc.

1964 developments in this line merit attention. The basic Admatic is an automatic slide projector with a 6-second change interval and a 16 x 23-inch picture. Now there's also a Harwald Sonomatic, with fully synchronized continuous magnetic tape for sound track and control.

And there's also the Cinematic, which puts 16mm sound pictures on the cabinet screen. Top-quality sound projection equipment by a national manufacturer is utilized within the basic Harwald cabinet. Model A is a Repeater-type which must be restarted at each cycle; Model B of the Cinematic is fully-continuous.

All models can be purchased outright or leased on convenient terms. Write Admatic Division, The Harwald Co., 1245 Chicago Ave., Evanston, Ill. for illustrated literature and prices.

HPI Offers Rear-Screen Unit For Technicolor 8mm "Instant"

Business film sponsors are finding new uses for short, silent, 8mm "single-concept" motion pictures, particularly for point-of-sale use. These films, which can be originally produced inexpensively, or adapted from existing material,

a-v equipment trade fair

NEW PRODUCTS & ACCESSORIES FOR PRODUCTION AND PROJECTION

are designed to catch the eye of a passer-by in a store, show-room, or exhibit and hold him long enough to explain just one particular quality of the product.

The Technicolor "Instant" 8mm cartridge projector has found a wide market among industrial film users, and a new compact rear-screen cabinet for the silent film projector which has been developed by Hudson Photographic Industries, of Irvington-on-Hudson, New York, should arouse even more interest.

The new sound-proof cabinet, the HPI Sonomute, will accept any Technicolor 8mm model

equipped with a "black" screen that permits clear viewing under normal store or exhibit illumination.

The HPI Sonomute can be easily operated from the viewing position. It has a birch wood finish, automatic interlock switches to turn off the projector when inserting cartridges, and a timed on off switch which shuts off the projector if left unattended. Ventilation is provided by a supplementary blower which is also silenced.

The HPI Sonomute measures 27 and 3 4 by 13 and 5 8 by 10 and 5 8 inches, weighs 30 lbs. and is priced under \$200.

Profile: Eclair NPR Camera

Eclair NPR Professional 16mm Camera Now Available in U.S.

Tradition looms large in the background of the new Eclair NPR professional motion picture camera, recently introduced in the U. S. For one thing, its maker is one of Europe's oldest and largest manufacturers of cine equipment, beginning as a film studio in the 19th century but turning to camera manufacture in 1909. The company's "Camerette" is well known.

The NPR (Noiseless, Portable, Reflex) was designed to be used with the new professional portable 1/4" tape recorders. It combines rugged construction, registration pin movement and an advanced reflex viewing system. "Easy to hold, thread and change and easier to follow action through the viewer" are among the maker's key sales points.

Take the NPR's reflex viewing system, for example. The shutter rotates at a 45-degree angle between the lens axis and the film plane. The front of the shutter is an optically flat, surface-coated

mirror. When in "closed" position, it reflects the image into the optical system of the finder. In "open" position, the image passes directly onto the film for the exposure.

Thru-the-lens focusing and viewing is said to eliminate parallax problems and the need for multiple finders, masks and time-consuming rack-over devices. Eclair notes that the new horizontal wiping shutter was designed because the cameraman pans horizontally at least five times as often as vertically.

Rotating Eyepiece Featured

A rotating eyepiece with a wide range of adjustment (18 diopeters) permits more cameramen to use viewers without glasses. The adjustment can be securely locked. Automatic eyepiece shutter on the NPR closes immediately when the eye is removed from the viewer; opens automatically on pressure. This eliminates danger of fogging and closing and opening of trap

doors. The eyepiece is capable of a double 360-degree swivel.

Not a self-blinded camera, the NPR was designed to meet studio sound requirements, utilizing components designed to be noiseless.

Motor is silent and drive from the motor to the shutter is direct, without gears. The transistorized governor-controlled motor also incorporates a sync pulse generator for use with 1/4" professional tape recorders.

NPR magazines accept 100, 200 and 400-ft. daylight loading spools and 400-ft. loads on standard cores. It was designed as a magazine-loading camera, with snap-on and snap-off facility. Other features: NPR was designed to accommodate the new zoom lenses; turret handles both Eclair bayonet mounts or "C" mounts for shorter lenses. The film transport mechanism uses a single pulldown claw and a single registration pin movement.

"Building Block" Principle

Engineered on the "building block" principle, whole sections of the camera are replaced as a unit, permitting rapid repairs without tying up the camera. Parts and repair facilities are now available in New York, Chicago and Los Angeles and other principal cities throughout the world.

Write the Eclair Corporation of America, 8078 Woodrow Wilson Drive, Los Angeles 46, California for a copy of a detailed new brochure on the NPR.

Export Model 250 Joins the Technicolor "Instant" Lineup

There's a new export model (#250) of the Technicolor 8mm Instant Movie Projector. It was made for use on foreign voltages (almost universally 50-cycles) and a convenient bottom switch, adjusted by ordinary screwdriver, makes it possible to set the device of any of the three voltage posi-

Quick change of magazine is feature of new Eclair NPR reflex camera . . .

tions. 110-120 V, 220-230 V or 240-250 V. An ingenious wiring system worked out by Technicolor engineers eliminated need for a special transformer. Weight increase is negligible.

Mast Introduces Model 135 a Random-Access Slide Unit

A new Mast Model 135 Random Access Slide Projector has been announced by the Mast Development Company, Davenport, Iowa. On receiving a digital com-

Model 135 Slide Projector

mand, the projector will locate and show within 3 seconds any slide in its magazine.

The Model 135 features a unique, inexpensive digital servo mechanism which translates the digital commands into corresponding positions of the slide tray.

Control is effected from a rotary digit switch, which is optionally installed on the projector or in a remote control unit. An actuator button, working in conjunction with the digit switch, energizes the digital servo and slide-changer mechanism.

Interchangeable slide magazines have a capacity of 49 slides each and accept any slide which has a 2x2 mounting. Lenses of varying focal lengths are available to suit a variety of business applications. Write the maker at 2212 E. 12th St., Davenport, Iowa for more details, prices.

AV Rear Projection Cabinet Has 22 x 28" Polacoat Screen

A new AV Rear Projection Cabinet has been introduced by Audio-Visual Research, Inc. at Pampa, Texas. Accommodating all standard 16mm sound projectors, the cabinet features a 22" x 28" Polacoat non-glare screen. A flawless, non-refracting mirror is said to permit distortion-free film presentation.

The maker also notes that this is "the only unit of its kind which provides the new Buhl wide-angle lens which can be built into the cabinet to provide full-screen presentation from projectors with two-inch lenses." The lens is optional at \$50.00.

An 8-inch speaker is built into

AV Rear Projection Cabinet

the AV Rear Projection Cabinet and it comes complete with cord and plug to fit any projector. Cabinet measures 65" high, 32" wide and 24" deep, is fitted with 5-inch casters and guaranteed for one year. List price is \$180. Write Audio-Visual Research, Inc., 205 East Kingsmill, Pampa, Texas for further details and literature.

Ultra-Compact Mini-Blimp by Sonex Designed for Arri-16

Mini-Blimp, which Sonex Engineering Co. believes is the smallest, lightest professional sound blimp in the world, is being produced for the Arriflex 16 in models (M) for 200' and (S) 100' configurations. The new blimp silences the Arri to a noise level comparable to a standard blimp, but does so at 1/5 the cost, according to the manufacturer.

Ultra-compact in design to gain maximum portability, Mini-Blimp is of aluminum construction, with neoprene and polyurethane lining, and weighs less than 12 pounds. Optionally, for those requiring even lighter weight, fiberglass versions are available; Model S weighs only 8 3/4 pounds, Model M, 10 pounds.

Model M provides 5 1/2 minutes of running time. Because of easy access design, reloads require less than 2 minutes.

Features of both models include reflex viewing, lens hood, matt box, footage counter window, Sonex sync motor, interior light, remote F stop and follow focus controls are available. Model S sells for \$199, Model M for \$279.50. Sonex products are sold with a 15-day unconditional guarantee.

For full details, write Sonex Engineering Co., Box 1189, Glendale, Calif. Please mention BUSINESS SCREEN when writing for data.

Wings to Land of Maya

**Latest Pan American Airways Film
Tours Mexico and Central America**

SPONSOR: Pan American World Airways.

TITLE: *Wings to the Land of the Maya*, 27 min. color, produced by Vision Associates, Inc.

The "Golden Triangle" of Yucatan, Guatemala and Mexico City promises to be a vacationland approaching the popularity of the Caribbean in the not too distant future. It has practically all the requirements — weather, new hotels abuilding, and governments keenly aware of the economic benefits of the Yankee tourist dollar.

Doing its part to promote the "Golden Triangle," which it serves with regular flights from Miami and New Orleans, is Pan American World Airways. Pan Am has a brand new film, *Wings to the Land of the Maya*, which does a lot to show why the area is growing in popularity so fast, yet still remains one of the least-exploited areas of Latin America.

Yucatan, once the most primitive and isolated of Mexican states, is changing fast. The capital, Merida, is known as the cleanest city in Mexico and its people the most friendly and courteous. Nearby are the Mayan ruins of Chichen Itza and Uxmal, which rival the ancient monuments of Egypt in their splendor. Off the coast is the island of Cozumel, with the clearest waters of the Caribbean. It is the newest of the tropic island paradises, and a real "in" place to go.

Guatemala offers spring-like weather in the highlands the year-around, and Indians little changed from their Mayan ancestors.

Mexico City, as contrasted to the pastoral picturesqueness of the lower points of the "Golden Triangle," is one of the swiftest cities in the world — a real cosmopolitan metropolis, and one of the most beautiful as well.

Vision Associates, which produced *Wings to the Land of the Maya*, has covered all the required tourist points of interest with beautiful photography and some live sound recorded on the spot.

Seymour Weissman, Vision Associates' writer and director, recalls one hectic problem that came up during production of the film. At Uxmal in Yucatan an Indian dance ceremony was to be performed during the afternoon on one of the ruined temples.

Mr. Weissman, and his cinematographers, Richard Shore and Bernard Hirschenson, arrived early to set up to shoot the event, but discovered that by some mix-up it had been postponed until after dark with only torch light provided for illumination.

Without a single photographic light available within 500 miles, and no chance to shoot the ceremony at a later date, Mr. Weissman had to think of some way to improvise and get the scene, which had already been written-in to the film.

The way he solved the dilemma was to dash back to Merida, 25 miles away, buy up all the available auto headlights he could find in the city (36), charter all the taxis in the Plaza for

battery power, and get back to Uxmal fast enough to wire up his lights on jerry-built stands. He got the scenes he needed and they came out quite well, too.

Wings also provides the debut for a new songwriter, "Attila," a 13-year old street singer of Merida, was recorded live on the street singing his own song.

Pan American will add the new film to its extensive library of travel films, which spans the globe. This new *Maya* film replaces an earlier version of 15 or more years ago.

BUSINESS SCREEN INTERNATIONAL: (CONTINUED FROM THE PRECEDING PAGE 24)

Learning to Live, produced by Eothen Films (who also produced *To Janet—a Son*, winner of a Chris Statuette award at the 1962 Columbus Film Festival).

The school film is intended to help the teacher through the introductory lessons on the human reproductive system. It illustrates the physical changes in adolescence and explains the reproductive process. By intercutting scenes of family, school, sports and youth activities, the film relates the biological details of sex with the problems of "growing up."

And for young adults, the same sponsor has released *According to Plan*, which briefly reviews sex instruction but concentrates on an explanation of the differing methods of contraception — discussing their merits and disadvantages.

Intended for use by marriage guidance counsellors, the film pleads the cause of family planning — in ways acceptable to all religious and ethical persuasions. Our London office will supply details on print availability in the United States. See addresses on page four.

Basic Facts for First Aid

SPONSOR: Johnson & Johnson

TITLE: *First Aid Now!*, 28 min., b.w. produced by MPO Productions, Inc.

What would you do if confronted with a victim of drowning, a man hit by an automobile, a woman burned in a fire? This new film dramatically explains the proper steps to take in emergency situations such as these.

The drama of accident scenes is used to bring viewers into realistic contact with situations where clear thinking and quick action can save lives. Live persons and specially designed dummies demonstrate mouth-to-mouth and heart resuscitation when breathing has stopped; the treatment of external and internal bleeding, minor and severe burns; and what to do when both simple and compound fractures are evident.

Throughout *First Aid Now!* certain basic rules are emphasized: to immediately send someone for help, not move the patient and act quickly and calmly.

The film is available for free-loan use to junior and senior high schools, churches, industrial and community organizations and TV stations from Association Films, Inc.

Courtesy is Good Business

SPONSOR: The Dollar Savings Bank

TITLE: *The Sound of the Dollar*, 85 frame sff, color, produced by Rossmore Productions, Inc.

☆ In New York's savings bank business, all of the banks offer about the same interest rates, and each has approximately the same variety of services to offer depositors. So what can a bank do to offer something a little better — something to bring the depositors in and keep them coming back?

One of the best answers to that question, according to Robert C. Johnson, president of The Dollar Savings Bank, is courtesy. Our depositors, he says, are the lifeblood of our business. Our people must learn to regard themselves as personal ambassadors for the bank. Their faces, voices and actions are the only part of our banking operation that our depositors ever know.

The Dollar's current emphasis on customer relations is taking shape in a new courtesy campaign throughout the Bank's six major facilities. One of the key elements in the campaign is a new sound slidefilm which is being shown to all employees on specially modified Salesmate projectors with 4 by 5-foot screens.

Results of the campaign are said to be excellent.

MULLING OVER A NEW MOTION PICTURE?

**FILM LIBRARY
and
TV Film Room Managers**

Horwald's precision automatic film inspection equipment is the accepted world standard for modern film libraries — T. V. stations — or wherever motion picture film is handled. Inspect-O-Film automatically finds breaks, torn sprocket holes, scotch tape "splices", any cause of film failure. Even those defects that are virtually impossible to find by hand. Also provides for film cleaning, conditioning, timing and editing.

Seven models available
See catalog for complete listing.

(CONTINUED FROM PAGE 59) were an important factor. The quality of the take proved the professional caliber of the lights, while their compact size kept them well out of camera range yet permitted full coverage and control in close proximity to the subject.

Cohn noted that another welcome time and money-saver was the ColorTran MiniDyne electronic dimmer — a 234 lb. solid-state device that is easily hung on a light stand and controls any combination of quartz or incandescent lights up to 1000 watt total capacity. Cohn found the MiniDynes ideal for location use where lightweight equipment with professional capabilities has long been in demand.

Film at the New York World's Fair

ONE DOLLAR

THE CASE FOR SPONSORED FILMS:

Arthur R. Railton, Public Relations Manager, Volkswagen of America, Inc.

Volkswagen Drives a Bargain...

(why VW sponsors 6 motion pictures)

"Our film program is a vital link in our communication chain. We have two basic stories to get over to the American public, and we consider films the perfect vehicle for delivering them subtly yet forcefully, pleasantly but with effective long-range impact.

When the first two Volkswagens were registered here in 1949 our particular type of automobile was unknown to the motorists of America. Automobiles were big and changed style by the year. A new car was a status symbol. In the face of this trend, we had to sell the concepts of economy and unchanging basic design. Motion pictures have helped materially toward our achievement of this goal.

The second and more important aspect of our story is that international trade is a healthy thing for the importer, the exporter and their respective countries, both economically and for the contribution such trade makes toward international peace and understanding.

The excellent acceptance of our motion pictures by audience groups all over the world—in community groups, schools, on television and in theaters—is a tribute to the skillful interpretation of our point of view by our film makers and of course to the wide distribution they've had. The results are good and in terms of their worth to us, reasonable in cost."

Partners in Success: Volkswagen of America, Inc., working with Marathon International Productions, Inc., and Modern, has achieved these impressive results in the United States:

The 1964 Ford Merchandising Fair, produced by Dramaturgy Division of Wilding, played an important part in one of the most successful new car introductions in automotive history—the Ford Mustang. The Dramaturgy-

designed modular pylons and ceiling grids used as background and side structures in the Fair won the annual Owens-Corning Fiberglas Design Award for Reinforced Plastics.

Trade Secret

How to attract audiences — and be sure they get the message

Displays and exhibits are an effective means of transmitting a message when designed as a comprehensive communications program.

The Dramaturgy Division of Wilding is a leader in this field because it applies this concept with impressive results.

Program the Message

From the largest exhibit to the smallest display, the sponsor's message is broken down into segments in a programmed sequence. The disclosure of each segment is planned to prepare the mind of the viewer for the next segment of the message.

Engineer the Audience

Wilding-Dramaturgy exhibits are engineered so that the audience is allowed to absorb each

segment of the message as it is processed from display to display.

Use Varied Media

Various segments of a sponsor's message are best transmitted by different media. Because of the broad experience and capability of Wilding-Dramaturgy in the production of print and audio-visual communications, appropriate media selection is assured.

Use Wilding-Dramaturgy

For complete coordination and quality control, these in-house capabilities are provided: Architectural Design • Research and Writing • Animated Displays • Structural Engineering • Puppetry • Costume Design • Lighting • Electronics • Electrical Engineering • Optical Systems • Art and Layout

How much red, blue and green exposure should each scene have? 50 steps are available for each color. 125,000 combinations are possible. At Byron, skilled timers carefully evaluate original film, to judge proper color density. They punch this exposure information—as well as the length of fades and dissolves—into a Mylar control tape. The film is then played back to double-check accuracy before release to the printing room. Then and only then, Byron's entirely automatic, precision equipment goes to work... providing perfection, print after print after print.

□ It's this combination of experienced men and fine equipment that means the kind of precision timing Byron is famous for. Byron, where film producers from all over the world turn for the finest in 16 mm Color-Correct® prints... only at Byron.

SELL BENEFITS TO DEVELOP MORE SALES FROM CALLS

Most salesmen logically focus their sales talks on needs. Yet people continue to buy what they want.

Here's a color filmstrip that shows how to cater to wants by selling benefits, answering the prospect's question: "What will it do for me?"

The importance of building presentations around "benefits" while stressing product or service facts is effectively demonstrated in

"Selling the End Result First"

It shows tested ways of presenting sales facts that motivate prospects to buy. One of a series of six color sound filmstrips:

"SELLING IS MENTAL"

These provide dramatic material for 18 sales-training meetings, valuable alike in training and re-training.

United Air Lines' Board Chairman to Keynote 25th Anniversary Convention of National Audio-Visual Association on July 18th

BOARD CHAIRMAN and chief executive officer William Allan Patterson of United Air Lines will "keynote" the 25th Anniversary convention of members of the National Audio-Visual Association when it opens its four-day meeting on July 18th at the Sherman House in Chicago.

Speaking on "Management Challenges in the Next Decade," this veteran of commercial aviation began his career in that field in 1929 when he left the Wells-Fargo bank to become assistant to the president of the Boeing Airline Company and Boeing Air Transport. He became general manager of United when Boeing joined three other airlines to form that transcontinental system in 1931. When Bill Patterson became president in 1934, United employed 1,000 people on a 2,600-mile system; today the company has more than 30,000 people at work along its 18,000 mile system.

"Quarter Century of Progress"

Convention general chairman Harold Newman, Kalamazoo, Mich. audio-visual dealer, called his selection "particularly appropriate" as NAVA observes its Silver Anniversary and concludes a quarter-century of progress "which parallels the growth of commercial aviation in the U. S."

Some 3,000 audio-visual business men and professional users of audio-visual media are expected to attend and to visit the 230-booth displays offered in the National Audio-Visual Exhibit, an integral part of the annual meeting. Theme of the 1964 Convention is "An Industry on the Move" reviewing the progress of the A-V field since the founding of NAVA in 1939.

A-V for Vocational Education

Forecasting the increased demand for audio-visuals through the Vocational Education Act for which the Congress appropriated \$183 million in April, Dr. M. D. Mobley, executive secretary of the American Vocational Association, Washington, D. C., will address convention delegates on "Your Road Ahead for Vocational Education" during the meeting.

Headlining the second general session is Dr. Neal Bowman, expert on business management, who will speak on "Pitfalls in Economic Illiteracy." His presentation will

cover what he describes as the "Five M's — Money, Machines, Management, Market and Motivation."

Although primarily devoted to the problems of audio-visual dealer members of the Association, a number of concurrent meetings of professional a-v groups will be held as usual during the four-day convention period.

* * *

Announce Program Details for "Day of Visuals" June 24-25

Suppliers and users of visual presentation tools and techniques will share program tasks when the National Visual Presentation Association holds its annual "Day of Visuals" program at the Hotel Commodore in New York City on June 24, continuing through the next day.

"Audio-Visuals: How and Why We Use Them" is the program theme as William J. Connelly, Plastics Division ad manager for Union Carbide moderates the opening seminar on the use of a-v in advertising on Wednesday, June 24. Herbert C. Rosenthal, head of Graphics Institute, Inc., will follow with a public relations seminar. Porter Henry, president of the company which bears his name, will preside over the a-v training session; Gerry Germain, sales promotion executive at Metropolitan Life Insurance Co., will moderate the final seminar on that topic.

"How to do it" workshop sessions will be featured on the second day, with that principle applied to the graphic demonstration of statistics and the technique of planning, organizing and running a meeting.

The annual "Day of Visuals" awards program will be concluded with the association's Awards Banquet program on the evening of June 24. Winning entries will be screened the following day for guests at the meeting.

* * *

Biological Photographers to Meet in New York August 27

The 1964 annual meeting of the Biological Photographic Association, professional gathering of biomedical photographers which includes many prominent medical film makers, will be held in New York City's Hotel Roosevelt on August 24-27. International in scope, the meeting will attract at-

W. A. Patterson, noted aviation executive, who will deliver keynote address at the NAVA Convention

tendance from many lands abroad including India.

General chairman for the meeting is Warren Sturgis, past recipient of the BPA's Louis Schmid award (highest honor given in biomedical photography). The noted medical film producer (Sturgis-Grant) is being assisted by Percy W. Brooks, Cornell University Medical College, serving as vice-chairman and program director. Motion picture arrangements are under the direction of Samuel C. Dunton, New York Zoological Park.

* * *

Society to Honor Management Films at October Conference

A first International Management Film Festival will be held in conjunction with the 19th International Management Conference of the Society for the Advancement of Management, Inc., in New York City on October 14-17.

Theme of the conference will be "The Bridge Between Science and Management" and films to be honored with appropriate awards will cover both technical management subjects as well as a special category to honor those films which deal with management in the general sense. Confirming acceptance of his membership on the Society's first Film Festival Committee, O. H. Coelln, publisher of BUSINESS SCREEN, will assist in the selection.

Oklahoma Hosts Short Course for TV Newsfilm Cameramen

Television newsfilm techniques were the subject of a short course attended by 54 military and civilian cameramen during the week-long Fourth Annual Television Newsfilm Workshop held at the (CONTINUED ON PAGE EIGHT)

What does MPO stand for?

A trade columnist, unable to answer the same question, finally gave up and quipped: "Good government." Quite right in a way. MPO does *stand* for good government—or good management, if you must be literal—but that's not what MPO *means*.

MPO does not mean Motion Picture Organization as is assumed by some folks who have a penchant for translating the letters on other people's license plates into memory props. Although MPO *is* a motion picture organization, it is much more than that, too.

MPO, although it is the world's largest producer of filmed television commercials and sponsored motion pictures, is also one of the most diversified companies in audio-visual communications. Besides MPO Videotronics, Inc. (television spots) and MPO Productions, Inc. (sponsored films), there are MPO Sales Meetings, Inc. (sales meetings, presentations, industrial shows, slide and film strips); the Repeater Projector Division (the Videotronic 8-automatic projector for sales and training); Kerbawy-MPO (complete A-V and industrial show services in Detroit); MPO-TV of California (complete West Coast facilities, staff and studios for films and commercials); MPO, Inc. (Chicago sales-service office); Special Projects Divi-

sion (military and government films and projects); Kenco-Tape Films Division (Print servicing, lab expediting, cataloguing, vault storage and shipping). MPO divisions cover *every* area of communications programming and counseling.

MPO maintains the East's largest, most modern motion picture facilities at the MPO Videotronics Center in New York (9 sound stages, 18 editing teams, screening rooms, shops) as well as a complete Hollywood production center. And MPO's full-time permanent staff of directors, cameramen, writers, editors and technicians regularly gathers more awards for creativity than anyone else in the business.

Next time you need a television commercial, sales training or public relations film, motion picture report, industrial show, sales meeting, sales projector, presentation, or want to consult about any audio-visual and communications project, call MPO. Ask for Judd Pollock. He's the "P" of the MPO. You see, back in the days when MPO was just a motion picture organization, it meant Madison, Pollock and O'Hare. MPO, 222 East 11 Street, New York 17, N. Y. (212) TN 7-8200.

University of Oklahoma on April 19-24. The course was sponsored by the U. S. Air Force, the National Press Photographers Association, World Book Encyclopaedia and the University.

Bob Shafer, WRCV-TV, Philadelphia, headed the faculty. He was joined by other representatives of the commercial news media including Howard Back, executive editor, National Television News, Detroit; Ernie Schultz, News Director, WKY-TV, Oklahoma City; and Houston Hall, WRCV-TV, Philadelphia, the NPPA Cameraman of the Year.

Faculty members from the Air Force were R. Pierson Smith, Arnold Air Force Station, Tenn. and MSG. Francis Grimaldi, of Offutt Air Force Base. Ned Hockman, motion picture production director and Dwight Swain, motion picture department, represented the University. Ed Fischer, Department of Communication Arts, attended from the University of Notre Dame.

Film Production Workshop at Long Island August 3 thru 28

☆ A motion picture production workshop will be conducted this summer at Southampton College of Long Island University, Southampton, N.Y., from August 3 through 28.

Instructor in the course, which will carry four credits, will be Merrill S. Brody, formerly a producer-writer for 20th Century-Fox, who has also produced 150 TV commercials and 14 industrial films. He has recently taught the creative and technical aspects of motion picture production at the School of Motion Picture Production in New York, UCLA and Wayne State University.

Tuition is \$150, plus \$50 for material, including film, processing and rental of camera and editing equipment. The workshop is intended for men and women whose vocation requires a basic knowledge of film production.

American Bankers Association Films Available on Free Loan

☆ The library of seven motion pictures on bank services, banking history, money management and career opportunities of the American Bankers Association is now available on a free loan basis. Association Films is offering the films to banks, schools, service clubs and for television showings.

Alcoa's Ralph Hoy (ctr) presents prints to Jack Copeland (l) and "Cap" Palmer, member of the Hollywood Museum committee.

Hollywood Museum Receives Two Historic Alcoa Films

★ Joining a growing list of national companies who are donors to the new Hollywood Museum, the Aluminum Company of America has presented two of that company's important, earlier motion pictures for the archives. Ralph L. Hoy, manager of exhibits and films for Alcoa, presented prints of *Unfinished Rainbows* (made in 1941) and *Color and Textures in Aluminum Finishes* to Jack Copeland, chairman of the Museum's non-theatrical film committee.

Unfinished Rainbows has been seen by 42 million people in the last 23 years and was the first

starring role for the late Alan Ladd. *Colors*, produced in 1958, has been shown to more than a million persons to date. Other sponsors have indicated interest in the archives.

MPO's Fine Arts Exhibition Has Auspicious Debut in N. Y.

★ The MPO Videotronics Fine Arts Exhibition, held at the production company's studios in New York on May 13 through 20, surprised almost everyone in the film and advertising business. As a first-time event, it really had no right to turn out as impressively as it did. From opening night, which brought forth a real log jam of advertising people, on through the rest of the week's run, large and enthusiastic crowds turned out to see the show.

Of the total of 292 works submitted to the exhibition, 276 were original paintings or drawings and 16 were sculptures. Lee Savage, creative director of Elektra Film Studios, whose paintings are included in many famous art collections, took first prize for an impressionistic painting titled "Rape". Second prize went to Jerry McDaniel, a free lance artist. Two third prizes were awarded —

one to Nelson Howe, an artist with NBC and another to Don Ivan Punchatz, an assistant art director at Ketchum, MacLeod & Grove, Pittsburgh.

All the artists whose works were displayed are engaged in working in the advertising industry, although most are not directly involved in designing or art direction. Many agency TV producers, copy writers, account executives and secretaries submitted their works to the show.

An awards jury of three eminent art critics — Dore Ashton, author and teacher at Pratt Institute; Anthony Bower, managing editor of *ART IN AMERICA*; and Peter Sely, Curator of the Department of Painting and Sculpture Exhibition of the Museum of Modern Art, did the judging.

In the original announcement of the show, MPO Videotronics pointed out that one of the objectives of the exhibition was to demonstrate the high level of creativity which exists throughout the advertising industry.

Marvin Rothenberg, MPO vice president in charge of creative services, said "creativity is not a 9 to 5 activity. We frequently find that the people we work with every day come up with fresh solutions

to the problems we face in filming commercials. These same people and their associates at the advertising agencies, with this existing showing have borne out our contention that the advertising industry is one of the last frontiers for people who want to express their individualism and sensitivity to the world around them."

New Vermiculite Product Film Shows On-the-Job Techniques

★ Savings of up to \$100,000 in construction costs are cited in a new 15-minute color motion picture on vermiculite masonry fill installation, just released by its sponsor, the Vermiculite Institute of Chicago.

It's All in the Wall presents case histories of various types of buildings in the U. S. and Canada, showing on-the-job techniques for insulating block and cavity walls quickly and economically. Sound-deading of partitions is also shown. The film was produced for specialist use among building contractors, owners and civic groups and is available on free loan (letterhead request) from the Vermiculite Institute, 208 S. LaSalle St., Chicago, Illinois 60604.

IN MOTION PICTURES, just as in juggling, you can't afford to miss — and neither can we.

For 20 years now, we have been a leading power in the effective communication of ideas in the educational, industrial and documentary film world . . . communicating with PERCEPTION and IMAGINATION in animation and live action at competitive prices in low and high budget films.

We take great pride in the fact that among our clients we can count General Electric, Kraft Foods, U. S. Steel, American Telephone and Telegraph, Union Carbide Corporation, Automobile Manufacturers Association, J. C. Penney Company, The B. F. Goodrich Company, New York Stock Exchange, E. I. Du Pont de Nemours & Company, General Motors, Chase Manhattan Bank, and many others.

In 1963 one of our films, MUSIC, THE EXPRESSIVE LANGUAGE, won more top awards than any other non-theatrical motion picture produced anywhere in the world.

In 1964, perhaps we will make such a winner for you . . .

CINE Awards "Golden Eagles" to 101

Council on International Nontheatrical Events Makes Annual Selection of Films to Represent U. S. at Festivals Abroad

THE COUNCIL on International Nontheatrical Events (CINE), organized for the selection of factual and documentary motion pictures which represent the United States at overseas film festivals, has entered its first "corporate" year under the leadership of Willis H. Pratt, Jr., film manager of the American Telephone & Telegraph Co., as president. Pratt was re-elected to that post at the recent Washington, D. C. meeting of the CINE Board.

During the week-long sessions, members of the non-profit organization also selected 101 films out of the 320 submitted for festival consideration as Golden Eagle winners, making them eligible for international festival showings. A list of the sponsored Golden Eagle winners appears in this issue and others will be published next month.

Cite Four as Honorary Affiliates

Four persons were named honorary affiliates in recognition of their contributions to film festival efforts for the United States. Joining former national chairman Ralph Hoy as recipients of this honor are Dr. William C. Carr, executive secretary of the National Education Association; Ambassador Myron Cowen, former U. S. Ambassador to the Philippines, Belgium and Australia; Kirby Grant, film and television actor and a former CINE board member; and Dr. Carolyn Guss, on the faculty of the Audio-Visual Center, Indiana University, also a former CINE board member.

A new member of the CINE

board is James Culver, formerly with the Library of Congress and the new treasurer-elect of the organization, succeeding Brig. Gen. Willard Webb, who became a vice-president. Also named to the board are Peter Cott, administrative head of the National Academy of Television Arts & Sciences, New York, and William J. Connelly, advertising manager, Plastics Division, Union Carbide Corporation, also of New York.

Other Officers of the Council

Officers for the coming year include vice-presidents Charles Dana Bennett, Farm Film Foundation; Thomas W. Hope, Eastman Kodak Company; Dr. Anna L. Hyer, Department of Audio-Visual Instruction, NEA; and J. Edward Oglesby, State of Virginia Education Department. Alden Livingston, E. I. duPont de Nemours & Co., was re-elected secretary and Dr. Harold E. Wigren, DAVI, remains as coordinator. John Flory, Eastman Kodak Company, is the group's recent past president.

Four organizations have become Sustaining Affiliates of CINE: BUSINESS SCREEN, Eastman Kodak Company, the National Association of Manufacturers and the National Education Association. Bill Snyder Productions was elected a Professional Affiliate.

Screened by Regional Juries

Films selected for overseas festival showings must meet special criteria. Golden Eagle winners were first submitted to regional juries; their selections were then reviewed in detail by the CINE (CONTINUED ON PAGE 14)

Selecting overseas film entries at recent Washington, D. C. screening (l to r): Capt. Joseph Beattie; The Rev. Michael Mullen, C.M.; J. Edward Oglesby; Anna L. Hyer; Rear: John Flory; Brig. Gen. Willard Webb.

MEN WHO DIRECT YOUR EMPLOYEES NEED THIS

People in supervisory jobs do their work more effectively when they are brought to realize the vital nature of their role in the organization.

The Supervisor's responsibilities — in the interpretation and application of Company policies—are clearly defined in

"The Supervisor's Job"

This sound filmstrip places emphasis on careful induction of new people, precise delineation of job requirements, and clear job instruction. It results in better work, reduced employee turnover, closer cooperation.

focus on film safety

Kalart/Victor 16mm projectors have a reputation for film safety. For 35 years, Victor Projectors have had three Safety Film Trips (one for each film loop) as exclusive components of the film transport mechanism. These Safety Film Trips spot film trouble before it happens and stop the projector instantly and automatically. Saves thousands of dollars in film damage annually. Kalart/Victor's large diameter Single Drive Sprocket moves film in and out of the projector smoothly and at one constant speed . . . no chance for film "pile up." These features give even beginning projectionists full confidence, allow them to concentrate on putting on a good show, with no interruptions. And a good show it will be with a clearer, brighter picture and brilliant sound . . . a combination that increases learning power. For full details see your Kalart/Victor dealer or write:

Klopman leans on "Moviematic"

Klopman Mills, Inc., a division of Burlington Industries, wanted to show their new color film "Man You Can Lean On" to 4500 top buyers and store training directors across the country, plus about 7 to 8,000 retail sales people. To do this they supplied each of their local representatives — *all women* — with a KALART VICTOR Moviematic Repeater projector loaded with a 16mm sound print of the film. These representatives then carried the convenient Moviematic to the store people. *Wherever* the buyer, Klopman pictured the "Man You Can Lean On" in the best selling atmosphere . . . and you can do the same for your business. With the Moviematic you're not selling in the dark. You can see what arouses your prospect's interest . . . then clinch the sale. That's because the last time you showed it, the film was rewinding itself ready for this time. Is Klopman enthusiastic about Moviematic? You bet! More buyers are specifying Klopman, not just any fabric. How about your product? You can purchase, lease or lease-to-buy the Moviematic. Ask your KALART VICTOR dealer or write:

Chicago Hosts Industrial A-V Association

Business Audio-Visual Executives Elect McCaslin President
as Group Holds Annual Spring Meeting at Hotel Continental

KEY THEME of the recent national meeting of members of the Industrial Audio-Visual Association, held in Chicago's Hotel Continental on April 27-30, was defined by its program chairman, Paul Dowty, as "GTTP."

"Getting Through to People" in management as well as among the many types of audiences served by audio and visual tools was expressed in the relevant talks and demonstrations throughout the three-day program.

Ray, Palmer Featured Speakers

Featured speakers included Reid H. Ray, president of the Society of Motion Picture & Television Engineers, who talked on "The Age of Change," Charles (Cap) Palmer, Parthenon Pictures' executive producer, who broadened the meaning of "The New Mode in Manuscripts" and Dr. Martin J. Maloney, Northwestern University, who presented a humorously negative approach as he explained "How to Avoid an Idea."

R. C. McCaslin (Caterpillar Tractor Co.) is IAVA's new pres-

Bob McCaslin, President of Industrial Audio-Visual Assn.

ident-elect; LeRoy Vanderford (AT&T) was elected first vice-president and Harold Daffer (Honeywell) is the new second vice-president. Continuing in office as vice-president, Illinois, is John Hawkinson (Illinois Central RR); Ed Palmer (New England Bell) is the secretary-elect; assistant-secretary is Frank Stedronsky (A. B. Dick); and Fred Woldt (Illinois Bell) continues as the organization's treasurer.

Directors for the various regions elected at Chicago include Gerald McGarry (Eastern); Lawrence Warnock (Central); Martin

Broadwell (Southern); Howard Williams (Northern); and Vincent Hunter (Western).

Presents Plaque to Connelly

Banquet speaker on April 29th was Tom Campbell, publisher of IRON AGE. At this dinner event, retiring president William J. Connelly (Union Carbide) received the traditional IAVA service plaque from past-president O. H. Peterson (American Oil).

Among other noteworthy program events was the discussion of sponsored film use on television by Al Fields, public relations director of WGN-TV, Chicago; and a special forum on the "State of Eight" in which various experts in the field of 8mm projection equipment and processing expressed their views on recent developments in that dimension.

Review "The State of Eight"

Bob Colburn, George W. Colburn Laboratories, reported a 60% increase in 8mm print volume at that company, noting that 8mm print costs remained at about 60% of 16mm and that 8-to-8 printing was still definitely to be avoided.

William Heddon, Calvin Productions' executive, talked on 8mm production from early phases to the present. He cited the recent problems in finalizing 8mm print standards within the SMPTE, noting that Eastman Kodak officials have introduced new frame sizes and a revision of the track area. This problem remains unresolved.

Equipment demonstrations included the MPO Videotronic "8"; the Fairchild "Mark IV" with its slide-in, no-thread cartridge principle; and the Technicolor "Instant" 8mm cartridge-load silent repeater projector.

Spotlight on Member Reports

As usual, members of IAVA took active roles in the program. Arch Smith (Humble Oil) briefly discussed a new research study on the effectiveness of that company's film program; Walter Hardy (Autonetics) described the growing closed-circuit television network operated within his company's facilities in the Greater Los Angeles metropolitan area.

Alan Yost (Bethlehem Steel) described a new executive A-V briefing room, used to communi- (CONCLUDED ON PAGE 88)

Advocating films for conservation education, Justice Douglas spoke on recent American Film Festival program at Biltmore in N. Y.

THE SIXTH ANNUAL American Film Festival, concluding with an awards banquet at the Biltmore Hotel in New York on May 1st, brought Blue Ribbon (first award) honors to producers, sponsors and distributors of 38 motion pictures and 10 filmstrips in the various categories of this educationally-sponsored event.

Over 1,000 registrants attended the four-day program, held under the auspices of the Educational Film Library Association. Festival visitors were primarily educators and professional representatives of

Hold 6th Annual American Film Festival

Justice Douglas, City Planner Lewis Mumford Address Guests as Film Librarians Honor 18 Titles With Blue Ribbon Awards

competing producers and distributors serving this field.

In addition to its awards program, the Festival featured lectures and panel discussions. William O. Douglas, Associate Justice of the United States Supreme Court, was a principal speaker, advocating the use of the film medium for conservation education. City planner Lewis Mumford (the subject of a Blue Ribbon-winning film); communications' expert Eric Barnouw, producers Willard Van Dyke, Stuart Finley, Martha Munzer and Maitland Edy were other featured speakers.

Frederic A. White, EFLA president, introduced past-presidents of the organization as presenters of the awards. The winning films will go on tour all over the U.S. and have been widely shown in recent years by educational television stations as well as at school meetings.

The complete list of 1964 Blue Ribbon winners follows. Within this list, the primary subject areas covering "social problems," med-

Emily Jones, Administrative Director of EFLA, is pictured with the noted social historian Lewis Mumford, honored guest at Festival.

ical, health and safety subjects and religious films are grouped in their relevant order; others, including filmstrips, are alphabetical.

BLUE RIBBON WINNERS

Agriculture and Natural Resources
• *Rice*, produced by Willard Van Dyke and sponsored by the Rockefeller Foundation.

Conservation

• *Heritage of Splendor*, produced

and distributed by Alfred Higgins Productions, Los Angeles.

Citizenship, Government, City Planning

- *How to Look at a City*, produced by George Stoney Associates and sponsored by National Educational Television.
- *Lewis Mumford on the City: Part 6, The City and the Future*, produced by the National Film Board of Canada and distributed by Sterling Educational Films (tie for top honors in this category).

Current Events

- *Eclipse of the Quiet Sun*, produced by the Douglas Aircraft Company and distributed by Sterling Movies U.S.A.

Economics and Consumer Education
• *The Marvelous Mousetrap*, produced by Norwood Studios for the Bureau of National Affairs, Inc.

Education and Child Development
• *Communicating with Deaf-Blind People*, produced and distributed by the American Foundation for the Blind.

Geography

- *The Great Unfenced*, produced and distributed by Harry Atwood.
- Guidance: Personal and Vocational**
• *The Professional Nurse*, produced by American Film Produ-

What the Bell & Howell Specialist AUTOLOAD® Filmosound projector *can* do is to get your films shown in more places—more often. Its lighter weight, brighter projection and fumble-proof automatic features encourage even inexperienced personnel to use it with confidence.

It threads itself completely, automatically... no other sound projector anywhere can do it!

It projects 34% brighter... gives you a bright, clear picture in semi-darkened rooms!

It weighs 20% less... lots easier to transport!

That's why Bell & Howell AUTOLOAD is the largest selling 16MM sound projector anywhere.

See the Specialist AUTOLOAD Filmosound at your Bell & Howell Audio Visual dealer today. Or write Bell & Howell, 7100 McCormick Rd., Chicago, Illinois 60645 for more information about AUTOLOAD.

IN WITH THE OLD...

Words, like people, get tired
from overwork.

"Motivation" is a good example.

As Webster defined "motivation"
many years ago, it meant: "to
provide with something (either
reason, method, or desire) that
causes a person to act."

"Motivation", in this sense,
remains the essential ingredient...
as causing people to act remains
the essential goal...of any
communications program.

Fastest and finest in quality color reversal films Ansochrome D/200, D/100 and D/50!

A whole new world of picture possibilities is opened to you with these important new Ansochrome® high speed films!

Ansochrome D 200 is much *more* than an extremely fast color film. It is also a *quality* color reversal film—with exceptional color fidelity, good color saturation and sharpness you have never associated with high speed color films.

In Ansochrome D 100, you get a *fast* color film of magnificent quality. Color rendition is superb, with rich, fully saturated primaries and delicate shadings handled with amazing fidelity. The high acutance of Ansochrome D 100 makes it an excellent choice for assignments requiring big screen images. For work under the lights, choose Anso-

chrome T/100, the companion film especially balanced for Tungsten illumination.

Ansochrome D/50 brings you superb color quality and sharpness in a 16 or 35mm daylight film with a speed of 50—ideal for many outdoor scenes.

These new Ansochrome films are available in long lengths of 16mm, 35mm and (except Ansochrome D/50) 70mm stock. Be sure to try a test roll soon—and discover how much good color you've been missing!

Unisphere® presented by  United States Steel 1964 New York World's Fair 1964-1965 Corporation

Films help build \$35,000,000 sell-out

\$35,000,000 in advance tickets, nearly three times the predicted amount was sold to an eager public before the New York World's Fair opened. For many, a film had sparked enthusiasm.

As official Film Consultant to the Fair Corporation, we produced three progress reports in a broad, 4-year program of filmed promotion.

The first, narrated by H. V. Kaltenborn, was used to sell exhibitor space, nationally and internationally, long before ground was broken.

The second, with Bob Considine, was seen by over 17,000,000. Association Films, its distributor, called it "in unprecedented demand."

When the third, hosted by Lowell Thomas, was released, over 700 prints were needed to satisfy even larger audiences.

Why? The World's Fair is a timely, exceptional subject. No question about that. But that's not all.

We think our promotional films were exceptional, too. They were colorful, lively previews that captured the excitement and drama of the Fair. They helped sell some of those advance millions.

This sell-out performance is the sort of promotional job we can do for you.

Award "Clips" to Year's Best Commercials

Leading Media Executives Attend Waldorf Awards Luncheon as American TV Commercials Festival Jurors Cite 52 for Honors

OVER 1100 advertising and production executives took part in the two-day program of the American TV Commercials Festival at the Waldorf-Astoria Hotel in New York on May 14-15. Included in the gathering at the Awards luncheon were five agency presidents or chairmen, 11 advertising, marketing or public relations heads within major companies and nine principal executives of broadcasting, advertising and production associations.

This year the event, as always the best-run film festival in the industry, featured two days of screening of finalists and winners, a reception sponsored by the Film Producers Association of New York, and a workshop on creative techniques conducted by a group of prominent production executives.

Weir Hosts Awards Luncheon

Chairing the award luncheon was Walter Weir, Chairman of the Executive Committee of West, Weir & Bartel advertising agency and current Chairman of the Festival's Council of Judges. Wallace A. Ross, Festival Director, coordinated the program.

Some 52 award-winning commercials were shown during the luncheon. CLIO statuettes were presented on stage to all winners of "Best of Product Category" and "Special Citations for Craftsmanship." Regional winners were not shown, in deference to the Regional Festivals that follow — in Toronto on June 4, in Chicago on June 9, and in Atlanta, Dallas and Los Angeles on dates later in June.

Shared by Agencies, Producers

Receiving the awards for "bests" and "runners-up" in the various categories were approximately 30 agencies and 40 production firms. Almost all well-known concerns in each field were represented at least once, but leaders in the number of awards won by agencies were: Doyle Dane Bernbach, Young & Rubicam, Grey, J. Walter Thompson and Papert, Koenig, Lois.

Leading the producer award winners were: EUE-Screen Gems, Rose-Magwood, MPO, Wyld and VPI

Preceding the presentation of awards there was a premiere of the Festival's annual review of

trends. Entitled *Hootenanny-Commercial Style*, the ten-minute film was produced and written by Richard Earle, of Benton & Bowles, and directed by Jim Rose, of Rose-Magwood Productions. ■

New England "Heritage Trail" Film Being Made by Bay State

✧ The first color film traversing New England's "Heritage Trail" is being produced by Bay State Film Productions, Inc. for the New England Mutual Life Insurance Company of Boston.

In announcing the picture, O. Kelley Anderson, president of the company which inaugurated mutual life insurance in America 129 years ago, said:

"People see a lot of our matchless six-state region along the Trail. Because New England Life has its roots in Boston — our charter was granted here by Governor Armstrong in 1835 — and because since then we have been intensely active in all six New England states, we are proud to sponsor this new film."

The picture will run 28½ minutes and a general announcement will be made on its release date later in the year. The "Heritage Trail" can be traveled in about 10 days and takes the visitor to every major scenic, historical and recreation area in that region. ■

FILM ACCOUNT EXECUTIVE

If you sometimes find yourself thinking you'd like to tie up with a different kind of film producer — a small outfit, maybe, where things are relaxed and informal . . . where the staff is in dead earnest about craftsmanship and competence, but rather carefree where clients' whims are concerned . . . where there is a flow of new ideas and concepts to fuel your sales effort . . . where you can have a voice in company policy, and a chance to acquire a solid chunk of stock . . . reply to:

COUTANT-MATHOT PATENTS

This camera will radically change your thinking about film making!

Whether you make entertainment, documentary, educational, industrial or television films, you will now be able to make complete sync. sound films as easily as you once shot silent and recorded wild. Shooting sync. sound won't take any more time or cost a cent more.

The new ECLAIR NPR (Noiseless, Portable, Reflex) is the first professional 16mm motion picture camera to free the film maker from the tyranny of the sound camera. It is designed to be used with the new professional portable 1/4" tape recorder; can be easily handheld, when necessary, and is so quiet no blimp is ever needed.

This freedom from the impedimenta of film making is combined with rugged construction, registration pin movement and the world's most advanced reflex viewing system.

Before you plan your next film, re-examine your basic thinking about film making...see the new ECLAIR 16 NPR.

ARRIFLEX at work — ONE OF A SERIES *

ARRIFLEX® CAPTURES ANIMAL ANTICS FOR "MR. PIPER" TV SERIES

Director Vincent Vaitiekunas called it "directing the undirectables." Cameraman Joseph Seckeresh listed three major problems and a barnful of minor ones... namely, "Kookie the Cat," "Rupert the Rat," "Bessie the Bunny," and the supporting cast, a variety of fowl, fish and four-legged creatures. Filming "Animal Farm," an enchanting segment of Independent Television Corporation's new "Mr. Piper" TV children's series, starring Alan Crofoot, proved a hectic, harried and often hilarious assignment.

"When shooting 'Animal Farm,'" Director Vaitiekunas relates, "we had to change the speed of frames per second to acquire the desirable pace of animal movement (lazy, excited, etc.). Then we had to compose, find focus and shoot in a split second. Then follow unpredictable small animal movements in close-ups and medium shots while pulling focus.

"We needed a very flexible and responsive camera. Often, using wide angle lenses, we shot scenes inside stove pipes, garbage cans, crevices, overturned boxes, under a car, inside a harvesting combine—and somehow we always managed to squeeze our Arriflex into the most unlikely places.

"Then too," he added, "the main set was a barn. Plenty of pulverized straw, dust and animal hair (a cameraman's nightmare) went flying after a good fight between cats and rats. Yet with care we managed to shoot around 100,000 feet of film with no 'hair in the camera gate' difficulties. Perhaps these were the outstanding features of the Arriflex that helped us immensely..."

Thank you, Director Vincent Vaitiekunas. Need any more be said?

From the microscope to the missile range... from spot locations to sound stages... Arriflex professional motion picture cameras are the dominant choice of filmmakers in science, industry, and entertainment. They're lightweight, rugged, tremendously versatile—uniquely suited to a range of applications virtually without limits. Here are some of the features that give Arriflex cameras their remarkable capabilities:

• MIRROR-SHUTTER REFLEX VIEWFINDER • REGISTRATION-PIN FILM MOVEMENT • 21° DIVERGENCE 3-LENS TURRET • CONTOUR HAND GRIP • FRAMES-PER-SECOND TACHOMETER • COMPLETE ACCESSORY SYSTEM... lenses, standard and special-purpose electric drives, power supplies, time-lapse equipment, film magazines, sound blimps, tripods.

YOU ARE INVITED to send us a description of your special use of Arriflex equipment.

ARRIFLEX CORPORATION
OF AMERICA

257 PARK AVENUE SOUTH, NEW YORK, N. Y. 10010

IN THE LAND OF THE FAIR which covers 646 acres on Flushing Meadows, Film is King. All along the 40 miles of sidewalks, exhibitors are showing pictures that surround the viewer, project on sky-domes overhead, poke their light, shadow and substance through obscuring veils and provide a multitude of ideas and wares on a thousandfold screens. There is 70mm, 35mm, 16mm, 8mm, stereo and monaural sound and a virtual army was enlisted to operate and maintain the complex as well as the simplest, means of projection.

The 300 exhibiting companies and 66 nations at the Fair are joined by religious exhibits of many faiths in this kaleidoscopic exposition of man's material accomplishments, his future aspirations and his spiritual yearnings. The Fair is colorful and chaotic; it has areas of rare beauty in architectural design and an equal portion of garish. But, at this writing, it also had passed the first seven million mark in attendance and was on its way to the anticipated 80,000,000 visitors during the two-year span which ends in October, 1965.

Most notable, from our specialized viewpoint, this Fair has the greatest collection of audio and visual presentation hardware ever assembled on the face of the earth. There are 65 projectors in the Bell System Pavilion and 159 are required for *The American Journey* show in the United States Pavilion. Equally notable is the repeated use of circular theater designs. This is by all odds *the roundest show to date*, and in some ways, *the squarest!*

Lessons for exhibition sponsors abound in the manifold operational difficulties encountered in the first month of the Fair. Most of these have been overcome and they could have been anticipated in exhibits which use such complex electronic gear as that which animates the figure of Lincoln, for example, or the criss-crossing beams which put images around and literally on top of the viewer. Imagine a single show with 110 screens to cover!

Fair exhibitors are learning fast that their guests have come to be entertained or, at least, bemused. They also want *action* and they get it in the innumerable exhibit "rides" which are Robert Moses' answer to Coney Island. The president of the Fair corporation has rare courage. His show is doing without fan-dancers and has practically exiled the paid amusement area. Instead, visitors are looking into the Futurama at General Motors, at the dinosaurs in Ford convertibles and at Michelangelo's *Pieta* in the Vatican pavilion.

Are the films at the Fair equal to the multitude and complexity of the projection systems? One of these has drawn widespread critical praise for the sheer joy which abounds on the three screens showing *To Be Alive!* in the Johnson pavilion. *The Searching Eye* is a cinematic, imaginative treat for visitors to the Kodak exhibit. Audiences feel they are literally *in* the action of the 360-degree tour *A-Round New York*. The Moody science films are familiar fare in our field but wondrous to behold again in the Sermons from Science theater.

The "People Wall" in the IBM pavilion is a show itself but there are also nine screens in action all at once as this exhibitor illuminates the science of the computer. Smaller but imaginative techniques are found in the "well" of the *Patterns in Sports* film and in the spherical projection globe of the Berlin pavilion. Cinerama keeps pace with Walt Disney as a major Fair creative source; there is a Cineramic *Voyage to the Moon and Beyond*; and the episodic, multi-screen *American Journey* of the handsome United States pavilion.

This is after a brief, first five weeks after the Fair's on-the-button opening day. It is before the onslaught of the *real* business of the Fair when the schools are closed and vacations begin. And there is the prospect of what might be an even more interesting second year to come. Stimulated by such successes as *To Be Alive!* there will be courageous sponsors who can replace less worthy film fare in '65.

What can be taken from the New York Fair to the innumerable industrial shows, to state fairs? What lessons are to be learned in time for the important Canadian exposition just a few short years ahead? The following 30-plus pages are devoted to the pictures taken by our own Bob Seymour and hundreds of lines of detail on the shows. •

The editors of Business Screen present:

A Pictorial Report on Audio and Visual Exhibition Technique at the NEW YORK WORLD'S FAIR

**32 pages of exclusive pictures and text
on innovations in production and projection
among principal exhibitors at the fair**

*A scene from the Tower of Light show exemplifies participation
at the Fair of many of these leading U. S. industrial companies.*

Fair by Moses: Pictures by Bob Seymour!

An Editorial Foreword to This Special Report

THE PICTURES which thoroughly illustrate these pages on the New York World's Fair are about 90% exclusively *ours*. So is the text. And here's the reason.

Our Eastern Bureau chief, Bob Seymour, spent 12 long days on the Fairgrounds, totaling about 120 long hours, during the first month after opening day. He clocked 165 miles on his pedometer, shot up 347 negatives from which the more than 100 illustrations in this section were gleaned, and he ate (and survived) 27 hot dogs, saw every exhibit at the Fair at least twice (some four times) and waited in all the lines just as you will have to when you go to the Fair.

He advises Fairgoing readers: plan your route before you get there. Don't wander about aimlessly or you'll waste hours in backtracking. Bring your lunch or learn to live on hot dogs, for the restaurant queues are usually the longest at the Fair.

The longest wait at the Fair, among industrial exhibits, is usually at the Ford pavilion, which also has the shortest ride. GM, on the other hand, has probably the most efficient crowd-control system at the Fair and has been aver-

aging only a half-hour wait on normally busy days.

This was a rugged first month and most of the sins of omission and dereliction have been corrected. We'll risk a prophecy that there will be some new films in some of the pavilions before the year is out; certainly a good deal of replacement production for the 1965 edition.

Logistically, he reports, the Fair management would have done better to spread the big attractions around to distribute the crowds more evenly. On a given day, for instance, the Transportation area may be crowded beyond capacity, while parts of the State and International areas and *all* of the Amusement area have much less than normal capacity. A big crowd at one exhibit tends to spill over into other nearby exhibits.

We owe a postscript of thanks to Barbara Skeeter who helped us with invaluable detail on Reevesound projection system installations. And we'll close this forward with this thought: The New York World's Fair is the largest single factual film theater in the history of mankind, a vast testing ground for projection systems and *a good place to visit!*

The Mobil Pavilion offers the only audience participation show at the Fair. Simulated Economy Run "game" involves 18 drivers who view same films via closed-circuit telecast into windshield-screens. Scoring is by data processing system; map reports driver's progress. Setup was created by Wilding-Dramaturgy; films were lensed by Tom Willard.

Capsule Reviews of Films at the Fair

This brief digest of some 24 principal exhibits featuring films (and slides) also "rates" some of the shows seen during the preparation of the picture and text reports in these pages.

Bell System: ride in your own arm-chair past 65 screens you won't see as screens at all . . . films by Owen Murphy. A technical tour-de-force; all it needs is "lighter" touch.

Chrysler: Bil Baird's charming marionettes are introduced on film which is, in turn, introduced by Bob Hope. You can't beat that.

Du Pont: live actors talk to actresses on several screens, pass flowers from hand-to-screen in this clever, tune-ful commercial presentation well worth seeing.

Eastman Kodak: lots of smaller screens and two big ones on which to see "The Searching Eye" and an Eastman Chemical-textile film produced by Filmex Bright, imaginative and impeccable.

Festival of Gas: A delightful, short Owen Murphy puppet film on three screens.

Billy Graham: the noted evangelist in Todd AO with a message on "Man in the 5th Dimension."

Greyhound: all-too-brief coast-to-coast film in CinemaScope (produced by Fred Niles), showing on big, wrap-around screen.

IBM: 500-seat "People Wall" carries you into the middle of a multi-screen explanation of life in the computer age. It's clever, humorous and slick.

Johnson's Wax: probably the best film at the Fair, "To Be Alive!" is happiness itself, completely non-commercial and a "must!"

International Pavilions: there's a projection idea at Berlin; sound and scenes in Ireland; a beautiful pavilion (Spain) with documentary films to match.

KLM-Cinerama: Graphic Films co-produced this star-studded journey "To the Moon and Beyond" with exciting scenes and sound.

U. S. Navy & Marine Corps: the "you are there" feeling engendered by the Jam Handy-designed Cine-Globe Cruiser in which to see jets and nuclear subs as if you were riding aboard.

New England: multi-free-hanging screens give many impressions of "The Faces of New England."

New York State: you haven't seen it until you're in the middle of this 360-degree picture produced (with great skill) by Harry Coleman.

Maryland: has the Milner-Fenwick picture "O'er the Ramparts" on the origins of The Star-Spangled Banner; voice of Arthur Godfrey.

Patterns in Sport: seen from a "looking down" position with a real feeling of action. See in General Cigar exhibit area.

Port of N. Y. Authority: a film ride via helicopter in another 360-degree picture, produced by Fred Niles and shown on 10 panels all around the viewer.

Protestant Center: the much-discussed film "Parable" (also a Niles' production). Strong stuff.

Sermons from Science: showing the best of Moody science pictures hourly and worth seeing.

Tower of Light: films are all over the place but not worth the quantity approach. A bore.

United Air Lines: film takes you "From Here to There" on a jet plane. Interesting patterns as viewed from aloft.

United States Pavilion: there is the "major" Cinerama ride past 110 screens and the introductory "Voyage to America" with its immigrant background, produced by Graphic Films and John Houseman.

World's Fair Exhibitors Sponsor Short Films to Show on RCA Closed-Circuit Color Network

MANY OF THE NATION'S leading companies with exhibits at the Fair are sponsoring five-minute motion pictures for showing exclusively on RCA's closed-circuit color television network on the Fairgrounds.

About 75 firms, thus far, are planning to supply films for the 300-set network, including Time, Inc., National Cash Register, Eastman Kodak Company, General Cigar Company, Ford Motor Company, Schaefer Beer, American Express, Formica, General Foods, Socony Mobil, Bell System, Chrysler, DuPont, IBM, General Motors and New York Airways. These films will run the gamut from things to do and see at the Fair to the new uses for helicopters. At this writing (late in May) about 150 sets have been installed at various sites around the Fair, half of them in VIP lounges of the big pavilions. By the middle of June, most of the other public location sets will have been set up.

While most of the sets are located indoors — largely in public and private lounges — a few are outdoors and operating only at night — at the Denmark and Chunky Candy pavilions, for instance. National Cash Register has a set in a prominent place in its pavilion. Bell System has six sets, and IBM has five.

All the sponsored films to be shown on the network are institutional in nature — Fair-oriented and non-commercial. They will

range from reviews of what is going on inside the pavilions to things about the Fair that people would not normally know about —

RCA color television set at the Danish pavilion. Network will be completed by middle of June.

odd facts, odd jobs, even movie shots of the Fair under construction.

"Since it might take as much as three weeks for a visitor to see everything at the Fair," says James M. Toney, Director of RCA's World's Fair Operations, "the closed-circuit network will help visitors see many things they might otherwise have missed."

Mr. Toney said the color TV network — largest of its kind in the world — will be programmed to make the Fair "more interesting, entertaining and informative for all visitors."

U.S. Steel Corporation, for example, has made a color film (by

MPO) on how the Unisphere was designed, fabricated and erected as a permanent reminder of the Fair's "Peace Through Understanding" theme. Sinclair Oil Company is producing a film on its life-sized dinosaur exhibit.

The American Iron and Steel Institute is doing a film (by Audio Productions) on the importance of steel construction in the Fair buildings. The Bell System has been shooting for several weeks (Owen Murphy Productions) on its exhibit at the Fair. Walt Disney is doing a film on the Pepsi-Cola exhibit, which was designed by his staff.

In addition to running the short

films repeatedly each week, RCA will divide the Fair into eight zones and run a ten-minute film highlight of each zone on its appropriate hour — zone 1 at 1 pm, zone 2 at 2 pm, and so on.

The films are only part of the over-all programming being planned for the network. Edited videotapes of shows appearing live in RCA's color television studio at the Fair will also be run at regular intervals.

Highlights of important events on the Fair grounds including the Olympic speed trials, will be carried live, as will lost children and five-minute news shows produced by the Fair Corporation.

Everywhere you look at the Fair there are friendly faces and all kinds of exotic costumes. These boys from Chichicastenango, Guatemala have been taking in sights at Hong Kong exhibit in the background.

Above: the Bell System Pavilion is a 400-foot "floating wing" which offers a chair ride and series of live demonstrations.

Right: familiar visitors' line awaiting turn along Bell's ride. Crowd control is very good here.

Exterior of small "stand-up" theater in main downstairs exhibit area. Audiences of 80-100 persons see a multi-screen slide presentation on many facets of telephone service; show is repeated every 15 minutes.

BELL SYSTEM PAVILION

*armchair "sound ride" takes 1,000 viewers
on film journey "From Drumbeat to Telstar"*

THE "RIDE" in the Bell System Pavilion is one of the most complex and interesting film experiences of the Fair. The 1,000 moving armchairs with built-in speakers in two continuous loops of 500 each on two levels carry spectators through a 15-minute program which involves 65 motion pictures on individual screens.

Titled *From Drumbeat to Telstar*, the program takes us from man's first efforts to communicate — with voice, drumbeats, smoke signals — on through the discovery of symbols, numbers, the written word and modern developments — the telephone and Telstar. The story is told by speakers

synchronized to the action on the screen for each individual chair.

The ride was conceived by the Pavilion's designer, Jo Mielziner, working with architects Harrison & Abramovitch, motion picture engineers — the Reevesound Company, and the film producers, Owen Murphy Productions.

On the 65 screens — which cannot be seen as screens at all since they are veiled in various thicknesses of gauze curtains called scrims — are short pieces of action performed by Hal Holbrook, noted stage actor of "Mark Twain" fame.

Mr. Holbrook will be seen calling "hello" in an early part of the ride, sending smoke signals, inventing the printing press or the telephone. It takes an average of six seconds for each chair to pass each individual screen (although many of the screens are grouped in a single tableau). On the screens are endlessly repeated actions on looped films which run from six to 15 seconds.

What is amazing about this is that there is no point at which the action can be seen to obviously stop and repeat itself — no jerks at the splices to spoil the smoothness.

Director Paul Cohen, of Owen Murphy Productions, achieved this by working with Mr. Holbrook until he was able to perform an action "forward" and then smoothly continue "backward" to the point of origination of the action. In other words, he would

Inside the "stand-up" theater: the slide show utilizes colorful light-ming effects. Technimation techniques. Scenes come up on several panels individually and "en masse" through both front and rear projection.

pick up a pen, write a few words, fold the paper, and lay it aside. Then he would continue right on doing the same thing, but backwards.

With this forward and backward action on film, editors could then print the "forward" portion straight, reverse print the "backward" portion, and splice almost anywhere in the action without it being noticeable on the screen. If this sounds complicated, it most assuredly is, but it works.

To achieve the effect of having none of the screens visible, Designer Joe Mielziner has used multiple scrims before each one, and the figures in the film are performing entirely with limbo back-

Design and Engineering of the Bell Show

DESIGN AND ENGINEERING installation in the Bell System Pavilion was a major task in itself, primarily centering on the 1,000 chair "sound" ride which occupies a mobile ramp in the "floating" wing of the wide structure.

Produced by Jo Mielziner of New York, this unusual theatrical presentation has projection and

Sound-equipped upholstered chairs which carry visitors along the ride.

grounds. There are no frame lines anywhere visible. This was accomplished by photographing the action on a blue cyclorama set. Then, by printing this through a blue filter, a matte exactly matching the action is obtained. Printing both together produces a film with no background, no frame lines, and the character entirely in limbo.

Each of the 65 loops in the program is changed daily. It is estimated that an average loop goes through 5,000 runs during the 12-hour day before it is discarded. For the producer, this means a regular editing staff constantly preparing new loops for the projectors.

With all these extraordinary complexities, it is a tribute to the designer, producer and engineers that the Bell System ride started operating at 10 AM on the opening day of the Fair and has continued with no breakdowns ever since. The Pavilion's percentage of visitors has steadily increased and *From Drumbeat to Telstar* seems settled into a long, successful run.

sound systems of unique capability which were created by Reevesound. A monaural sound system

Above: closeup of one of the 65 Reevesound-modified 16mm Norelco projectors used along chair-ride in the Bell Pavilion. Each projector is equipped with 1600-watt Zeiss Xenosol-II lighting source, a first-surface mirror and the 16mm film "loop" rack which can be seen at left in scene.

Scenes for the 65 loop films which carry the story of *"From Drumbeat to Telstar"* along the chair ride are seen through scrims of varying styles, thickness so that there is no apparent background, no visible frame lines. Resulting fuzziness (at times) doesn't improve quality.

of special two-ear design is built into each of the 1,000 upholstered lounge-type chairs.

This sound system utilizes two tracks on Reevesound's four-track, sixteen-millimeter reproducing system, with like programs being fed through right and left ear speakers, positioned at the upper inside of the chairs. Individuals are provided with a sound program that is synchronized with the ride.

* * *

Reevesound's projection system in the cavern includes a battery of sixty-five 16mm Norelco projectors equipped with 1600 watt Zeiss Xenosol II light sources, first-surface mirrors, continuous duty synchronous motors and spe-

cially designed film loop supports.

Projectors, lamps, rectifiers and loop racks are located on long platforms behind a series of rear projection screens. A first-surface mirror placed at the front of each projector mechanism receives light from the projector, redirects it to similar, larger mirrors positioned overhead, which transfer light to rear projection screens ahead. This system of mirror optics is used to increase projection distance and image size.

This combination of continuous 16mm film loops, synchronous motors and Xenon lamps gives the Reevesound system long operating life with minimum maintenance requirements on film and projection equipment.

Below: battery of 65 Norelco 16mm projectors lines up along slightly-curved ramp behind the 1,000 chair ride in the Pavilion. Overhead-first-surface mirrors increase projection distance and image size.

Introductory scene for Chrysler's Show-Go-Round as m.c. introduces one of "stats," a "carburetor" puppet.

THE CHRYSLER SHOW-GO-AROUND

... films, marionettes and a marvelous car take turns on revolving stage

THE SIX-ACRE Chrysler Corporation exhibit area on Flushing Meadow is dominated by a giant engine model which typifies this "Autofare" with its landscaped islands of displays and mockups. But the focal center is the "Pentastar-roofed" theater in which a Max Liebman Show-Go-Round production is presented on a 70-foot revolving stage serving four pentagon-shaped auditoriums housing some 2,500 persons in their comfortable bucket-shaped seats.

Through this unique design, a

four-phased performance is in continuous action offering a 24-minute interlude of music and whimsy, featuring a film story (introduced on the screen by Bob Hope); the Bil Baird marionettes and a finale in which a Chrysler experimental car (designed by the puppets) closes the entertainment.

In the introductory, first phase of the show, the master-of-ceremonies talks to puppet hero "Bob Bolt" against a backdrop of automotive parts. As the stage revolves to a big-screen, rear-projection setup, Hope (on film) introduces the rest of the little film play about an eager auto designer which starts out on the screen. This Group Productions' film is followed by Phase Three.

In this phase, the marionette creations of Bil and Cora Baird take over the action. Singing and dancing gaskets, dancing spark plugs, animated carburetors and jiving seat belts perform under the skillful hands of four rotating crews of five puppeteers each. The villain, "Monkey Wrench," gives way to a dancing line of 15 girl motor blocks as the stage turns to Phase Four, the big finale . . .

Before the final curtain falls, a completely-assembled puppet-built "experimental car" appears on stage, designed by the young genius with the help of his friends.

Max Liebman's talent, the genius of the Bairds, air-conditioned comfort and the attention-holding film and "live" segments on the revolving stage add up to full houses for these Show-Go-Round performances. In this show, film is the time-compressing link which sets the stage and story line. •

Left: sketch shows 70-foot revolving stage which serves four pentagon-shaped theaters for the Chrysler Show-Go-Round. Below: typical audience gathers for the introductory scene (see above). Then stage will revolve to film show, marionettes and the "live" car finale.

wonderful world of CHEMISTRY

films are blended into lively stage shows

in two theaters of Du Pont's circular pavilion

THE DU PONT PAVILION SHOW, "Wonderful World of Chemistry," is a musical revue in which singers and dancers onstage join in musical interplay with other performers on motion picture film.

It's startling fare, which requires perfect timing, especially when a girl on film passes a rose to a boy onstage, who in turn, hands it to another girl on film.

Three circular theaters uphold a N. Y. Fair tradition. In the Blue and Gold Rooms, audiences are

viewing the same musical show; then they move to a dazzling Red Room for science demonstrations.

Michael Brown wrote, produced and directed "Wonderful World," using an Elliott, Unger & Elliott film production. Animation was by Ernest Pintoff; special effects were by Film Effects of Hollywood. Bob Hills was show consultant. Scientific concepts and design of the Red Room show were by Jonathan Karas, with a spectacular finale in Mobilcolor. •

Girls on screens and boys onstage perform the flower-passing sequence.

Above: in this animated film sequence, audiences learn that all Greek philosophers did was just sit around and think; other film sequences continue the interplay between live talent onstage, events on screen.

Fairgoers wait on the colonnaded "porch" of the Du Pont Pavilion for their turn to see "The Wonderful World of Chemistry" musical revue.

Above: sketch of the Du Pont circular theater arrangement (all elements are stationary). Both Blue and Gold Rooms offer same musical show. Below: huge circular pavilion which houses Du Pont's exhibit.

Shadow-box "kiosks" present Recordak features on rear-projected continuous slides, using Eastman Carousel equipment in system.

THE KODAK PAVILION

*within its free-form building, two theaters
with 70mm films and many visualized displays*

THE ARTISTRY of visualization expected of a leader in photographic equipment and materials has been achieved in the imaginative and exciting free-form building of the Kodak Pavilion.

Picture-making opportunities abound on its "Moondeck" roof; the world's largest outdoor color prints illuminate the dominant "Picture Tower." Within, a pair of round theaters each present excellent 70mm motion pictures.

Dozens of small "kiosks" around the exhibit areas offer rear-projected slides and motion pictures

on Kodak products and a good part of the pavilion is devoted to examples of the best in modern picture-taking: aerial photography, TIROS weather pictures, and the like.

And throughout the Fairgrounds, Kodak signs point out good picture possibilities, including correct exposures and even sample prints for the camera fan!

Projection Engineering

Working closely with producers, architects, technical representatives of Eastman Kodak Company

Slide projection installation in kiosk showing modified Eastman Carousel projector with 450-watt Cinemecanica Xetron light beam.

and Eastman Chemical Products, Inc. from earliest planning stages, Reevesound provided more than two dozen motion picture technical systems for the Kodak Pavilion. These include projection, sound and control devices located in two theaters and in a number of individual displays strategically located throughout the Pavilion.

Reevesound's projection, sound and control system in the Dome Theater includes one Norelco 35 70mm projector operating at

70mm, equipped with a 2500 watt Zeiss Xenosol II light source. A special selsyn drive electrically interlocks the projector and a pre-programmed 60-channel controller that regulates a six-channel sound system and a dimmer bank for synchronous operation of theater lights.

As adapted by Reevesound, an Industrial Timer controller utilizes sixty of eighty-two available channels, regulating thirty load circuits. One foot of tape controls sixteen seconds of program time. Interlock drive paces the tape as it controls faders, spots, screen and cove lights, a six-channel sound system, an atom model and a Spitz star field projector, main feature of a thirteen-minute film.

"The Searching Eye"

Shown daily in the circular Tower Theater, the 20-minute color motion picture, *The Searching Eye*, is one of the focal points of the Kodak Pavilion. Produced by Saul Bass, the film dramatizes the heights of sensitivity to which vision may be honed on a motion picture screen.

Reevesound's unusual motion picture system in the Tower Theater includes two 35 70mm Norelco projectors equipped with 2500 watt Zeiss Xenosol II lighting sources, plus a multi-channel control and audio system.

Reevesound's selsyn system electrically interlocks the two Norelco projectors. One presents a 35mm film while its mate shows a 70mm film. Screen images resulting from this interlock operation of 35mm and 70mm projection give the film producer a dual format capability which he needs to develop his theme and story.

This special system allows the

Above: Kodak's "chimpanzee" film projected in the "Instamatic" kiosk (at left) is assured bright, sharp images by use of modified Eastman 16mm mechanism with its Zeiss Xenosol II lamphouse and continuous film loop. Long operating life, minimum care were objectives.

Tower Theater projection system uses two 35 70mm Norelco projectors with 2,500-watt Xenosol arc lamps and magnetic sound heads.

up the story, showing composite prints all made from intermediates.

Transitions from one machine to another are timed with great accuracy. Automatic dowers close to keep lamp heat off black leader on the machine that is not in use. The dower operations were programmed during production of the film, and operate by control tones carried on two of the magnetic stripes on the 35mm print.

Special Kodak Reevesound motion picture systems are located in ground-level kiosks at Eastman Kodak Pavilion, displaying uses of photography in science. Systems include Eastman Model 25-B 16mm are projector mechanism

At entrance to pavilion's Tower Theater, this lighted panel proclaims "The Searching Eye" 70mm film feature, gives credits for production.

two projectors to show alternate segments of film. The 35mm machine opens the show, projecting first-generation prints from original camera film. As the show progresses, the 70-mm projector picks

equipped with 1600 watt Zeiss Xenosol II light source and 130-foot 16mm Reevesound synchronous loop equipment.

First-surface mirrors mounted at front of projector mechanism

Modified Industrial Timer controller utilizes 60 of 52 available channels to control dimmer bank, 35 70mm projector, six-channel sound system and other devices in the Dome Theater.

Lumitron dimmer bank atop six-channel sound system activates fader, spots, screen, and core lights in Dome Theater. Both units are automatically controlled by Timer shown at left.

Visible all over the Fairgrounds, the Kodak Picture Tower dominates the free-form Pavilion building with its multitude of visual shows.

and above projection equipment re-direct light until it reaches rear projection screen, where image is formed.

This special system for projecting a seven-minute sound motion picture utilizes a Xenon light source and continuous film loop for long operating life with minimum maintenance requirements.

An unusual Reevesound system

in the Astronaut Bubble is designed to activate an animated astronaut in sync with optical sound track on 16mm film and motion picture display. The sound track carries narration, as well as a subsonic signal to activate the astronaut. The system includes a Reevesound-modified Eastman 25-B 16mm mechanism equipped with a 900-watt Xenon arc lamp.

Below: one of company's many well-trained "hosts" greets visitors at entrance to Dome Theater where Eastman Chemical film is shown.

While line gathers before Ford Rotunda, convertible on runway above prepares to enter the "dinosaur to the wheel" show area just beyond.

ON FORD'S MAGIC SKYWAY

a convertible ride into prehistoric times

SIGHTS UNSEEN for millions of years on earth are recreated in animated dioramas along a "ride" which is the feature of the Ford Rotunda at the Fair. Taped sound is fed through speakers of Ford convertibles in which visitors are towed past the dinosaurs, through the Birth of Man, emergence of the cave man and the invention of the wheel.

Walt Disney "Audio-Animatronic" figures make it all pretty realistic and the new cars are an unbeatable "commercial" by themselves. Henry Ford II does the introductory talk; a professional narrator carries on during the ride. Crowd lines are generally long. Principal early problem was keeping sound going through those ear speakers along the ride. •

Fair visitors hear narrated story on car speakers as they watch two Audio-Animatronic triceratops during hatching of prehistoric babies.

G.E. IN PROGRESSLAND

a carousel ride beyond "electrical living"

leads to a demonstration of nuclear fusion

GENERAL ELECTRIC's "Progressland" show ends up with an actual demonstration of controlled nuclear fusion. No Fair exhibitor can top that for a finale!

The big G-E Pavilion features a Carousel of Progress ride on which six audiences of 250 visitors apiece move along ramps and into theaters. The show opens with

Crowds move up the ramps to the Carousel of Progress within the G-E Pavilion. Circular building is 200 feet in diameter, 80 feet in height.

On the lower level of the G-E Pavilion, two little "stand-up" theaters offer continuous showings of G-E product pictures.

Disney-designed "Audio Animatronic" figures in re-enactions of life-at-home in the 1890's, through the 1920's, 40's and the up-to-the-minute all-electric home of today!

Groups are moved out of the nostalgic past into a "Time Tube" which opens on the third floor "Galaxy of Science and Engineering" with its dramatized examples of G-E scientists working on current research projects. Kaleidoscopic mirror effects are a feature of this sequence.

Inexorably, visitors find themselves in the top-level "Skydome" with its "Spectacular," a projected

In the 1920's: the family's latest "electrical servants" are connected to cords dangling from ceiling as "father" proudly notes progress.

Re-Creations of the Past and Visions of the Future Are
in These Three Major Pavilions of the New York Fair

and narrated dramatization of the power of nature's energy and man's efforts to harness it. It ends with an explanation of nuclear fusion as audiences then descend the central well of Progressland for the nuclear fusion "bang."

The Carousel returns visitors to "Medallion City" on the first floor. This model, all-electric community features the latest innovations in home living, electronics and space exploration.

Displays in Medallion City are enlivened by programmed sound

sequences installed by Wilding-Dramaturgy specialists. These help tell the story (on tape) of the Hotpoint Story Book Kitchen, the Medallion Home, a model classroom at Steinmetz High School, closed circuit tv in a hospital, an automated hot-strip steel mill.

Two little "stand-up" theaters show G-E product films in the Medallion City area; 87 projectors are used to cover the big dome ("largest screen in the world") for the Skydome show with images of stars, lightning and rockets.

Programmed sound sequences enliven these Medallion City displays. Left: Hotpoint Story Book Kitchen; right: model high school classroom.

Above: Wilding-Dramaturgy taped sounds describe use of closed circuit television at Coolidge Hospital (scene at left) and (right) a three-dimensional diorama shows modern automated hot-strip steel mill.

The present: a beautifully-appointed, all-electric Medallion Home is described by the animated figures as dog "woofs" and cat wags tail.

Largest building at the Fair is the General Motors Pavilion. Entering below this flaring facade, visitors see and hear the world of future.

RIDE THROUGH FUTURAMA

science finds space for growing populations

TRAVELLING THREE ABREAST in sleek, space-type chairs, visitors to the giant General Motors Pavilion regularly discard the realities of the present and cross over into the fantastic world of the future.

Highlight of the GM Exhibit, the Futurama Ride permits visitors to see, hear and feel the world as it may be known in the future . . . a lunar outpost, a permanent community in once-lifeless Antarctica, a vacation playground amid the strange beauty of the ocean floor, Metropolis of Tomorrow, U.S.A., where an extensive freeway network speeds traffic to a park-like industrial sector or recreational and cultural areas, while moving sidewalks whisk shoppers from store to store.

A unique system, designed, manufactured and installed by Reevesound, provides stereophonic sound for the 1,389-passenger ride which consists of 463 three-

chair cars. Each chair is equipped with a special Reevesound two-ear listening system. The speech program, originating on every third car from a multi-track sound film reproducer, feeds the succeeding two cars for a total of nine passengers per individual sound unit.

Reevesound created the multi-channel photographic sound track reproducing system for those high-reliability, low-maintenance applications in which a single program has to be repeated continually, and where it is possible to have that program doubled up on a single recording medium and run back and forth, as contrasted with endless loop systems, which run continually in a single direction.

The four-track, 16mm reproducing system is based upon existing motion picture industry dimensional standards, formerly used only on 35mm film. The system (CONCLUDED ON PAGE SIXTY)

Below: mankind's hope of the future is expressed in "Futurama" which takes Fair visitors past models showing how the world and outer space are yet to be conquered. Space station of future is pictured below.

produced by Fred Niles Communications Centers, Inc. The film carries its viewers from the Golden Gate to the Grand Canyon (spectacular shots) — through the Midwest and on to the towers of Manhattan.

The turntable show is fast-paced, there's no long wait as four synchronized projectors show slides of travel history, give way to animated U. S. map. The "audio" then cites advantages of bus travel and guests are told about tours. But the "big show" is that four-minute CinemaScope film. •

Across the Land in CinemaScope

from the Golden Gate to Manhattan's Towers by Greyhound

BEHIND THE WIDE FACADE of the Greyhound Pavilion, lobby film showings of travel pictures entertain waiting bus riders but the main attraction is in the turntable "Circle Theater" which al-

ternates illuminated transparencies, an animated map and synchronized slide showings on multiple screens with the main feature: a four-minute 35mm CinemaScope film journey from coast-to-coast.

A scene from the all-too-brief, four-minute CinemaScope color picture which carries viewers on Greyhound trip from California to New York and is the feature attraction in the Circle Theater (see sketch below).

CIRCLE THEATER DESIGN FEATURES:

- (A) Transparencies show travel history.
- (B) & (C) Projected scenes and aerial view are featured.
- (D) Screens for the synchronized slides.

Festival of GAS

beneath this pavilion's cool white umbrella,
two light-hearted film "entertainments"

SHOWCASE OF THE GAS INDUSTRY at the Fair in New York is the Festival of Gas with exhibits nestling beneath the octagonal white "umbrella" roof that shelters the cool interiors. Pleasantly-landscaped pools reflect the foliage and the area provides a comfortable retreat for the travel-weary.

Pleasant, too, is the screen fare which provides two main attractions in this pavilion. The puppet picture, *Tale of Truthful George*, is followed (in the Theater of Food area) by a *Heinz Magic of Food* picture, a "live" magic show put on film, featuring H. J. Heinz' food products.

A third and very well-conceived use of films is represented in the use of rear-projections at pipe ends (see illustration below) of the huge natural gas pipelines, within a "sculpt" design.

Meet Truthful George in a Puppet Fantasy

Audiences sit on the carpeted floor of the modest, curve-shaped theater where they watch those amusing Tom Tichenor puppets as they move about the three screens of Owen Murphy's film production, *The Tale of Truthful George*.

In this fantasy, Tom Therm is the puppet creation of the film's magician, Tom symbolizes gas energy as he solves the problems of a loveable puppet family.

It's the kind of Fair-oriented light entertainment sure to please viewers of all ages. Tichenor's talents were displayed on Broadway in the hit show, "Carnival," and his characters come to life in this Owen Murphy production.

Marc Siegall wrote the script; Bernardo Segall contributed the light-hearted score. Bauer 16mm sound projectors put the images bright and sharp on the three screens of the Gas Industry theater.

It's one of the better shows at the Fair in '64!

One of the hostesses at the Gas pavilion greets visitors at the entrance to 150-capacity theater where puppet film is shown.

Puppet characters created by Tom Tichenor help tell "The Tale of Truthful George" in curve-shaped theater of the Festival of Gas Pavilion. Audiences sit on the carpeted floor (150 capacity). Below: end titles of this most entertaining Owen Murphy film production.

Rear-projected pictures are cleverly designed into pipe ends along the Pipe Labyrinth within the Gas Pavilion. This sculptured display uses actual pipe which carries natural gas cross-country. Relevant projected visuals tie-in the story of the gas industry, its cross-country pipelines and industrial applications.

I.B.M. CREATES AN INFORMATION MACHINE

ride the "people wall" up into a multi-screen explanation of computers

THE MULTIPLE SCREEN presentation inside the big white egg-shaped pavilion which houses the International Business Machines' exhibit at the Fair is called an "Information Machine." Its purpose: to explain how methods used by computer systems are similar to those used in solving human problems in a variety of everyday situations.

One of the Fair's mechanical marvels carries groups of 500 visitors at a time into the Machine's 90-foot high ovoid theater. Seated along 12 steeply-rising tiers of this "People Wall" the audience slowly rises into the darkened loft to await the action.

And so begins one of the most complex visual presentations to be seen on the grounds: a 13-minute synchronized presentation which takes place on 15 motion picture and slide screens spread over the front wall of the big dome. The films, designed and produced by Charles Eames, inter-act on a variety of shapes and sizes of screens (see illustration right be-

This sketch shows all the principal features within the IBM pavilion, including the area occupied by the ovoid theater, the "little theaters" and "computer court" with demonstrations of the machines at work.

People along the IBM "Wall" awaiting the multi-screen film presentation which is projected (for 11 minutes) in the "Information Machine."

low on facing page) with much swiveling of heads as viewers try to take in all the action.

The program's intention is to show how data is stored and sorted by a computer; how the conclusions reached by these ma-

Narrator descends from the ovoid ball on this little elevator to greet the "Machine" audience as they board the "People Wall."

chines are not unlike those reached by the human mind when it compiles everyday data.

For instance, one sequence shows a woman planning a party and drawing a seating plan while people pop on — and off — as she decides whom to invite and who should sit next to whom. The viewer is taken "inside" the lady's mind as the considerations of the party take place on the 15 screens all around him.

Helping to connect the visuals with the workings of a computer

This view along the "People Wall" shows steel framework of theater and a partial glimpse of the frieze of trademark characters on dome.

Bob Seymour's camera has captured this wonderful shot of "People Wall" with its typical cross-section of IBM exhibit visitors awaiting show.

Captions and multiple scenes which are a part of the Information Machine program, shown in greater detail in the large view of the theater below.

LITTLE THEATERS

Three animated theaters within the IBM Pavilion feature puppet-like devices that help dispel many mysteries about computers. In one of these Sherlock Holmes unravels "The Singular Case of the Plural Green Moustache" using the same kind of logic as a computer and the logic which *you* use to solve your problems.

"Cast of Characters" and "Computer Day at Midvale" are the other playlets. •

is a live narrator who is suddenly spotlighted here and there (he's on an elevator, too) on various levels of the screens.

Foreign visitors to the IBM Pavilion may hear translations of the narration on special headsets along the "People Wall" which offer five language versions: French, German, Italian, Spanish and Japanese.

Elsewhere in the pavilion are little "theaters" where mechanical puppets act out playlets on such topics as speed, logic and information handling systems. Computers are at work to demonstrate how Russian technical data may be rapidly converted into English.

Crowd-handling is very good at the IBM Pavilion. •

Beneath these graceful arches and within the Golden Rondelle Theater of the Johnson Pavilion, audiences are seeing a three-screen hit film.

IT'S GREAT "TO BE ALIVE!"

**on three separate screens, the joyous unity
of happiness, shared by mankind everywhere**

WIDELY-ACCLAIMED by press and public alike as one of the most exciting film presentations at the Fair, the multi-image motion picture, *To Be Alive*, is the undisputed highlight of the Johnson Pavilion.

Produced by Francis Thompson

and Alexander Hammid, veteran documentary film makers, the 17-1/2-minute picture, depicting the joy and delights of simply being alive, is projected onto three 18-foot wide Hurley matte white screens through use of the Tri-Arc 335 projection system design-

Fair visitors in this shaded waiting line will soon be rewarded when they enter the Golden Rondelle Theater for showing of "To Be Alive!"

ed, engineered and operated by Reevesound.

Working in close collaboration with the producers, designers Lippincott & Margulies, and the staff of S. C. Johnson, Reevesound created the projection and control systems and advised on sight lines and acoustics for the 500-seat Golden Rondelle Theatre, main feature of the Johnson Pavilion.

Reevesound's special technical facilities include three Century 35mm motion picture projectors equipped with sync interlock drive and 78 amp Xetron light sources. Designed to run in interlock position as the picture does, the company's unique three-channel sound system reproduces three photographic sound tracks, one carried on each film print. Sound system includes Fairchild power amplifiers and speakers located between and above the screens.

To Be Alive! has been warmly received in national magazine stories on the Fair, with deserved accolades in the NEW YORKER, TIME and other periodicals.

Beyond the evident talents of its

Johnson's exhibit is pleasing large number of children among Fair visitors with gadgets like this joyful "Nonsense Machine."

To Be Alive! is said to have taken its creators nearly 18 months to produce on location throughout the world. Its message, reminding all who see it of the sheer joy of living, was worth every second of their creative effort.

Multiple opening scenes from "To Be Alive!" use speeded-up action to stress the pressures of today's harried existence; after transition, the scene below of a happy little Chinese boy who finds a turtle . . .

producers, special mention is due the narration written by Edward Field, winner of the 1962 Lamont Award for his poetry and to composer Gene Forrell, whose musical score upholds his reputation for original work on the ballet, opera and films.

Superb color sequences were processed by Movielab, Inc. A total absence of any commercials (not even the customary title credits) adds to the sponsor's laurels. The film will be remembered.

Below: master control panel at Johnson's Wax Pavilion operates lights, sound and projectors.

to the MOON in Cinerama

exploration of outer space
on an 80-foot Spacearium dome

ROCKETING VIEWERS into outer space, past the moon and into the far galaxies, the Cinerama film *To the Moon and Beyond* projects exploration of space against the 80-foot dome of a Spacearium on top of the Transportation and Travel Pavilion at the Fair.

Presently sponsored by the KLM Royal Dutch Airlines, the film is shown to paid admissions. It was produced by Graphic Films Corporation for Cinerama, Inc.

KLM-Royal Dutch Airlines is sponsor of this Cinerama journey into outer space showing in dome theater.

and Rod Serling narrates the film.

The audience is taken within the action which generally occurs in darkness to free the viewer from conventional ideas of size and time. Speeding up the events known to astronomers, the picture shows (through animation) how clouds of gas whirl into great galaxies, expanding outward from one another, with old generations of stars exploding to distribute the gaseous components of subsequent stellar generations, visible in our time.

Returning to earth, the film takes us to a great rocky canyon to illustrate the shape of matter on the stars . . . to the middle

Scene from Graphic Films' production which explores the vast events out beyond outer space.

of the insects crawling in and out above. But the intricate workings of molecular and atomic space are the film's true goal. From a broad view of the cosmos, attention shifts to the familiar building processes that we call the chemistry of the planets: the relation of liquid water to the diverse manifestations of life. The incredible complexity of living forms is revealed.

As a stirring conclusion, the pulsing image of a single living cell is invaded by the camera, accompanied by loud "booms" of sound on the track.

To the Moon was lensed by Graphic Films in double-frame 65mm. Final magnification to the 600X screen dimension required utmost care in the production of convincing special effects material. In this, it has succeeded. •

Left: a moving stairway takes viewers up to the dome theater for Cinerama "Moon" journey.

A LOOK INTO "PATTERNS IN SPORTS"

**Sky-divers, boxers and halfbacks in action
on a circular screen at the bottom of a well**

A CANOPIED KIOSK in the General Cigar Hall of Magic at the Fair houses a unique sports picture, which was shot as it is viewed, looking into action from above as from a helicopter.

Visitors gaze down the sloping pit walls (bell-shaped) as an overhead 16mm sound projector puts exciting action sequences onto the six-foot circular screen. A most exciting sequence shows the free-fall, sky-diving parachutists as they hurtle towards the earth.

Within the brief three-minutes, there's also indoor action of bil-

liards, boxing and golf and a "worm's eye" view as the camera looks upward at a boxer skipping rope.

Patterns in Sport is co-sponsored by SPORTS ILLUSTRATED. It was created from an idea developed by Gordon Auchincloss and George Marck. Filming was by Gerald Productions, Inc., designed by George Canata and under the direction of Jerry Auerbach. Technical equipment was designed and built by Reevesound, under the supervision of William Szabo. Another good Fair idea! •

At right: you're watching the "big game" from a hovering helicopter as you look down this picture well to see the "round" movie produced for the General Cigar exhibit area by editors of Sports Illustrated.

The Hall of Free Enterprise, located in the International Area at the Fair, has a 100-seat theater in which a 15-minute sight sound show on economics is presented. The scene below shows one of the dioramas in this combined slide and diorama presentation. Action takes place all around the theater; audience is seated on swivel chairs to follow it.

At right: the Dynamic Maturity exhibit at the Fair (sponsored by retired persons) brings its guests one of the earliest kinds of visual devices: the Camera Obscura. Tower in the picture below shows a mirror and lens arrangement; images are projected down onto a circular screen at the bottom of a "well." Viewers watch scenes of the Fair outside at showings which take place every five minutes in this hall.

ECONOMICS FOR EVERYMAN

dioramas and slides combine to help tell the story of free enterprise in this fair theater

THE HALL OF FREE ENTERPRISE, located in the International Area, is sponsored by the American Economic Foundation with the hope of spreading the validity of a free market economy and private competitive enterprise.

Exhibits in the pavilion are designed to show the superiority of the economic principles on which a democratic system of free enterprise rests.

A principle vehicle used is a 15-minute sight sound show entitled *Mr. Both Comes to Town*, which is staged with dioramas, slides, and other illuminated settings completely around the perimeter walls of a 100-seat theatre

in which all the chairs swivel so that the action may be followed in any direction.

The "plot" is that Mr. Everyman is "Mr. Both" — he wants higher wages for his work, but wants to buy goods at lower prices. The solution proposed is that a free, non-regulated economy is the best answer to Mr. Both's dilemma.

Other exhibits offered in the Hall include: *Money in Motion*, an animated display showing how America's corporate economy works and *The Tree of Economic Life*, which demonstrates the inter-relationship of natural resources, jobs, tools and capital.

There's Even a "Camera Obscura" at the Fair

Vignettes Show the Services of American Express

The American Express pavilion below is opposite the main gate of the Fair. Within its main hall, seven slide shows are being shown on a continuous basis. They offer "vignettes" (each of 11½-minutes) on Express services such as Travelers' Checks, the Credit Card, etc. 370 slides are presented on five Kodak Master projectors, modified

by the show's producer and designer, Roger Wade Productions. These are the same units which showed the memorable Kodak Pavilion slide program at the 1939-40 New York Fair. Each projector has two lenses; screen images dissolve from one to the other. Programming is on a master tape which controls all five machines, operating individually or as a unit. Sound is carried by directional speakers in the ceiling to avoid interference. Screen surface measures 37½ x 7½-feet.

ONE OF THE MOST novel and successful films being shown at the Fair is *A-Round New York*, a 14-minute Theaterama 360-degree production being presented in the New York State Pavilion.

Produced by Coleman Productions, Inc., the film treats viewers to a whirlwind tour of the state, highlighting significant scenic, industrial, cultural and entertainment centers. The feeling of presence experienced in the 360-degree film is extraordinary.

A New 360-Degree Approach

This process differs from earlier attempts at reproducing a total 360-degree field of view in several substantial areas. Most significant, it utilizes 35mm film, rather than the previous 16mm, which permits a projected image of sufficient dimensions to do justice to total all-encircling panorama.

Additionally, because the Mitchell Mark II cameras are equipped with identically-matched anamorphic lenses, only six cameras are required to complete the 360 degree horizontal coverage, rather than the 10 or 11 cameras required by other processes. This advantage is immediately obvious. The biggest obstacle to be overcome in multiple projection is edge-matching. By using only six units, the number of edges to be matched is reduced by nearly half.

Special System Was Built

In order to more adequately fulfill his conception of Theaterama, Harry L. Coleman, president of Coleman Productions, Inc., commissioned the Cinerama Camera Corporation, of Hollywood, to design and construct a multiple camera system to certain of his own specifications.

The result of their combined efforts is the 60-pound camera set-up approximating the shape of a cylinder — 48 inches high by 52 inches in diameter, including 1000-foot magazines.

The six Mark II's are mounted vertically on a pedestal, shooting up into a turret of six front-sur-

Circular Theaterama building in which Coleman-produced 360-degree film is shown. Examples of "pop" art are used around outside walls.

A 360-DEGREE TOUR "A-ROUND NEW YORK"

encircling vistas of the Empire State put viewers right "in" the action

Sketch of New York State "Theaterama" building shows how the six 35mm Norelco Pulse-Lite projectors cover equal number of 20 x 42-foot screens, encircling viewers who stand in center on marble floor.

face mirrors, arranged to present a 45 degree surface to each lens. Without this feature, the cameras would necessarily be mounted hori-

zontally, shooting outward like spokes of a wheel.

In the latter arrangement, the edges of the angle of view origi-

nating at the nodal point of each individual lens could not possibly correspond. Thus, at close range, a subject passing from the field of view of one camera to that of another would be lost from sight during that interval.

Avoiding the Loss of Field

By establishing an effective nodal point for all cameras (hypothetically dead center of the system) and reflecting the field accepted at this common point into each individual lens, there is no loss of field at any distance from the lens, from minimum to infinity. This is the value and necessity of the optically-correct, perfectly-aligned turret of mirrors.

Reducing the number of cameras, thereby providing more uninterrupted screen in projecting 360-degrees, created optical problems which challenged the best engineering minds in the business. Since each of the six cameras must accept a full 60-degrees of horizontal coverage, a lens with a focal length of not more than 40mm is required. A 40mm lens could not accept the necessary anamorphic addition without vignetting.

Lenses Were Ground Overseas

The problem was reported, with recommendations to an overseas optical manufacturer. The solution received was a set of six (CONCLUDED ON PAGE 76)

View of the New York State area with Theaterama ticket booth in foreground. A modest 25c admission is charged for the 12-minute picture.

A traditional architectural motif exemplifies the New England States exhibit area, which features multi-screen slide scenes of the area.

Multi-Screen Gallery of New England Scenes

Above: continuously changing scenes of New England are projected on these free-hanging screens, simultaneously and without cross-interference, with both front and rear projection from the several dozen automated sound and slide projectors, most of them Spindler & Sauppe Selectroslides. Smith's (of Boston) developed the unique showing of the people, places, industry and historical sites which comprise the many "Faces of New England." Polacoat created the specially-coated rear-projection screens; repeater-tape sound units were by Cousino.

NEW ENGLAND TO HAWAII:

slides and motion pictures help woo industry...

The Illinois Pavilion has Walt Disney's Audio-Animatronic figure of Abe Lincoln, who speaks to appreciative audiences every 12 minutes.

Illinois Has Lincoln

ABRAHAM LINCOLN stands, speaks and gestures with amazing realism in the Disney-created Audio-Animatronic feature of Illinois' Fair pavilion. The simplicity of the stage setting and the expressive excerpts from six of Lincoln's speeches are drawing appreciative audiences to the 12-minute performances. State exhibit also has an adjacent theater for promotional film showings.

Lincoln stands up and delivers excerpts from six famed speeches.

West Virginia's Film

Right: West Virginia Pavilion shows a radio telescope film.

Left: the big radio telescope at Greenbank, W. Va., is shown on screen above area model in this state's 75-capacity film theater.

New Jersey has this theater area: the darkened rectangle houses a rear-screen motion picture projector, showing films about the state.

SEVEN STATES AT THE FAIR

promote tourism, re-create historical tradition

Florida's attractions are exhibited within this big circular pavilion.

Visualizing the Good Life in Sunny Florida

RESORT PROMOTION is understandably a primary motif within the large circular Florida Pavilion. Various tourist areas, such as Miami, Orlando and Palm Beach, are using sight sound

media to show visitors the delights awaiting them. Transparencies are shown on "revolving ride" in the Palm Beach booth; the Miami show uses slide boxes turning on a center core.

Plastic stalls take visitors on a sight/sound "ride" past activities of Palm Beach County environs.

Fair visitors are watching a slide program about Orlando projected within this well.

a Pineapple Show and Travel Films on Hawaii

Below: travel pictures about Hawaii are shown within . . .

IF COSTS a quarter to see and hear a two-minute sound slide show, *The Story of Pineapple in Hawaii*, which is one of the two audio-visual attractions in the Hawaiian Pavilion at the Fair.

But you can enjoy some lush color and sound travel films of the area free of charge in a nearby "stand-up" theater.

Even if you're not "pineapple minded" that show has a cute trick in its use of listening cups along the railing (see illustration right, below for details).

Maryland features a maritime motif in the design of its pavilion; an 11-minute film tells how the Star Spangled Banner was written.

"O'er the Ramparts" is Maryland's Feature

THE STORY of the writing of our National Anthem is told in the film *O'er the Ramparts*, an 11-minute color picture created by Milner-Fenwick Productions for the principal attraction in Maryland's Pavilion theater.

U. S. Rubber sponsored the film; it is narrated by Arthur Godfrey and shown on a Bauer 16mm sound projector.

Above (right) and below: entrance and interior of Maryland's theater.

Below: projected images tell the story of pineapple from Hawaii as sound emerges through the little listening "cups" along the railing.

CONTINENTAL IN CINEMA-76

*heroes of the American Revolution are seen
in this unique outdoor slide projection show*

Above: heroes of the American Revolution are the slide show feature within this striking Continental Insurance Pavilion at the Fair. The photos (by our own Bob Seymour) are excellent visualizations of this "Cinema 76" presentation and its setting. Right: closeup of a scene in the show; inside building are dioramas of early American history.

United Shows "From Here to There"

VISITORS to the United Air Lines Exhibit in the Travel and Transportation Pavilion are ushered into a plush, compact little red and blue theater where the Saul Bass' film production, *From Here to There*, is shown by a special Reevesound motion picture projection system.

The system includes a 35mm Simplex XL projector equipped with a Strong Arc X-16 light source and single-track Ampex

magnetic sound reproducer, a 50 watt Fairchild power amplifier and a 27 amp Strong Arc Rectifier.

The 35mm film uses the big Cinemascope image to relate the story of a United jet enroute from Los Angeles, soaring cross-country and arriving at an East Coast destination. The film begins in narrow-image format which gradually enlarges to the full wide-image dimension as the plane

sound track, which trigger curtains at either side of the screen, causing them to move out as the plane ascends. Accurate timing permits the expanding screen image to precede by one second the opening of the traveling curtain, thus providing a continuous clean picture edge.

As the story nears its conclusion and the filmed image of the United plane begins its descent, the curtains begin to close, returning the screen again to narrow-image format. As this action takes place, the printed image follows the curtain by approximately one second to maintain the clean picture edge.

takes off from the Pacific Coast.

This transition from narrow to wide-image is an effect printed onto the film. It is accomplished by control tones, carried by the single

All popular Fair exhibits have their waiting lines. This one is seen at the entrance to United Air Line's 188-seat Jetarama film theater.

Comfortable theater seats provide a restful pause within the United theater, just before a showing of Saul Bass' "From Here to There."

PORT AUTHORITY THEATER

*ride aloft with cameramen for an exciting
new look around New York's east waterfront*

THE LOWERING PILLARS of the Heliport at the Fair, operated by Port of New York Authority, shelter the 195-foot circumference of a circular theater in which another spectacular 360-degree color film surrounds the audience with the Port-sponsored film, *From Every Horizon*.

This 12-minute "stereo" picture, produced by Fred A. Niles Communications Centers, rides above and around the far-flung facilities of this great port, shows its bridges and tunnels as they funnel millions of people back and forth from suburbia to the working canyons of Manhattan each day. It takes viewers aloft in its many helicopter-shot sequences to show how the Port's international trade operations — docks and airports — play such an important part in the commerce of the area.

Niles' crews produced the film with a specially-designed rig of 10 Arriflex 16mm cameras, matching their "takes" to the ultimate

10-screen projection setup which envelops viewers in the circular "stand-up" theater (see sketch below). The camera setup was trundled all over the Port area by special vehicle and, most notably, taken aloft by helicopter to give the Fair viewers some very exciting moments as the whole viewing area and tilting horizon make him feel part of the action.

Projection is via a "pod" suspended in the center of the theater's ceiling. In this booth, 10 Eastman Kodak Model 25 16mm sound projectors were set up by William Ralke for synchronous operation. Each has a 36-degree field of view to cover its section of the 10 screen panels which encircle the auditorium.

Narration has a "stereo" effect as voices come from the "Jersey" side of the Hudson River seen on the screen and, again, from the New York side, thus emphasizing the bi-state nature of the Port Authority to the audience.

Beneath this Port Authority Heliport is the circular theater in which Fairgoers see "From Every Horizon," a 360-degree look at the Port.

Sketch of the 10-screen theater

Many of the scenes in "From Every Horizon" were lensed by Niles' crews from helicopters, our picture caught only three of ten screens which enfold viewers, to show one of bridges along New York waterfront.

Port Authority picture is shown in this circular theater beneath the Heliport (background); there is no admission charge to this program.

The Port's "Theater 360" is now drawing good audiences at nearly all performances as this entrance shot of a typical waiting line proves.

A 330-foot facade of multi-colored glass draws the visitor's eye to the beauty of the United States Pavilion.

THE MANY IMAGES OF THE UNITED STATES

the big show is a Cinerama "ride" through 400 years of American history

FEATURE SHOW on the top floor of the huge United States Pavilion is a "ride" with film that takes the visitor through 400 years of the history of this nation.

The American Journey, produced by Cinerama, Inc., requires a dozen 55-seat vehicles which move along a 1,200-foot journey which passes 110 screens of every shape and size. 159 projectors (both movie and still) are used to fill the screens with scenes ranging from the depths of the sea to the outer reaches of space. Individual headsets built into each chair carry the narration . . . "here is our past, look at it!"

An "Environmental" Film

The experience is called an "environmental" film program, designed to encourage audiences to feel "in" the events as they happen, to psychologically *participate* in the nation's history as it unfolds. The *Journey* begins with early scenes of America before the explorers arrived, rolls on through

The late John F. Kennedy endorsed "Challenge to Greatness" theme of the United States Pavilion. This is the entrance to the Cinerama "ride" which takes groups of Fair visitors on "The American Journey."

Films are also projected in several "wells" in the U. S. Pavilion; here they are shown on side walls by overhead repeater projectors.

pictorial highlights on the past, leading up to the challenges of today's jet age.

There are 19-35mm motion picture, 14-16mm motion picture and 126 Eastman Carousel slide projectors along the ride. Narration for *The American Journey* was written by Ray Bradbury; Jeremy LePard directed for Cinerama. The musical score is all "Americana" with sounds of railroad whistles, old tunes, harmonicas and the like.

Film "Voyage to America"

Before reaching the Cinerama show, visitors are first received in a 500-seat theater for a showing of *Voyage to America*. This introductory film was produced by Graphic Films Corporation in collaboration with John Houseman. Its black & white images utilize both live action and animation to move through America's Colonial period, to the phase of American Immigration and the period of Expansion (from 1820 to 1920).

An original music score by Virgil Thomson, direction by Ben Jackson, and editing by Pieter Van Deusen of Graphic Films make this a notable film. It was narrated by Alexander Scourby and designed to create an understanding and mood of excitement and confidence in the American way of life — past, present and future.

This nine-minute black & white film should be made available to the nation's schools when the Fair closes.

* * *

The Pavilion's theme "Challenge to Greatness" was endorsed by the late John F. Kennedy. It is exemplified in a Pavilion area of "Challenge" through which visitors walk on their way to the *Journey* film. Here several hundred other displays include continuous films shown at the bottom of a "well" set in the floor of the United States Pavilion.

The "Voyage to America" picture is shown in this 500-seat theater; Graphic Films collaborated with John Houseman for this production.

Cine-Globe Cruiser scene shows a Navy fighter on a "strike" mission, viewed from the pilot's angle; audience figures are in foreground.

NAVY CINE-GLOBE CRUISER

ultra-realism of a superb training device

surrounds viewers with action on the screen

THE "WRAP-AROUND" projection system developed by The Jam Handy Organization is bringing Fair visitors a bigger-than-life look at the Navy and Marine Corps in action. The system is used in a Cine-Globe Cruiser theater within the Travel & Transportation Pavilion.

Landing a fast jet on an aircraft carrier, plunging beneath the sea in a nuclear submarine, hitting the beach with the Marines . . . all these are typical scenes as the Cine-Globe presentation gives amazing realism on its hemispheric screen. The system uses a Handy-designed lens of a unique type that completely fills the spectator's field of vision. The screen curves around and above the viewer to give the "you are there" effect.

Small continuous repeater projectors like these offer films on Navy and Marine Corps subjects in the Transportation Pavilion.

Standard-gauge 35mm film is used and the "taking" lens for production of the sequences is similar to that of the projection lens so that the simulated 3-D effect of the system is without image distortion. The Cine-Globe system was originally devised by JHO with the cooperation of the U. S. Navy to provide a realistic training device for Naval Aviation and in Marine Corps tank training. It simulates combat conditions, especially those involving fast motion (such as a jet plane attack). The lens covers an extremely wide angle (142 degrees) to almost match the field of vision of the human eye.

Ten Minutes of Real Action

The 10-minute presentation takes place in a theater with room

Opening scene in the Cine-Globe Cruiser show has jet trails revolving outward until they fill the entire area of hemispheric screen.

on its upper tiers (above the projector) for about 75 standees; a dozen or so children are permitted to sit on the floor "within" the screen area, practically "inside" the picture.

The Cine-Globe Cruiser's physical setup, utilizing a single very wide-angle lens for both production and projection, standard 35-mm motion picture films and a fold-up-and-carry hemispheric screen has already been utilized by The Jam Handy Organization in some stunning commercial presentations.

It is this kind of "carry-out" idea which business users of the film will be seeking at the Fair. The cost and complexity of larger,

"permanent-type" exhibits discourages their use outside of the exposition grounds.

The Army's Little Theater

Typical of dozens of such installations around the Fair is the small (10 persons) "walk-in" theater in the T&T Pavilion now showing a *Man on the Moon* film under U. S. Army auspices.

Also featured in the Navy and Marine Corps exhibit area at the Fair are six 16mm rear-projection (continuous) motion picture set-ups enclosed in round balls set on poles. Films shown are concerned with life in the services and the advantages they offer to young men and women.

Below: young viewers are encouraged to sit on the floor, "inside" the Cine-Globe Cruiser screen area which surrounds them. Their parents stand in tiers up and beyond the projector shown at top right.

The U. S. Army has this small walk-in theater in the Travel & Transportation Pavilion. It offers a movie, transparencies and dioramas of modern Army.

RELIGION AT THE FAIR

View of the Protestant and Orthodox Center at the Fair; theater inside is showing controversial "Parable" film.

"Parable" in the Protestant Center

THE CONTROVERSIAL religious film, *Parable*, is showing several times daily in the Protestant and Orthodox Center at the Fair.

It was produced for the Protestant Council of Greater New York by the Fred Niles Communications Centers, Inc. Rolf Forsberg was

the author of the *Parable* script. Chief character in the 22-minute film is a clown called Mime, who plays the role of a committed Christian. It is this character which has brought on controversy among church people, since he can be identified with Christ, depending on individual interpretation. Two members of the sponsoring Council actually resigned over this point.

Filmed in a circus atmosphere (at Baraboo, Wis.), the film shows

Mime taking upon himself various disagreeable tasks. Each of his actions win him the friendship of underdogs and the enmity of his masters, who kill him in a brutal attack while he is dangling on the puppet strings of Magnus, the antagonist who induces the tragedy.

In the end, a white clown, who can be identified as either Mime, Magnus, or Christ, is seen riding on a donkey behind a circus, a scene almost identical to the one opening the film.

At left: within the Protestant and Orthodox Center, this Lutheran alcove has three screens on which abstract displays of light are projected while a narrator tells of the work of the church around the world. Above: the "Guide Posts" exhibit has telephone receivers which deliver brief recorded messages on God's Power, narrated by noted personalities while visuals are projected on screens above.

Mormon History on the Screen in Twin Theaters

Mormon pavilion theater entrance (below the historical mural) where viewers are seeing a 15-minute film on the history of that church.

Interior of one of twin 140-seat Mormon theaters which use a 35mm Century are for projection. Note lighted transparencies at the right.

FOUNDED IN NEW YORK state 134 years ago, the Church of the Latter Day Saints (Mormon) has symbolically returned home in

the recent dedication of its pavilion at the Fair. It features a 127-foot replica of the eastern spires of the famed Salt Lake City Mormon Temple.

There are also a pair of twin 140-seat theaters within the pavilion, alternately showing a film on Mormon history. It is a 35mm production, projected on Century-arc equipment for its 15-minute duration. Walls of the theater are open at one side, below a fine mural which also depicts historical episodes in the life of the church founded by Joseph Smith. Transparencies along the wall of the theater illuminate both historical episode and activities of the church.

The pavilion was dedicated on May 18th, in the presence of high-ranking dignitaries, headed by President Hugh B. Brown, First Counselor in the First Presidency

127-foot tall replica of the eastern spires of the Mormon Temple is part of the Church pavilion.

of the Church. G. Stanley McAllister, President of the New York Stake ((diocese) presided at the pavilion dedication. •

* * *

Five Church Pavilions Show Films at the Fair

Of the seven pavilions sponsored by religious organizations at the Fair, five use films as either feature attractions or as major elements in their exhibit buildings.

This Fair is *unique* in exposition history in its emphasis on these religious pavilions. And they are drawing goodly throngs of visitors at all hours, warm testament to the interest shown by the people of the U. S. and those from abroad who come there. •

The Vatican Pavilion at the New York World's Fair is one of the most impressive structures in the area.

The Vatican: the *Pieta* and Films

SYMBOLIC of the important participation of churches of many faiths at the New York World's Fair is the beauty and grace of the Vatican Pavilion. The most important work of art of the Fair is on display here; the 465-

year-old *Pieta*, carved in marble by Michelangelo and generally considered the finest example of Christian art in any medium. It was sent to New York by special permission of the late Pope John.

Theme of the Vatican pavilion

exhibit is "The Church is Christ Living in the World" and a multiple screen wall carries ten one-minute films which reflect various aspects of Christ's love and the Church as an instrument thereof. Each of these films contributes its own separate images to the theme.

In another ground floor room are the celebrated LIFE transparencies of Michelangelo's Sistine Chapel ceiling and a photo exhibition on Catholic sacramental life. •

The Vatican Pavilion has the "*Pieta*" as its featured attraction but it also has this unique multiple screen wall on which one-minute films are rear-projected on subjects reflecting various aspects of Christ's love.

The Sermons from Science Pavilion houses a 600-seat theater where Moody science films are shown hourly, plus scientific demonstrations.

Moody Science Films at the Fair

WITHIN the Sermons from Science Pavilion, a 600-seat theater is offering 30 different half-hour programs. These include the well-known Moody science films, such as the award-winning *City of Bees* and *Red River of Life*. Lectures and science demonstrations alternate on the program.

Show's basis theme is the relation of basic laws for science and religion. Narration can be heard

in 13 different languages via earphones and a dial system.

Projection is by a specially-modified Graflex 800 16mm unit linked by a synchronous drive to a Stancil-Hoffman playback with five sound heads. Thus, while optical sound is fed to speakers in the theater, earphones receive translations (five versions at a time) from the tape playback linked to dials at special seats. •

Billy Graham in 70mm Todd-AO

BILLY GRAHAM's Pavilion is a showcase for the noted evangelist's 70mm Todd-AO motion picture, *Man in the 5th Dimension*, showing daily "on the hour."

Rev. Graham's prologue notes: "You are about to embark on a breathtaking journey through the four-dimensional world of space and time, into the realm of the fifth dimension, the dimension of the spirit . . ."

Scenes taken at Mount Palomar

show our own galaxy and the galactic systems millions of light years away. The story of creation is told in the setting of the Earth's "oldest living things," the giant redwoods of California. Billy Graham demonstrates the continuity of Christian witness down through ancient and modern times to the present day.

An imported 70mm projection system is used to beam Todd-AO images to a wrap-around screen. •

THE TOWER OF LIGHT SHOW

an automated story of electric power & light

INTEGRATED FOUR-MINUTE FILM images provide interesting accents to the fully automated show at the Electric Power & Light Exhibit's Tower of Light, where five motion picture projection systems, designed and engineered by Reevesound, are in operation. Each system includes one 35mm Norel-

co virtually instantaneous changeover in the event of burnout, giving the system a "continuous running" capability that is further enhanced through the use of Reevesound-designed 35mm continuous film loops. Fifty-watt Fairchild power amplifiers are used with the system. •

co Pulsed-Lite projector, with start-stop operation triggered by stop cues that are reflective patches on the film.

Norelco Pulsed-Lite lamps used on the projectors permit great flexibility in system design and operation. The light sources are water-cooled short-arc mercury tubes pulsed 72 times per second by a synchronizing signal from the film advance mechanism of the projector.

The water-cooled mercury tubes make it unnecessary to vent the lamps to the outside. They are mounted in pairs within the lamp-house water jacket with automatic,

Below: the Tower of Light show combines film scenes (at right) with this animated light bulb.

Above: 35mm Norelco Pulsed-Lite projector for Tower of Light is modified for cued, start-stop operation of integrated show.

Audio-Animatronic dolls representing 26 lands sing and dance along Pepsi-Cola's boat ride.

Pepsi-Cola's "Small World"

THE PEPSI-COLA Fair Exhibit transports the magic of Disneyland to Flushing Meadow as it takes visitors on a water-jet voyage titled "It's a Small World," a Salute to UNICEF. Once again, Audio-Animatronic figures of the world's children sing and dance in full-color fantasy settings of their native countries.

Canals wind through 26 lands, past a Very Leaning Tower of Pisa, a confetti-draped Eiffel Tower, miniature Swiss Alps and a Disneyesque Taj Mahal. Great fun for the small fry as the Irish "wee folk" sing, a Swiss yodels and Dickens-inspired Britains carol atop a Cockney moon.

Within the two-acre Pepsi-Cola area, the U. S. Committee for UNICEF is operating its own pavilion, dramatizing its role in helping meet the needs of children in over 100 developing countries.

The cruise is housed in a 47,000-foot air-conditioned building. It can handle some 55,000 passengers along its waterway.

The pneumatic and hydraulic tubes of these Audio-Animatronic figures are activated by audible and inaudible impulses fed by a complex magnetic tape system. A setup like this requires the services of electronic experts for constant maintenance. It is not calculated to give the average exhibitor any notions about the adoption of the idea except in static, long-term situations, also warranting the considerable expense involved in creation of the figures.

But this combination of entertainment and international welfare is one of the Fair's best!

MAKING IT A WORLD'S FAIR

*the sounds (and sights) of the Emerald Isle
within Ireland's most attractive pavilion . . .*

IN CREATING its Pavilion, the Government of Ireland has provided visitors with a series of rich, varied and pleasing experiences that communicate most effectively the mood and feeling of the Emerald Isle.

Almost square in plan, the two-story Irish Pavilion features a

To permit the beauty of the natural Irish stone background to be seen, the map is constructed as an openwork design with aluminum strips forming the outlines of the continents and other land masses.

Through the use of four copper symbols with baked enamel sur-

These "listening posts" in the Irish Pavilion's artificial forest offer a speech program by Irish writers, spoken by that country's noted actors and actresses and reproduced on a photographic sound system.

conical tower and a seven-foot wall composed of panels made in Ireland. The panels consist of a concrete core and a facing of large slabs of stone set in a bold pattern.

Chartered architects for the Irish Pavilion were Robinson, Keefe & Devane of Dublin. George Nelson of George Nelson & Company, New York, was coordinating architect. Mr. Nelson and Robert Fymat of the same firm were exhibit designers.

Visitors enter the Pavilion through a 50x30-foot open court which is partly shaded with a low wood trellis. On the east wall, a 15x7-foot world map is displayed.

faces in a variety of colors, the map indicates the extent of Ireland's relationship to the rest of the world in terms of cultural influence, emigration, missionary achievements and military emigration.

A dark-green plate-glass wall, bordered with shrubs and flowers common to the Irish countryside, separates the entrance court from the main exhibit hall. Opposite this glass wall, a 40-foot wall of copper-faced plywood containing four maps of the four original Irish provinces is displayed. Within the outlines of the counties are printed the names of those families which originated in these areas.

Scenes from Ireland's wide-screen slide show are projected in this stand-up theater in the pavilion. This room also has a "well" projection system which features a filmed trip over Ireland by helicopter.

The handsome Irish Pavilion has a big screen slide show and a helicopter film trip to Ireland.

Hidden loudspeakers give a quiet, continuous roll call, with a variety of Irish voices reading the names of the families which appear on the maps.

The first indoor space is the introductory area, a 30x50-foot air-conditioned room which is used as a projection area. Two types of presentation are featured in this space. One is a kind of glass capsule through which visitors can peer down at an aerial film projected on a circular pit about six feet in diameter. The illusion created is that of a flight in a balloon at about 1,000 feet above ground level. The flight is silent except for

Pull-out headphones at listening posts for the speech program.

occasional local noises such as the sounds of birds in the swamp, a bell in the distant church steeple, the barking of dogs, etc.

To show the four-minute films, Reevesound provided a modified 16mm Norelco FP-20B projector and a Reevesound-designed con-

INTERNATIONAL PAVILIONS:

(CONT'D FROM PRECEDING PAGE) tinuous 16mm film looping rack. The fully automatic, remote controlled system is in continuous operation.

In a second major presentation in the introductory area, three electrically-interlocked Spindler & Sauppe slide projectors are used to tell the story of the Irish people at their daily tasks, in views of the country's magnificent landscapes and seascapes. During the eight-minute show, some 300 slides are projected onto three screens that

utilize a space twenty feet wide. Folk music of Ireland, recorded in the studio of Radio Eireann in Dublin, accompanies the slide projection.

Linking the darkened introductory area with the main exhibition hall is a tower, a truncated cone similar to the ancient watchtowers still to be found at intervals on the Irish coast.

Main feature of the 3,500 square foot box-like exhibition hall, and focal point of the Pavilion, is a kind of geometric forest

bearing evidence of Ireland's outstanding cultural activities.

Consisting of eight tree-like metallic structures which serve as "listening posts," the forest is a place where visitors can listen to the words of the greatest Irish poets, novelists, and dramatists, as spoken by the finest voices in the Irish theatre.

Six seats, situated around each post, permit forty-eight people to listen simultaneously to the recordings through the use of individual "hearphones." Reevesound's unique multi-channel photographic sound track reproducing system

provides the speech program played through the conical-shaped "hearphones."

Forward and reverse running capability of the system, in wide use at both the General Motors and Bell System Pavilions, permit one sound reproducing unit to feed the program for two "trees."

The metal tubes which form the "tree trunks" in this artificial forest extend upward, branching out into hundreds of cubes covered with information regarding Ireland's greatest writers. Photographs, paintings, engravings, manuscripts, busts, and first editions are displayed on the cubes, providing additional information on the great names in Irish literature.

In the main exhibition hall the visitor is left free to study and enjoy what he chooses to concern himself with and ignore what fails to interest him. In leaving the hall, he passes out of the air-conditioned space into a quiet garden where he can pause, sit at marble-topped tables and sip Irish coffee while "punkahs," the slowly-revolving ceiling-mounted electric fans of another era, whirr overhead. The anachronistic devices were used to heighten the sense of pre-industrial tranquility that is characteristic of many regions of Ireland today.

The Berlin Pavilion at New York Fair features the spherical projection system described in this Fair report.

Spherical View of Berlin

WEST BERLINERS going about their daily chores are pictured in the cartoon film projected on a novel, spherical globe in the City's Pavilion at the Fair. Another short film takes up technological productivity; maps with special lighting effects portray the Berlin of the future. •

Left: this translucent sphere carries a cartoon film about life in West Berlin. It has an approximate four-ft. diameter. Above: our own sketch shows how images are reflected upwards through Plexiglas tube from 35mm (German-made) repeater projector down below floor. A Zeiss lens; 45-degree mirror are used.

SPAIN on film

SPAIN'S PAVILION has been hailed as the most beautiful at the Fair and the accolade is well-deserved for it is solidly-constructed, has charm and grace in all its aspects of design.

It's an expensive rendezvous, too, with elegant and costly restaurants; a distinguished exhibition of great Spanish art (Velazquez, Goya and El Greco) has a dollar

AROUND THE WIDE WORLD

INDIA'S PAVILION is one of the most interesting at the Fair, reflecting the industrial and social progress which this land has made since becoming an independent nation. Through dioramas (see below) and in visual displays and recordings, the pavilion shows the diversity of its people and the development of modern industry.

India uses a mirror-like screen to present these dolls, fading lights to show how the peasant becomes the technician; the village girl turns into a nurse. It is one of the interesting visual devices at the Fair.

SPAIN at the Fair:

admission fee. And there's flamenco dancing of the purest antecedents with Spanish music to be heard . . . also at a fee.

But, every morning at 10 a.m., Spain's opulent 400-foot theater opens its doors for continuous, free showings of documentary films (see poster cut) which are a joy to behold. Projection is by standard 35mm Century theater arcs so the sights-and-sounds of the land come through bright and clean on the screen.

* * *

Footnotes on Exhibits:

☆ Venezuela's pavilion has a continuous slide projection system. Two Selectroslides with dual automatic dimmers are used.

✧ Those continuous slide projectors of Jordan (see picture) are also Selectroslides.

☆ The American Interiors pavilion has a United States Rubber show which uses two DuKane Vista-Sell projectors to promote its vinyl carpets and Naugahyde.

☆ Singer Sewing Machine Company is using a Triangle 16mm and two Selectroslide projectors.

☆ Selectroslides are also being used by the National Catholic Education Association (Hall of Education) and by Kroehler Manufacturing Co. (American Interiors Pavilion).

☆ We'll supplement this report during the summer. Such exhibits

The United Arab Republic is showing films on modern industrial development in Egypt within this continuous repeater-projector at Fair.

as the Hall of Education were just being completed in late May; other pavilions were making alterations in their setups. The Fair

will also be analysed after closing in October, noting the equipment and the programs which have earned their popularity.

Jordan uses six of these round balls, containing continuous slide projectors and accompanying sound.

Modern Taiwan (Formosa) has this very large rear-projection slide set-up which takes Fair visitors through the changing patterns of this old yet new country, showing its people, industry and good scenic views.

The Images of Modern Jordan

JORDAN'S PAVILION, scene of much controversy over a mural on the wall which calls attention to the plight of homeless Palestinian Arabs (which has aroused objections from Israeli groups) features an open hall downstairs with a lunch counter and a stage equipped for live or film showings in the center. There is a seating capacity of 125. Just off the same hall are actual specimens of the Dead Sea Scrolls.

The film being shown here on a regular basis is *This Is Jordan* (produced by United States Productions) showing many of the travel attractions of modern Jordan. Equipment used is a Triangle 16mm continuous projector.

Upstairs, opposite the mural, are continuous slide projectors, operating with individual sound tapes which describe Jordan's expanding economy and increasing number of schools, hospitals, roads and other facilities.

Futurama riders in the General Motors Pavilion can watch this big articulated crawler, capable of surmounting any terrain obstacle, as it moves across surface of the moon to a communications post.

TRAVELERS HAS "TRIUMPH OF MAN"

under a red umbrella, a film takes up search for life

HOUSED IN A DOMED stone structure designed to resemble its red umbrella symbol of insurance protection, the Travelers Exhibit presents a dioramic portrayal of man's struggles and growth through the ages.

Beginning in prehistoric times, the dioramas trace human existence through more than two billion years from the dawn of man to the present. This story, "The Triumph of Man," culminates in an unusual motion picture depicting man's current explorations in-

to the reaches of outer space, his current searching for the basis of life itself.

Produced by Robert P. Davis of Little Movies, Inc., the film is projected by a specially designed Reevesound motion picture system. The picture images and ultraviolet stars are received by a dark blue screen wall and ceiling shaped like a half-sphere.

Reevesound's projection system consists of a 35mm Norelco FP-20 projector with conventional shutter, a 2500 watt Zeiss Xenosol II

THE GENERAL MOTORS RIDE THROUGH FUTURAMA:

(CONTINUED FROM PAGE 39) uses existing production facilities, recorders, printing machines and conventional methods for making release prints.

The 16mm photographic sound print has two pairs of tracks, one pair in the right-going direction, and one pair in the left-going direction. Each pair of tracks provides separate right-ear and left-ear programs, resulting in a full binaural reproducing system free from cross talk between adjacent channels. Forward and reverse running capability of the transport provides a unique solution to the long running time requirement. Reevesound malfunction detectors

are placed in fixed locations along the ride's route, while others are mounted on the ride itself to assure maximum reliability.

Interspersed among the dioramic Futurama displays are a number of 16mm motion picture images projected by professional Norelco units supplied by Reevesound. Some units are equipped with integral dichroic reflector incandescent light sources, and others with Xetron 450 watt Xenon lamps.

Reevesound's installation at the General Motors Pavilion was done in collaboration with the creative and technical staffs of General Motors Styling.

Travelers Companies' pavilion is reflected in Pool of Industry at the New York World's Fair.

Repulse of Attila the Hun is depicted in one of the dioramas of the "Triumph of Man" show.

Below: this special Reevesound-engineered projection system for the Travelers' Pavilion shows motion pictures on a dark blue screen wall. First-surface mirrors at top and front of projector step up images.

light source, and a Reevesound-designed continuous 35mm film looping rack. The Reevesound-modified projector has intermittent start-stop operation, triggered every four minutes by a sensing device signalling the conclusion of the dioramic display one floor below.

Two first-surface mirrors, one mounted at the front of the projector mechanism and another located overhead, receive light beams leaving the machine, redirect them to the screen wall, thereby increasing projector distance and image size. The system operates with a 50 watt Fairchild power amplifier.

Donald Deskey and Associates were architects for the Travelers Pavilion, which was constructed by the George A. Fuller Company. Designers were Lippincott & Margulies.

* * *

At right: 35mm Norelco projector, modified for intermittent start-stop operation, is being used for Travelers' film show. It has sensing device and 2,500-watt Zeiss Xenon light source.

You Can Help Win an Election

A New Film Provides a Versatile Short Course in Practical Politics. Showing "How the Opinion Maker Makes Opinions"

THE ACTIVE CITIZEN, man or woman, is not *only* a voter, though our system of democratic government would be far more effective if every eligible person did just that. To survive against demagoguery and to put the professional politicians on their mettle, citizen action must go beyond passive participation. In short, *influence* in politics belongs to those who exercise it and who make their opinions known.

More than a year ago, the American Medical Political Action Committee (AMPAC) began to impress that fact upon the doctors of the nation. The Committee's "educational program in depth" was reported in these pages. It included effective films, something borrowed and most of it new, hard-hitting and now widely-shown at countless hundreds of meetings of professional men who have found themselves better "schooled" in the practical arts of political action.

Now Being Shown at Seminars

A current followup motion picture is now being used in seminar sessions of these Healing Arts groups. It is virtually a complete learn-by-example, short-course in *How the Opinion Maker Makes Opinions* and that is its very appropriate title. 31 minutes, in EK color, with sync dialogue plus narration, *Opinion Maker* was filmed by the company which created the earlier AMPAC "package," Parthenon Pictures of Hollywood.

The previewer's first thought and lasting impression is the *versatility and wide application* of this picture's message. Dr. George Gordon, its principal player and the man who learns how opinions are really made, might well be Sam Jones, banker, or Dick Smith, tool maker. The 20 contacts made on a typical day illustrate actual, applicable techniques of opinion-making.

Film Can Serve Either Party

Whatever your party affiliation, there is *no* political bias in the picture. Although the influencer in the film is a doctor, the instruction applies to all men (and women) in potential leadership positions.

The first third of the film is "broad-scope," highlighting the

qualities which mark the potential Opinion-Maker — showing him how to work up his distilled "opinion statement." Then the body of the film demonstrates, in a succession of everyday incidents, how the Opinion-Maker can steer casual contacts into opportunities to

Robert Carson is the narrator of this useful "short course" with techniques for political action.

express his beliefs and to make his recommendations.

It won't work with a good many people, no matter how "influential" they consider themselves. But *when the right ideas get to the right people*, the American political system wins powerful allies, in whose hands may rest the destiny of a free society. ONE vote swung many an election this past year. One more convert to political action can be made every time this picture hits the screen.

The Qualities for Influence

When Dr. Gordon believes that the things he believes in are threatened, what can he do about it? He has some unique and useful qualities: (1) he is above average in intelligence and education; (2) many people less fortunately endowed look up to him; (3) when he states an opinion, these people are apt to listen with attention and respect.

The film follows him through a typical working day, showing how he can express those opinions within the framework of his normal, daily routine. The postman, a hospital receptionist, a young trainee, a head nurse, a patient . . . an absentee voter who has forgotten to get a ballot . . . are all contacted. An elderly banker he meets at the country club is reminded

George Gordon spends his evenings ringing neighborhood doorbells, passing out the candidate's literature before he realizes it's not his dish.

that, while no candidate reaches their ideal of perfection, staying away from the polls is a vote for the opposition.

The "pay-off" on all this is in the headlines. Important elections were decided on single votes — on less than one vote per precinct.

Focus Attention on the Ideas

Parthenon skillfully employs its "ambient limbo" technique within many scenes, allowing the audience to concentrate on "thought" via impressionistic backgrounds. Hospital scenes were lensed at Memorial Hospital in Long Beach, a pictorially beautiful setting. Use of modern recording and lighting

equipment implemented production without interruption of hospital routine.

Opinion Maker was written by Parthenon's Cap Palmer; directed by Don Livingston (on stage) and David Bowen (on location). Glen Holse was art director and Ron Hagerthy the associate producer. Actor Don Haggerty effectively played the role of Dr. Gordon.

Qualified organizations and companies may purchase prints of this widely-applicable film for their own intra-organization use at \$250 per print. Write Parthenon at 2625 Temple Street in Hollywood for preview details.

HOW OPINIONS MAY BE SHARED DURING A TYPICAL WORKING DAY

Dr. Gordon suggests that a local businessman help get his associates registered and voting.

The doctor's brief words on behalf of his candidate favorably impress the head nurse.

On his first morning as an opinion maker, Gordon tells the postman about his candidate.

This patient, happy with his disability benefits, is a "Sinner," sure to vote for the other side.

New Designs for Better Learning

A Coast-to-Coast Look at America's New Schools Helps to Give Community Leaders Useful Guidance for Their Plans

THE ENVIRONMENT in which teaching takes place greatly influences the form and content of instruction. To pursue that theory, the Ford Foundation endowed the Educational Facilities Laboratories, now engaged in research, experimentation and exchange of knowledge in the design and construction of American schools.

To help make communities aware of the scope and variety of possibilities in schoolhouse planning, the EFL has sponsored a new 27-minute color film, *To Build a Schoolhouse*. Produced by Pelican Motion Pictures, New York, the new picture is a virtual storehouse of new ideas in school design, lensed on location from Massachusetts to California, from Chicago to Texas.

Principles Shown in Graphics

Designed by Pelican's Ted Lowry, it includes graphic sequences

which illustrate the principles on which these innovations are based. The film studies the "basic box" design of the classroom, a "standard" of years past. The validity of the box is now being questioned as student population rapidly increases, the teacher shortage continues and a broad new range of activities and ideas enjoin this era of technological change.

The search is underway to make space more fluid, to be compatible with today's fluid, ever-changing times.

One new approach to teaching with considerable influence on school design is team-teaching. At Wayland, Mass., the film examines the application of this method and the schoolhouse designed to provide areas for large group instruction, conventional classrooms, seminar rooms for more intensive study.

Operable partitions are being

used in other schools as their approach to flexible space. Schools in Covina, Calif., Chicago and Boulder City, Nevada are found to have solved their problems through the use of various types of walls. A loft-plan at Hillsdale High, in San Mateo, Calif., enables walls to be built with a minimum of effort and expense.

Show "Clustering" of Space

Pelican film crews also visited modern schools which have "clustered" their space — by grade, by subject, and by ability. They filmed the reinforced concrete shell which spans large areas at Texas A & M; a geodesic dome in Bethesda, Md., and a form of

modular construction — the non-rigid structure made of vinyl-coated nylon which serves as the gym at the Forman School in Litchfield, Conn.

New shapes are being inspired by new things happening inside the nation's schools. Use of closed-circuit television; mechanical teaching aids for language classes and modern equipment for science labs all need space designed for their use.

\$10 Billions for Next Decade

In the next 10 years, it is estimated that the U. S. will spend 40 billion dollars to build and equip schools. EFL has sponsored this useful film to help communities involved to plan the schoolhouse which will best satisfy their needs and enable them to educate according to the demands now being made of pupils and teachers in a growing, changing world.

To Build a Schoolhouse is being made available on free loan to school administrators, boards of education, architects and for educational television showings through the regional libraries of Association Films, Inc.

Above: one of today's new schools merges the world outside the classroom with the halls inside. Below: language lab shows a new way of using space.

Above: this flexible classroom design utilizes new tools for learning in its arrangement. Below: a planetarium room broadens horizons for science.

FIVE FAMED FILM MAKERS took part in a special presentation arranged by the Eastman Kodak Company on behalf of more than 2,000 audio-visual educators attending the recent national convention of the Department of Audio-Visual Instruction of the National Education Association, meeting in Rochester, New York.

The program, "Frames of Mind" was presented at the Kodak Park Theater on Thursday evening, April 23. Showing samples of their work and discussing creativity in film making were five world-renowned film and television personalities.

Host on Bell "Science Series"

Dr. Frank A. Baxter, moderator of the program, came from the University of Southern California. Host of the Bell System's widely-acclaimed *Science Series*, he is the winner of seven "Emmy" awards and is currently engaged in the production of 50 film programs to commemorate the 400th anniversary of Shakespeare's birth.

Irwin A. Moon, director of the Moody Institute of Science, described his unique approach to films uniting the fields of science and religion. Noted for his technical inventiveness, Moon is the producer of *City of Bees*, winner of seven recent film festival awards. His films are currently on exhibition in the "Sermons from Science" pavilion at the New York World's Fair.

Master of Aerial Photography

Daniel W. Jones, head of research for NBC's Project 20 was another panelist. His credits include such programs as *Victory at Sea*, *Meet Mr. Lincoln*, *Mark Twain's America*, and other outstanding documentary shows.

Jacques Letellier, president of Filmeurop, came from France to take part in the Kodak presentation. He has been widely acclaimed for his work on behalf of NATO and is a master of aerial photography.

Final member of the panel was Saul Bass, creator of film titles, artist and industrial designer. He discussed individuality in film making and samples of his recent work, including sequences from *The Searching Eye*, major film feature at the Kodak World's Fair Pavilion, were shown.

Produced by Kodak's E. B. Hall

E. B. Hall, manager of Kodak's informational films division, was the co-ordinator and host of the evening program. He described "Frames of Mind" as "a produc-

Audience of educators assembles for "Frames of Mind" presentation in ultra-modern theater at Kodak Park.

Kodak Presents "Frames of Mind"

Members of Department of Audio-Visual Instruction Witness a Memorable Presentation of Creativity in Film Production

tion designed to emphasize the motion picture's role in our culture, and hence in education."

The program enabled a very large audience of audio-visual educators to sample films that entertain, films that inspire, and films that instruct in subtle, imaginative, and highly effective ways.

Dr. Baxter, commenting on the values of audio-visual techniques in education, seemed to sum up the overall value of this program's contribution when he said,

"Thousands of Informative Films"

"There is no necessity to remind this group, of all people, that there are in the files thousands of informative motion picture films and recorded tapes, the very listing of which fills catalogs, now available to the nation's teachers. They cover biological and physical science, history, sociology, geography, literature and the fine arts.

"There is no school district so poor, so remote that today it cannot have Nobel prize winners on its staff. No college so poor that through the miracle of film it cannot include Pablo Casals and Edmund Teller not to mention Leonard Bernstein, Dr. John Baxter and Mortimer Adler . . . hun-

dreds of eminent people on its faculty. With these aids, facts are given dimension, phenomena can

Dr. Baxter (back to camera) pictured with cinematographer Jacques Letellier and producer Saul Bass.

be seen in motion, abstracts emerge from concrete evidence.

" . . . this suggests the power of audio-visuals to foster identification; the power in the ability of the film, the tape, the picture, to reach into the hearts and minds of people through the eyes and ears as a direct sensory experience.

Joining the Pageant of History

"Watching the ancient films made of the funerals of Queen Victoria or Edward VII, or of Theodore Roosevelt, eloquently orating from the porch at Sagamore Hill or working a steam

Dr. Mendel Sherman, president-elect of Department of Audio-Visual Instruction of the NEA.

shovel in the Culebra Cut . . . or the gray tide of faceless German soldiers with heavy boots as they poured into the Belgium of 1914 or watching the serried rows of hooked cross banners and those terrible drums, beating the cadence which led to Nuremberg. Watching these any man, woman, boy or girl becomes part of the pageant of history in a new way. In 50 years our descendants will see this —"

He concluded with the showing of a newsreel sequence of Mrs. Kennedy approaching the late President Kennedy's casket as it rested in state in the Capitol Rotunda.

* * *

EDITOR'S NOTE: the full commentary of this historic program should be available from Kodak in booklet form at a later date.

Famed film makers discuss creativity (l to r): Daniel W. Jones, NBC; Jacques Letellier, of France; Irwin Moon, of Moody Institute of Science; designer Saul Bass; and program's producer, E. B. Hall of Eastman Kodak.

The research scientist and the production man within the mill are a team whose joint efforts must be closely coordinated to achieve new methods.

The "Search" for Better Steels

Within the Silence of the Research Laboratory, Today's Scientists Strive for the Better Products of Tomorrow

SELDOM HAVE THE MOODS as well as the goals involved in modern industrial research been as well presented in a single motion picture as they are in a new 20-minute color film recently completed for the Youngstown Sheet & Tube Company by Cinecraft Continental Productions. Its title is all-embracing: *Search*.

Mindful of the intensive com-

petitive struggle, of worldwide proportions in the steel industry, the Research Center at Youngstown takes on vital importance. Improvements in steelmaking processes are a constant goal within this and other companies for better, more reliable and less costly products. The research scientist has a critical role in all this. And his work must be closely

The soft "whir" of computers is the only break in the silence of the lab.

co-ordinated with the basic requirements of the mill.

Search makes vividly clear the four most important elements which a scientist must have to create: an inquiring mind, keen eyes, calm hands and silence in which to work. There is marked contrast between the sounds typical of the steel mill and the silence of the research laboratory.

Demonstrations in *Search* lay the groundwork of applications of steel in everyday life. But the serious business of the picture begins in a research conference. The raw materials must be examined to make the first, right step toward improvement of a process.

A notable example is Youngstown's thin tin line. Failure after failure must be endured before hard work pays off in a successful run. Then the scientist can relax in well-earned freedom until . . .

The next morning brings a new problem: pipe production and storage. The camera takes the viewer out along a pipe production line and back again to the silence of the laboratory, where research-

Director Julius Potoecny (center)

ers begin their work on new assignments.

It's hard work in the lab. Success brings satisfaction; the rewards go beyond the mill, into the field and bring a thousandfold new applications within industry, homes . . . a myriad of today's markets for steel. But one thing is made certain to viewers of *Search* — research never ends. The research men at Youngstown, or wherever they labor, will always work very hard to achieve better steel and better living.

Written with consummate skill by Frank Seidel, the beautifully-lensed scenes were photographed by Harry Horrocks on 35mm Eastman Color Negative. The talented Julius Potoecny directed *Search*, with the music of Zoltan Rozsnyai whose score is never obtrusive, often enriching to the mood. 景

Guide to Ski Safety

An Aetna Film Shows How to Avoid Injury on the Slopes

SPONSOR: Aetna Life Affiliated Companies.

TITLE: *Ski Sense*, 27 min., color, produced by the Aetna Photographic Bureau.

☆ Skiing, already the nation's biggest outdoor winter sport, continues to grow at schuss speed. Of the five million persons who will ski next winter, thousands will be first-timers and the majority of all skiers will be occasional week-end participants with varying degrees of experience and skill.

The accelerating growth of the sport has led to increasing concern about ski accidents and injuries; what causes them and how they can be prevented. U.S. Public Health surveys show that six out of every thousand persons skiing on a given day will be injured, and that 60 per cent of those hurt will not know what caused their accidents.

Medical and safety authorities say that most of these "cause unknown" accidents happen when skiers whose physical condition is not up to the rigors of the sport overestimate their ability or lose control because of fatigue. This combination far outranks any other factor as an injury cause. Moguls, sitzmarks, and other obstructions, for example, are assigned only 11 per cent of the injuries.

To bring this information to large numbers of skiers and potential skiers, and show what they can do to avoid injury to themselves are the primary objectives of *Ski Sense*.

Made in cooperation with the U. S. Department of Health, Education and Welfare, and the National Ski Patrol System, the film covers virtually all phases of the subject. Beginning with a discussion of injury causes and preventive measures by Dr. Arthur E. Ellison, ski injury consultant to the Public Health Service, *Ski Sense* covers ten specific "musts" for ski safety. Interspersed are many dramatic scenes and spectacular scenery shots that make the movie interesting to skier and non-skier alike.

Ski Sense will be distributed nationally for television public service programming and for free-loan showings by community organizations through the Information and Education Department at the companies' home office in Hartford, Conn. 景

this may be the first
movie projector sound system
you never need to fix

!

Its sound system can be trusted.

It has no electronic tubes to burn out; transistors replace the old tubes.

It has no photocell to go haywire; a space-age *solar cell* takes the place of the old photocell. Its exciter lamp is rated to last the life of the machine. You'll never have to carry spares.

This projector won't embarrass you or harass you.

It even takes good care of your film.

Kodak equips all PAGEANT Projectors with a spring-loaded film sprocket. These are like shock absorbers, so when you start the projector the film isn't jerked. Sprocket holes and film itself stay new longer that way.

These are the only projectors with a reverse *powered* sound drum. This means the film rolls with the sound drum when "*reversed*," instead of being dragged over it, hazarding scratches.

Another thing you can safely do with this projector is reverse it from full speed forward to full speed the other way, in one whack!

Kids can't hurt it either, but a child can set it up and operate it.

Anyone who can follow a red line can thread film into it.

Move one lever forward. Push one button. And you have a sound movie. Brilliant picture. Beautiful, clear, noise-free sound.

Incidentally, this sound is instant sound. That means it comes with no warm-up. No empty silence. No awkward waiting. And

the speaker doesn't hiss, or crackle, or pop, either.

This projector doesn't do anything to distract an audience.

Its machinery consists of so few

moving parts that it never speaks above a whisper while the show is on.

And the show always goes on.

You're not left suddenly in a fix.

With this projector, there's so little that could possibly ever need fixing.

Its name is the KODAK PAGEANT 16mm Sound Projector, Model AV-126-TR.

If you'd like to see and hear one work, or read illustrated literature about it, write your name and address here:

Then send it back to us at the address below.

Check this box ☐ and we'll have a Kodak dealer call you to arrange for a convenient demonstration. No obligation, of course.

Imaginative set design by Howard Barker for the Benny Goodman sequence in new Selmer-sponsored color picture, "Adventures in Sharps and Flats."

Selmer Film Tunes Up for Sales

Elkhart Instrument Maker's Color Picture Warmly Received by School Band People; Dealer Package Rings the Register

SPONSOR: H. & A. Selmer, Inc.

TITLE: *Adventures in Sharps and Flats*, 23 min. color, produced by Reid H. Ray Film Industries, Inc.

The sponsors of this color film, aimed at getting youngsters (and their parents) interested in school band activities, knew they had an artistic success when the first work-print hit the screen earlier this year. A fine "combo" of great names in music, imaginative and colorful set design, an original music score by a prize-winning composer and an intriguing story line brought H. & A. Selmer, Inc., leading makers of instruments, a truly "different" and intriguing film.

But even before the official an-

nouncement of its release, *Adventures in Sharps and Flats* brought the company over a 1,000 requests for showings. 350 prints, put into general distribution via Sterling Movies U. S. A. are currently booked to capacity. And this gratifying commercial response is only part of the film's success story.

Prints Are Sales Incentives

At the recent annual sales meeting, Selmer allocated prints of the film as merchandising incentives, offering a print for regional use to any dealer who placed a sizable order within a two-month period. They have now awarded 150 prints to musical instrument dealers throughout the country.

The *Adventures* promotional program was also conceived as a

complete merchandising package.

The film is made available through local dealers to the band director. It is then scheduled for showings to assembly groups of 4th, 5th and 6th grade students. Showings are followed up with printed handouts, including a paper record of selected music from the picture.

Both dealers and the sponsors know that this material goes into student homes, that the film is discussed with parents.

A second program is arranged for parent-child showings of the film and discussion with the band director. The values of beginning the child's training in music is a paramount objective.

The quality and interest of the

across the message that music enriches the lives of all young people. We think *Adventures* accomplishes all this and will be a great stimulus to band enrollment wherever it is used."

Producer Teams Up Top Talent

Having decided to produce a film both meaningful and a lasting aid to the school band movement, Selmer turned to Reid H. Ray Film Industries. St. Paul producer, who brought together a combination of really creative talent to turn out this fascinating color fantasy.

Robert Ward, composer of the original score, is the '62 winner of both the Pulitzer Prize and the New York Music Critics' Circle Citation for his opera, "The Crucible."

Stanford Sobel, who wrote the script, has won more than 40 film awards, two "Oscar" nominations and the "Best Film" award at the Seattle World's Fair. He was free to concentrate on a story without commercial considerations.

Joe Sperry, who directed the picture, is a veteran of network television production as well as a performing musician (Chicago and Boston Symphonies); the film's music was directed (an ensemble of 27 top musicians) by Jack

Joyce Kenny and Sam McMahon are the talented young players with featured roles in the Selmer film.

picture itself are a vital ingredient to the success of this program. Stan Sobel's original script for *Adventures* takes a young boy and girl into a magical land of music. They meet, as musical guides, Benny Goodman, the famed clarinetist, and Richard Franko Goldman, noted band master, who helps them "explore" music on the concert stage, the stage bandstand and on the athletic field. They also discover the disciplines needed to perform good music.

Aid to School Band Director

"*Adventures* is not a typical commercial film, with factory scenes and product plugs (there isn't an obvious moment of that kind on the screen), but rather a contribution from Selmer to school band directors," says advertising manager Harry Randall.

"The film shows the fun (and work) of music to youngsters and the values of band participation to their parents.

"We spent many months planning the direction of the picture and analysing its purposes. We wanted to make it fascinating to children, yet entertaining to adults and most of all, we wanted to get

Producer Reid Ray (at right) supervises a scene for "Adventures."

Shaindlin, conductor of many successful film scores.

Finally, the film's very imaginative sets, ranging from a fantasy background used in the Goodman sequence to the traditional gazebo for a concert band performance in a park, were the creative work of Howard Barker, set designer for more than 400 television shows.

It seems fitting to note that the "harmonious" blending of all these elements: good advance planning, topflight talent and production as well as a comprehensive promotional program have brought H. & A. Selmer, Inc. the kind of results which the proper ingredients alone can offer to any film sponsor.

While the film can be measured in terms of direct instrument sales results, they also have the gratifying satisfaction of turning thousands of youngsters toward music.

Below: famed clarinetist Goodman performs for his young admirers in scene from "Adventures"; also features band master Richard Franko Goldman.

Do you have a sponsored film that ties in with the New York World's Fair?

Read how United World Films, through its unique resources, can provide a distribution program custom keyed to your specific objectives — at a lower per-booking cost!

THE New York World's Fair is generating an overwhelming demand for sponsored films relating to the Fair. And, for at least the next two years, these films will continue to be of special interest to television stations, motion picture theaters and 16mm audiences across the nation.

This situation obviously presents special problems and special opportunities—particularly in the distribution of sponsored films with such a timely and specialized interest.

As a result, distribution requirements for such films vary according to each sponsor's specific objectives: (1) mass circulation on a saturation basis, (2) selective exposure at certain economic levels or in pre-defined geographic areas, (3) distribution limited to prescribed professional, religious, educational or age groups.

Whatever approach your public relations or marketing objectives require, you will find United's custom distribution service uniquely qualified to help you heighten the effectiveness of your World's Fair film program.

As a United client, you will have at your command the widest distribution facilities in the industry...the most advanced film-care laboratories...the most knowledgeable staff...the most careful planning and research...the closest, most informative liaison with the people you entrust with your message.

Above all, our organization is such that your films are assured thoughtful, individualized attention with greater print turnover and a lower per-booking cost than that of distributors not offering custom services.

How do we do it?

United is a subsidiary of Universal Pictures, the only major Hollywood film company in the sponsored film distribution field.

Also associated with United is Castle Films, official licensee for 16mm and 8mm home movies of the New York World's Fair.

Through its unparalleled corporate resources, United Films offers to a limited number of select and distinguished clients these exclusive benefits:

1) Greater access to prime 16mm audiences

United is the only company in the sponsored film field that covers every phase of 16mm distribution. Its Educational, Religious and Entertainment divisions constantly generate fresh audiences. These are automatically contacted for sponsored film showings affording clients a bonus circulation not otherwise obtainable.

2) More extensive television coverage

United has delivered up to 40% more telecasts than any other film distributor—at a net savings in unit costs. Recently, United established a *News Parade* service providing all the essential services needed to interpret your public relations story for news use and obtain its release on regular television news programs.

3) More extensive 35mm theatrical coverage

United is uniquely equipped to supply greater exposure in 35mm theater. Clients benefit from over a half-century of cinema "know how" and close personal ties with motion picture theater operators.

4) More efficient handling and service for United and "sponsor-generated" bookings

With a nation-wide network of 43 distribution libraries—more than its closest competitor—United assures clients the fastest movement of prints to audiences. In fact, current studies reveal that our service has

been able to deliver 25% more bookings for the same distribution dollar. United's quality control system includes electronic inspection of prints and their cleaning and care before shipment.

A look at the record will demonstrate how, in case after case, United's custom distribution has more than fulfilled the requirements of film sponsors...delivering more bookings at costs substantially lower than the industry average.

It takes only a few minutes to find out what United can do for you. A phone call, or the coupon below, brings a detailed, illustrated report on United custom distribution. It's yours for the asking.

Here's complete kit of turn-over chart, seminar guide and reference booklets used (with Fairchild 8mm projector, lower left) for the Republic program.

Packaged Program Helps Sell "Clean" Steel

Salesmen and Customers of Republic Steel Learn Benefits of Vacuum Degassing Through Integration of Film & Print

IN STEEL, performance value is in direct ratio to cleanliness — when dirt in the metal is held down, performance under stress goes up. The Republic Steel Corporation has a new raw product which has this greater property of strength, developed through its Ladle Vacuum Degassing process, a method of cleaning steel which has proven one of the industry's most reliable for steels being used in critical applications.

To bring this story of de-gassed steels and the company's particular method of degassing to its own sales force and, in turn, to their customers, Republic is using a packaged communications program (developed by Wilding, Inc.) for presentation to both of these important groups.

Metallurgist Conducts Seminar

The sales force orientation program was set up as a seminar conducted by an Alloy Division metallurgist. Tools employed include a turn-over chart, a meeting guide, take home piece for the salesman and a 16mm motion picture. The pros and cons of degassing methods were presented in these seminars. The film was used to drive home the advantages of the Republic operation to the salesmen.

Armed with these facts-in-depth and thoroughly familiar with the technical details of the process, Republic salesmen have been setting up all types and sizes of customer seminars. The program is, in fact, complete enough for the

customer to conduct his own meeting if necessary.

Film Previews for Management

To help salesmen to set up these meetings, an 8mm sound film (shown on Fairchild repeater-type projectors) is available for management showings. Larger meetings are conducted by representatives of Republic's Alloy Division, using the same materials from the sales force orientation program, slightly revised for customer presentation. All of these tools were also made available to customers when circumstances indicate putting on their own seminars for technical people.

The 11½-minute color film in this packaged program, *Ladle Vacuum Degassing*, is a straightforward technical film report showing the actual process at work in the steel mill — from the melting furnace to the new induction-stirred vacuum degassing units. The exposition of these facts and the commentary are sufficiently non-technical to be understood by men who have steel-related interests but who may not be technically-oriented. Produced in 16mm Kodachrome, prints have been reduced to 8mm sound for field shows.

But it is not the film alone which does the job in the field. It is, rather, the *complete* package of integrated materials which combine to give the men of Republic Steel a truly effective program for the introduction of a quality-oriented steel-making process. 

Featured in cast of "Something for Mrs. Gibbs" are talented players: Rudy Vallee and Kay Campbell.

Facts on PPG Glass Yarns for the Retailer

Pittsburgh Film Introduces "Mrs. Gibbs" to Store Audiences

SPONSOR: Pittsburgh Plate Glass Company.

TITLE: *Something for Mrs. Gibbs*, 20 min., color, produced by Van Praag Productions, Inc.

* * *

☆ Fiberglass for curtains and drapery fabrics has often been associated in the public mind with just one manufacturer, or usually with none at all. Yet, several fiberglass yarn suppliers are active in the field. More and more they are urging retailers and consumers to consider brand names in their purchases.

One of the larger manufacturers, Pittsburgh Plate Glass Company, is now mounting an extensive campaign to establish its own brand name as a major force in the market. One important part of its activities to this end is a new film now playing country-wide in retail stores to put a real consciousness of the PPG name across to sales people.

Something for Mr. Gibbs, a 20-minute photoplay designed with an especial appeal for saleswomen, gets across helpful hints on how to sell fiber glass draperies, with a strong but palatable emphasis on the PPG name. To make it particularly attractive, Van Praag Productions, Inc., which produced the film, has cast it with a dozen or so familiar faces that store people can easily identify with.

Rudy Vallee, John Carradine, Margaret Hamilton, Maurice Gosman (Doberman), Al Lewis, Charlotte Rae, Mickey Freeman, Adam Kennedy, Barbara Lord and Monica Lewis are some of these actors. They play the story for laughs all the way through — with enough verbal and sight gags to be sure to keep the people awake and happy during showings on company time.

William Van Praag, who produced and directed the film, explains that an extensive cast of well-known actors such as this can be obtained for a reasonable outlay if careful plans are made.

By keeping their on-set time at a minimum, good actors can do a part in as little as half a day, and also suffer from no public "over-exposure" in an in-store film. Their presence helps a lot in what has to be a hard-sell situation. Also important in providing a handsome mounting for this film is an original score composed and conducted by Richard Maltby.

Something for Mrs. Gibbs shows how the addition of draperies to a room can make all the difference in the world to its appearance. It also describes the particular good characteristics of fiber glass draperies — easy to wash, won't shrink, don't need ironing, long lasting, flameproof, sunproof and easy to sew. 

Vallee in another scene from Van Praag production.

Focus on Science Wins Honors for Douglas

"Eclipse of the Quiet Sun" and "Priceless Laboratory" Cited for Golden Eagles

TWO CURRENT DOUGLAS AIRCRAFT COMPANY color motion pictures cover widely-divergent fields of intense scientific interest but they have one thing in common: both films were recently cited for "Golden Eagle" awards by the Council on International Nontheatrical Events and prints are destined to represent the United States at various overseas film festivals later in the year.

The first of this unique pair: *The Eclipse of the Quiet Sun* is a 27-minute detailed photographic record of the events which took place

on July 20, 1963, when a Douglas-National Geographic sponsored scientific expedition documented the total eclipse of the sun from a specially-equipped DC-8 aircraft which followed the path of the eclipse over Canada. The flight extended the path of totality from 100 seconds to 144 seconds.

"Operation Deep Freeze" in Antarctica

The second and most recent of the Douglas films, *The Priceless Laboratory*, (25 minutes, color) records the activity of men and equipment dispatched to Antarctica where the com-

pany participated in vital scientific phases of "Operation Deep Freeze" in cooperation with the United States Navy. Douglas set up a riometer station to record the bombardment of the earth by tiny particles of cosmic radiation emanating from outer space.

Douglas cameramen lensed findings which are vital to planning of man's future as a space traveler, photographing the scientific aspects of the riometer study as well as other research tasks and experiments in temperatures which, at times, reached 60 degrees below zero. Twelve of the nations participating in the International Geophysical Year sent scientists to the Antarctic at this time.

Examines Two Worlds: Nature's and Man's

In a totally engrossing motion picture, enhanced by Ben Marble and Bill Gibson's photography and documentation, two worlds—Nature's and Man's—are meticulously examined. This gigantic undertaking created totally new concepts in logistics and construction in a hostile environment.

Both films were produced under the direction of O. B. Marble, director of marketing-communications, Douglas Aircraft Company and W. J. Gibson, assistant director of marketing communications-photography. LuVerne Barry, administrator of the company's film production department, was the producer of record for the films.

J. R. Gabrielson is Manager of Film Production in Marketing Communications at Douglas.

Documenting the Total Eclipse of the Sun

The Eclipse of the Quiet Sun, also honored with a Blue Ribbon award at the American Film Festival, shows the impressive roster of world-renowned scientists who boarded the DC-8 with their complicated recording instruments to make this fast-flying solar observatory a success. Intensive pre-planning by Film Production department people was essential: five cameras were utilized for coverage of the umbra, the sun in total eclipse, as well as the activity inside the converted Delta Air Lines aircraft before and during the fleeting seconds of totality.

Two 16mm Arriflex cameras were dual-mounted amidship to photograph the sun; one 16mm Cinerama camera was attached to the exterior of the aircraft (forward of the nose gear), facing aft to photograph the umbra as it enveloped the terrain below. One hand-held 16mm Bell & Howell was used in the cabin for the same purpose and one 16mm Auricon was installed in the rear of the cabin, facing forward to record the various experiments being performed during totality.

Commercial Ektachrome was used in all cameras at an operating speed of 24 fps. The two Arri cameras shooting the sun used N. D. filters with a factor of approximately 10,000. The Cinerama camera mounted outside the aircraft was previously tested in a cold chamber at minus 70-degrees Fahrenheit to assure satisfactory operation in the extreme cold encountered in the stratosphere where the climax of the flight would take it. It performed perfectly.

Windows of the DC-8 which were used for the purpose of observing and gaining instru-

Richard Rudolph, (left), Chain Belt Company engineer, and Bob Luce, Pilot Productions motion picture director, check gear demonstration model prior to studio photography.

MOVIE SAVES TIME OF ENGINEERS

Chain Belt Company uses a 25-minute motion picture to show design engineers what happens as certain design characteristics are varied in a sprocket. The motion picture replaces a 200-pound demonstration assembly that had to be shipped from location to location, then set up. Only specially-qualified Chain Belt engineers could explain the demonstration. The overall procedure

was expensive and slow. The movie allows more design engineers to see the demonstration, and the cost of reaching each design engineer is much less. The film was produced by Pilot Productions, Inc., 1819 Ridge Ave., Evanston, Ill. Perhaps a demonstration movie can help you sell. Let's talk about it. Phone: DAVis 8-3700.

mentation photography of the eclipse had to be constructed of specially-ground optically flat glass at a cost of approximately \$8,000 per window.

Eclipse of the Quiet Sun will be no stranger abroad. The film has already been seen in such far-flung places as Karachi, Lahore and Cairo, where prints were sent under the auspices of the American Science Film Association on behalf of the United States Information Agency.

How to Obtain the Films

Audiences in the U. S. are seeing the two films through Sterling Movies U. S. A., their national distributor. They may also be obtained via the Douglas Aircraft Company, Marketing Communications-Film Production, 3000 Ocean Park Blvd., Santa Monica, California 90406.

"Biggest World on Earth" Pictures Fair's Unisphere

The theme symbol of the New York World's Fair, the Unisphere, is the subject of a new 16mm Technicolor film produced by MPO for the United States Steel Corp.

The 14½-minute film is available on free loan from Association Films for all types of group showings.

Unisphere, Biggest World on Earth, portrays the real-life drama of engineers and designers as they worked on this largest representation of the globe ever attempted. They met fantastic mathematical challenges as well as a race against time to complete this 940,000 pound structure by the Fair's opening day. It is 13 stories high.

Within the film's scenes, this marvel takes shape from drawing board to final installation. In crisp documentary style, the film also shows how the three orbital rings were raised, all in one piece, to magically encircle the main structure.

Like the famed Eiffel Tower which dominated the Paris Exposition of 1899, the Unisphere was built to remain as a permanent feature of Flushing Meadows Park after the close of the World's Fair.

There's a fine picture of the Unisphere (by our own Bob Seymour) on this month's cover and it's been featured in millions of pieces of literature.

This slide presentation speaks for itself.

Different films for line and continuous tone are available. Polaroid Corp., Cambridge 39, Mass.

The Best of San Francisco

Visitors Bureau Film Brings Viewers
Delightful Tour of Golden Gate City

CAMERAS TAKE IN a multitude of scenic attractions, ranging from the Redwood forests to the rocky headlands of Carmel, and ski slopes of the Sierra before they close up on the city itself within the 28 colorful minutes which bring viewers to *The Wonderful World of San Francisco*. Host for this many-faceted visit to the city by the Golden Gate is the town's own Convention and Visitors Bureau.

Premiered to a happy throng of natives last January, the film has just been awarded a "Golden Eagle" by the Council on International Nontheatrical Events (CINE) and prints will represent the U. S. at various overseas film festivals this year. It is already serving the U. S. Travel Service as part of the program to attract foreign visitors to these shores.

"The Queen of the West" is a glamorous siren and an exciting assignment for the film producer at any time. Florence and Dick Fowler of Vista Productions got this enviable assignment and their only fault is an overabundance of material . . . the film covers a little *too much* ground. But the photography is

View of downtown business section.

superb and there are memorable sequences.

Though the "star" is the town itself: the hills, bridges, parks, cable cars, shops, buildings, flower stands, Chinatown, Candlestick Park and the haunting fog, there's a great ending.

Tony Bennett sings "I Left My Heart in San Francisco" in the finale as a cable car chugs up Powell Street and the fog "sensuously wends its way through Golden Gate Bridge." The music was incorporated in the sound track

for
SLIDE-IMATION

151 W. 46 ST. - NEW YORK 36 - JU. 6-4233

through the courtesy of Bennett, Columbia Records, the composers and the American Federation of Musicians.

"The film was long-wanted as a necessary part of our visitor promotion program," says Thor M. Smith, executive vice-president and general manager of the Convention and Visitors Bureau. "We plan to use it in a variety of ways and virtually all over the globe. It will be available to travel agencies, tour operators and all carriers. We'll use it for convention solicitation and public television."

376 Shots in Picture

The color picture was made possible through a special appropriation by the city and county of San Francisco. Within its 28 minutes, edited down from six hours of film, there are 376 different shots. Narration is by Marvin Miller, chosen during a blind audition of ten voices. He is the star of the "Millionaire" television show.

One first-nighter at the San Francisco premiere was a local businesswoman who admitted to having wept with pride. She advocated citywide showings of the film because "it will make San Franciscans realize how fortunate they are to live here."

Distributed by Modern

The city fathers will be even happier if the film attains its prime objective of luring the less fortunate outside the city to its gates. And advance bookings, solid through the months ahead at offices of the distributor, Modern Talking Picture Service, Inc. indicate that it will bring worshipful thousands to share the wonders of San Francisco.

Screen Directors Int'l Guild Elects Urbach as President

☆ Leslie Urbach, staff director at VPI Productions, New York City, has been elected president of the Screen Directors International Guild, balloting in Manhattan on May 28th.

Other officers elected to fill one-year terms were: Marc S. Asch, first vice-president; James M. Rose, second vice-president; Ira Marvin, secretary; and David I. Kelmenson, treasurer. It continues to seek merger of the two Guilds.

Hope for Cancer Victims Is Theme of "The Million Club"

More than one million Americans afflicted with cancer are now alive. But there could be two million still living if their cancers had been detected and treated in time. This is the message of *The Million Club*, a new color film now available on free loan from local Division or Unit offices of its sponsor, the American Cancer Society, Inc.

The film has been released in two Technicolor print versions. The "club" version, running 28½ minutes, is available in 16mm sound; a shorter (10 minutes) subject is available in 35mm for theatrical release. Roland Reed produced the picture in association with Film Counselors, Inc.

The film was made possible by a grant from Elmer Holmes Bobst of the Warner Lambert Pharmaceutical Company to the public education program of the ACS.

Within the film, seven strangers are invited to a mystery dinner party at a swank hotel. As they dine, they compare notes. Their invitations mention "your activities over the past five years." They recall, in a series of flashbacks, that all seven had been successfully treated for cancer in that period.

Their host, the mysterious Mr. X (played by Ralph Edwards), makes his appearance after the dinner. He explains that each guest represented a different type of cancer that has been cured. As a volunteer of the American Cancer Society he has filmed their dinner and discussion and asks their permission to use what has been said to help fight cancer. They are members of "The Million Club" who have been cured. But there are thousands of people who weren't so fortunate, who waited too long.

Problems of School Dropouts Shown in "I Never Went Back"

The problem of the school dropout who terminates his formal education for one reason or another is a matter of national concern. But it also brings the dropout a new set of problems: economic, emotional and social.

These are highlighted in a new 16mm b&w film produced for outright purchase by Charles Cahill & Associates. *I Never Went Back* approaches these problems in a constructive and informative treatment which shows that education need not stop if the individual is

what's new in pictures

persuaded to retain his desire to improve himself.

The film's inspirational background will not only benefit the young dropout but offers useful guidance to adults who lack formal education or who need to counsel those facing this problem. Preview copies are available from the producer at 5746 Sunset Boulevard, Hollywood 28, Calif.

Good Grooming Council Film Bids Teen-Agers to Dress Up

Encouraging teen-agers to an awareness of being well-groomed, a 20-minute color film titled *Dressing Up* is being nationally

distributed by United World Films, Inc. to high school audience groups.

Sponsored by the Good Grooming Council of America, the film tells the story of one adamant parent's far-reaching influence on an entire high school. He insists that his daughter's school dance date must "dress up" or she stays home.

Luckily, her girl friends join the "crusade" for better dress and the struggle ends in "ties and jackets" for the boys. Free loan bookings are being made through United World Films (Free Film Dept.), 221 Park Avenue South, New York, N. Y. 10003.

IS THIS HOW YOU CHOOSE YOUR LAB?

If you do, you are gambling on quality. Why not cut down the odds by choosing the Geo. W. Colburn Laboratory. With our white glove treatment you'll be a winner everytime.

California Group Announces a Management Training Program

A comprehensive new series of management training sessions, utilizing color sound slidefilms and collateral printed material has been announced for production by Executive Development, Inc., a newly-organized California company at 155 North LaPeer Drive, Los Angeles 90048. The first film of twelve in an initial series, titled *Evaluation — a New Integration of Management Theory*, has been completed. The second, *Self-Analysis for Executive Success*, is expected to be available for early previewing.

The first series will explore application of recent findings in behavioral sciences to the managerial position. An advisory board includes top names from industry, government and from such educational institutions as Massachusetts Institute of Technology, Harvard's Graduate School of Business and Case Institute.

Partners in Executive Development, Inc. are Robert Ellis, head of Pace Productions, Inc. of California; Sol Lesser, president of the Hollywood Museum; Norman Freeman, an officer of Principal Management Corp.; and Michael Blansfield, of the management consulting firm of Blansfield & Smith, also retained to act as research and technical advisors on the program. Additional titles will be reported as they become available.

"On Stream" Depicts Oil's Role in Relations Between Countries

The inter-relation of such diverse nations as Denmark and Kuwait which results from the supply and demand for petroleum products is highlighted in *On Stream*, a new film sponsored by the Gulf Oil Corporation.

Denmark's need for oil results in the building of a huge new refinery on the outskirts of Copenhagen; the film focuses on this project, showing the laying of pipelines far out into the harbor, the installation of tanks.

In Kuwait, a major supplier of crude oil to Denmark, petroleum has played another role. *On Stream* shows how this dusty desert area was transformed into a thriving country through exploitation of this natural resource. The oil is piped into tankers and heads northward through the Suez Canal to its final destination.

Prints of the film are available through all exchanges of Association Films.

BMI Grant Makes Possible a Film on Youth Rehabilitation

The New York State Division of Youth has released a new film which explains its work in rehabilitating delinquents and school drop-outs.

The 28-minute film, *Take an Option on Tomorrow*, shows how the Division deals with difficult and disturbed youngsters through Youth Camps and its START Centers (Short Term Adolescent Resident Training) at West Brentwood and Auburn, N.Y. Here, young men live under supervision and work in occupational training and group therapy.

The film was produced by Louis de Rochemont Associates through a grant of the International Business Machines Corp. Prints are available from Youth Division offices at 270 Broadway, New York City.

Gevaert Hdq. Now in Teterboro

The Gevaert Company of America, Inc. has relocated its corporate headquarters at Teterboro, New Jersey. Modernized facility includes executive, sales and administration offices and up-to-the-minute photographic labs.

Farm Equipment Makers Turn to 8mm Films

Standardize New Product Films for Technicolor "Instant" 8

MEMBER COMPANIES of the Farm Equipment Manufacturers' Association have arranged to standardize their new product films for dealer salesroom use in 8mm, utilizing the Technicolor Instant Projector. Sales Engineering & Training Co., St. Louis, made the arrangement with the group as midwest a-v dealers for the Technicolor Corporation.

Many leading farm equipment dealers have already adopted the cartridge-load silent 8mm projector for salesroom use; in the past year more than 50 leading midwest farm equipment makers have turned out films for this purpose. The move is said to be the first in which an entire industry has cooperatively adopted a single visual aid for promotional purposes. Even the smallest companies are now said to have new potential customer audiences among the 1,000 dealers equipped with the new "Instant" projectors.

Demonstrate Bulky Machines

The "circuit" permits dealers to readily demonstrate bulky equipment and seasonal items at low-

cost; rear-screen projectors are among the "Instant" models now going into regular use.

The Farm Equipment Wholesalers Association, affiliated with the manufacturers' group, recently circulated a questionnaire on the Technicolor projector which discloses some interesting data:

Percentages Favor Equipment

More than 95% of farm equipment salesmen use the 8mm Instant Movie Projector, the survey shows. Some 80% of distributors also make use of it and some 85% of convention exhibits include the projector. Approximately half of these users employ the projector every day and another 20% use it on a weekly basis. 55% of the users term it "good" and 45% find it "excellent."

The new development provides a market for film production suited to the network of available farm equipment sponsors and dealer outlets throughout the midwest region.

The A-V Equipment Trade Fair will be a feature next month!

Announce New Program for San Francisco Film Festival

Major changes in the organization and management of the annual San Francisco International Film Festival were announced in May by its board of directors, headed by Harold L. Zellerbach, president, and Irving M. Levin, director of the event.

A projected budget of \$100,000 has been set for the 8th annual Festival, to be held this fall on October 14-27.

This year's Festival showings move to the 1,250 seat Coronet Theater, replacing the much smaller Metro in which Festival showings have been held during the first seven years.

The Festival board has been enlarged to include 26 prominent citizens of San Francisco. Previous board had only six working members.

Levin departed in June for a round-the-world trip to scout films for the October event, also visiting film centers in India, Thailand, Pakistan, Russia, Madrid, Paris, and London.

Invitations to participate have gone out to producers in 60 foreign countries as well as to companies in the United States.

identical 40mm matched lenses, with built-in anamorphics. This feature permits angle coverage in excess of the 60-degrees per camera required, and then is masked in projection.

The cameras are collectively driven by a single motor, interlocked to the drive shafts of each camera. This mechanical interlock insures identical operation of all cameras. Power for the outfit is supplied by a 28-volt re-chargable storage battery. The various speeds of the motor are absolutely controlled by a servo amplifier, which is accurate to plus or minus a tenth of one degree. This servo amplifier was originally engineered for delicate speed controlled devices for the armed forces. Its application is ideally suited for constant camera speed controls.

Required 17-Conductor Cable

The remote control system, a single panel box connected to the camera by a 17-conductor cable, permits on-off control, variable camera speeds from 8 fps to 48 fps, full range control for diaphragm settings (a feature which proved invaluable during aerial photography at dawn when the camera was suspended 20 feet below the cameraman, and the rising sun changed light values every five minutes), and indicator lights to warn immediately should one or another of the six cameras develop malfunction. Harry Coleman is presently designing a radio-controlled remote device which will permit even greater flexibility in the use of the camera.

The camera is supported on a hydraulic dolly for field use, and can be moved directly in a Corvan truck for transportation. In order to get travel shots from the truck, a square opening was cut into the roof, and the camera is raised through it hydraulically. Most of the exciting shots were taken in this manner and give audiences a sense of participation so realistic that they inevitably gasp when the truck drives over a bump in the road.

Supervised by William Drohan

The film was produced for the New York State Commission On The World's Fair through William J. Drohan, project director. A circular theatre was designed and built, having an 80 foot diameter. The screen size is 20 feet high and 251 feet in circumference.

It was important to use projectors which do not have a shut-

NEW YORK STATE IN THEATERAMA

Intricate camera gear used to film 360-degree "Theaterama" production for New York State's World's Fair exhibit pictured at Madison Square Garden as cameraman Hal Sciden (right); assistant cameraman Don Shapiro prepare for a sequence featuring New York Rangers ice hockey team during a game.

ter in order to reduce flickers, which become more apparent through peripheral vision. For this purpose, six Norelco FP-22-S projectors were ordered. Corresponding to the identical operation of all cameras, an interlocking device for the projectors was designed and installed by Magna-Tech Electronic Company. Identical frame-for-frame registration on all projectors is necessary in order to insure proper reproduction.

Effect on Audiences Notable

The result of this cooperative endeavor is clearly evident on the faces of the audience. Just as the film transports the spectator deftly from the quiet serenity of an evening boat ride through the Thousand Islands to a thrilling "shoot-the-rapids" in Ausable Chasm, from a pleasant drive along a country road to a spectacular helicopter trip past the nose of the Statue of Liberty, so do the emotions of onlookers run the gamut from quiet appreciation to wild adventure. Each showing is invariably punctuated by sighs of delight, oohs of revelation, or squeals of fright. Whatever the impression, it is a lasting one.

Undertaking the production of a film of this nature was a challenge squarely met by Coleman. It necessarily involved a broad imagination in concept, and the ability and confidence to break all the established rules for motion picture production. Old ideas had to be discarded left and right, and new ones developed and put to work, often right on location.

The experience was found to be gratifying, however. With one Theaterama production under its belt, the company is now negotiating future presentations using the same medium. The 360-degree technique would be particularly effective for tent shows at state fairs and similar attractions.

Here's Steddie-Eddie in Use

Anti-Vibration Camera Rig Is Developed by Jack Campbell

A new anti-vibration camera rig has been developed by Jack Campbell, president of John Campbell Films, Inc., Greenwich, Conn. Called *Steddie-Eddie* by its designer, the rig is effective in providing smooth, steady photography from helicopters, speed boats, and other vehicles with severe vibration.

A particular advantage of *Steddie-Eddie* is that no special camera mount is required, since it is hand-held. Thus it may be immediately put to use in any vehicle, without delay in setting-up. In addition, hand-holding permits freedom of movement in pan or tilt. A standard tripod thread is provided, permitting the use of any motion picture or still camera.

The device is technically interesting. As shown in the photograph, three Kenyon KS-4 gyroscopic stabilizers are used in a configuration that provides stability in three planes. A single gyro stabilizes in only the two planes at right angles to its axis. Thus, a single gyro with its axis horizontal is effective only in yaw and pitch, but not in roll. The axis of the three gyros in *Steddie-Eddie* are mutually perpendicular; therefore, twice the effectiveness of a single gyro is achieved in each of the three planes.

Two versions of the mount are now being used by Campbell crews: the three-gyro *Steddie-Eddie* Senior, as pictured, and a two-gyro *Steddie-Eddie* Junior. The two-gyro configuration is used where vibration conditions are not as severe, such as fixed-wing aircraft, automobiles on smooth pavement, and so on. The junior rig is also used with good success on ordinary "newsreel" coverage, allowing steady pictures while maintaining hand-held ease.

An inverter belt, worn around

a-v equipment trade fair

NEW PRODUCTS & ACCESSORIES FOR PRODUCTION AND PROJECTION

the waist, carries inverters, switch box, and batteries to power the junior rig. The senior version is powered by an external 12-volt aircraft battery (connected to cable leading out of picture).

Steddie-Eddie is offered on a sales or rental basis. A sample 16mm reel, in sound and color, is available from John Campbell Films, Box 3443, Greenwich, Conn.

Permacel Appoints F & B Ceco Exclusive Eastern Distributor

Permacel, Inc., New Brunswick, N.J., has appointed F & B Ceco, Inc., New York, as Eastern franchised distributor of its new, exclusive film processing splicer,

No. 9100 and of Permacel 91 Mylar splicing tape.

The new 9100 machine splices both sides of the film with a pressure-sensitive Mylar in one operation. It was specifically designed for use in complete darkness. Films spliced with the new equipment can be processed on friction-drive systems and models are available to handle both 16mm and 35mm films.

Splicing tape used with the 9100 Splicer is Permacel's 91 Film Processing Tape, a white opaque Mylar with a pressure-sensitive adhesive. It resists aqueous chemicals, solvents and high-temperatures used in film processing, even when left in solution over a weekend.

You can improve immediately the effectiveness of audio-visual instruction with this new aid from Audio Visual Research, Inc.

This new rear projection cabinet relieves the five most common AV headaches

"Our darkened visual aids room goes unused too many hours every day."

"I'm never sure what's going on while the lights are out."

"Preparing to show a film wastes too much time."

"I usually see the film for the first time when I show it to my class."

"Storage of projection equipment creates real problems."

The new AV rear projection cabinet demolishes all these frequently voiced complaints. It ends the need for costly darkened rooms. The lights stay on, the blinds stay up. Instructors maintain supervision at all times.

The AV cabinet rolls easily from room-to-room, completely self-contained with your projector installed and a big built-in speaker. It per-

mits instructors to preview at their convenience. Easily, quickly stored.

GIVES YOU THESE ADVANTAGES

It gives you a distortion-free, 22" x 28" picture on a new Polacoat non-glare screens. Cabinet accommodates most late-model projectors. Exclusive Buhl built-in lens (optional) provides full-screen picture from projectors with 2-inch lenses. Standard AV cabinet price: \$180.00, f.o.b. factory. Add \$6.00 for modification to accommodate Bell & Howell projectors. Prompt delivery guaranteed. Send for free brochure containing complete information. Order direct from factory or your AV supplier.

Audio
Visual Research, Inc.

209 East Kingsmill Street
Pampa, Texas

Approved for purchase under Title 111, National Defense Education Act

F & B Ceco president Arthur Florman calls the new splicer "a major development for joining film for continuous processing in the picture industry."

Program to Save "Undeliverable" Prints

Post Office Department Cooperates With NAVA Film Council

THE RECOVERY of literally hundreds of "lost" 16mm film prints which have previously ended up in Dead Parcel Post Branches of the U. S. Post Office throughout the U. S. and which would otherwise have been burned as "undeliverable" is the objective of a laudable new program launched jointly by the Post Office Department and the Film Council of the National Audio-Visual Association.

These "lost" films which have become separated from their shipping cases or without shipping labels will henceforth be sent to

professional acquainted with productions of every type."

The scope of the project is illustrated by early reports. More than 100 reels were inspected in New York City and San Francisco; nearly 200 "undeliverable" films were screened by the Chicago representative. This represents an accumulation of prints since last August, when the Post Office called a halt to the destruction of unclaimed films in anticipation of the new program.

Aids Business Film Sponsors

Well over a year of negotiation between Postal authorities and the Association Council members went into preparation of the joint program now underway. Business and industry film sponsors will be among the many beneficiaries. *

Milt Levy to Pike Productions as Manager of Industrial Sales

Milton L. Levy has joined Pike Productions, Inc., Newton, Mass., as manager of industrial sales. He is the former vice-president of D4 Studios in that city.

Collateral responsibilities for the 30-year veteran in the field of audio and visual communication include production work in the field of education and television. He began his career while a freshman at Brown University, writing and acting in radio. *

U.S. Postmaster General John A. Gronouski (left) and NAVA Film Council Chairman C. T. Chandler examine film cases following announcement of new program to salvage "undeliverable" prints.

a dozen Dead Parcel Post Branches located strategically throughout the U. S. At regular intervals, an authorized representative of the NAVA Film Council will collect all such films from these Branches for individual inspection and identification. Whenever possible the owner of each print will be notified; when exact identification cannot be made, NAVA headquarters at Fairfax, Virginia will publish a full description of the film in a new "found films bulletin."

Regulated by Copyright Laws

Copyright laws have made it necessary for the Post Office Department to burn such "undeliverable" prints after holding them for a reasonable period of time. In making the announcement, Film Council chairman C. T. Chandler (Film Center, Washington, D.C.) noted that under the new program every "undeliverable" film will "actually be put on a screen and identified by an experienced

MANHATTAN COLOR LAB SAYS: NEW EK6008 IS GREAT!

EK6008 is an ideal interneg stock for slide and filmstrip duplication, combining quality and economy on a never-before basis.

Why is Manhattan the *only* lab that can get the best out of 6008? Because nobody else has developed the expert know-how to take full advantage of the superior qualities of this material. Like any great performer, it's tough to handle . . . a little temperamental. But this presents no problem. Just call on the specialist!

Here's what Manhattan is doing with EK6008:

- ★ daily shooting and processing.
- ★ achieving correct contrast and detail with no masking of original.
- ★ reproducing color to incredibly close tolerance . . . with highest retention and resolution of detail.
- ★ combining art and transparency in the negative.
- ★ offering authoritative advice and assistance to producers who handle their own shooting.

Manhattan is the *only* lab specializing in the use of EK6008. We can deliver all the quality that's built into this stock . . . plus all the economy its use implies. Challenge us. *Fill in the coupon* and we'll send you samples to prove it.

Kodak Announces Three Top Appointments of Ad Managers

★ Three Eastman Kodak advertising executive appointments have been announced by A. Dexter Johnson, director of advertising and an assistant vice-president of that company.

Robert W. Edwards is now manager of professional and industrial advertising. He will supervise advertising in professional, industrial, commercial and scientific areas and also the advertising of other Kodak products for specialized markets.

Robert W. Brown, as manager of advertising services, is responsible for Kodak's editorial service bureau, the photo services and photographic illustrations divisions, advertising production and scheduling. In addition, he will supervise advertising budgeting, research, personnel and media coordination.

Manager of consumer advertising is Reo W. Young, now responsible for the advertising of still and movie equipment, amateur film and other photographic products and services in the consumer area.

★ ★ ★

Michael A. Cimino Joins MPO Videotronics as Film Director

★ Michael Antonio Cimino, an award-winning film director and designer, has joined MPO Videotronics, Inc., as a director.

Cimino is a member of the group of film makers who have used stills, quick cuts, visuals and graphic effects to obtain a new approach to commercial production. His films have won awards from both the American TV Commercial Festival and the International Broadcasting Competition of the Hollywood Ad Club. His most recent association was with Ferro, Mohammed & Schwartz.

At MPO, Cimino will not only direct but will also work on special assignments involving graphic design concepts and unusual approaches to live film.

★ ★ ★

Cornelius Vanderbilt, Jr. to American Films as Vice-Pres.

★ Cornelius Vanderbilt, Jr. has joined American Film Productions, Inc. as vice-president in charge of public services.

Mr. Vanderbilt is a well-known author, journalist and lecturer who has been producing his own films for the lecture platform for the past 35 years. He has written 19 books, 35 movie scenarios and hundreds of magazine stories.

BUSINESS SCREEN EXECUTIVE

NEWS OF STAFF APPOINTMENTS AND A-V INDUSTRY DEVELOPMENTS

Briggs Is Assistant Gen. Mgr. of Technicolor's C & E Branch

★ Now assistant general manager of the Technicolor Corporation's Commercial and Educational Branch is Huntley P. Briggs. His appointment was announced by Delbert K. Smith, vice-president of the company's Consumer Products Division.

Briggs is directly responsible to Robert T. Kreiman, general manager of the C&E Branch at the Burbank, Calif. headquarters. His activities include sales administration, sales training, advertising, sales promotion and public relations. He is the former vice-president in charge of the West Coast office for Rosenbloom Elias & Associates, Chicago advertising agency. Prior to that service he was director of advertising and public relations for the Hoffman Military Products Division in Los Angeles.

★ ★ ★

Gerald Rackett to Panacolor as Technical Director of Lab

★ Gerald F. Rackett, a 30-year veteran in the motion picture industry, has been named technical director at the Los Angeles plant of Panacolor, Inc. For 15 years he was assistant general manager and vice-president of Technicolor, later joining Columbia Pictures as a technical executive.

Rackett joined Panacolor six months ago when the company set out to simplify its process of optically printing color film and sound tracks on black and white film stock. Under his supervision, many improvements were made in the equipment, including the use of "on-the-fly" threading.

★ ★ ★

Noted Dutch Cameraman Joins Jamieson Film Staff at Dallas

★ Roel van de Wijngaard, associated with the Joop Geesink Studios in the Netherlands for the past eight years, has joined the Jamieson Film Company, Dallas, Texas.

The Holland-born cameraman has a film currently showing at the New York World's Fair and has received two Cannes Film Festival Awards. He speaks four languages and has produced television films for several countries, including the U. S., England and Germany. He is married to the former Laurese Lucas of Fort Worth.

Hal Friedman Joins Elektra, New York, as Exec. Producer

★ A well-known producer of live action television commercials, Harold L. Friedman has been named executive producer at Elektra Film Productions, Inc., in New York City.

At Elektra, Friedman will supervise a growing volume of live-action spots, working closely with creative director Lee Savage, who continues to personally supervise the company's creative activities.

★ ★ ★

Carl Lerner Joins Filmex, Inc.

★ Carl Lerner, director and co-writer of the current feature motion picture, *Black Like Me*, has joined Filmex, Inc., New York, as a writer-editor-director.

★ ★ ★

Lee Goodman to Rose-Magwood

★ Lee Goodman, former executive vice president at Filmways, has joined Rose-Magwood Productions as a director-producer. Long prominent in documentary film production, Goodman recently directed the hour-long television show, *Wonderful World of Golf* at Filmways and has been active on many TV commercial campaigns during his former affiliation.

KNIGHT TITLE SERVICE

Jim Graven Heads Industrial Audio-Visual Sales for B & H

A long-experienced sales executive in audio-visual equipment has been named manager of AV industrial sales at Bell & Howell. The appointment of James J. Graven to that post was announced last month by Carl G. Schreyer, president of Bell & Howell Photo Sales Company.

Theodore C. Donhauser succeeds Graven in his former post as midwest regional manager in the same field. Henry H. Wilson has been appointed audio-visual sales engineer.

Graven, a veteran of the industry, came to Bell & Howell in 1956 after serving as director of audio-visual sales for the Ampco Corporation and as purchasing agent for Motion Picture Engineering Co. Donhauser, who joined B&H in 1960, is former district manager for consumer products in the Salt Lake City area. Wilson has been administrator of B&H field service since 1957. In his new capacity he will specialize in technical matters relating to special installations and product modification.

TV Producer Bob Black Joins Crawley Films Ltd. in Ottawa

Television film producer Robert Black, who has produced or directed over 1,000 Tv. programs, including network shows, has joined Crawley Films Limited, Ot-

tawa, Canada, as producer-director.

Crawley also announced the promotion of James Williams to producer-director, bringing the company's staff of experienced producer-directors to 10, said to be the largest group in any Canadian film company.

Burt Grodin to Manage Sales at the Camera Service Center

Burt Grodin has been appointed sales manager of Camera Service Center, Inc., New York professional motion picture rental and sales concern. He will also be directly responsible for sales marketing and advertising.

Mr. Grodin has had many years of experience in the professional motion picture field. He was recently sales manager of Camera Equipment Company.

Neuberger to Direct Factual Film Sales for Technicolor

The appointment of Burton A. Neuberger as director of sales, non-theatrical pictures, of the Technicolor Corporation has been confirmed by executive vice-president Edward E. Ettinger. He will make his headquarters at 222 W. Adams St. in Chicago.

Serving as a producer, director and cameraman during his 17 years in the factual film field, Neuberger has been associated with Screen Gems, Universal and Warner Bros. The company noted the growing importance of the midwest as a center of production activity in basing its new office in Chicago.

Kodak Assigns Marvin Hodges to Studies of A-V Markets

Marvin P. Hodges has been assigned to a study of the markets for Kodak photographic products in the fields of education and training. His transfer to that company's marketing executive staff from the Apparatus & Optical Division sales department was announced last month. He will report to Lincoln V. Burrows.

Watkins Now Feddersen V. P.

Don Feddersen Commercial Productions, Los Angeles, has named William Watkins as vice-president in charge of production. He was formerly in charge of West Coast live and film production for Dancer, Fitzgerald and Sample advertising agency.

when industry buys audio-visual equipment the screen, most often, is

DA-LITE

Shown is the 8 ft. electrically operated Da-Lite Electrol® projection screen installed recently in a conference room in the Apollo Support Department of General Electric's Daytona Beach plant.

For important conferences, the Da-Lite projection screen at General Electric plays a useful role. Out of sight when not in use, the electrically operated screen lowers automatically at the touch of a button. Superb reproduction of projected pictures on Da-Lite's unique White Magic II® Chemi-Cote® glass beaded surface is further assurance of effective visual presentations.

Experts in the audio-visual field recommend the Da-Lite Electrol for unsurpassed performance. Electrols have been giving trouble-free service for over 26 years.

Da-Lite Electrol screens are available in a wide selection of sizes to fit your needs. They can be recessed in the ceiling or installed on wall or ceiling. Choose a Da-Lite screen—get the *Big Difference*—and the difference costs you nothing.

Write for specifications, prices and name of nearest franchised Audio-Visual dealer.

Dolphin Sets Up International Division to Handle Increased Overseas Theater Screen Advertising Use by U. S. Firms

Use of the theater screen advertising medium abroad continues to grow, and American companies are increasing their use of the medium. Recognizing this trend, a New York film company, Dolphin Productions, Inc., has recently established a new division, Dolphin International, to handle overseas productions and theater campaign placements for its clients.

According to Allan Stanley, Dolphin's president, it is now possible for advertisers to place cinema campaigns in over 110 overseas markets. He noted that outside of the United States the number of theaters continue to climb, with the Far East leading with an increase of 61 per cent over a five year period.

Medium Well-Accepted Abroad

Advertisers from European countries such as England, France and the Netherlands proportionately still make much more use of the medium abroad than their U.S. counterparts. Kenneth Silver, Dolphin vice-president, suggests that one reason for the U.S. lag is that advertising executives from European countries have had the benefit of experience with the medium at home, whereas this is not too often the case with American advertisers.

An indication that the ratio is closing fast is the full use of theater screen advertising in Puerto Rico where mainland advertisers have used up practically all the available time allotted to commercials. Many companies such as Eastman Kodak, Alka-Seltzer, Pepsi Cola, Clairol and Campbell Soup have used well-organized screen ad campaigns, have achieved outstanding successes with the medium in the emerging markets of Latin America, Asia and Africa.

Members of World Association

Product selling messages are almost always contained in exciting, tasteful color commercials which reach the theater screens through specialized contracting organizations, most of whom belong to the Screen Advertising World Association (SAWA) headquartered in London. A representative member and a Dolphin affiliate is the Pearl & Dean Group with companies established in Trinidad, Jamaica, Barbados, Malta, Cyprus, Sierra Leone, Nigeria, Ghana, Liberia, Greece, Thailand and Singapore.

An opportunity for U.S. adver-

tisers to gain a greater understanding of the international theater screen advertising medium is presented by the upcoming 11th annual International Advertising Film Festival, sponsored by SAWA.

At Venice, from June 15th through June 20th, delegates to this event will see a wide cross-section of the best television and cinema commercials from all parts of the world as well as meeting principals from the production and distribution organizations concerned with cinema advertising. A record number of U.S. delegates is expected.

19 U. S. ad agencies and film companies have entered 55 theater and television commercials. Results will be reported in the next issue of BUSINESS SCREEN, in July.

Radiant Screen Opens Service Depot in Nuremberg, Germany

Consistent increases in export sales have brought the establishment of a Nuremberg, Germany service and repair depot for European distributors of Radiant screens. The G.M.B.H. office, at Konstanzenstrasse 13-15 in that city, will also serve purchasers of lots of six or more screens and the Corporation will process a-v business for German schools, institutions and industrial users from this location.

RCA Burbank Facility Provides Acoustical Consulting Service

With Michael Rettinger as engineer in charge, a new acoustical consulting service has been announced by the Burbank, California, facility of the RCA Broadcast and Communications Products Division. Previously available only to users of RCA film recording equipment, the service is being extended to meet the needs of architects, builders, and others requiring professional counsel in acoustics.

Mr. Rettinger, who will direct the service, was responsible for the acoustical design of the Cinerama Center Theatre which opened last year in Hollywood. He has made acoustic analyses of scoring stages, review rooms and other facilities for Columbia Pictures Corp., Paramount Studios, Republic Studios, Revue Productions, Twentieth Century Fox and Walt Disney Studios.

NAVA DEALERS... ON THE JOB

A-V Service . . . whenever you need it

The smooth operation of A-V equipment is essential to any audio-visual program. This requires prompt service and dependable repairs — precisely what you get every time from a NAVA dealer.

He's a trained expert equipped to handle all types of repair work quickly and economically. Annual equipment maintenance, offered by your NAVA dealer, helps avoid those untimely emergency calls — but if they arise, he'll answer the panic button with swift, reliable service.

Your best A-V plans begin (and keep rolling) with a NAVA man. Call him whenever you need service. For a List of NAVA Dealers, showing services and rental equipment offered by each, write—

The 16th Annual Canadian Film Awards

Producers Share Top Honors With National Film Board

WELL-KNOWN CANADIAN film producers shared honors with the National Film Board in the 16th annual Canadian Film Awards competition. Awards were presented at a dinner in the Royal York Hotel, Toronto, on May 8th.

Canada's best public relations film was *Brampton Builds a Car*, produced by Crawley Films Limited and cited "for its dynamic description of automobile assembly, its effective presentation of a company image." The winning sales and promotion film was *Land on the Move*, produced by Westminster Films Limited.

Best of Training Pictures

The award for the best training and instruction film went to Robert Anderson Associates Limited for *Mrs. Reynolds Needs a Nurse*, cited "for skilful use of the hospital environment in presenting an approach to a common psychological problem."

Two pictures shared top honors for travel and recreation. *Rogers Pass*, produced by Peter J. Elkington, won "for bringing to life a piece of Canadian history and for its clear presentation of the facts in modern avalanche control."

Chetwynd Film Draws Praise

Co-winner in travel and recreation was Chetwynd Films Limited's film of the *Stanley Cup Finals 1963*, which drew praise "for its communication of the color, excitement, drama and tension of the game."

Canada's best general information picture of the year was *Fields of Sacrifice*, produced by the National Film Board of Canada and honored for "its style in the integration of war

"The Hutterites" cinematography won Canadian honors for best black and white camera work.

sequences with contemporary scenes to create an imaginative treatment of a difficult subject."

"Canadian Film of the Year"

The top award, for the "Canadian Film of the Year" also went to the Film Board. *Pou la Suite du Monde (So That the World Goes On)* is a feature-length picture made in the Robert Flaherty style of documentaries. It re-creates the tradition of hunting the porpoise at Ile-aux-Coudres, an island in the Gulf of St. Lawrence which preserves the language and customs of an earlier time.

There were a total of 149 entries submitted by 43 producers. The awards presentation followed a showing of several winning films at Film House and a reception hosted by the Association of Motion Picture Producers and Laboratories of Canada.

Directors Host Awards Ball

The Directors Guild of Canada was host for the Canadian Film Awards dance which concluded the festivities and concurrent meetings of producer, director and cameramen associations. More than 400 guests from across Canada and the United States were on hand to honor leading Canadian film makers.

Don Carter of London, Ontario, accepted the Trophy of the Association of Motion Picture Producers and Laboratories for the best amateur film, *House of Toys*.

Brede Wins Color Honors

Special awards presented by the Canadian Society of Cinematographers were won by Stan Brede, C.S.C. for the "best color cinematography" in the Crawley production, *Brampton Builds a Car*, and by John Spotton, C.S.C., for the best b&w cinematography in the Film Board production, *The Hutterites*.

The Canadian Awards are sponsored by The Canada Foundation, the Canadian Association for Adult Education and the Canadian Film Institute.

Cal Dunn Completes Shooting of His First Feature Picture

Production of his first feature-length motion picture (scheduled for national theatrical release later in the year) was confirmed by Cal Dunn, head of Chicago-based Cal Dunn Studios, Inc. Four weeks shooting on the Mojave Desert completed all major scenes on location for *The Desert Raven*, followed by two weeks on Hollywood sound stages.

The \$225,000 production, aimed at "family trade" is being financed by a group of Chicagoans, including men in the TV film and radio industry. A mystery yarn, set in a desert locale, the feature was directed by ex-Chicagoan Alan S. Lee and features Paul L'Amoreaux in the cast; Rachel Roman and Rosalind Roberts carry the feminine leads.

SOS Photo-Cine-Optics to Occupy New Quarters in N. Y.

The 38-year old professional motion picture equipment organization now known as S.O.S. Photo-Cine-Optics, Inc. will occupy a new 18,000 square foot headquarters at 387 Park Avenue South in New York City on June 30th. Announcement of the move was made this month by Alan C. Macauley, president.

Notable Business Films Are Produced by Hanna-Barbera

Known throughout the world for its animated cartoon features and TV characters, (*Yogi Bear*, *The Flintstones*, *Huckleberry Hound* and *The Jetsons*), Hanna-Barbera Productions of Hollywood entered the field of industrial film production less than a year ago, creating both animation and live-action subjects for leading American companies.

A biographical, all live-action film for Warner-Lambert Pharmaceutical, *The Story of Dr. Lister*, is a noteworthy example. Made in association with Film Counselors and directed by Arthur Pierson, the film had a distinguished cast which included Richard Ney, Wanda Hendrix, John Hoyt, Sean McGlory, John Archer and Lloyd Bochner.

The studio followed with *Of Mutual Interest*, covering the subject of mutual funds, with a cast headed by Donald Woods. An all-animation featurette for the National Association of Tobacco Distributors told the story of that industry in *Mr. Leaf*. With Jim

along production lines

Backus doing the voice of "Mr. Leaf," the film was premiered in Miami on April 4.

One of the company's TV sponsors, Ideal Toy Company, also sponsored a combination live-action half hour film to introduce the character of *Magilla Gorilla* to television audiences. George Fenneman acted as the host of this film.

"Blue Ribbon" Filmstrip Shows the Wide Range of Techniques

One of the Blue Ribbon winners at last month's American Film Festival in New York was a unique self-promotion slidefilm made by Lance Studios, a New York production firm.

Titled *Slide-imation*, the short filmstrip is an imaginative, fast-

A scene from "Slide-imation"

paced little presentation that crams 130 quick cut frames into its three-minute length. Unusual, too, is the use of zooms, pans, build-ups, pop-ons and squeeze motion, which are familiar techniques in motion pictures, but new and different in

slidefilms; has wide application.

According to David Wasserman, producer of the film, the *Slide-imation* technique can be used on any modern slidefilm projector, such as Salesmate, DuKane, etc., which can handle quick changes at the rate of three frames per second.

The *Slide-imation* film, which took the honors in the Public Relations and Sales Promotion Category at the American Film Festival, was composed of Lance's own promotion material combined with examples of the technique which the firm has recently made for clients.

Chapman 5 Occupies Larger Studio Facilities in Burbank

Chapman 5 Productions, Inc. has opened new, larger studios at 3805 West Magnolia Boulevard in Burbank, California. The company was previously located in Glendale.

New facilities include a large sound stage with permanently-installed lighting as well as sound recording, transfer and dubbing studios. A music library, animation and titling equipment, preview, editing and conference rooms are among other facilities in the 5,000-square foot studio.

Alexander Film Co. Sets Up East Coast Division in N. Y.

The East Coast Division of the Alexander Film Co. opened new offices in May at 6 East 45th St., in New York. Complete production services will augment the company's 27-acre studio complex at Colorado Springs, Colo.

THE EDITORIAL VIEWPOINT

UNFAIR COMPETITION IS HURTING
THE NATION'S ABLEST PRODUCERS

THE MARGIN BETWEEN profit and loss has been perilously close for most of the nation's specializing film producers, the companies whose films and related communications' media serve the bulk of U. S. industry. These are the same companies to whom the U. S. government turned for the most effective training films used by the armed forces in World War II.

They are also the leading employers of the industry's most highly-skilled technicians, craftsmen and supervisory personnel, such as directors, *all of whom belong to unions*. Their wages have certainly kept pace with rising costs and with the ratio of experience and skills acquired in production over the years.

It is no accident that the country's *most-
resultful* communications' tools continue to come from within these experienced shops, coast-to-coast. And, as private enterprisers, these film companies are taxpayers, through their payrolls and whenever merited profit margins are maintained. Not only *Federal* taxpayers but heavy contributors to state and local taxes, as well.

Small wonder then that organized groups of these companies are up-in-arms about two serious threats to their economic well-being.

Item: the Wayne State University Bulletin which states (on page 40): "Each year the motion picture production department makes a number of films for the University, *for business and industry, and for social agencies throughout the state*. Detroit companies object.

This publication supports House Resolution 86 now before the State Legislature of Michigan "for the purpose of investigation of a state-subsidized university's participation in the production of motion pictures and other visual aids for industry."

Neither Wayne State, nor any other tax-supported educational institution, has any business soliciting this type of work. It is beyond its physical and technical province, unrelated to education and unfair to private business which supports the tax rolls.

Item: A much more serious economic threat as well as a potentially great loss to the nation is involved in present Federal Government film procurement practices.

Here the Film Producers Association of N.Y. puts the problem squarely before U. S. government agencies and departments involved, as well as the organized crafts.

Says Harold Klein, executive director of the FPA, "production of film for government over the past few years has declined, with the past 12 months showing a tremendous drop in such production. Federal agencies are generally bound to award contracts to the lowest bidder

STILLWELL 6-4600 • Est. 1940

THE EDITORIAL VIEWPOINT:

(CONTINUED FROM THE PRECEDING PAGE 85)
regardless of union status. Consequently, the disparity between bids from a union producer and that of a company free from such contract restrictions operates to the detriment of organized industry.

"As far as I see it, there is only one way at this time to bring our people back into the running and that is to equalize our conditions with that of unfair competition. Unions must realize that granting relief by way of elimination or reduction of mandatory crews, lay-over location pay on weekends, etc. will endure to the unions' benefit by providing more employment for their members."

We couldn't agree more with Mr. Klein. But we also believe that it's time for government, too, to take a new look at the problem. The low-quality of many recent productions is evidence of a failing policy. The loss of highly-skilled sources, so vital to the national defense, must be taken into account. And a government which has pledged its concern for minimum wage standards, for fair payment of skills at accepted rates, cannot turn its back on men and women who have spent their entire lives in acquiring these skills on the permanent pay-rolls of the nation's principal film producing companies.

Tighten up the requirements for a successful bidder! Put out film work on a cost-plus basis, if necessary. A minimum of experience-years, proof of reliability, previous Government contracts and evidence of permanent staff are suggested criteria.

The Federal Government has seldom, if ever, had a contractual price dispute with the companies who were its dependable suppliers through World War II and the years after. But who will answer for a failing informational program that has to depend on shoddy screen fare? Who will answer for the "studio-in-his-hat" operator with neither staff nor facility? And who will answer for the nation's welfare when its vital military training films cost lives in the field or cause the country to lose a war anywhere on the face of the globe?

* * *

*Film Paragraph in Wall Street Journal Ad
Should Remind Sponsors of Tie-In Potential*

The May 20th issue of the WALL STREET JOURNAL, carrying a full-page ad of the U.S. Independent Telephone Assn. with a bold-faced paragraph about the availability of the USITA motion picture, *The Independent*, reminds us that every leading company with such films should look into that excellent promotional opportunity.

Put a squibb, a box, a paragraph or a column about your films in an occasional national publication ad! Pick the media which reach the kind of relevant audiences who should be seeing your pictures. You'll advance your film program, surprise top management with the gratifying results. But better be sure you have the necessary prints on hand to meet the demand!

We still remember the week in which Alcoa advertised its films in a Post ad. Modern Talk-

Creative Filmmaker Morton Goldsholl Elected "Art Director of Year" by National Society

Film has intrigued Mort Goldsholl, noted designer and art director, for many years. And his efforts, both commercial and experimental, have been rewarded with many honors as well as excellent results. Because Mort has brought fresh stimulus to creativity in film, all of us engaged in the medium have benefited.

On Monday, May 25th, some 4,000 art directors and designers throughout the country bestowed on Morton Goldsholl the highest honor of their craft, naming him "Art Director of the Year." The president of Chicago area-based Goldsholl & Associates and our good friend and neighbor received the gold T-square of the National Society of Art Directors at a luncheon in his honor at the Americana Hotel in New York.

Honor Helen Krupka of Cal Dunn Studios as Chicago's "Advertising Woman of the Year"

Congratulations to Helen A. Krupka of Cal Dunn Studios, Inc., well-known Chicago film producers. Helen received the highest honor accorded advertising women in the Midwest when she was selected (on April 12) as Chicago's 1964 "Advertising Woman of the Year."

She was the first person in the business film industry to receive this award and only the seventh to be so honored by the Women's Advertising Club of Chicago. The creative services director of Dunn Studios received her award from U. S. Senator Margaret Chase Smith during a luncheon ceremony attended by 300 persons in the Guildhall of the Ambassador West Hotel in Chicago.

* * *

Industry Mourns Loss of Two Respected Men

His many friends in the industry mourn the passing of Henry Solow, 60, who was production chief of the 16mm Division at Consolidated Film Industries. At CFI since 1946, he is survived by his widow, Mildred, and his brother, Sidney P. Solow, vice-president and general manager of Consolidated.

One of the best-known pioneers in the audio-visual field, Fred G. Roberts, Jr., president of Traid Corporation, Encino, California, passed away suddenly in his home in that city in April. A Navy veteran in World War II, Fred was for many years head of the Educational Department at Bell & Howell, founded the nationwide network of specializing dealers.

INDUSTRIAL AUDIO-VISUAL:

(CONTINUED FROM PAGE 17)
cate changes in the marketing picture to top management of that company. Charles Woehrle (3M) told of his experiences in supplying a-v meeting materials for implant use. One of these programs serves a 1,500-man supervisory conference; another is the annual 3M shareholders' meeting with an attendance of nearly 2,000 persons.

Gerard K. Hall (National Cash Register) talked on "Programmed Instruction" techniques being applied by that company and Dan Rochford (Standard Oil N.J.) brought the membership up to date on "What's New in Motivating People." The European Editor of BUSINESS SCREEN, Peter Rigg, reported on the use of audio-visuals by overseas divisions of U. S. companies. His report was especially pertinent in the matter of proper translation and the use of readily-understood idioms. Foreign versions, he concluded, must be handled with extreme care to achieve desired results.

Nine new members were introduced at the spring meeting. These included William C. Herman (Eli Lilly & Company); Albert S. Schlachtmeyer (Link Belt); Donald A. Benjamin (Columbia Gas System); James G. Damon, Jr. (IBM World Trade Corp.); Ronald Kaas (Westinghouse Electric); Darrell T. Rathbun (American Standard); William T. Walton (IBM); Herbert D. Johnson (3M); and James H. Moquin (Dow Chemical).

A panel discussion on "Motion Picture Distribution Today" included presentations by Jerry Curto (Santa Fe) who spoke on TV showings; Arch Smith, on "Reaching Community Audiences" and Frank Greenleaf (U.S. Steel) speaking of "Theater Audiences." IAVA past-president and historian James Craig (General Motors) was moderator of this panel.

Consolidated Film Industries has its own separate filmstrip and art department... staffed with highly skilled craftsmen... backed up by the same chemical control and printing know-how as in our major motion picture production.

We can produce masters from any type of material... 35mm to 8 x 10 transparencies, opaque art to a 30 field size or directly from a three dimensional product. Our lighting techniques insure faithful color rendition with minimum contrast gain.

Specially designed continuous-loop printing equipment produces uniform filmstrips from scratch-free negatives.

One, ten, a hundred or a thousand prints... your release prints will consistently match the approval sample.

A company is known by the men it keeps!

... and that's why Modern is the best-known company in the field of sponsored film distribution. The cumulative film experience of the men shown above, who guide sponsored programs, is more than 204 years ... and they're backed up by more than 250 people who operate Modern's 32 film libraries. This knowledge and experience with every phase of film distribution—with community audiences, television and theaters—provides sponsors with film programs structured to meet their goals. Flexible patterns of circulation coupled with merchandising and promotion know-how leads to productive results for sponsors.

These skills are backed by the most modern and complete dis-

tribution facilities in the industry. The accuracy of advance playdate notification, reports, certifications and annual summaries is assured by the latest computers and data-processing equipment. An unbelievably smooth-running organization with unequalled facilities provides faultless service to sponsors and film users.

Whether you are planning a film or wondering what to do about distribution for the film you've just completed, consult Modern. Modern has the men with know-how, the facilities, equipment and resources to insure the best possible distribution program. And of at least equal importance ... it has the want-to!

14 foot professional screen installation. Can travel in 1 light weight case in trunk of car. One person can set up in 30 minutes.

If you want a screen larger than 14 feet—maybe one up to 50 feet—you need 3 more cases, another 30 minutes, and 2 more people. Reasonable.

Completely dressed professional stage with screens—up to 40 feet wide. Suitable for auditoriums, ball-rooms, and meeting rooms. Loads in 12 light weight

cases—will fit in one hotel elevator. Can be set up in four hours by four people. Reasonable.

CPE products are designed to help you present audio-visuals and shows in the most professional manner possible. In addition to a complete line of portable screens and stages, we specialize in

electronic control units, lecterns, light stands, wide screen projectors, audio-visual equipment tables, chart stands, and screen presentation accessories.

When you're in Chicago, contact Harvey Wilcox at SU 4-0263 for a tour of CPE facilities . . .

Fastest and finest in quality color reversal films Ansochrome D/200, D/100 and D/50!

A whole new world of picture possibilities is opened to you with these important new Ansochrome® high speed films!

Ansochrome D 200 is much *more* than an extremely fast color film. It is also a *quality* color reversal film—with exceptional color fidelity, good color saturation and sharpness you have never associated with high speed color films.

In Ansochrome D 100, you get a *fast* color film of magnificent quality. Color rendition is superb, with rich, fully saturated primaries and delicate shadings handled with amazing fidelity. The high acutance of Ansochrome D 100 makes it an excellent choice for assignments requiring big screen images. For work under the lights, choose Anso-

chrome T/100, the companion film especially balanced for Tungsten illumination.

Ansochrome D/50 brings you superb color quality and sharpness in a 16 or 35mm daylight film with a speed of 50—ideal for many outdoor scenes.

These new Ansochrome films are available in long lengths of 16mm, 35mm and (except Ansochrome D/50) 70mm stock. Be sure to try a test roll soon—and discover how much good color you've been missing!

THE EDITORIAL VIEWPOINT

"The Marvelous Mousetrap"

STARRING WALLY COX

A motion picture has to be good, has to do its intended job in an outstanding way in order to win this kind of top recognition:

BLUE RIBBON AWARD

American Film Festival 1964—"Best Film in Economic Education Category."

GEORGE WASHINGTON HONOR MEDAL

Freedoms Foundation at Valley Forge—"For Outstanding Achievement in Bringing About a Better Understanding of the American Way of Life."

AWARD OF MERIT

National Association of Manufacturers—"... Specifically selected for exhibition at the Industrial Relations Film Forum ... as a special feature of the NAM Institute on Industrial Relations."

And more: Mr. Arch N. Booth, Executive Vice President of the U. S. Chamber of Commerce: "The Marvelous Mousetrap does an excellent job of explaining the American free competitive enterprise system in an effective and entertaining way."

BNA's "The Marvelous Mousetrap" is light-hearted, but its lessons are unforgettable ... more important than ever today for any company's internal communications program. The message? Why the company trusts each employee to do his job the best he can ... and how every employee contributes to his company's continuity, profits, and success in business.

16mm. ... sound and color ... running time 24 minutes.

Prints are available for purchase, or rental for any period of time. A nominal preview charge of \$15 can be applied to later purchase or rental.

Write for more information about "The Marvelous Mousetrap". ... and other BNA films for employee communications and supervisory training.

PROJECTORS YOU CAN BUY AND USE

THE INNOVATORS, bless their inventive minds, were well-represented around the lobby of the Hotel Sherman in Chicago during the recently-concluded National Audio-Visual Trade Show reported in this issue.

The man whose projector carries 10,000 filmstrip images (answering to push-button selection) shared his blueprints with that hopeful maker of a "less than \$100" 8mm optical machine; news of a "\$500" videotape recorder-reproducer made the item about its \$6,000 competitor seem less exciting ...

But up on the Trade Show floor, exhibitors were doing business with a sizeable number of *here-today-and-ready-to-go* projectors, screens and other items. Turn to our Special Report beginning on page 37 for the *factual* news. ☐

Xerox Corporation Sponsors 16mm Prints of "The Making of the President—1960"

The Xerox Corporation has announced that 16mm sound prints of the 1963-award-winning television documentary motion picture, *The Making of the President—1960*, are being made available for free loan by educational, civic and church groups throughout the U. S.

This "pageant of American politics brought to life" is to be offered as two 40-minute 16mm sound films. One segment has been retitled *The Battle for the Nomination*; the second is called *The Battle for the Presidency*.

Reservations for either or both films may be made on written request to this specific address: The Making of the President, Xerox Corporation, Rochester, N. Y. 14604. Groups must specify *dates desired for each segment, if showings are not on the same day*, so that all can view the complete program in proper sequence.

The original television program (on film) was awarded the Grand Prix at the Cannes International Television Festival in 1963 and in May of 1964, the National Academy of Television Arts and Sciences gave the program its top Emmy award as the "program of the year." It also won three other Emmy awards as "the year's outstanding documentary," with the "best film editing and music."

Xerox, a consistent backer of controversial and thought-provoking television programs, recently announced that it would give \$4 million worth of support to a six-program series on the United Nations — and not even present product commercials. Some of the world's finest talent, including noted producers and directors, writers, actors and composers, are working on this exciting UN project. Costs for this series would be prohibitive for anyone to undertake were it not for the fact that all these talented people are donating their services. A timely film for *this* year. ☐

Don't buy it

try it.

The way to sell anything easier and better is through visual persuasion. Demonstration. Right on your prospect's desk.

How? With the Videotronic 8, the lightweight repeating 8mm sound projector that puts your sales story across the same way every time, at any time. Simple to use. One-knob control. Takes up to 15 minutes of motion-picture film. Has a self-contained screen and sound system.

You can try this proven sales-improvement system by simply leasing the Videotronic 8. No need to make a major capital investment to equip your

sales force. Most lease plans average out to less than 75¢ a day per man.

Any film you now have can be easily converted to use in the Videotronic 8. Or we can make a film for you. After all, MPO is the world's largest producer of sponsored films.

Call or write MPO Videotronics, Inc., Repeater Sales Div., 210 W. 65 St., N. Y. 23. (212) TN 7-8200.

MPO Videotronic 8

THE EDITORIAL VIEWPOINT:

Michigan's Governor, State Legislators at Lansing Premiere of American Oil Picture

☆ Premiere showings of good new sponsored films have attracted VIP-studded audiences within recent months. Latest of these events was the unveiling of the American Oil Company's picture, *Happy Holidays . . . Anywhere in Michigan*, which was viewed by Governor George Romney, members of the Michigan legislature and other high administrative officials of that state. The showing was held on Thursday evening, May 28th in the Lansing Room of the Jack Tar Hotel in Lansing.

A reception and dinner preceding the first public showing of the film was hosted by Milo I. Hector, Detroit regional manager for the sponsor's Standard Oil Division. Aimed at stimulating tourist travel, the new 28-minute color film presents a generous sampling of Michigan's tourist attractions.

The third in a *Happy Holidays*' series being produced by Parthenon Pictures of Hollywood for American Oil is being fortified by a two-million piece mail promotional campaign aimed at encouraging showings at clubs, civic groups, schools and other organized group audiences. This will get under way as soon as prints of the film are available in local offices of the national distributor, Modern Talking Picture Service, Inc., serving both U.S. and Canadian audiences. The film will also be available through Modern for public service-television station requests.

In his introduction to the premiere audience, Hector noted that none of these *Happy Holiday* films contain "commercials." The name of the sponsor is never mentioned in the narration and appears visually only in unobtrusive title cards at the opening and close of each picture.

"This is not entirely a philanthropic view," he added. "We take the long view that if more people take more vacation trips into Michigan, for example, some of them are bound to stop at Standard's attractive and frequently-encountered service stations in the state and along the way."

This enlightened sponsor viewpoint is matched by the unusual audience values in the series. Parthenon abandoned the usual "guide-book" format and instead has presented a series of subjective vignettes which add up to a promising cross-section of what a family can see and do on day trips, week ends or longer vacation tours. The approach has won award-honors for previous films in the *Holiday* series, one on *Illinois* and the other, . . . *Along the Potomac*, depicting the sights in and around Washington, D. C.

Tokyo Olympic Film Society to produce the official documentary film of this year's games.

The anticipated three-hour documentary film will record track and field events in the 80,000-capacity National Stadium; field hockey, wrestling and volleyball in the Komazawa sports complex; swimming, basketball and judo in the Yoyogi sports center; and the sailing competition to be held on Sagami Bay. The U. S. can take pride in the announcement by Nagase & Co., Ltd., distributors of Kodak products in Japan, that Eastman 35 mm color negative film has been selected for the production.

The Olympic films will be processed in Tokyo by Far East Laboratories, Inc., a Nagase subsidiary. In order to speed production, the lab will provide the film makers with special cutting, editing and conference rooms. At the previous games in Rome (1960), Eastman color negative film recorded the events for the Instituto Nazionale Luce. Kodachrome film was used in the official motion picture of the Melbourne, Australia, Olympics in 1956.

Chicago Film Council's "Man of the Year"

Award Given to Publisher of Business Screen

Members of the Chicago Film Council have named the publisher of BUSINESS SCREEN as "Chicago's Outstanding Audio-Visual Personality of the Year" and bestowed this appreciated honor on Ott Coelln at their meeting in our town on the evening of June 18th. The presentation was made by Bernard Mack, retiring Council president.

The intra-industry group of professionals in distribution, production and use of audio-visuals in industry, education and community affairs, annually selects one of the city's leaders in the field for this singular honor. We're indebted to its members and our many friends for this selection.

Three More '64 Festivals to Go; Widely-Varying Entry Fees Draw Reader Inquiry

What price glory? This publication has extended its whole-hearted respect to the dedicated community and civic leaders of Columbus, Ohio who annually sponsor a well-regarded Film Festival and "Chris" awards. They find it possible to meet the expenses involved with a modest \$5 entry fee per title.

The equally admirable San Francisco International Film Festival, emphasizing feature films but with two important sections devoted to "Film for Communication" and "Film for Art", also charges a reasonable \$15 entry fee, but only after the entry has been invited by the Festival after review of its forms.

Both of these events are well-supported by volunteers and by financial aid from sponsoring groups and individuals. The "commercial" host for such a program has to pay his own way and the costs go up.

So if you want to compete for one of those handsome silver bowls offered by the Inter-

(CONTINUED ON THE FOLLOWING PAGE 61)

Fairchild 400 repeating sound projector

the 8mm that's
better than 16!

The Fairchild 400 is the most reliable rear-screen sound projector ever developed. Because it is the most efficient. Take film life, for example. You get eight to ten times the number of plays you get with 16mm. Three thousand plays from a single print is not unusual! And 8mm dupes, printed from the same originals as 16, cost less because they require only 1/4 as much film. Think of the savings to your film program. The Fairchild handles up to 20 minutes of sound color film on a single cartridge, repeats automatically, and needs no maintenance except an occasional bulb change. The Fairchild 400 weighs only 17 lbs, easier to carry than a portable typewriter. Its top flips up for front projection to larger audiences. It goes anywhere and performs brilliantly in broad daylight. A tireless demonstrator, it takes less than 2 sq ft of counter space, and runs absolutely unattended.

Write today for full information and prices.

SPECIFICATIONS

- Screen Size—8 1/2 x 11"
- Dimensions—12 x 12 x 9 3/4 (closed)
12 x 12 x 19 3/4 (opened)
- Weight—17 lbs
- Amplifier—100% transistorized. No warm-up (high quality Fairchild silicon transistors)
- Frequency response—80 to 7000 cycles $\pm$ 3db
- Overall Amplifier output—3 watts
- Speaker—4 x 6 oval P. M.
- Lamp—high efficiency 8V 50W pre-focused
- Lens—f/1.6 7mm coated lens
- Motor—induction type, constant speed
- Power consumption—100 watts
- Operates on 105-125 volts, 60 cycles A.C.

HOW TO TURN A DEAF EAR TO SALES RESISTANCE

Showing how to use creative selling techniques, delivers better results than mere exhortation for improved performance, most sales trainers say. They find the filmstrip

"Turning a Deaf Ear to Sales Resistance"

remarkably effective in showing men why prospects build a wall of resistance to any sales presentation, no matter how desirable.

Typical situations demonstrate how to develop the art of by-passing objectives; how to turn a deaf-ear to sales resistance; how to continue to sell . . . and to close.

Fortified with mental pictures from the color filmstrip, salesmen are immunized against the fear of prospect resistance.

One of a series of six filmstrips:

"SELLING IS MENTAL"

provides tested material for 18 meetings on sales training.

Secretary of Defense Reports to Nation With Annual Film

THE PROGRESS and achievements of the Armed Forces in facing up to Communist challenges throughout the globe in the past year are presented in Secretary of Defense McNamara's 1964 Film Report, *Partners in Freedom*, just released worldwide by the Department of Defense.

Secretary McNamara introduces the 30-minute color film, pointing out the nuclear superiority and flexibility at all levels achieved by U. S. forces after three years of military buildup. From actual fighting in the jungles of Vietnam to mercy missions in Africa and "Alliance for Progress" help in Latin America, the film graphically shows what our soldiers, sailors and airmen are doing to maintain the frontiers of the free world.

President Johnson, as Commander-in-Chief, sums up America's military policy and goals in a stirring finale.

The 1964 Report film was produced for Defense by the Air Force at Orlando Air Force Base with Colonel Bertram Kalisch, USAR, Ret., serving as executive producer. Previous Defense Film Reports, *The Eagle's Talon* (in 1962) and *Pentagon Report* (1963) received Freedoms Foundation awards.

16mm sound prints for non-profit public showings may be obtained from Army Audio-Visual Communications Centers in nine U. S. areas or directly from the Office of Public Affairs, Department of Defense, Washington, D. C.

Farm Film Foundation Cites Riley With Improvement Award

☆ For the past decade, annual awards of the Farm Film Foundation have helped to advance the art and science of communications among relevant groups serving the cause of education in rural America.

On the 10th Anniversary of this program, observed at a dinner gathering in the Hubert Room at New Mexico State University, Las Cruces, New Mexico, July 13th, Lewis W. Riley, visual instruction editor at Clemson University, South Carolina, received the Foundation's \$500 Professional Improvement Award. It was the second time around for Riley, who received the same award in 1959.

Edith T. Bennett, executive vice-president of the Farm Film

Foundation, presented Riley with his Certificate of Award, a check for \$500 and, in commemoration of the Anniversary occasion, an engraved sterling silver Revere bowl. Hosts for the dinner tendered to the annual meeting of the American Association of Agricultural College Editors, meeting in Las Cruces, was the Farm Foundation and the Foundation for American Agriculture.

William O. Maxwell of the International Harvester Company, Chicago, was the principal speaker and assisted in presentation of the award and of an Honorable Mention certificate given to Roy Mills of Purdue University, which was accompanied by a cash award of \$50.

A veteran of U. S. Navy service as a motion picture cameraman, Riley has been visual aids specialist at Clemson since 1937. He is responsible for the production and distribution of photographic visual aids for the Agricultural Extension Service and Experiment Station. He produces two or three color films each year and five or six short television subjects.

Judges who selected the winners were: Dr. Landis Bennett, in charge of visual aids, Agricultural Extension Service, North Carolina State College; Mr. Maxwell; and James E. Gibson, chief, Agricultural Division, Office of Public Affairs of the Peace Corps.

3M Company Acquires 100% Ownership of Ferrania, S.p.A.

Ferrania, S.p.A., one of Europe's leading makers of photographic products, has been merged with the 3M Company. Simultaneous announcement of the transaction was made at 3M headquarters in St. Paul, Minn. and at Ferrania's main office in Milan, Italy last month. It was effective on July 1.

"The primary value of the acquisition will be in photographic products for industrial markets," Bert S. Cross, president of 3M, disclosed. He noted that his firm is acquiring 100 per cent ownership of Ferrania and its interests in affiliated companies.

The Italian-based firm has some 10,000 items in its product line, including color and black-and-white films, photographic papers and accessories, X-ray films, microfilm, 35mm and 16mm motion picture film, aero-photographic films and graphic arts products.

Ferrania marketing activity in the U. S. has been previously limited to industrial photographic products. It employs 3,700 workers at its main plant in the town of Ferrania near Genoa and an-

EBF Signs Pact With NBC to Distribute Filmed Programs

Encyclopaedia Britannica Films, Inc. will adapt filmed television documentaries of the National Broadcasting Company for print sales and rentals to schools, colleges, universities, libraries and adult education centers under terms of a new five-year contract announced on June 29.

The contract, which gives EBF the right to distribute films of any of NBC's documentary, news, special, religious and children's programs was made public by George A. Graham, Jr., chairman of the board of NBC Films and Charles Benton, president of EBF.

The first three NBC programs to be adapted by EBF are *Cuba: Bay of Pigs*; *Birth Control—How?* and *The American Revolution of '63*. The latter program, dealing

with civil rights, has won eight awards, plus an Emmy nomination.

Dr. Patrick Hazzard, head of the English department of Beaver College, Glenside, Pa., has been retained by EBF as television consultant for the project. He is chairman of the committee on commercial broadcasting of the National Council of Teachers of English and editor of the "public arts" section of *THE ENGLISH JOURNAL*.

Speaking of the new pact, Benton said:

"We are consciously seeking out programs which were produced to explain controversial problems — programs which can be used in schools and by discussion groups. We feel that greater public understanding of the basic issues facing our country today will result from this kind of free discussion."

One important aim of this close association of NBC and EBF, according to a network spokesman, is "to reach more systematically and in greater depth the specialized audiences interested in the programs and who may have missed the original airing on TV."

Set Up Vocational Classes for Film Handlers in New York City

Formulation of a vocational school program to train film handlers for the motion picture and television industries in the New York area is now underway according to Harold Klein, executive director of the Film Producers Association of New York.

A meeting sponsored by Saul Jeffee, president of Movielab, Inc., and attended by leading officials of the New York City Board of Education, networks, unions, laboratories, production and service companies, was held in late May. The meeting disclosed that federal, state and city authorities are ready, willing and able to provide a training program for unemployed young adults and a separate upgrading program for low-level technicians who are currently employed.

"Training classes could be organized with as few as 20 persons, with the courses involved running for a few months or longer. Similar programs are now in effect in industries such as watchmaking and shoe repair, with something like 3,000 trainees involved over-all in New York City alone," Mr. Klein said.

Genesis of Vital Mekong River Project in a Shell Picture of Worldwide Interest

Mastery of This Mighty River Means Food, Power for Millions

THE HARNESSING of the waters of the Mekong river is one of the world's major development projects. From its source high in Tibet, the Mekong flows down to the South China Sea, bordering the northern tip of Burma and on through Laos, Thailand, Cambodia and Viet-Nam. In its lower basin of 1,500 miles, it becomes an international river, affecting the lives and future of millions of people in that region.

Mekong — the Story of a River, is by all odds the most timely picture of the year to date. This 15-minute color documentary produced by the South East Asia Shell Film Unit is a brilliant introduction to the people and the country of the delta of the River Mekong, leading into and explaining the plans for development of this area, known as the Mekong Project. It is sponsored by The Shell International Petroleum Company Ltd.

24 Countries Working Together

The four nations of the delta formed an international committee under United Nations auspices to direct a series of detailed studies of the Lower Mekong Basin and to propose a plan to control and direct the river. 24 nations are cooperating in this venture. Their work is coordinated through ECAFE (Economic Commission for Asia and the Far East).

The action of *Mekong* has as its background the work of engineers and specialists who have studied the plateau, probed the waterways, examined the Mekong's entire course from the air, photographed, mapped, measured rainfall, and recorded speeds of flow. The river can be a cruel and destructive giant, its floods wreak havoc to vast areas of rich land.

The plan is to construct a series of dams from North Laos to the

Cambodian plains, then more dams and barrages on larger tributaries to provide water for irrigation and for power. The river is to be made navigable from Vientiane to the sea — a distance of 1,500 miles. The film shows Indians, Japanese, Australians and specialists from countries of the Basin working together, carrying out geological studies and preliminary drillings to test the sub-soil. In 1963, the bulldozers shifted earth for a diversionary dam — the first step in a 20-30 year project envisioned by ECAFE.

of Value to Developing Nations

Peter Rigg, European Editor for BUSINESS SCREEN, calls *Mekong* "the top, for the size of its conception, its value to the world's developing nations and the sheer beauty of its presentation."

Both 16mm and 35mm versions of the film have been made available of a first English language version; both French and Thai versions are being completed. *Mekong* was produced by Lionel Cole (Film Centre Ltd.) and directed by John Armstrong. Photography is a notable asset with both Arthur Wooster and S. Lawrence credited.

A few lines from the opening commentary of the film suggest the sweep of its images:

"To the people of its banks, the Mekong is their own. Its waters are the highway, the crown of life. Respect and joy to the giver of movement, strength, renewal. On to the South it flows, past Vientiane; then pauses, as it were, above the Khone Falls to gather force again. Now with its tributaries swelling in — it cleaves the broad plains of Cambodia; washes the stone feet of Udong, their ancient capital..."

Most Important Film of Decade?

There are 20 millions of people within the area of the Lower Basin; its area is larger than France, larger than Japan. There must be crops to feed the hungry of this and nearby lands. The Mekong Project may well hold the fate of the world. Mindful of the battles now being waged along its banks, at the delta of the Mekong beside the South China Sea and in Laos, this may well be the most important picture of the decade.

Controlled irrigation will bring increased crop yields to the Mekong basin.

Swollen by melting mountain snows, the river floods the valley low lands.

By the river, all men are fishermen whatever other trades they may ply... Below: the people who live beside the Mekong have put its waters to work.

Cite Seven Films for Industrial Relations Use

Receive Awards of Merit at Institute Sponsored by N.A.M.

BUSINESS EXECUTIVES at the recent 36th Institute on Industrial Relations, sponsored by the National Association of Manufacturers, have designated seven current motion pictures to receive the Institute's Award of Merit. The purpose of this 2nd Annual NAM Industrial Relations' Film Forum was to "seek out and focus attention on the cinematic releases of 1963 that could best implement a company's labor-management goals."

In selecting the award-winning films, a committee of industrial relations executives representing NAM member companies, stressed the importance of previewing each film before employee screenings. They also noted that discussion after the showing, led by informed supervision, increased the effectiveness of such presentations.

Titles of the Award of Merit winners, plus a brief description and the current source, are as follows:

☆ **Foreign Trade-Challenge of a Changing World** (16mm snd, b&w, 20 minutes). Distributed by Republic Steel Corp., Republic Bldg., Cleveland, Ohio.

• A film-lecture presentation featuring Dr. Gerhart Rosegger of Case Institute of Technology as he explains why countries trade with each other, center upon the principle of "comparative advantage." It describes the difference between "balance of trade" and "balance of payments," and discusses foreign exchange rates, tariffs and the need for free trade.

Judging committee commented: "this film is appropriate for exhibition to most exempt employees; the vocabulary appears to be somewhat advanced for a general employee audience."

☆ **I Just Work Here** (16mm snd, b&w, 17 minutes). Prints sold by Roundtable Films, Inc., 275 S. Beverly Drive, Beverly Hills, Calif.

• Three experiences in which he himself was treated poorly are recalled by an employee as he faces a difficult and complaining customer. As he imagines how each of these contacts might have been improved, he decides to try understanding the customer's point of view; to treat him as he would like to be treated.

Judging committee comment: "this film would . . . be well received by employees at almost any level in any industry."

☆ **The Marvelous Mousetrap** (16mm snd., color, 24 minutes). Apply to

Bureau of National Affairs, Inc., 1231 24th St., N. W., Washington, D. C.

• With humor and drama, this film shows the founding and growth of a company, how profits are used to insure job security — and how the slipshod workmanship of even one employee can jeopardize profits and security for all. The film develops understanding and support for the American free enterprise system as it encourages employees to do their best on assigned jobs. Wally Cox stars in a multiple role.

Judging committee comment: "previewers found this film to be generally excellent in the communication of its message."

☆ **Pulse of Life** (16mm snd, color, 27 minutes). Apply to Pyramid Film Producers, P. O. Box 1048, Santa Monica, Calif.

• Primarily aimed at rescue workers, this film shows procedures for treating resuscitation emergencies, using several real-life situations as well as demonstrations illustrated by models and cut-aways in a laboratory. Raymond Massey narrates.

☆ **Stress** (16mm snd, b&w, 24 minutes). Apply for terms to American Film Productions, Inc., 1600 Broadway, N. Y. 19, N. Y.

• This Swedish-produced film has narration easily understandable to American audiences as it dramatically illustrates the stress and strain under which employees in today's industrial society live. Film traces and documents reactions to stress of two individuals from a biological and environmental point of view to show how stress reactions can be minimized and reduced to the benefit of both employee and employer.

☆ **Target You** (16mm snd, color, 17 minutes). Apply to F. K. Rockett Productions, 729 Seward Street, Hollywood 35, Calif.

• Ronald Reagan reviews the history and stated intent of the Communist Party to extend its philosophy throughout the world as this film stresses the need for intensified security measures in order to maintain. (CONTINUED ON NEXT PAGE 20)

tain lead-time in American industry. Illustrated by relevant newsreel footage and dramatic sequences which show several aspects of security in defense production.

Judging committee comment: "although aimed primarily at defense employees, this film could easily serve to alert employees in any industry to the need for security . . . The judges found that this production was most effective in holding audience attention and communicating its message."

* * *

☆ That Magic Something (16mm snd, color, 5¼ minutes). Sponsored by the Martin Company, P. O. Box 5837, Orlando, Florida.

● A cartoon fable on the subject of product reliability, this film uses a Persian carpet setting in which missile products and flying carpets are broadly associated. Two protagonists, Abdul and Hammid, represent those who, on one hand, fail because they put profit ahead of reliability and, on the other, those who succeed because they place product reliability first and foremost.

Judging committee comment: "the serious message of reliability is presented with an enjoyably entertaining light touch that should appeal to almost any audience."

* * *

Announce First 3 Programs in Executive Development Series

☆ The series of twelve sound and color filmstrips in the recently announced "Executive Development Series" has been launched by the release of the first three subjects.

Now available for management preview are:

1. *Evaluation: a New Integration of Management Theory.* This subject was the recent winner of American Film Festival and NVPA "Day of Visuals" awards.
2. *Self-Analysis for Executive Success.*
3. *Your Inner Dynamics as a Communicator.*

Series is supplemented by related collateral material. These subjects "equate the latest findings in behavioral sciences with the development of the professional manager," according to Robert Ellis, president of the producing company, Executive Development, Inc.

For further details or for evaluation preview of the series address inquiries to the Reader Service Bureau, BUSINESS SCREEN, 7064 Sheridan Road, Chicago, Illinois 60626. Your inquiry will be promptly answered.

Pan Am Has New 19-Minute Color Film on World's Fair

☆ Pan American World Airways has a 19-minute color film in worldwide distribution to help promote attendance at the New York World's Fair. *World's Fair, New York* is being offered abroad with French, Italian, German, Spanish, Portuguese, Japanese and English sound tracks.

Capturing the glitter and glow of the Fair, the film will be available for overseas and domestic television use as well as for theatrical showings. It supplements the previous title, *Prologue, World's Fair*, which was released before the Fair opened and was selected for distribution abroad by the United States Information Agency and the United States Travel Service.

An indication of the promotional strength behind the Fair is given in the disclosure that both films are part of a \$2 million Pan Am advertising and sales promotion campaign designed to attract visitors to the U. S. and the Fair. Local Pan Am offices in the U. S. have prints for free loan.

* * *

Theaters Show J. C. Penney Picture on Cruise Fashions

☆ The J. C. Penney Company is offering a new color film, *Welcome Aboard*, to U. S. theaters (including drive-ins) for public service showings via United World Films, Inc. The film contains no advertising, is a 14-minute presentation of colorful cruise fashions worn by two lissome models aboard the S. S. Santa Rosa on a Caribbean cruise.

Betsy Palmer narrates as sequences show clothes for brief shore excursions, a variety of sun suits and the latest in swim wear apparel.

COLLECTOR'S ITEM!

NEW! ARRIFLEX 35

with built-in signal generator
and automatic start marker!

NOW! Throw away your "Clap-Stick"

Eureka! Now, without the use of clap-sticks, achieve perfectly-sync'd sound movies — easily, efficiently, **economically!** This new Arriflex 35 motion picture camera, factory-equipped* with a built-in signal generator and automatic start marker, becomes an even more versatile tool for the professional. In all filming, particularly news, candid and documentaries, the art of location synchronous sound recording is streamlined. And on the editing bench, your line-up is fast, accurate and economical.

The Arri built-in generator develops the required 60 cycle signal for lip synchronization and assures an

output frequency that is always a positive reflection of camera speed. The electrical output is compatible with every quarter-inch tape sync system in use today. Starting the 16 volt transistorized governor-controlled motor energizes marker lights, which go out the instant the camera comes to speed. Several frames are flashed at the beginning of each take to indicate the start mark.

The compact Arriflex 35, uniquely light weight and maneuverable, combines with modern compact recorders ideally — a perfect match for today's film assignments.

*Available only as an original installation on new cameras.

INCOMPARABLE VERSATILITY! The Arriflex 35 is shown: as a hand camera (left), with 400-foot magazine, matte box, and 16-volt variable-speed DC motor; and as a studio sound camera, fully blimped with 400-foot magazine (center); and with 1,000-foot blimp (right).

TWO-WAY RELAY FOR MANAGEMENT AND MEN

How can you win enthusiastic co-operation for your aims and policies . . . throughout your organization? The answer is: improve communications. Success for this depends in large degree on your Supervisors. To develop men adept at interpreting management goals and ideals . . . and conveying employee "climate" to management . . . many companies find valuable help in

"The Supervisor as a Representative of Management"

Third in a series of eight filmstrips clarifying the Supervisor's job, this film demonstrates practical methods . . . intensively tested and proved effective for building better two-way communications. Overall title:

NVPA Honors Films at "Day of Visuals"

National Visual Presentation Association Hosts Seminars;
Cites "Best Audio-Visuals" at Two-Day Program in New York

THE 11TH DAY OF VISUALS, an annual seminar and awards competition conducted by the National Visual Presentation Association, was held this year on June 24 and 25 at the Commodore Hotel in New York.

A two-day affair, the "Day of Visuals" presented a program of six panels of experts speaking on how and why audio-visuals are used in sales promotion, advertising, public relations, training, graphic statistics, and in planning and meeting. Moderators were Gerry Germain, Executive Assistant, Sales Promotion, Metropolitan Life Insurance Company; William J. Connolly, Manager of Advertising, Union Carbide Plastics Division; Herbert C. Rosenthal, President, Graphics Institute; Porter Henry, President, Porter Henry & Co.; Gene Zelazny, Visual Aids Consultant, McKinsey & Co.; and Charles Corn, Admaster Prints, Inc.

In addition to the six seminars, NVPA also gave awards to the "best audio-visual presentations of 1963" from almost 200 entries which were received into the annual competition.

According to Norman L. Bebell, of Bebell & Bebell Color Laboratories, chairman of the awards competition, the number of entries represented a substantial increase over last year. "The purpose of the Awards Competition is not to give prizes," Mr. Bebell said, "but rather to show the rest of the industry the quality work that can be done, and stimulate their interest in improving audio-visuals."

The 1964 NVPA Awards winners follow:

THE F&B/CECO SEAL OF APPROVAL A 6-Star Program for Your Protection

You can buy with confidence because F&B/CECO has instituted a product-approval program that takes all the guesswork out of deciding which professional motion picture equipment to buy.

An item of equipment bearing the F&B/CECO Seal of Approval:

1. Has been thoroughly tested in our shops and in the field and is certified for complete reliability.
2. Carries the double guarantee of F&B/CECO and the manufacturers...we back up manufacturers' guarantees with on-the-spot repair, adjustment, or exchange.
3. Is priced competitively or better—you pay nothing extra for the quality-assurance implicit in the Seal.
4. Enjoys the advantages of the industry's best facilities for testing, maintenance and repair.
5. Is backed by a complete stock of factory parts and trained technicians.
6. Seal-approved reconditioned used equipment carries all foregoing warranties.

We regard the establishment of the F&B/CECO Seal of Approval as a major step forward. We are confident you will, too.

Turteltaub & Moss End Year With Three NVPA Awards

☆ Turteltaub & Moss, just completing its first full year in film production, has won two "firsts" and one second place award in the annual film competition held by the National Visual Presentation Association.

First place awards were for a motion picture produced for Sun Oil Company and a filmstrip for 20th Century Fox; the second place award was for another Sunoco motion picture. In addition to these, the company worked cooperatively on another filmstrip which took a first place award for JACK AND JILL — a Curtis publication, and its agency Helitzer, Waring & Wayne.

During its first 12 months in (CONTINUED ON PAGE 62)

RCA FILM RECORDING EQUIPMENT TO MEET YOUR MOST EXACTING REQUIREMENTS

◆ VARI-DIRECTIONAL CONDENSER MICROPHONE

For maximum sound fidelity, start your film recordings with an RCA Varidirectional Condenser Microphone (MI-10006A-1). It features wide range directional pattern, high sensitivity, and self-contained battery power.

MAGNETIC FILM RECORDER/REPRODUCER ◆

The RCA Dual Magnetic Recorder (PM-75) features two separate mechanisms in one cabinet, selectable as two reproducers or combination recorder and reproducer. Available for 35mm, 17½mm, or 16mm film.

◆ AUTOMATIC MAGNETIC TAPE ERASER

The RCA Tape Eraser (MI-10880) features COMPLETE and UNIFORM erasure for all magnetic recorded signals with an automatic erasure cycle. It handles all magnetic recording stocks from ¼ inch audio tape to 2 inch TV tape.

OPTICAL FILM RECORDING SYSTEM ◆

The RCA PM-80 consists of a transistorized-amplifier system and a 16mm or 35mm optical film recorder. It features negative or direct positive variable area sound track recording. It is pre-assembled and factory tested for easy installation.

From start to finish on your sound film recording production, RCA has the quality product. In addition, RCA has an expert team of Field Sound Engineers for custom design of sound recording facilities. Want to know more about RCA recording equipment and service? Write: Dept. 100, RCA Broadcast & Communications Products Division, 2700 W. Olive Avenue, Burbank, California.

Focus on Science Films in Nation's Capital

200 Attend Annual Meeting of American Science Film Assn.

OVER 200 SCIENTISTS, science educators and scientific film makers from the U. S. and abroad attended the annual meeting of the American Science Film Association and the first Science Film Exposition, hosted by that group in Washington on May 11-13.

115 recent science films, from 8mm "single-concept" loop films made to show to university students, to an animated film made and produced by a computer were screened at the meetings. Randall M. Whaley, vice-president for Graduate Studies and Research at Wayne State University, Detroit, Michigan, is president of ASFA and of the International Science Film Association. He announced an expanded program to serve the needs of scientists.

Stressing the importance of film in international scientific exchanges, he told members of the Association:

"The rapid expansion of scientific investigation has brought about a greater need for the use of film as a tool of research, for reporting scientific information and for science teaching. Accordingly, ASFA plans to deal with inquiries and carry on film-related projects through several special committees."

The new committees appointed by Whaley are under the following chairmen: **EDUCATION**—headed by Leslie P. Greenhill, Pennsylvania State University; **RESEARCH**—Malcolm S. Ferguson, National Institutes of Health; **POPULAR SCIENCE**—E. G. Sherburne, Jr., American Association for the Advancement of Science; and **NEW CINEMATOGRAPHIC**

TECHNIQUES—John Flory, Eastman Kodak Company.

Ralph Buchsbaum, University of Pittsburgh, will head the organization's membership committee. Harold Goodwin, National Aeronautics and Space Administration, was named Editor of ASFA publications.

Highlights of the program included these papers: "Film as a Medium for Scientific Reporting," presented by Sol Dworkin, Bell Telephone Laboratories; "Science Films for Teaching," by O. S. Knudsen, Iowa State University; and "Cinematography in Research," which was discussed by Malcolm Ferguson.

At the concluding session, Dr. Roman Vishniac presented his new film, *Marine Biology*. A pioneer in time-lapse photography for nearly five decades, Dr. Vishniac predicted that "within the next 50 years all the definitely established scientific principles of today will be regarded as medieval superstition." □

F&B/Ceco Lighting Political Conventions for TV Networks

☆ A major supplier of film production equipment to the television and motion picture industry, Florman & Babb/CECO of New York City has been selected to furnish the lighting equipment to be used by all three major television networks at both the Republican and Democratic National Conventions this summer.

At presstime, F&B Ceco's Stewart Martin was already at the Republican convention in San Francisco to direct installations there. He goes to Atlantic City next. □

WE DON'T LIKE BLIND ADS EITHER. BUT . . .

. . . that's the best way we know of tracking down and capturing that most elusive of quarries, an outstanding writer of functional films and varied other media for business.

Do you know of a writer with gilt-edge credits in sales training, public relations, product presentation and merchandising, and maybe musical and dramatic writing, too?

Experience is important. So are originality and imagination. If you know of a writer who has *everything* . . . DON'T WAIT. WRITE POST-HASTE TO:

Box 64-4B, BUSINESS SCREEN MAGAZINE
7064 Sheridan Road, Chicago, Illinois 60626

This is the easiest way to
make slides and copies in 10 seconds.

This is why. The Polaroid Copymaker has everything you need for copying: two fluorescent lights for uniform illumination; close up lenses for pictures down to 1:1 magnification; and a built-in electric timer for exposure and development timing. The easel is marked off into eight field sizes to show exactly what will appear in the picture for various camera settings. Teamed with a Polaroid Model 160 Land Camera, the Polaroid Copymaker allows you to make on-the-spot close-ups of anything that will fit into an 11" x 14" space—charts, maps, books, small objects.

You'll make prints or line copy slides in just 10 seconds, continu-

ous tone slides in two minutes. With no trouble. Just load and shoot the transparency film the same way as standard film. Push a button, pull a tab, wait a moment, remove your transparency. After a quick hardening, put it in a snap-together frame and it's ready for projection.

Whether you want slides or prints, you'll see your results immediately. No waiting. No expensive darkroom. And the Polaroid Copymaker is so simple, practically anyone can learn to operate it in no time. If your school, office, laboratory or drafting room needs quick, quality copies, why not get them the easiest way? With the

Over Two Million View U. S.

Bureau of Fisheries' Pictures

☆ The Bureau of Commercial Fisheries, Department of the Interior, reports that more than two million persons in the U. S. were in 16mm group audiences which borrowed prints of the Bureau's 21 films from its 200 nationwide library sources. In addition, large audiences saw these films on television.

Three sponsored films were among the most popular subjects last year. *Salmon — Catch to Can*, sponsored by Canned Salmon Institute, was the number one film, with *Outboard Fisherman, U.S.A.*, sponsored by the Outboard Marine Corporation, and *Sponge — Treasure from the Sea*, sponsored by the Sponge and Chamois Institute, close "runners-up" in audience popularity.

The motion picture *It's the Maine Sardine*, sponsored by the Maine Sardine Industry in 1948, was the "top" film for years. After 16 years in distribution, this long-lived title still rated "No. 5" on the Bureau's 1963 "most popular" list. It has been supplemented by a second film (in 1953) and the Maine Sardine industry is presently sponsoring a third film to be produced by the Bureau.

* * *

USOE Contract to Reid Ray

☆ The United States Office of Education has awarded a "call contract" to Reid H. Ray Film Industries, Inc., of St. Paul, Minn. Under terms of the pact, the government agency may assign the film company to a project anywhere within the continental U. S.

* * *

Day in Life of "Governor" a Timely New Documentary Film

☆ The office of Governor in the year 1964 is the subject of a new film now being released by Vision Associates.

In this political year, the motion picture titled *Governor* — has wide audience appeal. It is being offered without charge to all television stations in the United States and will also be distributed to non-theatrical groups. The film is a non-partisan dramatic documentary featuring Governor Endicott Peabody of Massachusetts. It follows the Governor through a full day of activities and is photographed, directed and edited in a highly impressionistic documentary style.

Vision partners. Lee Bobker,

Massachusetts' Governor Peabody

Helen Kristt and Seymour Weissman produced and directed, and Irving Oshman supervised the editing.

Governor affords the general public a view of high political office seldom viewed on film. It has a running time of 28 minutes, and was released in mid-June.

ARRIFLEX at work — ONE OF A SERIES *

Filming over the Hudson River. ▲

◀ Camera rig is mounted to helicopter.

Close-up of Arriflex Camera Rig. ▼

ARRIFLEX® goes 360° panoramic for New York Port Authority World's Fair Film*

Shooting from helicopters, rafts on the Hudson River, atop the George Washington Bridge—even from underneath a jet plane—cameramen of Fred A. Niles Communications Centers, Inc., completed a most unique motion picture, the 360° ultra-spectacular panorama for the Port of New York Authority's exhibit at the World's Fair! Designed to be shown on a complete circle screen, the 12-minute film dramatically emphasizes how PA transportation facilities serve 14,000,000 people in the New York metropolitan area.

Behrend's Inc., Chicago motion picture equipment specialists—with the aid of Niles technicians—engineered a suitable "camera" for the stupendous project. They mounted 10 Arriflex 16M's (equipped with 400-ft. magazines) on a rigid steel frame, with each camera precisely set to shoot

up into one of 10 circularly arranged mirrors. Problems of holding to .00025-inch camera-position tolerance, exact phasing, intricate image-angles, optical exactitude and parallax correction—to name but a few—were ingeniously solved.

A gear-interlock mechanism connected all the drive shafts of the 10 Arriflexes for identical 24 fps operation. Of special significance in the selection of the Arriflex "M" are its gear-driven magazine system, register pin film movement, small size and weight, combined with its high adaptability and absolute reliability.

In this imaginative and demanding motion picture assignment, Arriflex again proved its versatility as an instrument of almost limitless capability. It will answer **your** filming needs as well.

*for complete technical details see article in Dec. 1963 issue of American Cinematographer.

Illustrated with 400 ft Magazine

From the microscope to the missile range... from spot locations to sound stages... Arriflex professional motion picture cameras are the dominant choice of filmmakers in science, industry, and entertainment. They're lightweight, rugged, tremendously versatile—uniquely suited to a range of applications virtually without limits. Here are some of the features that give Arriflex 16M cameras their remarkable capabilities.

FEATURING: GEAR-DRIVEN, SPROCKETED, QUICK-CHANGE MAGAZINES TO 1200 FT. ☆ Production news of the month was highlighted by an important Philco sales convention described below and by the release of a sizeable number of outstanding industrial, informational motion pictures and slidefilms previewed on the following pages.

Philco's in Appliance Business to Stay

5,000 Dealers and Wives See Company's 1965 Product Line as "Show of the Year" Is Staged at Radio City Music Hall

ON THE WEEK-END of May 23, in New York, Philco Corp. spent a million and a half dollars on a sales convention and industrial show to prove to its dealers that it is in the appliance business for keeps.

Philco, which is owned by Ford Motor Company, has been plagued with rumors that it might abandon the appliance field, leaving many of its long-time dealers adrift. The big week-end for over 5,000 retail dealers and their wives was designed as a real blockbuster to scotch these rumors, to show the greatly improved new 1965 Philco lines, and to demonstrate that the company aims to move more aggressively than ever into the full-line appliance field.

Activities over the week-end included a World's Fair trip, the world's largest theatre party — involving nearly 5,000 seats at seven of Broadway's leading stage hits, and a giant variety show Saturday morning at the Radio City Music Hall. The Music Hall show itself was a "first". The world's largest theatre had never before been used as an auditorium for an industrial show.

The Music Hall show, produced by MPO Sales Meetings, Inc., served to introduce the 1965 line of Philco by and color television,

J. F. Kilmartin (left) and Milton Rogin of MPO Sales Meetings directed Philco's dealer show.

radios, phonographs and kitchen appliances. Titled, *You're On Top Of the World with Philco*, the show featured a cast of 20 singers and dancers lead by Jack Drummond and Karen Murrow. Ed Herlihy was the "Voice of Philco".

The Music Hall Rockettes were featured in one of their famous numbers, while the Radio City Music Hall Symphony Orchestra under the direction of Elliot Jacoby, Music Director of MPO Sales Meetings, Inc., played for the show.

Seven MPO-produced product introduction films were integrated into the live stage presentation. Joseph F. Kilmartin was the Executive producer, Milton Rogin, producer, and Ed Naylor, director.

Cast of the Philco show included 20 singers and dancers, joined by the Rockettes. Seven pictures were made to introduce 1965 product line.

Scene from the new Bethlehem Steel color-sound motion picture shows technicians checking temperature of roll during induction hardening.

"Hard" Look at a Bethlehem Steel Process

A 20-Minute Color Exposition on Making of Hardened Steel Rolls

SPONSOR: Bethlehem Steel Company.

TITLE: *Hardened Steel Rolls*, 20 min., color, produced by Audio Productions, Inc.

☆ This new 20-minute color motion picture is a very "clean" and clear-cut exposition of the manufacture of hardened-and-ground forged steel rolls which are mounted in matched pairs in giant steel rolling mills. Since this product is used by companies engaged in cold-rolling steel sheet, strip or tinplate, *Hardened Steel Rolls* is of special interest to engineering, research and other executive personnel within firms engaged in these processes.

But this new color film also provides an up-to-the-minute look at both sophisticated steelmaking and modern manufacturing methods. In this vein it will have considerable interest to other business and industrial audiences.

High Speeds & Great Pressure

These hardened cylinders are used in an operation roughly comparable to the old-fashioned wringer on a washing machine in which the mill rolls correspond to the wringer rolls. Since modern rolling mills operate at high speeds and with great pressures on the sheet material, the rolls are subjected to rigorous service. They must endure impact loads, heat from friction and severe stresses from mill pressures. The ultra-hard surface of each roll must re-

sist production wear and marking.

Vacuum degassing is made vividly clear through the use of technical animation and high-speed photography. This method of removing oxygen and hydrogen is a vital key in assuring ultra "clean" steels essential to roll quality.

Forging under enormous pressures "deep works" the metal into dense, tough material. Long, carefully-controlled heat treatment further "homogenizes" metal all along the production process, down to its final "high hardness."

Useful Role in Export Field

The picture follows this vacuum degassed product through forging, heat treating, rough machining, hardening, finished machining and inspection. Its useful role in the export field is worth noting. Matching the original is a Spanish version, *Cilindros de Acero Forjados y Templados*, also recently completed by Audio Productions.

Alexander Gansell directed for Audio, from the script by Joseph Boldt. Jules Sindie was head cameraman and Murray Margolin is credited with the tight editing of this useful technical exposition.

Like other Bethlehem Steel films, *Hardened Steel Rolls* is being distributed nationwide by Modern Talking Picture Service, Inc. Direct company requests to Modern hdq. at 3 East 54th St., New York, N. Y. 10022.

KELLY-SPRINGFIELD'S GALLERY

Facing Up to the Dealers

Kelly Springfield Tire Company Widens Dealer Coverage With Lively Slidefilm

The Kelly-Springfield Tire Company, a division of Goodyear, is a leading producer of private label tires, as well as of its own well-known brand which goes back to the earliest days of motoring. In some previous years, the company has put on rather elaborate dealer shows in a few major cities across the country, but this year decided to obtain a much wider coverage with many more, but smaller, meetings, taking the show almost into the dealer's own back yard.

The vehicle selected for traveling this wider circuit was a sound slidefilm, titled *Right In Your Own Backyard*, which will be shown in scores of meetings throughout the country.

A "New Look" for the Executive Talks

Kelly-Springfield had the idea of using their own chief executives in the film to tell their own salient sales points themselves. But they were also wise enough to know that just an ordinary photograph of a man sitting at a desk with his mouth closed while the sound track goes on spouting statistics is enough to drive almost any audience to sleep.

They asked Animatic Productions, of New York, which has produced several successful Kelly-Springfield films in the past, to find some way to permit their own executives to participate — for they are well-known and liked throughout the dealer organization — yet keep the film lively and interesting.

Animatic came up with the idea of using candid photographs of the faces of the men who would appear in the film, and tying these in to cartoon drawings of figures doing all sorts of funny and outlandish actions. This was carried out by shooting them in dozens of different poses as they recorded the script for the film.

Right In Your Own Backyard stresses the idea that good money in tire sales can be made by service stations who do an effective job of merchandising their own localities and regular gas and oil customers. Taking part in the film are Executive Vice President J. Carson Dowell, Kelly Brand Vice President Marion T. Powers, Director of Development Ivan A. Hall, and Director of Marketing and Advertising Glenn E. Martin.

Division Managers Have DuKane Equipment

Distribution will be through 15 division managers who are each supplied with complete kits including the film, DuKane Micro-matic projectors and two LP records containing the narration. District managers take the films out from division headquarters to put on dealer meetings throughout their territories.

The film provides a good answer to the question of how to put across a lot of important statistics, but effectively and painlessly. Another innovation is that the production contains a "film within a film". Part of *Right In Your Own Backyard* is a film, which will also be used separately, called *How a Tire Is Built*, showing the construction of tires in the three big Kelly plants in Tyler, Tex., Cumberland, Md., and Freeport, Ill.

These Events Made News

OF SIGNIFICANCE AT PRESSTIME

Veteran Film Maker Sam Orleans Dies in Crash of United Air Lines Plane July 9th

☆ The flaming crash of a United Air Lines plane eight miles north of Newport, Tennessee on July 9th, took the life of Samuel P. Orleans, 64, our good friend and an internationally known film maker.

The plane was carrying Sam to his home in Knoxville where it was due to arrive just 14 minutes before it exploded in mid-air. All 35 passengers and the crew of four perished in the disaster — which the Civil Aeronautics Board is still trying to unravel. The veteran film maker is survived by his wife, Jean Hengen Orleans and his 15-year old daughter, Alice.

Sam came to the Tennessee Valley area in 1934 to set up the film operation of the Tennessee Valley Authority which he directed before going into business for himself. At one time the White House newsreel representative for a number of film companies, he created many films for the Army, Air Force, Navy and Maritime Commission. Within recent years he was responsible for a number of Atomic Energy Commission pictures, "more than anyone else," according to an AEC spokesman. For the past five years he documented the story of the nation's first nuclear-powered merchant ship, the N. S. Savannah.

The roly-poly film man was a "friend to all, the mighty and the common alike." Born in Helena, Montana, he numbered among his friends many of the nation's leading statesmen but was as much at ease among roustabouts and editors, like us. Interment was in Woodlawn Cemetery in Knoxville, with last rites by the Roman Catholic Church.

Radiant Receives President's "E" Award for Leadership in Developing World Trade

☆ Two of the nation's leading makers of audio-visual equipment have received the President's "E" award for excellence in developing export markets. Joining the Eastman Kodak Company in that distinction, officials of the Radiant Manufacturing Corporation received the "E" flag which will fly over the firm's Morton Grove, Illinois plant, at an impressive Sherman Hotel ceremony held on Sunday evening, July 19th.

Antony J. Buchar, Chicago field office director of the U. S. Department of Commerce, made the presentation to Radiant president Adolph W. Wertheimer. The citation, signed in the name of President Lyndon B. Johnson by Secretary of Commerce Hodges, noted that:

"Entering highly-competitive world markets, this company has sold its projection screens in nearly 100 countries." Radiant had a 100 percent increase in export trade during 1962-63, now delivers approximately 25% of its total output abroad.

Some 300 leaders in the audio-visual industry (CONTINUED ON THE FOLLOWING PAGE SIXTY)

SPONSOR: The Hoover Company.

TITLE: *Company Profile*, 24 min., color, produced by The Jam Handy Organization.

☆ The first Hoover product for the home, an Electric Suction Sweeper, was introduced by H. W. Hoover Sr. with a 1908 advertisement in the *SATURDAY EVENING POST*. The founder of that company was also its full-time salesman who launched his new enterprise through personal calls on merchants' wives to whom he sold his machine while persuading their husbands to obtain a dealer franchise.

But this sales-minded entrepreneur, whose main thought was to "free women from household drudgery" was also a far-sighted pioneer who looked beyond the U. S. borders early in the game, establishing an assembly plant in Windsor, Ontario in 1911. The following year, Hoover was making sales in Norway, France,

Company Profile: a street scene in Cardiff, Wales, site of one of Hoover plants abroad.

Belgium, Holland and Scotland. His thinking was international from the outset.

The company launched its British counterpart in the 20's; by 1923, the millionth Hoover was sold and the basis for the company's annual International Sales Conventions was laid. On these beginnings, related in the company's current 24-minute color film, *Company Profile*, The Hoover Company has established an envi-

A press conference on the steps of Hoover's plants in Merthyr Tydfil, Wales, is lensed.

A Hoover Company Film is Helping Unite 25,000 Employees, Neighbors in 100 Lands

able record in worldwide marketing. By 1931 its Perivale plant under construction in England was to become the center of export trade in that European area.

To the primary audience for the picture — members of the worldwide Hoover organization in 1964 and people in the communities where its plants are located, president and board chairman H. W. Hoover, Jr. had this to say:

"If anything will iron out international differences, it is trade. I feel that what we need in this world are more ways to bring people together. Trade is such a way."

Camera crews under Jam Handy Organization direction worked in England, Scotland, Wales and France to film scenes for the 1964 presentation. To complete the global visualiza-

tion, sequences from Finland, Australia, Mexico, Brazil and other lands were incorporated.

Today, the worldwide Hoover organization has 25,000 employees in more than 100 countries throughout the world. There are, for example, some 1,400 at the Cambuslang plant near Glasgow, Scotland and each of them is, in his or her way, a "specialist" on the job.

Back home in North Canton, Ohio, Hoover continues to expand into an ever-more responsive manufacturing complex."

As an example of American ingenuity and progressive, world-minded enterprise, The Hoover Company is more than fulfilling the vision of its founder as it does its part in assuring world peace through trade.

Workers along the modern production lines of the Cambuslang, Scotland plant are in focus.

Company Profile: this Glasgow plant worker is one of many specialists in Hoover overseas plants.

Key Role in Customer Service

An Award-Winning Bell System Sound Slidefilm Is Helping Prepare Applicants for Job of the Service Representative

ONE OF THE MORE demanding jobs for young women in the Bell System telephone companies is that of Service Representative. It is an important position, because in these days of almost completely automated dialing almost the only person in the company that the average subscriber ever gets to talk to is the Service Representative.

Recent surveys have shown that only one of about 100 girls interviewed were both qualified to learn the job and desirous of undertaking it. Thus, it is important to try to insure that as many as possible of these girls will really take to the job and be successful at it.

Shows Every Aspect of Work

It is interesting, but not always easy, work involving not only taking orders for new installations and other services but answering complaints, collecting bills and offering appropriate suggestions for additional telephone service — in other words — selling.

The Bell System companies have found that sometimes girls who have started the job have later complained that the work was not exactly as it was described to them. If they had only known what it would be like, they say, they would not have taken the job.

Actually, it does take a young woman with specific talents and a certain kind of temperament to hold up under the stresses of continuous communications with customers all day, and at the same time keep up with the many clerical tasks which are required.

Orientation of the Applicant

To help insure that Service Representative applicants will under-

stand the job more thoroughly, American Telephone & Telegraph Company has recently prepared a new sound slidefilm for release to the operating companies.

The film, titled *The Service Representative*, tells in a very factual way what the job is all about. It is not designed to be promotional or for recruiting, but gives the plusses and minuses of the job so that the applicant can more readily picture herself doing that kind of work.

Previously Used a Flip Chart

Prior to the release of the new film, a flip chart presentation was widely used throughout the operating companies. The results of explaining the job depended to a great degree on who did the presentation of the flip chart.

Some employment interviewers had made the Service Representative job sound like a snap, or eternally glamorous, or, conversely, a day-long drudge. Actually, it is none of these things, and the film will go a long way towards providing much more practical and uniform information for applicants.

Meets Requests from System

As in most A.T.&T. film projects, requests from the operating companies throughout the country instigated the production of *The Service Representative*. Two members of the company staff at headquarters in New York were assigned the task of organizing the film and providing technical supervision during its production.

Miss Flodean Marsh, concerned with training aspects, and G. J. Geris, whose job is in the field of recruiting and selection of per-

Animation shows how sewage and industrial wastes contribute to water pollution: scene from the Soap and Detergent Association's new film.

New Facts on Water Pollution

Soap and Detergent Makers Show Steps They Have Taken to Help Conserve Water Resources in "Every Drop Fit to Drink"

A HARD LOOK at the nation's water problems, what one industry is doing to clean up its share of these problems, and some suggestions for providing safe water supplies for the future, are subjects discussed in *Every Drop Fit To Drink*, a new motion picture just released by The Soap and Detergent Association.

Produced in filmograph animation technique by Visualscope, Inc., and written by Stanford Sobel, the 14½-minute film shows how important water is to everyday life — in the home, in recreation, in agriculture, in industry — and how it contributes to our high standard of living. But, the film points out, every time we use water, we add some degree of pollution to its clarity and purity. So much so that today, according to Government experts, pollution is the number one water resources problem.

Conversion Project Under Way

Every Drop Fit To Drink is an objective, first-hand report on what is being done now by one group — the detergent industry — in an extensive program of product change that will help eliminate detergent foam after use in the home and proper sewage treatment.

The industry's multi-million dollar conversion to the new LAS-based detergents, which will decompose more rapidly and readily, has been undertaken in cooperation with federal, state and local public health agencies, and it is expected to be completed by the end of 1965.

Every Drop Fit To Drink dispels some misconceptions and

myths about water pollution. For example, it shows that most pollution is actually caused by untreated or only partially-treated sewage and industrial waste; that "foaming" was in evidence long before household detergents were

New detergents make up 90 percent of home cleaning products.

on the market; and that detergents are but a small and non-toxic portion of the pollution present in waste water.

Steps to Eliminate Pollution

The film explores the means that will be necessary to eliminate the broad water pollution problems. It stresses that only the combined efforts of public and private agencies, backed by good individual citizenship expressed in the form of support for the construction of adequate sewage treatment plants, can insure that the nation will be able to meet its future water needs.

Every Drop Fit To Drink is available on a free-loan basis from all regional libraries of Association Films, Inc., or from member companies of The Soap and Detergent Association, nationwide.

Fair-Inspired Series

FROM STERLING MOVIES U.S.A.

TWO NEW SERIES of public service, tape and film programs, both inspired by the New York World's Fair, have been announced by Sterling Movies U. S. A.

FYI at the Fair, a series of 14 half-hour tape shows, is a continuation of the company's *For Your Information* format which has been used on 39 previous half-hour shows. Bob Considine and Fran Allison shared host duties on these television shows.

For the *Fair* programs, a total of 56 six-minute segments were produced in May on color videotape within the RCA World's Fair Exhibit or on location around the grounds. Distribution to stations began in mid-June. Participating sponsors were offered six minutes of air time with either Mr. Considine or Miss Allison. The shows' flexible discussion format permitted the use of slides, film inserts and demonstration props.

Charles P. Dolan, president of Sterling Movies U.S.A., calls the new series "successful beyond our expectations," noting that the program had to be extended to 14 half hours to include all sponsors who wished to participate.

Among the program's highlights are 13 six-minute segments (sponsored by the New York Stock Exchange) which feature Burr Tillstrom's Kukla, Fran and Ollie. The two puppets and Miss Allison discuss market finance.

Burr Tillstrom and Fran Allison in scene with puppets Kukla and Ollie.

A companion series of 16mm film programs, based on the World's Fair theme "Peace Through Understanding", is being offered to nationwide free-film audiences. Films selected for these programs "must be closely related to the series' theme in one of two ways: by describing the ways of life, the attitudes and the hopes of people in key countries of the world; or by explaining and interpreting the major scientific, social and economic advances of our times."

WHEN YOUR EMPLOYEES hear the company criticized, not just on company time, but off the job, what do they do? Do they knuckle under or "stand up to be counted"? That is the challenging question posed by a new 31-minute color film, *Everybody Has Two Jobs*, sponsored by the United States Independent Telephone Association for use by its member companies but of universal interest throughout many segments of industry. The sub-title suggests its highly-useful content: *His Own and Public Relations*.

The incidents in this dramatic film, produced by Parthenon Pictures, concern the employees of an independent telephone company, but they point up the fact that it is the off-the-job attitudes of these workers which actually do most to shape the attitude of the community toward any concern. It's negative when they knuckle under; it can be positive and of far-reaching influence when an alert employee gives the answers about the vast number of things people find to complain about.

Shown to Clubs, Employers

The universality of *Everybody Has Two Jobs* goes beyond the showings to employees which are being held by independent telephone companies. They are also wisely taking prints to service clubs, to other organizations of employers and lending prints to other companies in their towns for their employee showings.

Hugh A. Barnhart, Chairman of the USITA Public Relations Committee, says about the picture: "It locks the barn door before the horse gets out. It reminds you that telephone people must be 'on alert' 24 hours a day to maintain good will. And it explains how and why every employee can benefit when he 'speaks up' for his company."

Consider this: when the telephone company looks forward to its next rate case, or the business man wonders about public reaction to a tax rise, a zoning change or a threatened strike, will it pay to have the community liking the company and understanding it better?

Story Relates Key Incidents

The picture's convincing human story begins with the problem faced by a young telephone engineer, Peter Jensen, whose big re-equipment job at the Center City Telephone Company has fallen through. A citizen's committee's list of complaints has influenced a Commission Hearing for the rate

Viewers of this picture will identify with incidents which illustrate how typical company employees stood up to their critics during off-job hours.

"Speaking Up" for the Company

Importance of "After Hours" Attitude of Alert Employee Is Related in a Widely-Useful New 31-Minute Color Film

increase which would have helped to finance the work.

When he brings the problem to his father's Middle Counties Telephone Office in nearby Fairhill, he asks:

"What have you done that's made everybody like the company . . . even feel a sort of personal interest in it?"

Would it be public relations? No, we don't even have a public relations department. Bill Redd, company wire chief, says, "it's our people." And they realize that, "sure, we've got a public relations department . . . every man, woman and girl on the whole company payroll. And the reason they're so good is that they work 12 or 15 hours a day at it — because it's outside of working hours that they get in their best licks. Remember the time when . . ."

Variety of Jobs, Temperaments

The picture takes its viewers through a series of past incidents, each of which shows employees from different types of jobs, with a

different kind of personal temperament involved, from the extrovert to the very shy type. The special story point of each of these "vignettes" is one of the most commonly encountered "complaints."

There's the incident at a backyard barbecue, 10 years ago, when one of the subscribers starts complaining about an over-crowded party line and a noisy instrument. After another employee goes along with the "beef" and agrees with the complainer, night operator Susie Morris breaks in with the right answers: overtaxed lines through overbuilding of the area; the home-made splice which causes the noisy instrument.

PR stands for Public Relations but it can also stand for Personal Responsibility. That is the "core" of *Everybody Has Two Jobs*. It becomes clear, as you watch this film, that the security and income of everybody in the company has improved through the years because of the fact that "everybody seems to be always on the alert."

Among the "vignettes" in the picture is the incident at a backyard barbecue when Bob Johnson "beefed" about his crowded party line, noisy phone.

WHEN A COMPANY EMPHASIZES quality throughout its entire marketing program, operation of the largest most-modern manufacturing facility in its industry is an obvious selling point. The problem is how to use it effectively, short of taking prospective customers on plant tours.

Southern Equipment Company, St. Louis, the world's largest producer of custom-built, stainless-steel food service equipment has found sound-slide presentations to be a highly-effective solution. Via color slides, both the firm's five-acre plant and an unlimited number of its custom installations of equipment have now become "portable," and can be displayed to potential customers anywhere, in a lively, effective manner.

Multi-Purpose Sales Tools

Initially planned for convention showing on a custom-built, rear-screen viewer, the slide series, the viewer itself, and the projector within it, have all proved to be multi-purpose sales tools.

Loaded with the sound-slide presentation, *A Trip With Colonel Q*, (for quality) the rear-screen viewer has been a consistent attraction at Southern booths at institutional equipment shows around the country. The image is seen on a 9 x 14-inch ground-glass screen. Two telephone-style handsets provide the audio.

The *Trip With Colonel Q* lets the viewer follow a courtly Southern Colonel, a cartoon character, on a step-by-step pictorial tour of Southern's plant. Each department is shown and described, and a job's progress traced from raw stainless-steel to a finished installation. Colonel Q emphasizes that — quality — is present at every point.

A Message from "Colonel Q"

Between shows, the viewer stands amid rows of stainless steel equipment on Southern's sales floor in St. Louis, where it performs an effective sales function. Some of the time, Colonel Q delivers his message of quality from within it. On other occasions, the viewer is loaded with a slide presentation describing one of Southern's new products. The firm markets cabinets, dish and work tables, cafeteria counters, custom-built sinks, conveyor systems, exhaust canopies, etc., to hospitals, schools, hotels, restaurants, department stores, and for other volume feeding organizations.

In addition, the viewer's slide projector, a Kodak Carousel, is

Quality Conscious? Here's How St. Louis Manufacturer Shows His Facility to Trade

Southern Equipment Uses Sound-Slides on Plant and Products

often removed and used for larger screen projections.

Slides describing new products, their selling features and installation methods are discussed at engineering meetings. And, new product slides, or *Colonel Q*, are shown to potential customers.

The Carousel Projector is used for two training presentations, too.

Southern salesman holds remote control as he begins presentation on the Carousel projector.

One is aimed at dealers' estimators, and is based on Southern's pricing catalog. The other is for dealers' engineers and tells them how to specify and make detailed drawings for Southern's use in manufacturing the custom kitchen equipment.

On these occasions, the projector is controlled by a remote hand unit which activates both slide advance and focusing.

"When the crux of your entire philosophy is 'quality,' any audio-

visual presentation you make must, itself, be of high quality or your message will not get across," said Ralph Eberts, Advertising Manager of Southern Equipment Company.

"This is essentially why we selected a Kodak Carousel Projector. Its 80-slide magazine holds our entire 56-slide '*Colonel Q*' presentation, and permits us to show it continuously and automatically, without interruption.

"Also, slide changing is much faster than on other automatic units we inspected, and the image projected is particularly sharp and bright. The viewer operates effectively in even a well-lighted room," Eberts said.

"Helped Us Close an Order"

"There have been occasions when the use of the projector has unquestionably helped us close an order."

The *Colonel Q* slide presentation, on Kodachrome film, is actually the outgrowth of a sound-slide-film Southern used with a small, table-top, rear-screen strip projector. Created by Harcastle Film Associates, St. Louis, the presentation utilizes existing black-and-white plant photos Southern had made when the firm moved into its new manufacturing quarters in the mid-1950's. These have been livened with colored acetate overlays, color cartoons and titles.

"The film strip was a good show, but we really weren't getting mile-

Prospective buyer of custom-built food service equipment is viewing Southern Equipment slide presentation accompanied by taped message.

Southern Equipment's advertising manager Ralph Eberts is pictured with custom-built slide viewer.

age out of it," said Eberts. "It was hard to assemble a group of potential customers — architects, owners, etc. — and our salesmen also had to concern themselves with a manual advance on the projector and rewind the film at the end of the presentation."

Detail on Custom Viewer

The automatic viewer, completed in May, 1963, was Eberts' means of presenting the message to a wider audience, with greater impact. The viewer, made of plywood by the St. Louis office of Brede Decorating Company, measures 24 x 24 inches by 58 3/4 inches high. Handsets were utilized for audio because many shows have restrictions on the continuous use of loudspeakers in exhibitors' booths.

The magnetic tape unit, which provides the message and triggers the Carousel is a Mag-Matic Message Repeater, manufactured by Cousino Electronics Corporation, Toledo, Ohio. All wires, cables, jacks and plugs used to link the units were color-coded by Brede, taking cognizance that the Carousel Projector is frequently removed for the other uses described above.

Set Screen at "Reading Angle"

The ground-glass screen is set at a slight angle above the horizontal — what Eberts describes as a normal "reading angle" — for ease in viewing. The image is reflected onto the screen by a 4" x 5" mirror mounted a few inches in front of the Carousel. Due to space limitations, the projector is equipped with a 3" Kodak Ektanar lens, which projects a wide-angle image.

For convention showing of the *Colonel Q* series, the remaining (CONCLUDED ON PAGE 62)

Part 1: A-V Equipment Trade Fair

Dealer Is "King" at National Audio-Visual Convention and Trade Show in Chicago

Association's 25th Anniversary Is Theme of Four-Day Program

THE MEN WHO SELL the bulk of audio and visual equipment going into the schools, churches, institutions and industry of the U. S. and Canada held the 25th Anniversary convention of their National Audio-Visual Association in Chicago's Hotel Sherman on July 18-21. These audio-visual dealers, some 900 strong, shared the 230-booth Trade Show with representative users from among the members of educational and business groups who held concurrent meetings.

The dealer association elected Harold E. Newman, Kalamazoo, Michigan, as its president for the coming year. He succeeds Robert P. Abrams, of Philadelphia, who became chairman of the NAVA board of directors. Newman was general chairman of the Silver Anniversary Convention. He is president of Newman Visual Education, Inc., in his home city.

VP's from Dallas and Seattle

Other new officers-elect include: Eloise F. Keefe, owner of the T.E.A. Film Library, Dallas, Texas, first vice-president; Max H. Rarig, president, Rarig's, Inc., Seattle, Washington, second vice-president; Frank S. Bangs, president, Frank Bangs Company, Wichita, Kansas, secretary; and John C. Ellington, owner of the Inland Audio-Visual Co., Spokane, Washington, treasurer.

Keynote speaker at the convention was W. A. Patterson, chairman of the board of United Air Lines, who spanned the 25 years of air transportation which parallels the growth of audio-visual communication in his talk. He noted

that business in America still enjoys tremendous freedoms, "but if we expect to protect the freedoms we now enjoy, we must measure up and anticipate our present and future responsibilities."

He told the association's membership that industry's primary consideration should be "for its employees, its customers and its shareholders, and in that order." In closing, he made it crystal clear that any successful business must be operated on a moral basis and, he warned, "failure to fulfill our moral obligations will in the end destroy us."

Multi-Screen View of History

The convention's first general session on Saturday, July 18, was opened by NAVA director of information James W. Hulfish, who delivered a multi-screen kickoff "From the Thrifty Thirties to the Soaring Sixties" in which he portrayed a quarter-century of progress in the audio-visual field since 1939 when the association was founded.

Delegates also heard Dr. M. D. Mobley, executive secretary of the American Vocational Association, as he discussed the role which audio-visuals can play in the Manpower Development and Training Act recently approved by the Congress.

Discuss Services for Business

New and varied uses for audio-visual techniques in every phase of business and industry were discussed during a meeting of the association's Industry and Business Council held on Sunday afternoon, July 19th. Council chairman Robert Abrams spelled out a

United Air Lines' board chairman Patterson delivered the keynote address.

Six projectors showed Jim Hulfish's (far right) multi-screen presentation.

Scene during Sunday session of the NAVA Industry and Business Council.

Below: scene at one of the Convention's well-attended general sessions.

Scanning the field for the latest and the best in sight sound projection equipment, these 1964 "show" models from leading makers are reviewed for the buyer in business & industry. We preface these "Trade Fair" pages with a bit of "sound" advice: look for brand quality first; then be sure of national service facilities. Count on the established audio-visual dealer to assure continued satisfaction out in the field.

The 25th National Audio-Visual Convention:

(CONT'D FROM PRECEDING PAGE) theory: Knowledge plus Action equals Profitable Progress as he outlined the goals of the Council.

"Our purpose," he suggested, "is to provide an effective and responsive agency to relate business and industry to the audio-visual services it needs and to let AV specialists within our own field know industry's present and future requirements."

Members of the Industrial Audio-Visual Association provided an audio-visual "demonstration" program for their counterparts in the Illinois Training Director's Association as one of the concurrent meetings during the four-day convention period. IAVA president Bob McCaslin, Caterpillar Tractor Co., was host for the session, assisted by regional chairman Larry Warnock, Link Belt a-v executive and other IAVA members.

The midwest chapter of the National Visual Presentation As-

Harold Newman, President-Elect of the National Audio-Visual Assn.

sociation also took part in the program, showing recent winners of the 11th "Day of Visuals" awards at a Tuesday, July 21st afternoon meeting. The Council of Medical Arts & Sciences was another group active at the Convention.

8 & 16mm Motion Picture Projectors

PORTABLE MOTION PICTURE projection equipment development among U. S. manufacturers is still affected by the hundreds of thousands of 16mm sound prints in business, educational and religious film libraries and by the more than 600,000 16mm sound projectors owned by such users. At the top of the quality ladder, for largest audience showings, are such superb machines as the Eastman Kodak 25B (either incandescent or arc models); the Kalart-Victor 70-1600 arc; Bell & Howell's Civilian JAN and the Arriflex' import, the Siemens 2000, a magnetic-optical projector.

The lure of today's brilliant color films and the proven value of films for door-to-door, desk-to-desk demonstration selling, and exhibit and display use, continues

Fairchild's Mark IV is on automatic, cartridge load 8mm sound-on-film projector with Movie-Pak cartridge (inserts in the front slot). When lever is depressed, the showing begins on 8 1/2" x 11" screen. Auto stop circuit can end showing or provide continuous program. Weight: 20 lbs; capacity: up to 22' of sound film. Write Fairchild Industrial Products (see p. 42)

Movie-Mate Convertible Model CV-4 is a 26 lb. portable 16mm repeater sound projector also fully equipped for conventional showings on its 2000' detachable arms. For continuous use; pop-out 9" x 12" Polacoat screen; 50' to 500' repeater magazine capacity. Available on Rental Lease. Write Movie-Mite Corp. listed on p. 42.

represented for nationwide repair and maintenance; is the firm's "track-record" for quality, uninterrupted operation sound and secure? There are few "bargains" in today's markets, except for the occasional "orphan." The best bargain of all is the machine which will take punishment in the field (where most machines go); is easy-to-thread, easy on expensive color film prints and providing quality in both visual reproduction and sound fidelity.

Standards of the field in 16mm mechanisms: Bell & Howell, Eastman Kodak, Graflex, Kalart-Victor, Movie-Mite and RCA for this kind of projector dependability, nationwide dealer service and established reputation. In 8mm sound and silent: Kodak, Fairchild, MPO Videotronics, and Technicolor are the brand leaders, all of whom have established service outlets for their users.

to influence sales of continuous repeater-type motion picture equipment. The Kalart-Victor "Movie-Matic" (16mm sound) is widely used; Movie-Mite has introduced a light-weight "Convertible CV-4" which serves both conventional and repeater purposes (see illustration). The Busch "Cinesalesman" for both standard and repeater projection, has an excellent record. In this repeater market 8mm sound is forging ahead. There are the MPO Videotronics 8 and the Fairchild line, with its new cartridge-load Mark IV (illustrated) 8mm sound unit.

Silent 8mm films also serve well, for short-length, single-concept subjects and display use. The Technicolor "Instant 8" line has been joined by a Model 700 Display Cabinet (facing page). It has a 4-minute film capacity, automatic continuous operation.

The business buyer looks to fundamentals: is the manufacturer of projection equipment well

Bell & Howell's Model 552 Specialist Auto-load Filmosound, introduced two years ago, provides automatic threading of 16mm sound films. Covered guide system permits insertion of film at top; within 3 seconds it glides into take-up position, completely threaded. Weight: 30 lbs., 13 oz.; it has f/1.4 lens. Write Bell & Howell, see p. 42.

Cabinets for Rear-Screen Projection

PROJECTION CABINETS, those self-contained "theaters" of industry and the exhibit field, are only as good as their mirror optics, rear-screen material and the projector mechanisms within the box. These are *essentials*.

Projection may be either motion picture film or slides but trouble-free operation of the visual material is the first consideration of the user. That's compounded for

Audio-Visual Research Rear Projection Cabinet has large 22" x 28" non-glare Polacoat screen; 8" round speaker. Use your own sound projector, it comes with cord & external speaker plug to fit. Size: 65" high, 32" wide, 24" deep. Crated weight: 150 lbs. Write Audio-Visual Research, Inc.

mechanism, was unveiled by Kalart-Victor last month (illustrated). Six phone handsets give individual sound messages to viewers.

Also serving the field is a new entrant: Audio-Visual Research, Inc. with a large non-glare Pol-

DuKane Vista-Sell Continuous Flow Film Units are available in two models; show 35mm strip films which travel horizontally at rate compatible with viewer interest (15 minute program capacity). Automatically repeats for continuous showing. Screen size model above: 12" x 7"; also available in wide-screen model with 11 1/2" x 20" screen (Polacoat). List: \$128.00. Write: DuKane Corporation, listed on 42.

Busch Continuous Cine-Educator has large 123" x 32" screen; utilizes Busch Cine-salesman projector mechanism (16mm sound) with 1200' film capacity; two speakers; push-button start stop cycling device. For continuous use, cartridge holds 800'. Write Busch Film & Equipment Company.

continuous-type durability. Busch Film & Equipment puts its Cine-salesman mechanism into the Cine-Educator (illustrated); Harward has a fine-looking Admatic cabinet, optional for movies or slides; two models of the DuKane Vista-Sell "Continuous Flow" 35mm stripfilm units offer a choice of standard or widescreen images (see illustration).

A new cabinet, utilizing the revolutionary optical "Soundstrip"

Model 700 Automatic Display Projection System by Technicolor was developed to show 8mm silent motion pictures in untended displays, store windows, point-of-sale, etc. Uses "Instant" cartridge-load projector (continuous loop) with four-minutes viewing time. Projector activated by "start" button, has automatic shut-off at end of show. Unit also features illuminated display panel (at left). Write: Technicolor Corporation.

acoat rear-screen (22" x 28" area) and adaptable to any of today's top-quality 16mm or 8mm sound projectors. This unit has its own 8" round speaker within the cabinet (10-ounce magnet, 15-watt capacity). It comes with

The LaBelle Courier sound slidefilm projector is powered by self-contained nickel cadmium battery-pack with sufficient power for 10 average daily showings. Tape sound cartridge has 15-minute capacity; film magazine w/ 150-frame capacity in continuous coil of 35mm filmstrip. Program stops automatically; ready to repeat. Interrupt button. Weight: 15 lbs. Retractable power cord for overnight charging or optional AC operation. Write LaBelle Industries for data, prices. See page 42.

cord and external speaker plug to fit the user's projector. Mirror for image reflection is polished plate, non-refracting type. Optional accessory is a built-in Buhl wide-angle lens, which also permits use of 8mm projection.

Projecting Your Sound Slidefilms

☆ The sound slidefilm (some people like "filmstrip") is another of the industry's "standard" media. Cartridge-tape sound came into this field on the battery-

Porta-Lectern, recently introduced by the McClure Projectors' firm has its own battery-power source for 20-watt transistorized amplifier (instant warmup). Two standard 6-volt lantern batteries give immediate microphone volume. Attache-case also serves as detachable 8" speaker; microphone is lavalier-type. Write: McClure.

AudioVisual Equipment TradeFair

powered LaBelle "Courier" within recent months. Here's another ready-to-show piece of equipment that sets up within seconds to provide bright images and high-fidelity sound on its self-contained within-the-cover screen.

DuKane introduced a new model of its top-quality "Micromatic" sound slidefilm line at the NAVA Show; the familiar DuKane "Flip-

Kalart's Soundstrip Cabinet was designed to house this maker's unique Soundstrip optical sound-on-filmstrip projector, with or without continuous attachment. A self-standing unit w/adjustable legs which can be detached for counter or table use. The screen size is 16" x 22". Rear airflow fan aids cooling for continuous use. Six telephones provide sound; simple switch for alternate phone/built-in speaker adaptation. Cabinet 36" plus legs.

Below: Kalart Soundstrip Projector w. continuous loop attachment has optical sound track (photographically printed) on 35mm filmstrip. Carries strips from 5 min. long (w/2 min. sound; up to 100 scenes with 30 minutes of sound. For data on either or both items write The Kalart Company, Inc.

(CONT'D FROM PRECEDING PAGE)
Top" at 19 lbs., 8 oz. is a true lightweight with versatile components. Sound is 33 1/3 rpm disc; visuals on 35mm single-frame filmstrips. Rewinding with the maker's exclusive Redi-Wind system. Pictures change automatically via inaudible signal system.

A battery-operated Viewlex sound slidefilm unit joins the company's self-contained "Table-Top Automatic" for buyer selection (see illustration). Worth noting is the Automatic's 8" x 10" self-contained screen; there's also an inaudible automatic advance (30/50 cycle signal).

Also pre-eminent in the field this year are the "big-show" model "Gold Plater" of Commercial Picture Equipment; the diversified models offered by McClure Projectors, including the "Thinline," and a new combination Magnematic-Carousel sound-slide unit.

The "Gold Plater" is a major business show tool, projecting filmstrips or slides with a 1,000-watt lamp of 2,000 lumens brightness on screen. Vista.Strip attachment is available for widescreen filmstrips. Optional also is synchronized control for sound and picture changes; shows up to 30" wide. Write: Commercial Picture Equipment Co.

Kodak Carousel Slide Projectors, now available in three smaller, lighter and quieter models: the 80-slide circular tray remains standard; also slide preconditioning and gravity feeds but bodies have been reduced almost half, weight cut six pounds (12 lbs. now). Click silenced through new "watchdog" device; also new swing-away lamp and condenser compartment. Model 600, push-button manual unit; Model 700, with remote control; and fully-automatic Model 800, with prices ranging from under \$90 to less than \$150. Write: Kodak.

The Beseler "Salesmate II" is an automatic tape-sound and 35mm filmstrip projector available in three versions: the "Discussion" model; the "Picture Partner" and a 35-minute capacity, "Long Play" model. Write: Charles Beseler Co., see page 42.

Viewlex Battery-Power Filmstrip/Slide Projector is powered by six-volt wet cell which recharges in 12 hrs. Total unit is 25 lbs.; can be used with variety of lamps, lenses for small-screen to large audience. Write Viewlex, Inc. from list on page 42.

Magnematic-Carousel Automatic Sound/Slide Projector combines automatic tape cartridge transistorized mechanism for sound with a 500/300 watt Kodak Carousel Projector. Has choice of three cartridges for program to vary from minutes to four hours long. 3-watt power amplifier and speaker. Write Amplifier Corp. of America, Magnematic Division.

Bell & Howell Specialist Autoload — Filmstrip/slide Projector, Model 745 was introduced to dealers at the NAVA Convention. It accepts a filmstrip-loaded cartridge, eliminates manual handling. System includes storage file which holds 36 labeled cartridges. Will accept "loose" filmstrips for automatic threading; also 35mm standard or single-frame slides. Jet-stream cooling system; open aperture. Lens retracts behind sliding door; carrying handle on projector. Model 745A w/5-inch lens, 500 watt projector lamp. Write to Bell & Howell, use address on page 42.

Filmstrips and Slides

Are Basic Presentation Tools

THE SIMPLEST and often most effective of all visual tools is the *still* picture. Organized in single or double-frame filmstrips and accompanied by either disc or taped sound, it carries the familiar (to business) designation of *sound slidefilm* and has proven a superb medium for a wide variety of training applications, and for general education as well.

Today's versatile slide-changer mechanisms have brought a renaissance to the use of color slides, especially of the 35mm dimension. Here, again, the addition of taped sound has given business the option of sound-with-slide showings.

Notable addition to the field in July was the introduction (by Bell & Howell) of automatic threading of 35mm filmstrips via the new Specialist Autoload Model 745, a combination filmstrip and slide projector. This uses an exclusive B&H cartridge to set up the filmstrip for automatic threading, eliminating manual handling of the delicate color material.

Multi-screen use of filmstrip, slide and motion pictures is a growing trend, especially in very sophisticated presentation setups, such as the military and for top management review purposes. Random-access slide projection is a vital element in such operations. The Spindler & Sauppe Selectroslide has several such random-access models.

Sharply-reduced weight of its popular "Carousel" slide projectors was announced by Eastman Kodak this Spring (see illustration). There were other noteworthy improvements in this widely-used equipment line.

Model SL-1200 Standard Selectroslide shown above is typical of automated slide projector line. Models to fit all requirements, #332, 322 for TV; SLM Manual with 1,200-watt light source; SL-series (Standard, Dual and Reverse; also Random Access and Speed Dissolve Systems. Write Spindler & Sauppe, Inc. of address on page 42.

Slide Projection Optical System for Strang Trower Carbon Arc Spotlight makes possible use of this ultra-bright equipment as dual-purpose unit by interchanging optical systems. Slide optical system projects 7,500 lumens through a 3 1/4 x 4 aperture, 2 x 2 and other slide carriers available. Choice of projection lens up to 20" f. l. Write: Strong Electric Corp. off list on page 42.

Graflex SM 400 Filmstrip Slide Projector w/300-watt illumination is new small, lightweight unit (only 4 lbs. 2" or 3" lenses. Has curved glassless film gate, unique optical ("cone of light") system. Accessory slide changer; filmstrip feed/take-up and carrying case — optional. Write: Graflex.

Overhead and Opaque Projectors

BASIC TOOL for the presentation of transparencies is the

Porta-Lite 100 Overhead Projector is revised, greatly improved model. 500 750 1000-watt lumination also 1200-watt excl. Platen remains cool despite high light output. High quality lens, spiral mounted for precision focusing. Write General Aniline & Film Corp.

Buhl Koalite Model 100-CF Overhead Projector, 1,000-watt type, uses type CTS lamp which emits no ultra-violet radiation. A special heat filter protects transparencies, limiting operating stage temperature to less than 30 degrees over ambient. Thermal switch allows blower to exhaust residual heat after shut-off, automatic stop. 3-element anastigmat objective lens made by Buhl. Price is a key factor on model. Write Buhl Optical Company see page 42.

familiar widely used, overhead projector. Several new models were displayed at the NAVA Show, including the Beseler "Vu-Lyte."

What's New in Projection Screens

FAST SETUP was a notable feature of new Radiant tripod-type projection screens introduced this spring. Da-Lite, another leader in this field, has found a wide market for its low-cost "Jr. Electrol" model (see illustration) and for a wide variety of other types recently shown. Screen surfaces have been greatly improved. The Hudson Photographic "Groupshow" self-contained rear-projection screens (see illustration) offer till another answer to the need for fast setup, exhibit or training showings. Polacoat, a specialist in non-glare rear-screen material, is favored by growing number of rear-screen projection equipment manufacturers.

Da-Lite Junior Electrol projection screen provides electrically-operated unit for wall or ceiling installation. Auto stops in up or down position. White Magic II Chemi-Cote beaded screen surface, also available in mat white or "Da-Tex" translucent surface for rear-screen projection. Sizes: 50" x 50" through 12' x 12'. Write: Da-Lite Screen Company at address on page 42.

Radiant Tripod Projection Screen W/Built-in Keystone Eliminator easily compensates for distortion associated with overhead rejection. Keystone bracket replaces standard hanger hook on "Educator" series of tripod screens. Write Radiant Mfg. Corp.

HPI Groupshow Senior, a rear-projection screen with 25' x 25' surface. It folds flat yields brilliant, full-contrast pictures in normal room light; square format permits optimum display of horizontal, vertical or square material. Folds into attractive case, weighs less than 29 lbs. Projector is to side of audience; mirror corrects image. Other Groupshow screens: 18 x 24-inches; Jr. Model 12' x 12'. Write Hudson Photographic Industries from list on page 42.

Film Handling & Inspection Tools

GREATLY-EXPANDED distribution of 16mm motion pictures, with many of today's films exceeding 1,000 prints in use, has re-emphasized the key role of proper handling of prints at the library source.

The fortunate introduction of electronic film inspection machines several years ago (and subsequent improvements in this equipment) has assured both sponsor and distributor (as well as viewers) of greater print perfection. A pioneer in this field, the Harwald Company, has diversified its line of Inspect-O-Film

Harwald "Inspect-O-Film" electronic 16mm film inspection equipment has transistorized control eliminating all solenoids; is available in a number of specialized models, from large-station, large library to modest film library installations. Write: Harwald.

machines to the needs of television, industrial and school libraries, etc. (see illustration). A more recent entrant, Paulmar, Inc., has now introduced the Simplex 501 electronic film inspector, noting that this unit brings the equipment "within reach of smallest libraries."

Also notable this Spring was the growing acceptance of new,

AudioVisual Equipment TradeFair

Simplex 501 16mm Automatic Film Inspection machine was unveiled at NAVA. The 501 detects all types of film defects including torn sprocket holes, rips, tears, sound track defects, Scotch tape splices, etc. Footage counter; rotary brush cleaning of film. Plug-in chassis components. Neon indicator lights; complete all ball-bearing construction. Film speed is variable from 200 to 100 ft. per minute on the inspection cycle; up to 3,000 ft. per minute on speed rewind. Write Paulmar, Inc. for prices, data sheet.

durable and lightweight plastic film reels and shipping cases introduced by the Plastic Reel Corp. of America. The maker also has a bright, compact little Reel-Pak which was recently offered for tv. film distribution.

Permacel Film Splicing Machine, Model 6600 for motion picture splicing use under dark-room conditions. Makes butt splice in 10 seconds or less; takes both 16mm and 35mm. Sprcketed model also available. Permacel EA 6687 pressure-sensitive Mylar film processing tape recommended for use with 6600. Write Permacel from list on page 42.

Plio-Magic 16mm Film Reels, illustrated, are going for in the a-v field. New from Plastic Reel Corp. of America w/color matching an quantities of 5,000 or more grey is standard. Now available in 600' to 2,200' sizes. Unconditionally guaranteed against breakage and defects. Company also makes Reel-Paks plastic and shipping cases. P. 42.

A Directory of the Manufacturers

Here is a convenient address directory of principal manufacturers and distributors of leading types of audio-visual projection equipment and accessories, including exhibitors at the NAVA Convention.

- American Optical Company, Instrument Div., Eggert & Sugar Rd., Buffalo, New York 14215. TX 5-4000.
- Bell & Howell Company, 7100 McCormick Road, Chicago 60645, Illinois. 673-3300.

Max Howe Film Wins Public Utility Award

"Power for Good" Produced for Black Hills Power & Light Co

A 28-MINUTE FILM produced for the Black Hills Power and Light Company took one of the top three film awards in the recent International Public Utilities Advertising Association competition.

"Star" of the film, titled *Power for Good*, is the spectacular Deadwood forest fire of 1959, which came within a whisker of destroying the historic old city. Max Howe Film Productions of Rapid City, S. D., produced the winner. The script was written by Dean Nauman of Dean Nauman Advertising, also of Rapid City.

Arrived at Outbreak of Fire

Howe explained that entirely by accident he arrived in Deadwood just as the forest fire broke out. It was out of control almost from the time it was reported and within an hour evacuation of the city was underway.

Howe was on his way home after completing a shooting schedule in Wyoming and Montana, and was just about out of film. He hoarded what he had to film the progress of the fire and the evacuation of the town. He noted: "Then 'Charlie Brown' and I (son Charles) perched on top of Mt. Moriah with the camera trained on the gulch below and waited for Deadwood to go."

Wind Change Saved Deadwood

Fate saved the historic old gold-mining town, however.

Flames were licking up Deadwood's outlying industrial buildings when the wind suddenly died, shifted direction, and blew the flames back, saving most of the city. Deadwood is located in a gulch and the forest fire was then raging on four (yes, four) sides.

"I know the fire and logging trails well in that area and could

Historic Deadwood, S. D. was menaced by forest fires that raged on all four sides of the old town.

have gotten out," assured Howe "When you're filming you don't think much about such things..."

Deadwood (and Howe) escaped, but it was another week before the forest fire was out.

Howe put his flaming film away in the "can" and although he didn't forget about it, he had no immediate use for it. Until last year that is, when he contracted to do a public service film for Black Hills Power and Light.

Role of Utilities' Crews

Howe remembered the Black Hills Power and Light Company crews that converged on the Deadwood area to fight the fire, assist the people evacuating the city, and save what property they could move. Howe and Dean Nauman decided to open the film with the spectacular fire raging out of control, then build into the script the role the Black Hills Power and Light crew played in first fighting the fire and restoring power to the area, then serving Deadwood and other Black Hills communities.

Judges on the International Committee of the Public Utilities Advertising Association commended the film for its strong story line and for the way people and places were incorporated into the role Black Hills Power and Light plays in this rugged western South Dakota and eastern Wyoming area.

Included in the third place award was a companion film Max Howe Film Productions produced, simultaneously to interest investors in Black Hills Power and Light.

First, Second Place Winners

All the major utilities firms in the country — of which Black Hills Power and Light is one of the smallest — competed in a single film category. First and second place winners were Northern States Power Company (Minneapolis) and Southern California Edison Company.

This is the third such award for Max Howe Film Productions. Howe has also received a 1963 Calvin Workshop award for a Notable Advertising Film entitled *Sitzmark*, produced for the Red Lodge Ski Association. The 1960 Western Heritage Award for an outstanding western documentary went to Howe for *Four Seasons West*. The latter was produced for the South Dakota Stockgrower's Association.

IFPA JOURNAL

INDUSTRY FILM PRODUCERS ASSOCIATION, INC.

General Cody's Talk. Annual Cindy Awards Are Highlights at 5th National Conference

James L. Wasson, Jr. Becomes Association's Fifth President

IFPA's LEADERSHIP in film production for the vital aerospace and missile industries was reflected in the 10 motion pictures which swept all "Cindy" and runner-up plaque awards at the recent 5th National Conference held on June 4, 5 and 6th at the Disneyland Hotel in Anaheim, California.

Cindy awards went to five different film production groups with Douglas Aircraft Company and the Space Information Division of North American Aviation sharing two plaques apiece among the runners-up.

Keynote Talk by General Cody

This year's principal speaker also reflected this concentration of interest as General Joseph G. Cody, Jr., Vice-Commander of the Air Force Space Systems Division, addressed the Conference on "Space . . . and the Need to Know" as the highlight of the Friday afternoon session on June 5th.

James L. Wasson, Jr., of the Space & Information Systems Division, North American Aviation, Inc., was elected to succeed Jack R. Goetz, Aerospace Corporation, as president of IFPA for 1964-65. The active Eastern leader of IFPA affairs, Peyton (Pete) Stallings, Radio Corporation of America, became executive vice-president. He succeeds Jack R. Smith, Hughes Aircraft Company, in that post.

Brief biographies of other officers-elect appear in this JOURNAL section.

Wide Range of Presentations

A broad spectrum of other useful contributions to the program was offered by such speakers as famed mountain climber Norman Dyhrenfurth who described "Filming the Mount Everest Expedition" at the Saturday a.m. session; and by Les Novros, President, Graphic Films Corporation, who described "New Techniques in Space Animation" on that afternoon.

Colonel John D. Craig, camera-

man and director-producer of adventure films, was joined by two ace underwater photographers as he told conferees about "Problems, Solutions, Training and Safety in Underwater Filming" on

Norman Dyhrenfurth, guest speaker at the Conference, visits with delegates during a program break . . .

Friday afternoon. Col. Craig's underwater lens work has won him an Academy Award and three "Emmy" nominations.

Use of Closed-Circuit Video

IFPA members and guests also got an insight into the role of "Closed Circuit Television . . . New Dimension in Management" as Fred K. Leary, marketing specialist in management communications, Space & Information Division of North American Aviation, shared know-how on this medium. Leary is chairman of the public relations committee for the Los Angeles Chamber of Commerce.

The civic angle was covered by Battalion Chief Martin T. Petersen's presentation of "Film and the Fire Department." Chief Petersen, a 22-year veteran of the Los Angeles Fire Department, is its public relations director. His cinematography unit concentrates on training films but occasionally finds itself "shooting" through smoke.

Extremely useful technical background was contained in "Lighter

Scene at annual awards banquet shows head table and part of audience which witnessed "Cindy" presentations and Jay Gordon award ceremony.

Lights in Industry Production" presented by John Hlynd, manager of the large film unit at General Dynamics Astronautics in San Diego. He was director of the prize-winning film, *Friendship 7*. Ray Ussery and a panel of lighting experts assisted John in this key program.

Rich: Photo-Instrumentation

Another key technical talk was given by Edward E. Rich, optical physicist at the Hughes Aircraft Company who spoke on "Photographic Instrumentation: Measure of Failure . . . Short Cut to Success." Rich is the former director of engineering at Thompson Optical, managed the optical department at Aerospace Corp. and has had 23 years of experience in the field of photographic instrumentation and aerial reconnaissance.

His vast experience was reflected in the presentation at the Conference.

Film critic, author and librarian Arthur Knight represented the new Hollywood Motion Picture Museum as he described "Industry Film Representation" in that new building on the final Saturday a.m. program of the Conference.

Vincent H. Hunter (left) received the Jay E. Gordon Memorial award from John Flory as a special event of the annual banquet which concluded the Fifth Conference.

☆ In the tradition of IFPA, the 5th Conference was concluded with our Annual Awards Banquet on Saturday evening. Honored this year as the winner of the Jay E. Gordon Memorial Award was Vincent H. Hunter, veteran head of film production for the Union Pacific Railroad. Vince Hunter received the special trophy and honorarium (donated by Gordon En-

Members and guests at the Fifth National Conference were pictured on their Disneyland visit where they viewed the Circarama exhibit area.

terprises) from John E. Flory, Advisor on Nontheatrical Films, Eastman Kodak Company and also a winner of the Jay Gordon award.

The late Jay Gordon was a founder of IFPA and one of the leaders in factual film production.

Nine leading production equipment manufacturers and distributors participated in the well-attended Trade Show, including Amega, Arriflex, Eclair, Hollywood Film Company, Magnasync, Mole Richardson, Photo & Sound, Ralke Company, and S. O. S. Photo-Cine-Optics.

An historical motion picture exhibit was presented by Kemp R. Niver, assistant curator of the ASC Museum of Motion Picture Equipment. As always, IFPA is indebted to our two tireless co-workers: Elaine M. Dolnick, our Recording Secretary and John Gregory, co-ordinator of all Disneyland Hotel activities and trade show arrangements.

BRIEF BIOGRAPHIES OF IFPA OFFICERS

James L. Wasson, Jr.

President-Elect of IFPA

★ The man who leads our association through the coming year is a native Californian, born in San Francisco just 33 years ago and a 1952 graduate of UCLA's Theater Arts Department. During his four

IFPA President Jim Wasson

years in the Air Force (1953-57) he served as navigator and began his film career in May, 1960, as film production coordinator for General Telephone Company of California.

Jim Wasson is presently a writer-director at North American Aviation's Space & Information Systems Division (since Novem-

ber, 1962) and he served as IFPA's Financial Vice-President for the 1962-63 term. He has been a member since the fall of 1960.

* * *

Peyton M. Stallings

Executive Vice President

★ "Pete" Stallings organized and served for two years as chairman of our Delaware Valley Chapter, leading that Eastern group to new, high ground of intensive activity. His motion picture career was launched in earnest when he served as a Signal Corps photographer during World War II.

"Pete" Stallings, Exec V. P.

While a cameraman and assistant director in the 3227th Signal Photo Production Detachment, he worked on films for the military government of Occupied Germany, later covering the Nuremberg War Trials until his discharge in April, '46.

His civilian career began the following May as Production Manager for Educational Films at the University of Minnesota where he supervised production of adult level subjects with a staff of 10. With an ex-Signal Corps' acquaintance, he helped to form the University Film Producers' Association, becoming that group's first vice-president.

Turning to business, he served as Service Director for Calvin Productions in Kansas City, participating in some 400 industrial and educational films serviced by that organization. After free-lance work in the Kansas City area, he returned to university life and was (for 10 months) a staff member at Ohio State University.

Since 1959, Pete has been employed by the Radio Corporation of America as a writer and director of industrial motion pictures; in May, 1964, he became Director of Presentations for RCA's Com-

munications Systems Division in Camden. From this position he will supervise all photographic, audio-visual and presentation efforts of the division.

* * *

Kenneth J. Maurer

Financial Vice President

★ These pages have previously told of Ken Maurer's extensive background in education and film production, which followed his formal schooling in Motion Picture Production and Education at UCLA and at Los Angeles State College where he completed work for his Masters' degree.

Our new financial vice-president (he served as Chapters' v.p. last year) got into the serious business of film-making when he joined Ramo-Wooldridge Corp. during early development of our major missile systems. His career continued at STL (Space Technology Laboratories) when it became an R-W subsidiary.

At the Aerospace Corporation, Ken is senior film specialist on the Titan Weapon System, making

Ken Maurer, Financial V. P.

films for Air Force Command program offices, engineering evaluation, orientation programs, etc. During the rest of the year and into '65, he will also keep track of our finances.

* * *

Robert R. Canon

Chapters Vice President

★ Before entering the Air Force in April, 1943, Bob Canon was a motion picture technician at Columbia Pictures Corp. where he served in the Foreign Dialogue Department. His initial Air Force assignment brought him to the First Motion Picture Unit in Hol-

The Jay E. Gordon Memorial Award

IFPA's annual award "to the individual whose personal contribution to the field of communications is deemed worthy of this memorial to our founding president" was presented at the 5th National Conference to:

VINCENT HUNTER, Union Pacific Railroad

"for his years of dedicated service in film production and unselfish aid to many young film makers." The trophy and cash award are donated by Gordon Enterprises.

Public Information and Sales Promotion "Runner-Up" Winners pictured (l to r): Terry Waterson, Iberia Airlines; Bill Gibson, representing Douglas; O. B. Marble and Roy Anderson, Douglas Aircraft Company, winner of both runner-up awards (for "Eclipse of the Quiet Sun" in Public Information and "To Catch a Dream" in Sales Promotion category).

Training Film Award Winners pictured are (l to r): Lt. Col. A. Gallcrand, George Pratt (of 1352nd Photo Squadron, APCS); Jack Succency (1365th Photo Squadron, Orlando); and Major Robert Mackinnon, 1352nd Photo Squadron. The 1352nd received a Cindy award and the 1365th won the runner-up plaque for films in this IFPA Awards Category.

Brief Biographies of New IFPA Officers:

(CONTINUED FROM PAGE 44)

lywood. In March, '44, he was assigned to the 2nd Motion Picture Unit as a director-cameraman and stationed in the European Theater of Operations until 1946.

Following his Air Force discharge in Europe, he immediately went to work for the War Department, covering the Nuremberg War Trials as a cameraman. As an extra assignment he formed and operated photo-finishing plants and studios in West Germany for the EUCOM Exchange System until his return to the States in 1948.

A two-year stint as motion picture and television instructor at the Radio & Television Arts Academy was followed by a very active career in commercial television film production. Joining TV Spots, Creston Studios, Inc. as a director-producer of commercials in 1952, Bob was named Vice-President and General Manager of that company in '54 and entered television show production. He produced both animated and live action shows for NBC, ABC and syndication until 1962.

In September of that year he joined the Lockheed-California Company as editor-cameraman.

* * *

Robert M. Duff

1965 Conference Vice President

☆ Bob Duff set out to make a career in the writing game. Before turning to the film medium in earnest after his army service, he learned to organize those facts as a writer of building trade news (Building Witness Publishing Company) and of promotional literature and news for the National Underwriter Company. He's a graduate of Xavier University in his native town of Cincinnati, Ohio, with a BS in Science.

Public Information Office service in the Army included work on several films for Special Services and that seems to have turned Bob to our field. He began his post-service career as a technical editor for the Jet Propulsion Laboratory in Pasadena, turning to the Librascope Division of GPI to write and direct motion pictures for seven years.

Until recently he also wrote and directed films for the Rocketdyne Division of North American Aviation. In July of this year, he rejoined JPL to do special assignment motion pictures. Last year he

Robert M. Duff

was program chairman of IFPA's Southern California Chapter and now moves up to national ranks as our National Conference planner for the coming year.

* * *

Harald O. Dyrenforth, Ph. D.

Editorial Vice President

☆ IFPA's "JOURNAL" coordinator for the coming year is no mountain climbing enthusiast and that's a small miracle! Both his father and mother in Switzerland, Prof. Dr. G. and Mrs. Hettie Dyhrenfurth received Olympic Gold Medals in 1936 in recognition of the achievements of their Himalayan expeditions in 1930 and 1934. His mother holds the unbroken world record for mountain climbers for her ascent of Queen Mary Peak (Sia Kangri) where she attained the 24,500 ft. altitude in 1934.

Brother Norman Dyhrenfurth led the successful American Mount Everest Expedition in 1963, receiving the Hubbard Medal of the National Geographic Society from the late President Kennedy.

But Dr. "D" turned to the stage and radio following undergraduate study at the University of Zurich from 1931-35, entering Swiss municipal repertory theater and radio until he came to the U. S. in 1938.

Dr. Harald Dyrenforth

SPACE... and the 'Need to Know'

Conference Address by Brig. General Joseph J. Cody, Jr.
Vice Commander, Space Systems Division, U. S. Air Force

I AM NOT a photographic expert but I have a genuine appreciation — based on experience — of the value of motion pictures in their many industrial and management uses. This value has been well demonstrated, and is still being demonstrated in a very dynamic way, in the national missile and space business.

In fact, I would venture to say that the rapid growth of the missile and space-related industries has served as a direct stimulus to

am really referring, if you will, to the "what," the "how," and the "why" of our Air Force missile/space missions.

* * *

The first, and probably most obvious use we make of motion picture resources, is for purposes of data display and documentation.

When General Schriever initiated the ballistic missile program, now ten years old, he insisted on complete film coverage of every step of the development program. This requirement, definitized for all our contractors in an early 1956 directive, coincided with the organization of the Industry Film Producers Association.

The Camera's Unblinking Eye

This reliance on film coverage and photographic techniques has been well placed. The unblinking, unemotional eye of the camera has furnished us a frame-by-frame report of what is happening in the complex programs of the past ten years that have been leading us in the direction of space.

This instrumental eyesight has given us a "sixth sense" in evaluating the performance of missile and space components and systems.

As you know, in the production of motion pictures, film is the cheapest commodity. But we found, in testing rocket engines and in launching test missiles, that even cameras were expendable. In my years at Vandenberg Air Force Base I have seen first-hand what films can mean in terms of saving time, money, and other valuable production resources.

Film enables us to fly a test over and over again — to witness the causes of failure under the microscope of slow motion or through the magnifying glass of photo enlargement.

* * *

The second principal value of the motion picture is for communication.

Now, I realize full well that this is a universal value, and that the communication capabilities of film have become a major educational resource for this nation.

But I wonder if those of you who are part of this industry recognize the extent to which communication has become essential to the nature and to the pace of human progress.

In our business, for example, (CONTINUED ON PAGE 48)

General Joseph J. Cody, Jr. as he addressed delegates to the Fifth National Conference. His remarks are the subject of a special article in this JOURNAL section.

industrial film production. I note that better than 90 percent of the companies sponsoring or participating in the IFPA National Conference are principal aerospace contractors.

Enduring Image of Progress

Although great moments of history are sometimes over-shadowed by the image of film celebrities, it is no less true that film has captured many great moments of history and preserved an enduring image of human progress.

Such has been the case, and continues to be the case, in the ballistic missile and space professions. We who hold management responsibilities are indebted to our industrial film producer associates for the tangible and highly effective way they have contributed to the progress of American aerospace developments.

Three Contributions of Film

There are three principal ways these contributions have been expressed. Film has been adeptly used for detailed documentation, for closer communication, and to foster broader understanding. I

SHOW OFF?

NEVER! You should never have to apologize for this movie projector's actions.

This new KODAK PAGEANT Projector is put together so that you have no parts to attach, or find, or wonder about when you're setting it up. You have nothing to lose.

Even its power cord is permanently attached. And its cord is a long, 12-foot double length so you can forget about looking up or hooking up extensions.

Politely, this projector shows you how the film goes. Just follow the red line when you thread it and you should never have to ad lib your way into a movie again.

No awkward waits for sound system warm-up. Push a button. Hear sound instantly!

This KODAK PAGEANT Projector has a new, space-age sound system that won't act up during a performance. It's electronically quiet (no hiss, no static, no popping, no crackling). You'll probably never need to have it fixed. You can definitely forget about carrying or storing spare parts for it.

It's all transistors. Which means no vacuum tubes to worry about. It also has a lifetime solar cell. Meaning noise-free sound, without the problems of the fragile photocell it replaces.

It has rugged printed circuitry that can't be jostled or bumped out of kilter. And it has a new idea in exciter lamps. The one that comes with the projector should be the one you trade in with the projector years later.

With all these excellent features, you can keep volume at a level that won't disturb people in the next room, yet everyone at your show hears the slightest whisper on the screen. They are never distracted by machinery noises. There are so few moving parts and they move so quietly, the machine never calls attention to itself.

The picture your audience sees is always bright, yet with no eye-fatiguing "hot spots." Picture brilliance is the same all over the screen—the picture is fully visible even in hard-

to-darken rooms, thanks to the exclusive KODAK SUPER-40 Shutter.

The sound your audience hears is never mush-mouthed. It speaks up, out of a big, 11" x 6" baffled speaker—a speaker sized to handle full amplifier power, reproducing every sound it is possible to record on the film.

If you like a lot of switches and dials to fiddle with on a movie projector, we're sorry. This machine has only one button for sound, and one dial for volume, another for tone. That's all.

If you'd like to show off a little with a projector that won't steal the show, ask for this KODAK PAGEANT 16mm Sound Projector, Model AV-126-TR. To see and hear it work, or read illustrated literature about it, write your name and address here:

.....

Then send it back to us at the address below.

Check this box ☐ and we'll have a Kodak dealer call you to arrange for a convenient demonstration. No obligation, of course.

7-47

 Dept. 8-V, Rochester, N. Y. 14650

SPACE... and the Need to KNOW

(CONTINUED FROM PAGE 46)
rapid, expressive, unmistakable communication up and down channels of authority, between government and industry, and among industrial associates in diverse fields is necessary if every member of the team is to be informed — if various elements are not to go off in different directions.

Knowledge v.s. Time Factor

We live in an age of ideas, where the sum total of human knowledge is growing exponentially while the time in which to apply the products of this knowledge is diminishing.

One way to compensate for this differential is by speeding up communications: by compressing more into each "message," by sharpening the "eyes and the ears" of the decision-makers whose judgments cannot be deferred if progress is not to lag.

The time is past when major new defense systems can be produced by a single "prime" contractor or by the "arsenal" technique. Today at SSD alone we are engaged in some two dozen space projects, studies or programs — for the Defense Department or in support of NASA. We have surveillance over some 485 contracts with 75 principal contractors and more than 300 "first-tier" sub-contractors, located in more than half the 50 states. Our interface with NASA and with the numerous elements of the government, together with rigid criteria for cost control and schedules, demand that communication among ourselves be *consistent, clear and concise*.

Films are a form of management communication that meets these criteria. Industry-produced

film illustrates "how" we do our management job better.

The Need for Understanding

The third value which you in the IFPA satisfy eminently well is the need for *understanding*.

Space is relatively new on the national scene. While the aerospace industries have reportedly become a \$20 billion business and are predicted by some to be certain to overtake the automotive industry as the world's largest, we still think of space as remote, complicated and unrelated to our individual futures.

Such is not true. Space really is pretty close to home — just 50 miles away, straight up. Space investigations are difficult, but the obstacles thus far have not been insurmountable. In fact, I think we sometimes fail to realize that since 1958 the U.S. has successfully launched more than 200 satellites or space probes, and that data pours in on us from space at an average rate of better than 40 miles of tape a day.

Space and the Individual

Neither is it true that space is totally unrelated to our individual lives. In the Air Force, for example, we are being concerned particularly about our security as it may come to be affected by what we do, or do not do, in space. On the non-defense scene, investigations of space are contributing mightily to our knowledge, not only about the universe beyond us, but about our planet as well. And dozens of new products, materials and processes stimulated by space-age research and development already are appearing in commercial uses.

But it is not enough to know *what* to do about space or *how* to get there. If we are to make the most of the space-age opportunities before us, we must also know

why. Understanding is especially important in a democracy for, ultimately, the people are responsible for the course of the nation.

Understanding is equally important to the advancement of our professions. It has been said, and wisely, that "the man who knows *how* usually works for the man who knows *why*."

Today we are trying to understand space, and to help all the world's citizens-for-freedom, who also have a real "need to know," to recognize and understand the possibilities inherent in our national reach into space. You are helping us toward this objective. As we found with the ballistic missile program, motion pictures can best portray the complexity of the job and the importance of the mission.

Capabilities Vital to Cause

It is said that only the imagination of man is vast enough to contain the immensity of space. Imagination is a talent well suited to

your art. The capabilities of those skilled in the film production professions — the cameramen, the writers, the editors, directors, producers — are vital to our cause and to the enlightenment of those whose understanding and support are necessary to the further examination and use of space.

We may begin with imagination, but of course we do not stop there. It was said by a science fiction writer that "what one man can imagine, others can make real."

We are aiming higher and the conquest promises to be even more difficult. But we relish the spirit of the adventurer who says: "I will go anywhere, as long as it is forward."

That is the direction of space. We are going forward because we know *how* — and, more important, because we know *why*. And you in the motion picture professions are helping us on our way, just as you are helping to put space in the public eye.

DR. HARALD DYRENFORTH:

(CONTINUED FROM PAGE 46)

There his career really flowered as he acted in Broadway shows and appeared in major dramatic radio shows out of New York until 1942.

U. S. military service (1943-44) took him (naturally) into the Army's mountain infantry ("ski troops") as a member of the "Mountain & Winter Warfare Board" at Camp Hale in the Colorado Rockies. He became a naturalized U. S. citizen in '43. In 1944-45, he served as foreign language broadcaster in the Office of War Information and later, on a part-time basis, for the "Voice of America."

He continued his acting career for four years, then taking his master's degree in the Theater Arts Department at UCLA in 1950. For the next decade, he turned to academic life, rising from instructor to professor of drama, broadcasting and speech at Mount St. Mary's College (Brentwood), Pasadena City College, Chapman College (Orange); and Long Beach State College. He received his Ph. D. in drama and telecommunications from USC in 1963.

Since 1962, Dr. Dyrenforth has served with the Space & Information Systems Division of North American Aviation, first as a motion picture coordinator for the APOLLO Project, then as writer-director in the Closed-Circuit

Television Department at N.A.A.

Throughout his college teaching career he was (for 12 years) the only fulltime college faculty member in the U. S. who was *also* a *working professional actor*. He has appeared in about 600 television plays, among them *Combat*, *Dr. Kildare*, *The Dick Powell Show*, *Perry Mason*, *Third Man*, *Hitchcock Presents*, and *Dobie Gillis*. He also worked in 50 films, starting in 1946 with the featured role of Walter Damrosch in *Carnegie Hall*.

Among his recent honors was the 1962 Nieman Foundation "Best Feature Article" Award for the International Labor Press Association. He wrote "Stop the Debasement of Our Profession" for THE SCREEN ACTOR to win this citation.

* * *

Name Bannister Photo Chief at Sperry Gyroscope Company

☆ James N. Bannister is now chief photographer of the Sperry Gyroscope Company, a Division of the Sperry Rand Corporation, Great Neck, N. Y. His appointment marks the consolidation within a centralized department of photographic services in the 12-plant Sperry complex on Long Island. Bannister joined Sperry in 1952 as a public relations photographer, subsequently becoming a photo-journalist and public relations photo section supervisor.

A Brief Note on Brig. General Joseph Cody

☆ A top-management role in military space programs climaxes an impressive Air Force career for General Cody. Chief of the Ballistic Missile Field Office at Vandenberg from 1958 to 1963, he managed the direction and growth of this bustling missile and space launching base from a small office to a giant military and industrial complex exceeding one billion dollars in value.

His important top-management responsibilities derive from a generation of Air Force service which has spanned fighter pilot training, assault landings at Normandy, participation in nuclear tests, and extensive management experience with the Air Research and Development Command, forerunner of the USAF Space Systems Command with which he is now associated.

**Port of Los Angeles Awards
Contract for Two New Films**

Two new Port of Los Angeles public relations films have been authorized by the city's Board of Harbor Commissioners with a total budget of \$47,580 to cover their production. The new films replace outdated productions in use for the past four years.

A personal services contract for the two pictures was to go in June to Ernest Kleinberg Productions, 3890 Edgeview Drive, Pasadena, who was awarded the job over seven other bidders for submitting the "most creative and original proposal," according to Albert Perrish, Board president.

The first film, a 26½-minute color and sound production, is designed to be viewed by a general audience "ranging from junior high school to adult level groups throughout the country." Stress will go to the port's facilities and its importance as a leading commercial harbor on the West Coast.

The second picture, only 14 minutes long and also in color and sound, is destined for port traffic promotion showings to foreign and domestic importers, exporters, freight forwarders, steamship officials, etc. It will be supplemented by French, German, Italian, Japanese, Spanish and Scandinavian language versions.

**F&B/Ceco Designs Camera
for White House Press Films**

A new camera is being designed especially to film the President's press conferences in the White House. Working on the project, which involves the conversion of a regular N. C. Mitchell camera to a reflex type with 3,000-foot magazines, is chief engineer Ray Emeritz of F&B Ceco, Inc.

He notes that the "L.B.J. camera" is a long stride technologically towards the perfect automatic professional motion picture camera. It will have automatic zoom lens, automatic electronic slating and a sync pulse generator to operate with a Nagra ¼-inch tape recorder.

Kyle Rote Hosts TV Series

A new series of 26 public service films, *Kyle Rote's World*, is being offered television stations by Association Telefilms. Series features the former All-American and New York Giants' football star as narrator of sports, travel, physical fitness, safety, education and science subjects.

BUYERS READ BUSINESS SCREEN

***BOON 1.** A welcome benefit; blessing.
— Webster

The Lipsner-Smith ultra-sonic film cleaning machine was first introduced to the Hollywood motion picture industry by Consolidated Film Industries.

Thru close user-manufacturer collaboration and under actual working conditions, CFI technicians helped develop the original machine to today's practical** and efficient machine. Now, ultra-sonic cleaning has become standard procedure for negative cleaning in film processing laboratories throughout the world.

A famous first from CFI. One of many in its 40+ years of serving the film industry.

****STILL ANOTHER FIRST FROM CFI** is the recent development of a solvent recovery system that further extends the use of ultra-sonic cleaning.

A FILM-LENDING LIBRARY with unusual requirements is the Audio-Visual Library of the Eastman Kodak Company in Rochester, New York.

Requirements are unusual not only because of high volume usage of its films but also — and especially — because, through the library, Kodak uses photography to promote photography. The film library is designed to provide information on picture taking and Kodak products and to stimulate interest in photography both as a hobby and as a profession.

Needless to say, a high quality job of film inspection is a must between each booking. For its 16mm motion-picture films, the library uses a Harwald Mark IV Inspect-O-Film machine, with automatic scratch detection.

How Inspect-O-Film Serves

This machine finds defects, such as torn sprocket holes, broken splices, etc., and provides an automatic scratch recording of the film. It inspects with speed and accuracy, and it also *cleans* the film, readying it for the next showing.

Kodak's library includes a total of over 5,000 copies of some 50 different 16mm film subjects and more than 4,500 copies of about 70 slide and print sets. In 1963, these programs were shown over 40,000 times to an audience of about 2,750,000.

The service is promoted in a number of ways. Catalogs listing the wide variety of programs are sent to camera clubs, photographic instructors and photo dealers. Free bulletins suggest how to tie the films in with an integrated program. Typical bulletins are titled "How to Run a Live Camera Club" and "How to Conduct a Club Course in Photography."

A Wide Range of Programs

For some 5,000 adult amateur photographic clubs, and 8,000 youth groups, there are "how-to-do-it" instructional programs, such as "Adventures in Indoor Color Slides" and "Camera Handling."

Kodak also offers motion pictures and slide tape talks to any group interested in photography, travel, gardening, or technical programs. Many of these groups are non-photographic, including churches, Rotary, Kiwanis, Lions, PTA and garden club groups.

Some programs are designed directly for particular professional or technical groups — graphic arts technicians, or law enforcement officials, for example.

New "Thermoelectrics" Film a First on This Technology

Said to be the first and only motion picture on *Thermoelectrics*, a new 15-minute sound film with that title shows how temperature problems are being solved with this "new" technology. It is offered for rental and sale by Industrial Education Films, Inc.

"The principles and practical applications of thermoelectric cooling, heating and temperature control are featured," according to IEF president Frederick W. Bright. "The film gives an explanation of the Peltier Effect of heat pumping, describes the latest techniques for effective application and demonstrates many thought-provoking applications. It also provides step-by-step procedures for writing specifications.

Thermoelectrics was produced under the supervision of a leading authority in the technology; is especially designed to appeal to engineers as well as non-technical people, including middle and top management. A 104-page reference manual is also available at \$2.00 covering five chapters dealing with "Solving Temperature Problems With Thermoelectrics." A Discussion Leader's Guide is provided with the film prints. A \$50 rental fee and purchase price of \$195 covers the new film. Write BUSINESS SCREEN for further details, c/o Reader Service Bureau, 7064 Sheridan Road, Chicago, Illinois 60626.

Reid Ray Filming Athletic Picture for Louisiana State U.
 ☆ Louisiana State University athletic officials will be using a new 24-minute color motion picture next fall to help recruit high school athletes to their campus. *The Fighting Tigers* have been lensed by Reid H. Ray Film Industries, Inc. from a script by Oveste Granducci.

Football and basketball games, a golf tournament, track meet and intramural sports events are all

"covered" in color sequences narrated by Lindsay Nelson. The film winds up with a trip to the Orange Bowl for the Miami-LSU post-season game.

American Cyanamid Shows 'Phosphates for Agriculture'

American Cyanamid Company has released a new film, *Producing Phosphates for Agriculture*, which describes the company's extensive mines and chemical plant in Bradley, Florida.

The film, which was made by Tiesler Productions of New York, will replace another Tiesler motion picture on the same subject, made seven years ago. The older

Tiesler Productions' crew sets up for shooting in Florida's phosphate mine of American Cyanamid.

picture, still giving good service to audiences until recently, was replaced because of four major expansion projects in the Florida phosphate operations.

Fertilizer manufacturers throughout the country will see the film, as well as farmers, the ultimate users of American Cyanamid phosphates. Expansion projects pictured include doubling phosphate drying capacity, tripling phosphoric acid capacity and adding diammonium phosphate as well as granular triple superphosphate to the company's line.

The new film also focuses attention on approximately \$3 million worth of air pollution controls which have been installed, as well as the plant's land reclamation program which is restoring several hundred acres of mined over land each year.

Sid Lund Joins Sales Staff at General Film Laboratories

☆ Sid Lund, a 25-year veteran in film production, has joined the sales staff of General Film Laboratories, Hollywood. He was in charge of lab administration and the camera dept. at Universal.

Shown in final scene of Cornell Centennial film are (l to r): Arthur H. Dean, Chairman of Board of Trustees; President James A. Perkins; Jansen Noyes, Jr., National Chairman; and Austin H. Kiplinger.

Cornell Shows Centennial Campaign Goals

CORNELL UNIVERSITY is currently embarked on a Centennial Campaign to raise \$73,200,000 as a "maximum gift" to the school from its more than 100,000 alumni and corporate donors as well. Playing an important part in this campaign is a new motion picture, *Cornell Centennial Campaign*, which will be shown throughout the world, wherever Cornell men and women gather.

Playing a leading role in the film, and acting as narrator, is Austin H. Kiplinger, publisher of the Kiplinger Report, and Major and Select Gifts Chairman of the Washington, D. C. area.

Cornell Achieves "Proper Mix"

Mr. Kiplinger takes his audience on a tour of the campus to show how Cornell has succeeded over the years in finding "a proper mix" between the cloistered ivy league college, which it is, and the broad, humanistically inclined land grant university, which it also is. The film shows that Cornell is blessed with one of the finest campus plants in the country, and it has drawn a distinguished faculty with few equals anywhere.

But, lest Cornellians feel complacent, the film also stresses that the plant and faculty must be held together and constantly replenished. Provision must be made for the 4,000 students who still live off-campus.

Produced by Willard Pictures

Cornell Centennial Campaign was produced by Willard Pictures, Inc., whose producer-director, John M. Squiers, Jr., an old Dartmouth man, found his loyalty severely strained during the weeks of production on location at the

Cornell campus in Ithaca, N. Y. ■

Meet "The Service Representative..."

(CONTINUED FROM PAGE 34)

sonnel, undertook this supervision, starting with research, through script-writing and testing in the field. Bruce Campbell was film production supervisor assigned by A.T.&T.'s film department.

A Gotham Film Production

Gotham Film Productions, of New York, was selected to make the 96-frame, 13½ minute color film, with Seymour Zweibel, Gotham's president, as producer, and Susan Wayne, director.

The story line of *The Service Representative* shows a close-up of the service representative's chair in a typical business office, and tells the girl watching the film to imagine it as *her* chair, and imagine herself doing the various tasks required of the job as it unfolds

on the screen. At the end, the film says if she thinks she would like handling contacts with customers intelligently, capably and, above all, humanly, then in this chair may be just the job she is looking for.

Script Pre-Tested in Field

In his research on the film, Mr. Geris went out into the field armed with a tape recording of the script and played it to groups of junior college and high school senior girls to test their reactions. This resulted in several changes which further clarified the service representative's job.

In addition, he and Miss Marsh visited a number of business offices and photographed typical working locations with Polaroid cameras. Later these pictures were used in selecting shooting sites for the film which would be most typical of conditions to be found throughout the country.

Three Versions Are Available

The Service Representative was first offered to the Bell System companies two months ago. It is offered in an automatic and manual version for use with small rear-view projectors which most personnel offices are now equipping themselves with.

For smaller offices, a flip chart version has been prepared (also by Gotham Productions) which will be used with a special tape synchronized to pages of the chart. Orders have come in from virtually all the operating companies. To date, it has been a highly accepted slidefilm and seems destined to have a large distribution.

The Service Representative was a First Place award winner in the 1964 NVPA competition. ■

S.O.S. Photo-Cine-Optics in New Quarters on Park Avenue

S. O. S. Photo-Cine-Optics, Inc. has completed the move of its New York City headquarters to a larger, more convenient location at 387 Park Avenue South in midtown Manhattan.

According to S. O. S. president Alan C. Macauley, the new facilities provide over 18,000 square feet on one floor, including an all-new, modern Display Room as well as completely separate warehousing space under the same roof.

Completed on June 30th, the new facilities are ready to welcome visitors to the New York World's Fair. S. O. S. is ready with the latest in Fair information for its summer visitors. ■

U. S. Television Spots Win Overseas Awards

Grand Prix to Alcoa Film at 11th Int'l Ad Film Festival

CRITICS AND VIEWERS have noted, with increasing frequency, the "art" and production care which goes into many of today's television commercials. Good commercials have (at times) exceeded the interest and entertainment value of the program fare which they accompany.

To spur both sponsors and agencies (as well as producers) toward even greater public acceptance as well as sales results, at least three international award programs have flourished in recent years. Interest on both U. S. coasts are served by the Western competition sponsored by the Hollywood Advertising Club and by the American TV Commercials Festival, recently concluded in Manhattan.

Held at Venice in Mid-June

The third and last of the 1964 awards programs specializing in this medium was concluded in Venice, Italy in mid-June when winners of the 11th International Advertising Film Festival were announced. This week-long program was attended by more than 1,300 delegates from all over the world.

The Festival's Grand Prix for television went to a U. S. advertising agency, Ketchum, MacLeod & Grove, Inc., for a 90-second commercial on Alcoa closures, sponsored by the Aluminum Company of America. The film features in intriguing electronic sound track simulating talking bottles, cans and jars in stop-motion photography. Silence at the climax adds drama as the spot relates an institutional "protection" story on behalf of closures.

Three Other "Firsts" to U. S.

Campbell-Mithun, Inc., another U. S. agency, won two first prizes. One of these went to its Mishavaka Rubber Company spot (for Red Ball Shoes), titled *Springprong-Balloon*; the other first award was given for a 60-second commercial, *Gobbles Dirt*, sponsored by the Gold Seal Company. Both of these spots were noteworthy for the "light touch" and killful use of humor.

Third U. S. first prize award was given the Doyle, Dane, Bernbach agency for its 60-second Volkswagen of America "snow slow" commercial. The spot tells the story of a man who drives a snow plow as his occupation but drives a Volkswagen to his work.

Two Johnson & Johnson Band-

Aid commercials won a second prize for Young & Rubicam. The first shows a child running on a beach; the second a child running on a playground. The films give stress to the words "kiss it with a Band-Aid" and if you haven't seen them, you don't watch television!

Other Venice awards to U. S. commercials included five "diplomas of recognition." Doyle, Dane, Bernbach received two diplomas: one for its 60-second Polaroid entry, *Sleeping Boy*, the other for a Laura Scudder Potato Chip *Boy Scout* commercial.

The Campbell-Ewald Company took home a diploma for its *Canon Balls* entry, sponsored by Chevrolet trucks and MPO Video-tronics, Inc. was another diploma winner as its *Sidewalk Cafe* commercial on White Owl Cigars (General Cigar Company) won this honor.

Last of the five diploma awards went to Leo Burnett Company, Inc. for a Joseph Schlitz beer spot titled *Pierre Skater*.

The International Advertising Film Festival had its origins in the theater-screen advertising commercial medium and films for that audience are dominant among its European entrants. U. S. screen advertising films won only one

second prize and a single diploma in the 12 awards categories for theatrical ad spots.

The U. S. cinema ad film winners were: Campbell-Ewald, with a second prize award for its film, *Pinnacle*, for the Chevrolet Motor

Division; a diploma of recognition went to Gerald Schnitzer Productions for its entry, *Frozen Action*, also sponsored by Chevrolet.

Next year's event will return to Cannes, France where the program is held on alternate years.

NEWS OF STAFF APPOINTMENTS AND A-V INDUSTRY DEVELOPMENTS

James R. Phillips, Jr.

Colburn Associates Appoints J. R. Phillips Head of Sales

James R. Phillips, Jr., is now general sales manager of John Colburn Associates, Inc., Wilmette, Illinois and its affiliate, McClure Projectors. The appointment was made last month by president John Colburn.

Phillips will be responsible for advertising, marketing and sales of both companies. Well known in the field of audio-visual communications, he was, until recently, visual communications training director for the Technifax Corporation and has been supervisor of the presentation section in the General Electric Polaris Missile Fire Control Program.

Currently active in the American Society of Training Directors and its Illinois' group, the new Colburn sales chief has appeared on WTTW, Chicago educational television station and in talks to members of the American Management Association, Institute of Radio Engineers and the Association of Technical Writers and Publishers. The 31-year old native of Rutland, Vermont now resides in Des Plaines, Illinois with his wife and three children.

Color Service Company Names R. C. Rheineck Chief Engineer

Robert C. Rheineck, formerly photographic engineer with the Columbia Broadcasting System, and American Broadcasting Company, has joined Color Service Company's staff as chief engineer in the New York lab.

* * *

Joins Wilding in San Francisco

Thomas Gleason has joined the San Francisco office of Wilding, Inc. as art director. Gleason has been a print and TV art director in the San Francisco office of McCann-Erickson for the past seven years.

Robert S. Throop, Jr.

Top Exec Posts for Throop, Hilliard at Geo. Colburn Lab

Two top executive appointments were announced last month by the George W. Colburn Laboratory, Inc. in Chicago.

Robert S. Throop, Jr. is the new sales manager for the company.

Allen Hilliard

His responsibilities include all lab sales planning and supervision throughout the midwest. He will make his headquarters at the company's 164 North Wacker Drive building.

President George Colburn has also announced that Allen Hill-

ard, a member of the lab organization since 1955, has been named technical information and public relations director. He previously served as a film editor and writer in the Producer Services Department until he was appointed laboratory consultant in 1958.

Both appointments are part of an expansion program being carried on by the company.

Niles Names Gwen Chandler as Studio's Production Stylist

New head stylist at the Fred A. Niles Communications Centers, Inc. is Gwen Chandler, who locates at the company's Chicago studios.

Studio president Fred A. Niles notes that Miss Chandler will

Niles stylist: Gwen Chandler

serve as consultant to the entire production department "to assure impeccable taste in settings, wardrobe, make-up, hair styling, etc., primarily in television commercial films but also in other work."

She has been associated with a top Chicago interior decorator and recently produced and coordinated Chicago fashion shows. Miss Chandler has also worked in theater, radio and television, both in Chicago and New York, as a model and actress. A recent selection as one of Chicago's "Ten Best Dressed Women" matches the national recognition given her own home interior which she designed.

Technicolor Growth Brings Promotions Among Key Execs

Expansion of the Motion Picture Division of Technicolor Corporation throughout the world has brought the announcement of personnel promotions within that company by president Melvin Jacobs.

Paul Fassnacht, former Technicolor v.p. in charge of production, has been made vice-president in charge of International Operations. He is serving his 35th year with the company.

A. P. (Al) Lofquist, Jr., former

This photograph was made in an undarkened room. Notice the brilliant clarity of the film being shown.

AV rear projection cabinets immediately improve your audio-visual program

A typical owner reports that AV rear projection cabinets gave his audio-visual program new vitality and effectiveness. It's because this new teaching aid makes using films so much simpler and more economical.

Users frequently find that they can afford more and better films when they must bear no longer the expense of fitting out darkened visual aids rooms. Directors of audio-visual programs notice that teachers are more willing to schedule films when they can use this compact, easily managed projection equipment.

The AV cabinet is completely self-contained with your projector installed and a big speaker built in. It goes into action quickly, and, just as quickly, stores away. Since it operates anywhere, instructors are able to preview films well in advance and at their convenience.

"Custom-made" quality for reliable performance
The AV rear projection cabinet

gives you a distortion-free, 22" x 28" picture on a new Polacoat non-glare screen. Cabinet accommodates most projectors. Exclusive Buhl built-in lens (optional at \$50.00 extra cost) provides full-screen presentation from projectors with two-inch lenses and larger, including slide and filmstrip projectors. Cabinet rolls easily from room to room on 5-inch casters.

Standard AV cabinet price: \$180.00 f.o.b. factory. Add \$6.00 for riser to accommodate Bell & Howell projectors. All modifications made at factory prior to delivery.

Send for free folder containing complete information and specifications. Order direct from factory or your AV supplier.

Camera Mart Expansion Move Nearing Completion in N. Y.

Remodeling and expansion of facilities of The Camera Mart, Inc., New York City, underway for the past six months, has been virtually completed, according to Camart president "Chick" Hyman. The professional motion picture equipment firm now occupies all four stories of their building at Broadway and 60th Street in Manhattan, has tripled its working space to approximately 12,000 square feet.

Office quarters, equipment maintenance and repair departments have been enlarged and additional facilities provided for lighting and sound recording equipment. The company's manufacturing area has also been increased. Accessories as well as custom-built products are designed and produced here under the trade name of Camart Products.

The facility, now known as the The Camera Mart Building, is located at 1845 Broadway, in the Columbus Circle-Lincoln Center area.

Manhattan Effects Develops New "Double-Eight" Technique

A new technique for the preparation of "Double Eight" internegatives has been developed by Manhattan Effects, a New York optical service firm. This involves shooting in both b/w and color from either 35mm and 16mm originals to double eight stock from A, B, C, or more rolls.

According to Bernie Barnett, Marketing Manager, this method will provide new economies to the motion picture industry for 8mm films.

Manhattan Effects is a newly organized optical service, set up by Bernie Barnett and Chuck Robbins, owners of Manhattan Color Laboratory, which has been servicing the slidetfilm field for the past 14 years.

Friden Installs Computer at Sponsors Film Service, N. Y.

Sponsors Film Service, an associate company of Gerald Productions, New York, has installed an electronic computer designed by the Friden Company to handle the work involved in the company's print procurement and film storage operations. The company is active principally in the procurement, shipment and storage of TV commercials.

Flat base of new Arriflex-16Q has two tripod sockets for balance and "correct" attitude.

Unveil New Arriflex 16-Q at Industry Film Producers Show

The new Arriflex 16-Q camera was introduced to film makers at the recent Industry Film Producers Association 5th conference in Anaheim (see pages 43-48) by the Arriflex Corporation of America.

The model "Q" designation was cited for these qualities: It stands for "Quiet" — the camera with a loaded 400-foot magazine produces only 31 db measured with a General Radio Noise Level meter at three feet. It also stands for "Quick" through the use of the quick-change magazine (similar to Arri's 16M) which permits loading in mere seconds.

Finally, the maker notes, the "Q" includes "Quality" and the new model has retained the rugged characteristics with which Arriflex has established a world reputation.

The Arriflex 16Q, complete with its special 400 ft. magazine, governor controlled motor and blimped Angenieux 12 to 120 zoom lens, weighs only 16 lbs. This self-blimped camera also has its lens in a blimp-housing to prevent noise from being radiated. This also serves to protect the delicate zoom lens from external damage as well as dust and rain.

The "Q" optical system differs significantly from other Arri-16 cameras. The mirror-shutter is farther forward from the finder aperture; ground glass is located near the mirror. The "Q" has the same balanced butterfly-type mirror reflex shutter; its 180-degree opening gives an exposure time of 1/48 sec. at 24 fps. Further important details are available, together with basic cost and accessory data, from the Arriflex Corp. of America, 257 Park Avenue South, New York, New York 100-10.

New AUDIO-VISUAL Equipment

Amega's New Magnetic-Film Sync Sound Recording System

The Amega Corporation, Sun Valley, California, has announced a new magnetic-film synchronous sound recording system, its Model A-1. A single carrying case contains the complete record play-back system.

Use of plug-in modules containing circuitry for the bias oscillator amplifier, record amplifier, microphone pre-amplifier and play-back pre-amplifier is an unusual design concept. Other features include a four-digit footage counter (chain interlocked with the synchronous drive motor); removable head cover and instrumentation type split-apart 1200-foot reels. For complete technical data write:

Amega Corporation, 11817 Wicks Street, Sun Valley, Calif.

F&B Ceco "First" is the New Pro-Jr Fluid Head Tripod

The first new product developed by F&B Ceco, Inc. is the Pro-Jr Fluid Head Tripod, designed to accommodate such cameras as the Cinevoice, Arriflex 16 and 35mm, Eclair NPR and others up to a total weight of 30 lbs.

Silicone damped head utilizes the latest silicone fluid formula and is designed to operate with 100% efficiency in temperatures varying from 20 degrees below zero to over 120 degrees Fahrenheit. Other new features include a positive grip locking device which cancels all drift possibilities, per-

Pro-Jr Fluid Head Tripod

mits absolute rigidity in the locked position. There is also a new combination camera balancing and tightening lever never before used on this type of equipment. The head fits any Pro-Jr Tripod. Total weight is 7 lbs; tilt: 50 degrees, both directions. Head cost (only) \$350. Regular deliveries began on July 1st.

News of Projection Equipment

☆ The annual "Trade Fair" pages, beginning on 37, bring readers the news of late model projectors.

HPI Has New 8mm Wide-Angle Lens for Kodak Automatic 8

☆ A new, fully-corrected wide angle lens for use with the Kodak Automatic 8 Projector has been announced by the Industrial A V Division of Hudson Photographic Industries, Inc., Irvington-on-Hudson, N.Y. The new lens is available in a mount that replaces the existing standard lens in Kodak Automatic 8 without modification. It is a complete lens system — not a supplement.

The HPI 8mm wide angle lens is said to give images without distortion, loss in color or definition. It has been especially designed for rear projection use with the HPI Groupshow, Telescreen, and similar screens.

An unusually short focal length (7 mm) enables a projector equipped with the HPI wide angle lens to be used with rear projection screens on one desk or a single projector table. For example, when used with the HPI Groupshow Junior, the entire space occupied by both projector and screen is less than 24 inches long. The image can be viewed by an audience of up to 30.

For the business film user, the HPI wide angle lens permits a simple-to-operate rear projection display right on the client's desk. It is available from franchised dealers at \$28. The lens can be fitted to other 8mm projectors on special order.

BUSINESS SCREEN INTERNATIONAL

Norwegian Industrial Groups Hear Talks by AEG Film Chief

Guests of the Norwegian "Studieselskapet for Norsk Industri" heard Dr. Hans Schaller, film chief of the AEG, Frankfurt, West Germany, at one of three lectures delivered recently on the subject: "Industrial Film — a Way to the Public."

Dr. Schaller reports that interest in the industrial film medium is keen in Norway and that production efforts in other countries is followed closely. There are strong indications of increasing output of business industrial films, especially in export industries such as aluminum and paper-making.

The West German leader in business film activity expressed the hope that industrial film conventions would be held in Norway in the near future to give added impetus to that country's film activities. Three AEG color films, *Movement in Three Phases*, *In Nine Minutes* and *Kahl* were warmly applauded.

300 Dutch Business Leaders View Prize Industrial Films

Our Netherlands' correspondent Kerst Blaauw reports on the recent showing in The Hague of prize-winning films from the 4th International Industrial Film Festival held in Madrid last fall. Over 300 Dutch business executives were in the audience at the Seinpост Cinema.

Host for the screening was Dr. Braat, president of the Technical Film Center, Holland's specialist industrial film distributor. In his introduction to the program, Dr.

TFC's Dr. Braat addresses audience of business leaders who attended showing at The Hague.

Braat cited the advantage of including the film medium as an integral part of the information program within industry.

Shell Netherlands Premieres "Chemie" on Chemists' Work

Shell Netherlands held press showings in Amsterdam and The Hague last month for an impressive new color film, *Chemie* (Chemistry). In the new 25-minute picture, viewers are shown the relation of the chemical industry in everyday life, taken into modern chemical laboratories.

George Sluizer, who directed the fine Shell film *Hold Back the Sea*, has done an equally impressive job for the producer. Multi-film of Hilversum. Cameraman Pim Heytman is credited with excellent photographic quality. The new film's objective is to give "an artistic impression of the climate in which the chemist works and of the intriguing world in which he lives."

Neal English Becomes National Director of Public Information for the Red Cross

Neal English, until recently assistant director for audio-visual activities at Red Cross National Headquarters, was named national director of public information on July 1st. He succeeded Roy E. Johnson, long active in the audio-visual field, who retired on June 30th after nearly 30 years of Red Cross service.

Since 1960, when English came to the Red Cross, the organization has re-emphasized "star" spots, made greater use of color in its annual TV films and divided its report film into varying TV time segments. Radio-TV disaster coverage has been increased. Under his supervision, too, a series of three disaster films was created as a public education project.

The Red Cross' p. r. director came to national headquarters from Cincinnati, Ohio where he served concurrently as director of community relations for that city's Red Cross Chapter and as associate director of public relations for the Area United Appeal. His film experience includes service with Hallmark Productions and he is a member of the Public Relations Society of America.

National Committee Names 15 U. S. Films for Fifth Int'l Industrial Film Festival

The 15 motion pictures which will represent the United States at the 5th International Industrial Film Festival to be held in London, England on November 2-6th have been named by a national screening committee working in cooperation with the National Association of Manufacturers.

Titles, sponsors and producers of the American entries are as follows:

Adventure in Color, sponsored by the Pittsburgh Plate Glass Company and produced by Dynamic Films, Inc.

America's Cup Races, 1963, sponsored by Thomas J. Lipton, Inc., and filmed by Agnew Fisher.

Area of Action and Tomorrow Today, sponsored by the IBM World Trade Corporation and produced by Film Enterprises, Inc.

First Aid Now, sponsored by Johnson and Johnson and produced by MPO Productions, Inc.

Forged Hardened Steel Rolls, sponsored by the Bethlehem Steel Company and produced by Audio Productions, Inc.

The Magic Mirror, sponsored by Hallmark Cards, Inc.

Man the Manager, sponsored by Pan American Airways and produced by Henry Strauss & Company, Inc.

Metal Bandsawing Tips and Techniques, sponsored by Simonds Saw & Steel Company

Narrator of nine stockholder report films for Beatrice Foods Co., Chicago, the veteran television commentator Fahren Flynn (ctr) received plaque from president William G. Karnes (left) during company's annual meeting in Palmer House on June 1st. At right: Dr. George Shadwick, director of technical services and of Beatrice film program.

and produced by Bay State Film Productions, Inc.

Methods, Money and Maps, sponsored by the Procter & Gamble Co.

Miles Over Water, sponsored by the Louisiana Department of Highways and produced by Avalon Dagget Productions.

A Spark in Time, sponsored by Champion Spark Plug Company and produced by Portafilms, Inc.

The Spirit of America, co-sponsored by the Shell Oil Company and Goodyear Tire & Rubber Company; produced by Spotlight News.

Story of duPont Elastomers, sponsored by E. I. duPont de Nemours & Company, Inc. and produced by Audio Productions, Inc.

With Care and Concern, sponsored by The Upjohn Company and produced by Parthenon Pictures, Hollywood.

These annual International Industrial Film Festivals are sponsored by Confederations of Industry on the Continent and in Britain. The British Industrial Film Association is in charge of arrangements for the program in London.

FILM LIBRARY and TV Film Room Managers

Harwald's precision automatic film inspection equipment is the accepted world standard for modern film libraries — V. stations — or wherever motion picture film is handled. Spect-O-Film automatically finds breaks, torn sprocket holes, scotch tape "splices", any cause of film failure, even those defects that are virtually impossible to find by hand. Also provides for film cleaning, conditioning, timing and editing.

Seven models available
See catalog for complete listing.

national Film and TV Festival, sponsored by Industrial Exhibitions, Inc. the entry fee which must accompany your original form is \$50 for either "industrial" or "public service TV programs."

We hope this answers many reader inquiries about the widely-ranging differences in cost between the growing number of such events. In the latter case, the New York Festival mentioned is a strictly *commercial* proposition. But we do sincerely believe that no sponsor or producer should lay down \$50 without full and frank disclosure of the names and qualifications of the people who lend their authority as judges to the award he may expect to receive. Industrial Exhibitions, Inc. should provide such information on request to all entrants.

The Jam Handy Organization Helps Create a Manual on "Audiovisuals in the Church"

We commend The Jam Handy Organization for "editorial and design assistance" given the Audiovisual Council on Public Information, Inc. in the preparation of an excellent new manual for leaders in the church field, titled "Using Audiovisuals in the Church."

Within its colorful and illustrated 16-pages and covers are a multitude of useful facts to help pastors and Christian educators on the proper use of films. Copies are being made available to audiovisual dealers, religious film producers, distributors, etc. at extremely low cost for nationwide dissemination.

Jamison Handy's great personal interest in and dedication to Christian education and the advancement of the religious film field has once again made a truly useful contribution for the benefit of all concerned. Stanley G. Hansen, Chairman of the Religious Council of the National Audio-Visual Association, expresses the sentiments of all of us when he says:

"I am really excited about this new, king-sized promotion tool to help sell audio-visuals to the churches. I think you will agree with me that this manual can accomplish a great deal. The response you will receive when using this material will make you proud . . ."

"Project Discovery" at Shaker Heights School Will Measure Impact of Films in Curriculum

A school system, an educational film producer and a projection equipment manufacturer have joined in a unique three-year research and "discovery" alliance for teaching-learning study, according to Dr. Donald G. Emery, superintendent of schools at Shaker Heights, Ohio.

The study, which is being endowed by contributions of materials and equipment by Encyclopaedia Britannica Films, Inc. and the Bell & Howell Company, will note the impact that a vast component of filmed instructional materials, installed in a single elementary school building (Mercer School), may have on the

Wheelock Productions, N. Y., to Offer Producer Services

☆ A new organization has been formed in New York to provide a wide variety of services for film producers — particularly for film producers from other parts of the country.

Eli Wheelock Productions, Inc., a subsidiary of Willard Pictures, Inc., will offer New York facilities, connections and services ranging from complete productions to simple lab contacts. It will operate as a completely separate company under officers: John M. Squiers, Jr., president, Frank Brittain, vice-president, and David Teske, production manager.

Currently, the firm is doing work for five out-of-town producers, ranging from talent procurement to complete production of a \$70,000 motion picture.

Wheelock Productions is also active in procuring a wide variety of services for several major exhibitors at the World's Fair, including talent, technical and maintenance personnel.

SOUTHERN EQUIPMENT CO: (CONTINUED FROM PAGE 36)

24 positions in the 80-slide Carousel magazine are filled with black slides, and the sound tape is adjusted so that the slides change as rapidly as possible to bring the magazine around to the beginning of the presentation again. However, Eberts is considering replacing the black slides with a sales message, or extended introduction to the presentation.

"Audiovisual presentations are particularly valuable to any firm that manufactures custom equipment," Eberts said. "Even if a customer comes into our showroom, looks over our products, then goes through our plant, we are often unable to show him an item much like the one he needs. But, chances are we have manufactured and installed one similar to it, and captured it on a color slide."

learning behavior of over 700 boys and girls, kindergarten through the sixth grade.

In launching what he calls "Project Discovery," Dr. Emery made clear that no abrupt changes will be made initially in the Mercer curriculum.

"We are in a most remarkable position of placing a wealth of quality filmed materials in the hands of quality teachers who use a modern curriculum. *Project Discovery* offers a controlled situation for investigating additional ways in which pupils gain knowledge, learn attitudes and develop skills," Emery stated.

A film library of approximately 500 sound motion pictures and 1,050 filmstrips in all "K-6" subject areas will be installed by Britannica Films this summer on extended loan to Mercer School.

In turn, Bell & Howell is equipping all Mercer classrooms with the company's automatic-threading 16mm Filmosound projector and the newly-developed Autoload filmstrip projector without cost to the school for the duration of the study. Several small library conference rooms will also be equipped with projection facilities. Installation of new projection screens, projector tables and delivery of new films and filmstrips as they are released, comprise the audiovisual inventory for *Project Discovery*.

In addition to the initial installation, the education directors of both sponsoring companies — Andrew Scarborough of Bell & Howell and Dr. Wayne Howell of EBF — have announced that the services of their entire research and educational staffs would be at the disposal of Shaker Heights' educators through the duration of the three-year experiment.

"We think of what is happening here in Shaker Heights as a significant step in the evolution of American education, rather than the much-discussed but non-existent revolution," said Dr. Howell in outlining a blueprint for action for the unique project.

"If you give individual pupils, under the guidance of creative teachers, the opportunity to extend their horizons and discover the world at their own pace, using the film medium in much the same manner as library books and other basic resources, we feel sure new avenues will open for personal, self-directed study."

New Communications Idea Center demonstrates the latest in A/V presentation ideas

The new Wilding Communications Idea Center, located at 5725 N. Broadway in Chicago, dramatically illustrates the full potential of modern Audio-Visuals.

Only Wilding could create it! The new Communications Idea Center is the most complete Audio-Visual demonstration facility ever designed. Here you will be exposed to the full range of modern creative and production ideas necessary for effective business communications. At CIC you will learn, for instance:

How to present a message—A dramatic presentation will give you ideas on how best to convey *your* ideas. The presentation incorporates a variety of media—motion pictures, standard and widescreen slidefilms, complete stereo sound, industrial theatre, printed materials and displays. It demonstrates how these media can be combined to accomplish your objectives.

How a modern A/V installation works—The new CIC is a modern Audio-visual installation in action. An experienced Wilding

A/V consultant is always on hand to demonstrate and explain how a programmed installation works. Learn how these ideas can be applied to the communications needs and facilities of your own organization.

What's available in A/V equipment for small shows, direct selling, and point-of-sale—Flip-top slidefilm projectors, 8mm and 16mm motion picture projectors and a wide variety of other portable A/V equipment are available for demonstration.

Visit the Wilding CIC—You are cordially invited to see our new Communications Idea Center. To arrange a showing for your organization, company or department, write, wire or call—collect—our nearest office. Descriptive color folders available on request.

He goes for the flesh tones

The color of skin is terribly important to this gentleman. He's a color-correction specialist in the General Film lab; skin is the key tone he uses to judge color adjustments that are needed from scene to scene in trial prints.

His corrections are then programmed into our automated printers. (We use both additive and

subtractive types.) These reproduce release prints in any quantity, rapidly and without variation.

In many instances, the precision and speed of our modern equipment will lower processing costs for producers. Send for our latest price list, or call for a specific quote on your next production, either color or b&w. Write to General

Film Laboratories, 1546 N. Argyle, Hollywood, California 90028. Phone (213) HO 2-6171.

POSITIVELY outstanding 16 and 35mm B&W NEGATIVE film...

New Ansco Versapan® NEGATIVE Film!

The better the negative the better the positive. It's that simple. And there's no better premium-type medium speed black & white negative film than new Ansco Versapan®.

Soft gradation, very fine grain, high resolution... everything that makes a better negative has been built into this exceptional film. It's the way to give all your black & white motion pictures that unmistakable look of quality.

What's more, since we've built these qualities right into Ansco Versapan you can forget having to depend on special or forced processing to produce superior results. You get them naturally.

And with its medium-speed of 80 Daylight and 64 Tungsten, new Ansco Versapan is ideal under a great variety of lighting conditions.

Before you shoot your next black & white assignment, try a test roll of new Ansco Versapan and see the difference quality makes. It's available in all standard 16mm (Type 2531) and 35mm (Type 5531) rolls.

Society for Advancement of Management to Honor Films

☆ Recognition of the key role of films in management programs will be a highlight of the 19th International Conference and Exposition sponsored by the Society for the Advancement of Management when that group meets at the Americana Hotel in New York City, October 14-17.

An International Management Film Festival, to be held in conjunction with the Conference, will present awards in several categories for "the most outstanding documentary, industrial and educational motion pictures related to the science of management."

Dr. Henry A. Singer is executive director for the Society. Inquiries concerning the Film Festival should be addressed to his office at 16 West 40th Street, New York, N. Y. 10018.

* * *

Accept Entries to October 1 for Int'l Film & TV Festival

☆ Deadline for film entries to the 4th International Film & TV Festival of New York has been extended to October 1. According to Herbert Rosen, president of Industrial Exhibitions, Inc., sponsors of the annual event, the deadline extension applies to all four categories of Festival media including industrial films, public service television programs (including single films and series); and slidefilm presentations.

The festival is slated for the New York Hilton on October 21-23. The three-day program includes seminars and workshop sessions (Industrial Film & A-V Exhibition section). An orientation seminar "Selling Your A-V Program to Top Management" has been announced under the co-chairmanship of Charles Corn, president of Admaster Prints, Inc. and Porter Henry, president of Porter Henry & Co., Inc.

Elements of this seminar are being set to illustrate and prove that management will allocate budgets for audio-visuals when results are shown. Methods of measuring results in "before and after" figures and demonstrations on "how to get the most out of an A-V budget, getting management approval for a planned program, etc." are mentioned in the advance program notes.

Among other authorities scheduled to appear on the festival program are Harry Wayne McMahon,

international advertising consultant, who will discuss (and show) examples of "Breaking the Language Barrier in International TV Advertising," giving examples of new non-verbal techniques.

An extensive display of the latest in a-v media and equipment as well as services will be included in the exhibit area at the New York Hilton.

Further details, entry forms and the complete program are available from Industrial Exhibitions, Inc., 17 E. 45th St., New York, N.Y. 10017.

Wilding, Inc. Names Directors at Board Meeting in New York

☆ Meeting on August 19 at the Drake Hotel in New York City, directors of Wilding, Inc. have elected three new members to the board of that national communications' company.

Joining the Wilding board are Dr. John K. Kough, former executive vice-president of Science Research Associates, Inc.; and Daniel B. Gallagher and William R. Winn, both vice-presidents of the parent company, located at its Detroit office. The present board also includes president H. Williams Hamner, executive vice-president Clinton B. Hatcher; Robert C. Ausbeck, assistant to the president; and Wallace Flower, partner of William Blair & Co.

In other actions, the Wilding board confirmed the appointment of Donald P. Smith as a vice-president in the company's New York office and John Long as a vice-president at Detroit. A 10¢ per share dividend was declared for the second quarter of 1964.

The New York meeting enabled all board members and Wilding guests, including various underwriting group representatives to attend the 1965 Ford Announcement Show at the New York Coliseum. The three-hour musical show was produced for the Ford Motor Company by Wilding, Inc.

N.Y. Film Producers Assn. to Screen TV Spots Monthly

☆ The Film Producers Association of New York will begin to hold monthly screenings of current TV commercials starting in the latter part of September at the Preview Theatre, 1600 Broadway.

The FPA's executive board believes this will allow various seg-

MAYBE WE'RE NUTS

But we're trying a new way to birth a movie. Maybe it will work, or maybe it will be just a new way of driving over the fiscal cliff. But — We've decided that when our staff feels strongly about a picture idea, we'll put our money where our claims are and make the picture on our funds — to be offered for sponsorship not as a paper idea, but as a completed answer print... ready for your credit titles, with you-the-Sponsor knowing exactly what it can do for you.

"Holiday for Bands" was born this way; most successfully: check Modern T P S or the American Oil Company.

Your budget charge need not be "film production" but "Advertising Materials" or another current account — you simply buy the necessary lot of release prints. Add distributor and serve.

"WHAT'LL YOU DO IF — ?" for TEENAGE DRIVER SAFETY (12 minutes, 16mm b&w, sound)

An exciting but explicit good-driving movie, vividly dramatizing two stay-alive "Anticipate" concepts — "Drive ahead of your car" and "Rehearse ahead of time" what you'll do if certain common emergencies arise." Plus actionful pointers for Expressway Driving, Night Driving.

"UNDER YOUR HOOD" FOR WOMEN AND YOUNG DRIVERS (11 minutes, 16mm EK Color, Sound)

As the narrator says, "If you know just a few fundamentals of What Makes Your Car Go, you're less likely to get caught in embarrassing situations, you'll make better sense to mechanics, save money on your repair bills, get more m.p.g. out of your gas, and become an Authority to your less versed friends." The film uses models, cutaway chassis, road scenes and sharp-styled animation to present the major systems of the engine, drive-train and brakes, identifying the parts that concern the driver and showing what they do.

If your company may be interested in exclusive sponsorship rights to either of the above, phone us for the answer print.

ARRIFLEX® 35

** ...only 12½ lbs. light!*

**but
very
heavy
in
performance!**

Today's filming jobs break fast, demand the best equipment. So, check out the fabulous Arriflex 35. Pick it up, heft it. It has the right feel—and at no more than 12½ pounds. Makes for hours of effortless filming—studio or location, on the run or in the crowd. **ARRIFLEX 35—the undisputed favorite when the action really counts.**

Precision works throughout, too. The Arri people didn't skimp to make that weight. Better engineering does it all. From the knurl on the knobs to the brilliant reflex mirror shutter system. **ARRIFLEX 35—the head of its class in compactness, portability, dependability.**

Not to mention continuous design improvements most others only talk about. Now the clap-stick is no longer needed. Arri research offers you a built-in signal generator and automatic start-marker for true lip sync with any ¼-inch tape system; the governor-controlled motor activates marker lights which flash key frames at the start of each take. Factory-equipped, of course.

ARRIFLEX 35—a leader in film-making unsurpassed for exclusive features and money-saving advantages.

ARRIFLEX 35—the preferred camera system of cinematographers world-wide—in commerce and industry, the sciences, education, news and sports, entertainment and the arts.

There's a valid reason for it. Take an Arriflex in hand and see for yourself.

* Model 118 with 400' magazine

ments of the industry to keep abreast of such factors as new trends, techniques, growth or decline of color, more or less talent, voice-over or on-camera sound, etc.

The screenings are principally designed for advertising agency people, department heads, art directors, copywriters and producers.

Only those commercials made by FPA members will be shown, but since this is estimated to be about 70 per cent of the national total, the product on display should be representative.

Screenings will begin at 9 AM and run for about 90 minutes, and then be repeated.

Lewis Bernhard, Jr. Becomes SMPTE Executive Secretary

☆ Lewis A. Bernhard, Jr. has been named executive secretary of the Society of Motion Picture and Television Engineers (SMPTE). He succeeds Col. Charles S. Stodter, who is retiring after serving the society since 1956. Mr. Bernhard has, until recently,

Lewis A. Bernhard, Jr.

been administrative manager of the society of Plastics Engineers.

Colonel Stodter retired from the Army in 1954 after a 30-year career, the last four years of which he served as chief of the Army Pictorial Service.

Audio-Visual Institute for Training Directors Oct. 25-30

Industrial training directors will be helped toward more effective use of modern instructional materials at four day-long workshops of an Audio-Visual Institute to be held at Indiana University from

October 25-30th. The program is co-sponsored by the American Society of Training and Development and the National Audio-Visual Association.

The first of the daily workshops will cover slides and filmstrips; the second daily program will include motion pictures, television, audio equipment and graphics. Third and fourth daily programs will consider overhead and opaque projection and the local production of a-v materials.

In addition to the workshops, the Institute will feature two general sessions at which a-v spokesmen will visualize the role of teaching aids in an industrial training program.

"Audiovisuals are playing an increasingly important role in business and industrial training programs," notes James A. Unger, chairman of the ASTD's Audio-Visual Institute Committee, "and this has led naturally to growing interest among training directors in the effective, extensive use of these tools. To meet this growing demand, we have programmed a practical and extensive study of the whole gamut of equipment and materials available today, emphasizing those aids which are most com-

monly used in everyday training situations."

Enrollment in the Institute will be limited to 100 students this year. Both ASTD members and non-members are eligible to enroll though preference will be given members. Inquiries may be addressed to Gordon Bliss, executive director, American Society for Training and Development, 2020 University Ave., Madison 6, Wis. •

Record Sales and Earnings Bell & Howell at Quarter

Record second quarter sales and a 37 percent increase in operating earnings over a year ago brought a 15 percent increase in net earnings to the Bell & Howell Company for the 1964 period.

Sales of \$46,261,000 established a new record and compared with \$39,095,000 in the second quarter of 1963. First half net earnings of \$1,747,000, up 13 percent, were equal to 40¢ per share.

THE EDITORIAL VIEWPOINT

SOME 25 YEARS have gone by since the Chicago-based Mills Novelty Company of the late 30's introduced the coin-operated sound-on-film "jukebox" with which at least one member of the Roosevelt family was identified. Mills and the film machine went that-away through a combination of circumstances, not the least of which was the maintenance of what was a comparatively simple type of continuous, repeater-type rear-screen projector. Film also tended to break through brittle hardening of the material and there were apparently all too few qualified repair men out across the country to keep the gadget going.

Europe has taken a hand in this game with in recent years. From Italy came the complex 40-film (three minute subjects) capacity Cinebox and where has that gone?

This year it's the Scopitone, patented by a French company (Cameca Corporation of Paris) and set for marketing to U. S. tavern and restaurant operators by Tel-A-Sign, a Chicago maker of point-of-sale advertising. A. A. Steiger, president of Tel-A-Sign, is quoted as saying that his company hopes to produce 3,000 to 5,000 of the machines in Chicago in 1965 and about 10,000 in 1966. About 200 of the machines have been delivered to date, at a cost of \$3,500 apiece.

The Scopitone contains 36 films, also running about three minutes each. Frequent reports mention that "there is no U. S. competition now" so we can wonder what happened to the Cinebox.

Knowing something of the adamant nature of organized projectionist's locals, organized repairmen in the jukebox field and the royalty problem involved in musical entertainment films needed to fill those 36 slots, we will watch with interest subsequent developments as Scopitone bids for viewers in cafes.

Scopitone: a three-minute film for a quarter.

**In Memoriam: a Brief Tribute
to the Late Frank Arlinghaus**

THE INDUSTRY HE SERVED with great distinction and to which he brought so many progressive innovations in the vital field of sponsored film distribution, will long remember Frank H. Arlinghaus, president of Modern Talking Picture Service, Inc., who succumbed to a heart attack at 62 on Sunday, August 23rd.

The publisher of *BUSINESS SCREEN*, to whom he was friend and counselor since this magazine was born within months of Modern's founding, will always cherish that unanticipated tribute he paid to us at his company's informal dinner party held at Chicago's Hotel Sherman during NAVA's recent 25th anniversary convention last July. Cold type cannot express the warmth which Frank Arlinghaus will forever leave in our heart, as in the hearts of all with whom he worked and served.

We will remember him for his pioneering of both equipment and practices which are now the accepted "standards" among his contemporaries in sponsored film distribution. We will remember him as he brought together that first modest staff with whom he founded his company on its separation from the Western Electric Company in 1937 — and for building the vast network of Modern film libraries which now covers 32 cities of the United States and Canada. It is typical of his thoroughness and belief in maximum quality of service, that all

The late Frank H. Arlinghaus

Pioneer leader in sponsored film distribution

of these Modern libraries follow the same high standards as those laid down for the constantly-expanding New York headquarters operation.

Through his foresight, Modern Teleservice was established as a subsidiary in 1956 to distribute film television programs and commercials. The realization of the needs of the nation's schools for greater use of science films, led to the establishment in 1960 of the Modern

Learning Aids Division. And the vision of this man encompassed the growing international use of the factual film medium. Frank Arlinghaus helped to establish Inforfilm, the first *international* association of sponsored film distributors, in which Modern is the U. S. and Canadian representative.

A graduate of Stevens Institute of Technology in 1924, he joined the Western Electric Company in 1929. In this pioneer phase of sound-on-film (in which the Bell Laboratories and Western helped develop and install sound systems), the ERPI Classroom Film program in which he was one of the executives, he began what was to become his life's work. When the Western Electric separated this activity in 1937, the department he headed became an independent concern under his leadership: Modern Talking Picture Service, Inc.

A devoted father and husband, he found inspiration and guidance in Christian service and was honored by his church. A resident of Rumson, New Jersey, he is survived by his wife, Rosalie; a daughter, Alix-Ann; sons Frank Jr. and John Clemens; brothers Clemens and Rohs; and a sister, Ann. A requiem Mass was given at Holy Cross Church in Rumson on Friday, August 28.

But his monument is the esteem held by all who knew him; the gratitude of an industry to which he brought one of its most vital service organizations and the respect of those who know the high standards with which Frank Arlinghaus has endowed the field of sponsored film distribution. — OHC

SOUND FILMSTRIPS IN COLOR

"Your Press, Your Freedom"

Graphic art captures the colorful history of the printing press from its beginning through modern-day advances in technology. The first movable type is shown as well as examples of the first newspapers. Highlight of the filmstrip is the case against John Peter Zenger and its contribution to the establishment of the freedom of the press. (Showing time: 6 minutes)

"The World At Your Fingertips"

The exciting world of the newspaper is told in this animated sound filmstrip. The newspaper is shown offering something for every family member — the importance of the editorials, the guidance of the index box, the home section, the sports, and the wide variety of entertainment. Key terms are also explained and the benefits gained by the reader are discussed. (Showing time: 6 minutes)

"Newspapers In The Classroom"

A documentation with color pictures of a classroom study plan as it is conducted in San Diego, California. Suitable as a teacher briefing tool, or a student orientation program, the filmstrip points out the wide selection of information available through the local newspaper. Coordination with geography, history, reports, and current events programs is explained and the standards of a classroom newspaper are discussed briefly. (Showing time: 11 minutes)

"Newspaper Tour"

A comprehensive look at the many departments and functions utilized in producing a metropolitan daily newspaper. The newspaper library, the business office, the city room, the composing room, makeup, wire services, editorial conference, advertising departments, cold type, photoengraving, stereotype, press room, mail room, and delivery are all exposed to the camera's recording eye. (Showing time: 15 minutes)

Scene in the Audio film "Before It's Too Late" featuring Dick Van Dyke.

SAFETY EDUCATION FILM OF THE MONTH

Buckle Up Those Seat Belts

S EAT BELTS SAVE LIVES, the Bell Telephone System believes, and within the near future all of its vehicles will be equipped with them.

But just installing the belts is not worth much in the way of preventing injuries and death if they are not used. The Bell System is instituting a campaign amongst all of its people, and the general public as well, to get them to always snap the belt buckle before turning on the ignition switch.

A new film, *Before It's Too Late*, will play an important part in this program. Starring popular TV entertainer Dick Van Dyke, the picture shows that seat belts are not "sissy" propositions, as some drivers unfortunately still think of them, but good all-around common sense.

Dick Van Dyke tells about a collision he had with a concrete wall. His car was completely demolished, but he escaped without a scratch — because he was wearing a seat belt.

The 13½-minute film, produced in Technicolor by Audio Productions, Inc., has an exciting, modern score and impressionistic photography. It stresses the many positive pleasures of driving, and shows how seat belts are not a nuisance but entirely compatible with family fun on the open highways.

To get down to the specifics of how seat belts work, and what can happen without them, the audience is taken to collision tests conducted by the University of California at Los Angeles. Vehicles, traveling at only 40 miles an hour, collide at a predetermined impact point. Inside are specially instrumented life-

like mannequins of adults and children. Not protected by seat belts, they are shown being tossed about inside the cars as they collide and thrown through the windshield and out of sprung-open doors. All these scenes, shown in startling slow motion, took but the wink of an eye to happen at normal speed.

Robert Yung directed the film for Audio; original music is by Al Gorgoni; and editing by John Barnard.

All business offices of Bell System Companies will make the film available to interested public groups. Theatrical showings and TV distribution are also planned.

SCRIPT WRITERS (FILMSTRIPS)

A leader in the educational field needs experienced film-strip writers. This long established firm, located in Chicago, has openings on their permanent staff and freelance contract.

This is an unusual opportunity to grow with a successful firm. Excellent full-time benefits include a company paid-for profit-sharing retirement plan. Salary dependent upon experience and ability. Please send complete resume and list of credits. Manuscripts or other samples of work submitted will be returned promptly. All applications will be held in confidence and will be acknowledged.

NATIONAL SURVEY PROBES THE TEEN-AGE MARKET

Teen-Agers Are Film Viewers

A NATIONWIDE SURVEY recently conducted by Gilbert Youth Research, Inc., a leading firm in the youth marketing field, for Modern Talking Picture Service, Inc., has proved conclusively that sponsored films are seen, liked and remembered by teen-agers, and they deliver a strong sponsor identification.

This survey is part of Modern's long-ranging program of probing the viewing, remembering and buying habits of the big American audience. Modern delivers film messages to millions of teen-agers every week and feels that it is important to regularly take the pulse of this market and see what makes it tick.

In the survey, a selected national sample of 1,116 teens — the same group used for Gilbert's weekly Associated Press poll — were asked about sponsored films.

... Almost one-third of the teen-agers have seen a sponsored film within the past three months. (This is considered a high index for free recall.)

... All remembered the name of one or more companies sponsoring a motion picture.

... Nine out of ten teens saw this film at school.

... Over 70 per cent had a highly

favorable opinion of the motion picture viewed.

Other information in the new survey points up the extent of the teen-age market and the tremen-

dous purchasing power it represents. Items:

... Teen-agers are now 22,000,000 strong, 12½ per cent of the population and this proportion is increasing annually.

... They spend \$12 billion a year.

... They play an important role in influencing the direction of the family budget — are strongly affected by advertising.

... Over half of all brides are teen-agers — 500,000 teens marry each year — and start buying.

... And then come the babies!

Modern's *The Teen Age Market*

booklet goes on to tick off many other interesting facts about teens, their wants, their ability to buy, and what sorts of films are best suited to meet this market.

The survey is available on letterhead request only from Modern Talking Picture Service, Inc., 3 East 54th Street, New York 22.

Film Producers Assn. Asks Agencies to Step Up Payments

☆ A joint committee of the American Association of Advertising Agencies and the Association of National Advertisers met on July 10 to discuss a proposal of the Film Producers Association of New York that agencies pay two-thirds of the bid price for TV commercials production within two days after completion of final photography.

Although no official action was taken at the meeting, general opinion seemed to be favorable to the proposal.

Currently many producers do not receive payments for some time after completion of production. This has led to a situation of some producers having to stall off payments to labs, optical houses and other services, and to require frequent financing through bank loans.

Also discussed at the meeting was the FPA's recent decision to guarantee completion of all TV spots produced by FPA members.

Pilot Productions camera crew on location in Las Vegas, Nevada

MOVIE TELLS 210 DISTRIBUTORS HOW TO DEMONSTRATE NEW PRODUCT

Clark Equipment Company uses a newly produced movie to show 210 domestic and foreign distributors how to put on local demonstrations for prospective buyers of tractor dozers, scrapers and tractor shovels. The 12-minute sound, color movie shows how to stage a full hour demonstration of dozing, push-loading and truck loading with Clark equipment. It also explains the careful ad-

vance planning necessary to put on a successful demonstration. The film, entitled, "How to Demonstrate Construction Equipment" was filmed in Las Vegas by Pilot Productions, Inc., 1819 Ridge Ave., Evanston, Ill. Write for information on how movies can help train your distributors to do a better job of demonstrating and selling. Or, call us collect at DAvis 8-3700, Evanston, Ill.

BUSINESS SCREEN INTERNATIONAL

18 Nations Get Ready for Festival in London

— as reported by European Editor Robinson P. Rigg

Information by former U.P.A. Director, George Dunning.

Nineteen Diplomas and 13 Certificates of Merit were awarded to other outstanding industrial films.

The 15 entries from Britain, their sponsors and producers:

BRITAIN

"Muloorina"

Sponsor: British Petroleum Co. **Producer:** RHR Productions (Film Producers Guild). 35mm, Technicolor, 27½ min.

- The story of Donald Campbell's 1963 attempts on the world land speed record seen through the eyes of an Australian farmer.

"The Bronze Horses"

Sponsor: Ministry of Housing & Local Government. **Producer:** World Wide Pictures for Central Office of Information. 35mm, Eastmancolor, 22 min.

- As part of a drive to encourage the public to accept modernization of urban districts, the film outlines the facilities and grants available for converting substandard domestic property.

"Discovery — Penicillin"

Sponsor: Foreign Office, Commonwealth Relations Office and Colonial Office. **Producer:** T.V. Cartoons Ltd. for Central Office of Information. 35mm, Technicolor, 12 min.

- Sir Alexander Fleming's discovery of penicillin and the subsequent developments in the field of antibiotics.

"Powder and Shot"

Sponsor and Producer: Imperial Metal Industries (I.C.I. Film Unit), 35mm, Eastmancolor, 35 min.

- A reconstruction of the rook shoot from "Pickwick Papers" is shown in contrast with modern sporting shooting practice, using Eley Kynoch cartridges.

"All That Mighty Heart"

Sponsor: London Transport Board. **Producer:** British Transport Films, 35mm, Eastmancolor, 24 min.

- A day in the life of London, seen by London transport.

"The Launching"

Sponsor: The Stock Exchange. **Producer:** James Archibald Augusta Productions. 35mm, Eastmancolor, 29 min.

- The part the Stock Exchange plays in the launching of a public company.

"Mekong"

Sponsor & Producer: Shell International Petroleum Co., Ltd. 35mm, Eastmancolor, 30 min.

- One of the biggest irrigation schemes in the world — 16 nations cooperate to help Cambodia, Laos, Thailand and Vietnam.

"Snow"

Sponsor: British Railways Board. **Producer:** British Transport Films. 35mm, Eastmancolor, 8 min.

- Scenes of trains, people and snow are composed in a kind of choreography and jazz composition.

"Critical Path"

Sponsor: Richard Costain. **Producer:** Richard Costain Film Unit. 35mm, Eastmancolor, 16 min.

- An account of the network analysis system of production programming and planning. Intended for management.

"Polyolefins"

Sponsor: Shell Chemical Co., Ltd. **Producer:** Shell International Petroleum Co., Ltd. 35mm, Eastmancolor, 20 min.

- The decision, research and testing of products manufactured from plastics. Intended for industrial audiences.

"Shutdown"

Sponsor: British Petroleum. **Producer:** Verity Films Film Producers Guild. 35mm, Eastmancolor, 29 min.

- A method to reduce the oil refinery "shut down" times necessary for plant overhaul. Intended for engineers and technicians.

"Frontiers of Friction"

Sponsor & Producer: Shell International Petroleum Ltd. 35mm, Eastmancolor, 20 min.

- An examination of the basic effects of friction and new methods of lubrication. Intended for specialists, students and laymen.

"Introduction to Control"

Sponsor & Producer: Associated Electric Industries. 35mm, Technicolor, 17 min.

- The film defines and illustrates industrial process control principles. Intended for university and sixth form science and engineering students.

"Business Connections"

Sponsor: General Post Office. **Producer:** Ronald H. Riley for Central Office of Information. 35mm, Technicolor, 25½ min.

- Swift and efficient lines of communication are now essential to success in commerce and industry, but all too often there are serious defects in the use of the telephone in organizations of all sizes. Intended for management to improve the internal PBX operation.

"The Team on 204's"

Sponsor & Producer: National Coal Board. 16 and 35mm, black & white, 17 min.

- Successful mechanization of coal-face work depends on good planning and teamwork. The factors involved are discussed on a visit underground. Intended for a mechanization training course for underground workers.

France Chooses Entries at Festival in Rouen

First nation to announce its selection of 15 films to compete is France; George Baigneres reports from Paris:—

"For the seventh year in succession industrial sponsors, producers, observers and journalists gathered in historic Rouen for the French National Industrial Film Festival to present the nation's Golden Leopard awards to the 15 films chosen to represent France in London this November.

"The annual event provides students of the industrial film movement a chance to compare facts and figures on trends in industrial film utilization and style. Fifty films competed — 24 entered by private enterprise, 26 by France's nationalized industries.

Facts About the French Films

"France's competitive films were made by 42 commercial film producers and 8 in-plant units; 45 were in colour and 44 were shot in 35mm. The average running time for films for general audiences was 19 minutes, for specialist films, 23 minutes. A noteworthy feature about this year's entry was the ex-

It'll never hit Mach 3

EUROPE'S BEST INDUSTRIAL FILMS OF THE YEAR

(CONTINUED FROM PAGE 17)
tensive use of animation techniques — in 17 of the 50 films."

France is the current holder of the Grand Prix of the International Industrial Film Festivals, won at Madrid last year, and the fifteen films chosen to defend the title are fine examples of imaginative sponsorship and production. In addition to the films listed in these pages, two others deserve special mention; *Veronique and her Cat*, produced for Sud Aviation by Objectifs — and *L'a couleur et la forme* (*Colour and Shape*) a training film for hairdressers, produced by Cineastes Associates for l'Oreal.

France Suggests Product Films

One significant comment emerged from the Festival — many delegates criticised the rules which at present discourage entry of films dealing with consumer products — is that a sign that regulations may be relaxed to include sales promotion films in the International event?

Here are the titles, sponsors and producers of French entries:

FRANCE

"Faust 63"

Sponsor: Commissariat a l'Energie Atomique. Producer: Cinetest. 35mm, color, 14 min. (French).

• Dr. Faust, unable to discover the secret of the structure of matter, calls on Mephistopheles, who reveals it and brings to life a pocket-sized atomic pile.

* * *

"Les Experts Des Annees Quatre" (The Leap Year Experts)

Sponsor: Gaz de France. Producer: Son & Lumiere. 35mm, color, 23 min. (French).

• The story of gas, interrupted every four years by the prophesies of industry experts, but each prophesy is overtaken by progress.

* * *

"Le Nouvel Age De Pierre" (The New Stone Age)

Sponsor: Syndicat National des Maitres Carriers de France/Groupement Technique des Entreprises de Taille & Pose de Pierre Centre d'Action Pour la Proprete de Paris. Producer: Les Analyses Cinematographiques. 35mm, color, 12 min. (French).

• Stones are getting young again, thanks to the resurfacing of monuments. Due to modern techniques, stone is no longer the luxury material of yore, but a competitive material in modern architecture.

* * *

"Le Petrole Et La Mer" (Oil and Sea)

Sponsor: Cie Francaise des Petroles.

Producer: Cinetest. 35mm, color, 20 min. (French).

• A picture of the Compagnie Navale des Petroles and the part it plays in the total oil operation. Life aboard one of the most up to date units operated by the company.

"Revolutions"

Sponsor: Compagnie de Pont a Mouson. Producer: Films Albert Champeaux. 35mm, color, 25 min. (French).

• Modern materials formed by the casting process are the subject of constant scientific research to make their specifications suitable for each new industrial requirement as it occurs.

* * *

"Le Plus Grand Tableau du Monde"

(Biggest Painting in the World)

Sponsor: Electricite de France. Producer: Omnium Francais Du Film. 35mm, color, 13 min. (French).

• In 1937 Raoul Dufy painted a vast picture outlining the history of electricity, for the Paris exhibition. The picture is brought to life through film.

* * *

"Le Verrau de la Vallee" (The Bolt in the Valley)

Sponsor: Electricite de France. Producer: Les Film Du Soleil. 35mm, color, 15 min. (French).

• In order to build the dam at Serre-Poncon, the village of Savines was demolished and rebuilt outside the flood area. The dam brought tourists and new economic development to the district.

* * *

"Face a la Mer" (Facing the Sea)

Sponsor: Sofresid. Producer: Gaumont Industries.

• The planning and construction of the Dunkirk iron and steel plant.

* * *

"Kilowatts Heures et Calories" (Kilowatt Hours and Calories)

Sponsor: Electricite de France. Producer: L'Information Par Le Film.

• The various applications of electricity in the problems of industrial heating.

* * *

"Le Char de Bataille AMX 30" (The Tank AMX 30)

Sponsor: Delegation Ministerielle pour l'Armement — Section Expansion exportation (terre) et Ministere des Armees. Producer: Etablissement Cinematographique des Armees. Direction: Ministerielle pour l'Armement.

• Putting the AMX 30 tank through its paces. (Continued on page 20)

BUSINESS SCREEN MAGAZINE

Change films in 2 seconds flat!

Read how Fairchild's amazing new MoviePak cartridge can multiply the value of your entire sound film program

At last you can show any film, anywhere, anytime—without threading, film handling or rewinding.

Sound incredible? Nothing to it!

Simply select the MoviePak sound film cartridge you want, snap it into the Mark IV rear-screen projector, and play.

In broad daylight. In a prospect's office. In showrooms. At trade shows. On sales counters. In training labs. Or in the boardroom.

Want to switch to another film instantly. to answer a question, make a point, follow up on an opening?

Watch!

Just snap out one cartridge, snap in an-

other, and you're off and running.

Think how this revolution in 8mm projection unleashes the full power of your film program.

No longer do you or your salesmen have to master complicated equipment, sweat out set-up time, or juggle projection schedules.

Better still, you never have to pass up a perfect opportunity to show a film you spent good money to make.

Every film you have can be easily and inexpensively converted to 8mm, and threaded into the MoviePak cartridge.

Duplicate prints are less expensive than 16mm, too, so you can afford to have them available wherever they might be needed.

The Fairchild Mark IV projector itself is a miracle of practicality. It is totally portable, weighs just 20 lbs., and is always ready for action.

Nothing to set up. Just-plug in and run, no warm-up time required. The Mark IV takes up to 22 minutes of sound color film in a single MoviePak—and repeats automatically.

For display use, the Mark IV will run indefinitely without supervision. And its trouble-free operation means exceptional film-life—up to 3000 plays per print.

Doesn't it sound like your films would

work harder for you in MoviePak cartridges? Doesn't it sound like they'd get more exposure on a Fairchild Mark IV rear-screen projector?

We'd be happy to verify. Just rush the coupon.

PSA Awards Progress Medal to Dr. Deane Rowland White

The Photographic Society of America presented its 1964 Progress Medal award, the Society's highest honor, to Dr. Deane Rowland White, associate director of the Research Division, Photo Products Department, E. I. du Pont de Nemours & Company. The award was made at concluding ceremonies of the PSA's international convention at Montreal on August 20th.

The citation accompanying Dr. White's award stressed "his contributions to photography over many years as a physicist in both fundamental and applied research . . . his unique service to the development and advancement of photographic standards and his exceptional leadership in photographic organizations."

Dr. White is the longtime chairman of the American Standard Association's Committee on Standards for Motion Pictures (ASA-PH22) and has served as engineering vice-president of the Society of Motion Picture and Television Engineers.

SMPTE Awards Kalmus Medal to Earl L. Arnold of Kodak

Earl L. Arnold, manager of the Film Emulsion and Plate Manufacturing divisions of Eastman Kodak Co. has won the 1964 Herbert T. Kalmus Gold Medal Award of the Society of Motion Picture and Television Engineers.

The medal will be presented to Mr. Arnold in ceremonies during the Society's 96th Technical Conference, Sept. 27 - Oct. 2 at the Commodore Hotel in New York.

Established in 1955 in honor

Medal Winner: Earl Arnold

of the developer of the Technicolor process, the award recognizes outstanding technical achievement in color motion pictures for theatre or television use. This year's award was announced by SMPTE President Reid H. Ray. Chairman of the award committee was Edward H. Reichard, chief engineer of Consolidated Film Industries.

I.C.'s John Hawkinson Named Administrator of A-V Services

On the 20th anniversary of its department of audio-visual services, the Illinois Central Railroad has named its veteran a-v organizer, John T. Hawkinson, as administrator, audio-visual services. Hawkinson organized the department in 1944 and has been its manager since 1955.

Consulted by All Departments

Principal function of the IC department is down-the-line consultation with the railroad's many departments in planning and production of audio-visuals to assist in their work or to pictorially analyze their problems. In addition to production of media, the department also acquires ready-made motion pictures and slide programs which it adapts to the needs of the company. It also maintains the Illinois Central library of hundreds of motion pictures, sound slidefilms, disc and tape recordings as well as operating the presentation service which arranges for the showing of these materials.

Among the motion pictures produced by Hawkinson are *Suggestions Unlimited* (telling the story of the railroad's suggestion system); *Spiking Down a Dream* (a record of the ceremonies attendant to the road's 100th anniversary); and *Never Argue With a Train* (on highway-rail crossing safety). He also produced a series of five films on outmoded railroad work practices which were used as testimony in the national railroad work rules hearings which led to the elimination of firemen in freight and switching operations and changes in train crews.

A Past President of IAVA

A native Chicagoan who joined the IC's Engineering Department in 1919 as an office boy, Hawkinson attended Armour Institute and Northwestern University. He is a past president and treasurer of the Industrial Audio-Visual Association, national business society.

ARRIFLEX at work — ONE OF A SERIES *

ARRIFLEX[®] records a blow-out for Firestone Tire & Rubber Co.

Filming the effects of a dynamite-cap explosion inside a tire traveling at 55 miles per hour was the unusual assignment given the Arriflex 16 motion picture camera. The blowout was staged by Firestone engineers exploring ideas for motorists' safety, in the development of a special test safety tire. The Arriflex, powered by a dry cell battery mounted on a specially-designed wooden frame bolted to the car chassis, was focused on the loaded tire. Set on continuous-run at 24 frames per second, Arriflex maintained perfect image registration despite the car's

traveling at high speed and the shattering effect of the driver-controlled tire blast. Recorded on film—and in closeup—was the precise effect on the tire as it blew, and the manner

in which the inner safety tire permitted the driver to bring the car to a safe stop without sudden swerves. Once again, the rugged, compact and extremely lightweight Arriflex has served scientific inquiry. In studio or on location, hand-held, on tripod or bolted to a blast-shocked platform, you can rely upon the dependable Arriflex to execute your assignments without a hitch.

From the microscope to the missile range... from spot locations to sound stages Arriflex professional motion picture cameras are the dominant choice of filmmakers in science, industry, and entertainment. They're lightweight, rugged, tremendously versatile—uniquely suited to a range of applications virtually without limits. Here are some of the features that give Arriflex cameras their remarkable capabilities:

• MIRROR SHUTTER REFLEX VIEWFINDER • REGISTRATION PIN FILM MOVEMENT • 21° DIVERGENCE 3-LENS TURRET • CONTOUR HAND GRIP • FRAMES-PER-SECOND TACHOMETER • COMPLETE ACCESSORY SYSTEM lenses, standard and special-purpose electric drives, power supplies, time-lapse equipment, film magazines, sound blimps, tripods.

PRODUCING FILMS ABROAD?

a veteran traveler shares some hard-earned experience

by Fred A. Niles, *President*

Fred A. Niles Communications Centers, Inc.

THE BEST ADVICE for anyone contemplating a shooting schedule abroad is to dress well, act convincingly and look like a tourist!

If you dress well in most overseas countries, everyone seems to believe that you have the proper authority and, camera in hand, you can go just about everywhere. The appearance of a tourist helps to quickly clear customs.

This advice might seem humorous, in view of a multitude of technical problems to be overcome, but we have had camera crews overseas on a number of occasions and these three tips can really help avoid trouble. There are some other "lessons" we've learned from experience, to wit:

- **TALENT:** The basic problem with talent abroad is, of course, language. While true among professionals, it's especially significant in the production of documentaries where we've filmed many groups of ordinary people. For example, we recently filmed sequences in Kuala Lipis in the jungles of Malaya. The script took us to a school which taught aborigine children to be mid-wives and there were about 40 youngsters in uniform involved in one scene.

Local Translators Are Helpful

We employed a local translator (rule no. 1 in working abroad) but it was still difficult to get our meanings across. The children had never seen a camera and could not understand why we wanted them to do the same thing over and over again. I managed to learn one word of the local dialect which meant "one more time." I can still pronounce it and say it, but haven't the faintest notion of how it's spelled.

The children greeted my tongue-twisted pronunciation of the word with shrieks of laughter but then obediently repeated the scene! We bring up rule no. 2: *retain a sense of humor!* It can help lower any language barrier.

Don't Forget Equipment "Spares"

- **EQUIPMENT:** Plan to bring everything you might conceivably need with you, especially in working off the beaten paths. Bring "spares" for on-the-spot repair of vital gear, especially cameras. Re-

member that *voltages* differ, country to country.

On our last trip, we carried quartz lamps and devised a method of using 220-volt bulbs so that we could use them anywhere. The normal 110-or-120-volt bulb will burn out immediately in most countries.

Also make sure that the *lenses* you carry are interchangeable between cameras, just in case one of these breaks down.

Most Governments Make Films

When you do get into a bind for equipment, especially in the Far East, a good suggestion is to contact the film department of the local government. Most countries, including Malaya and Thailand, have such agencies. Usually, when you explain your problem, they'll let you borrow equipment, some of it American-made. In South Viet Nam one of our tripods broke down and we quickly got one from a government source. But there's little standardization of gear, so be prepared to use your ingenuity and to improvise.

In the countries of Europe, however, equipment is available at low rental cost. We rented some essentials in Hamburg, Germany, which included a generator, lights and two men to operate them for the price of one man's labor in the U. S. Prices in Rome, Paris and London, however, seem comparable to those in the United States and sometimes higher.

Studio Facilities Will Vary

- **STUDIOS:** Should you require the use of a studio, you'll find

Setting up to film a sequence at CARE headquarters in Saigon. Fred Niles is in center above (wearing shorts); his wife, Mary, is at the far right.

On location in Moscow, with producer Fred Niles on the job.

them in most lands abroad. However, with the exception of those in Europe and Japan, for example, these facilities are not what you expect to find at home. But they'll do in a pinch.

The story is far different in Rome, London and Paris and you'll find good facilities in other large European cities. For instance, we recently did a film for the U. S. Department of Agriculture which required studio shooting in Holland. One of the scenes was quite complicated. We used a fine studio in Amsterdam where technicians were highly competent and the result more than satisfactory!

Overseas studio people, in general, are also quite helpful in rounding up professional talent.

Special Cans Safeguard Film

- **FILM:** To protect raw stock overseas, we have developed special film cans to safeguard against extremes of blistering heat and freezing cold. They were developed some years ago when we did a film on Sir Edmund Hillary in the Himalayas. During that expedition we had to carry film through jungles averaging 120 degrees in the shade and up into mountains where temperatures dropped to 25 degrees below zero at night.

The film cans are air-tight and contain packets of silica-gel. The gel goes to work after the can is re-closed to absorb moisture which may have entered during operations.

- **SHOOTING:** We've found it best to wait for our return home before processing footage. Thus the trick in shooting overseas is to "over-shoot" everything. Change exposure consistently and have at least two men cover each segment, each operating independently of the other. And watch for political exigencies!

UPDATING MEDICAL HISTORY

"Modern Obstetrics" Replaces an Historic Teaching Film

THE HISTORIC MEDICAL teaching film, *Physiology and Conduct of Normal Labor*, made in 1928 by a distinguished teacher in obstetrics — the late Dr. Joseph B. DeLee — has been replaced by a new color motion picture, *Modern Obstetrics: Normal Delivery*. A pre-premiere showing of the new film, produced by Sturgis-Grant Productions, Inc. of New York City, was a significant event at the recent annual convention of the American Medical Association in San Francisco.

Dr. Edward Annis, President of the AMA, introduced the new film to AMA preview guests at the Civic Auditorium on Tuesday afternoon, June 23rd. Heralding it as a "major step in the progress and advancement of obstetrics and gynecology," Dr. Annis noted:

"A great deal of work and money went into the making of this film. It was about three years ago that the idea first flashed into the mind of Ralph Creer, longtime director of medical motion pictures for the American Medical Association. He saw the need for a new, modern film to replace the

old masterpiece by Dr. DeLee, which has been in circulation since 1928.

"Subsequently the idea advanced through various stages of dreams, enthusiasm and efforts to reality on the screen, thanks to a smooth, cooperative relationship between the AMA and the American College of Obstetricians and Gynecologists."

The two groups are co-sponsoring the picture with the Ortho Pharmaceutical Corporation. It is designed as a teaching aid for medical audiences, including practicing physicians, medical students and nurses. Limited to normal obstetrics, actual cases are shown. Animation is used to illustrate physiology, descent of the fetus, rupture of membranes, delivery of the placenta, and inspection of the uterus.

Production of *Modern Obstetrics: Normal Delivery* was under the supervision of a committee of five authorities on the subject, headed by Dr. Robert A. Kimbrough, medical director of the American College of Obstetricians and Gynecologists, Warren Sturgis

Ortho Pharmaceutical vice-president W. Vincent Abrahamson (third from right) hands print of "Modern Obstetrics" to Dr. Edward Annis, president of American Medical Assn. (third from left). Others (l to r) are: Ralph Creer, AMA, Dr. George E. Judd, immediate past-president, American College of Obstetricians and Gynecologists; Dr. Robert Kimbrough, medical director of the ACOG; and Dr. Ronald V. Chapple, medical director of the Ortho Pharmaceutical Corporation, one of the film's co-sponsors.

was the producer. Ex-officio members of the committee included Dr. Ronald V. Chapple, medical director of Ortho and Mr. Creer. A standing-room-only audience witnessed the premiere.

Combined with the 8th INDUSTRIAL FILM & A-V EXHIBITION

THE FESTIVAL: from a small beginning, the festival has grown and developed to an outstanding annual event for the entire industry. It has received continuous acclaim from the industry, the trade press, as well as from Mayor Robert F. Wagner, who praised this event from the start and has given it repeated support in his appearance at the Awards Presentation Luncheon to present the trophies for the winning films.

The categories are based on the idea behind a film and the message which it offers, regardless of product content. The judging is done according to the individual quality and the effect of the production as a whole.

SPECIAL PRESENTATIONS: Roundtable Sessions, Discussions,

as well as continuous film showings of the outstanding Industrial Films, Public Service TV Programs and Commercials will be held during this three-day event. Full details to be available at later date.

SOCIAL FUNCTIONS: An Awards Presentation Luncheon will be held at 12:00 Noon on Friday, October 23rd, at which time all trophies will be presented for the prize-winning films entered in the Festival. This Luncheon is now so popular it has become the meeting place for all the top people in the film industry, as well as City and State officials, representatives from foreign governments, the press, etc.

this Bell public affairs film shows the making of a citizen

THE QUESTION of the individual's importance in influencing public affairs has always been a controversial one; the challenge of how to attack the topic in honest and believable terms has baffled politicians, corporations and other deeply interested parties — among them, film producers. It is, therefore, gratifying to report that the Bell Telephone System's new color motion picture, called *Beyond Three Doors*, a lively and provocative treatment of the "single small voice" theme, may well serve as a model for future explorations of this problem.

Bell Offices Have Prints

The film, now being released through System offices nationwide, dramatizes the surprising number of ways in which one person can truly influence the direction of his government at local, state and even national levels. Henry Strauss Productions was selected by the Bell System to work with them on the research, development and production of the project.

The course of the film's 26 minutes follows the actions of three different citizens, each in a totally different geographical and political section, unknown to one another, who are motivated in various ways to be involved in amateur political situations.

Helping Viewer to Identify

Thus the story has three interlocking, though seemingly unrelated plots, and the viewer thereby has a choice of identifying with one or all three protagonists. The

jobs they undertake are neither uniformly easy nor, in all instances, completely successful. But the point is clearly made that the opportunity for effective political action exists in unexpected quarters.

Owing to the unusual storytelling method employed by Jane and Ira Avery, and the reality of casting and direction, the film dramatically stimulates interest and participation in the day-to-day workings of Government, as well as achieves its objectives: (1) to arouse an attitude of individual responsibility, (2) to clarify the basic principles of realistic citizen action, and (3) to show in simple but dramatic form some of the practical machinery that is necessary for the functioning of local, state and national communities.

Why Citizens Aren't Active

Basic research was an important factor in the project and was conducted among several widespread communities and universities as well as in official Washington. It was found that six general factors acted as deterrents to personal participation in public affairs: ignorance, indifference, skepticism as to the value of individual effort, fear of censure in business or neighborhood, fear of losing identity in the group effort, and plain cynicism.

Since the Bell System and Henry Strauss Productions felt that one film couldn't cover all these points, especially ignorance and cynicism, *Beyond Three Doors*

Marion Long gets a great deal of satisfaction from working to better her community. She also discovers how effective it is when citizens are all working together.

concentrated instead on dealing with the other four deterrents through three plots in the story.

The plots are developed in alternating sequences, so that the emotional appeal of each carries over to the next and results in a form of cumulative empathy. One concerns a commuter who is angry about water pollution in a local swimming spot.

Another tells of a woman reluctantly recruited in a citizens' drive to preserve property values in the face of a new and necessary highway program.

The third has to do with a workman who learns that he can find rewards in local precinct work. The three protagonists, who never meet, learn valuable lessons about their relationship to Government.

Good Corporate Citizenship

The film represents the Bell System's deep-rooted conviction that politically responsible individuals contribute importantly to

Meet Charlie Trumbull. Everybody likes him, an outgoing type and good pal, salt of the earth and a real solid citizen. "But what is a solid citizen?" asks the film.

good Corporate citizenship. But *Beyond Three Doors* has a significant additional value in its painstaking realism, its timeliness in view of this year's pending election campaign, and its broad appeal on an entertainment, as well as informational, basis.

Although it was primarily devised for telephone company employees, it has already aroused the interest of public groups and television stations, to whom it is available through local Bell Telephone Company offices. The League of Women Voters has recommended its showing to all of its chapters throughout the nation.

Also Has Utilization Kit

This original motion picture stands on its own two feet so that it can be an integral part in existing Bell System Companies' Public Affairs courses. However, it is also accompanied by a utilization package which includes comprehensive Leader's Guides and suggested program usage, thereby making the best application of the motion picture as a communications tool.

It is to the credit of the Bell System that an important frontier has been crossed in the field of public affairs communication. •

In one of featured roles in "Beyond Three Doors," viewers meet Charlie, who has an idea he feels will help elect his favorite candidate for mayor, Paul Redway. Precinct captain Jim Robinson explains why his idea won't work; on headquarters' tour tells him how he can help.

"Wolfsburg 221" takes viewers along the modern production lines of the Volkswagen factory.

the profit-minded film program of Volkswagen

WHAT IS A PROFITABLE film for Volkswagen? Before Volkswagen went into its film program we looked at many available titles and screened many films in an attempt to learn something from the experience of others.

We were especially interested in films made for automobile companies. We were surprised at the kind of films they were using. We found films on Little League baseball. We found films on golf matches and films on the thrills of big game hunting and sport fishing.

Not a bad idea, we decided. After all, each of these subjects is of interest to people who buy automobiles. Maybe this was the way to guarantee your film will be looked at and that, after all, is the first step toward profitable use of a film. Even the greatest film in the world is no good in a can.

Pictures Must Have Worldwide Appeal

But Volkswagen has a more complicated situation than some auto companies. It is an international company and its films must be of interest wherever we sell cars — in as many as

130 countries. Little League baseball is fine in Pennsylvania but it would be strictly a no-hit, no-run game in Zanzibar. Golf might be great in Atlanta, Georgia, or in Edinburgh, Scotland but it might not tee-off in Arabia, the world's largest sand trap. Sport fishing is fine for a Maine audience but I doubt if it would draw crowds in a small village in Ceylon.

Not only did the subject matter have to be entertaining in many diverse societies but it had to be pertinent as well. We were not anxious merely to entertain, we had a message to tell at the same time. And a message that must make good sense in eight languages.

We Asked Ourselves These Two Questions

Our research into what others had done with films was enlightening and entertaining, but it didn't give us very much material on which to base our own program. So we decided to start from the very beginning and we asked ourselves two questions:

What did we want to say?

To whom did we want to say it?

And this was the beginning of the Volks-

by Arthur R. Railton

Public Relations Manager

Volkswagen of America, Inc.

wagen film program. It was the same way hundreds of film programs had started, I am sure.

"Five Miles West" of the Iron Curtain

We began in 1957 with the production of the film *Five Miles West*. This is a story much bigger than Volkswagen, much bigger than the automobile industry, much bigger even than all industry. It is a story about free men and men who are not so free. And the differences between them.

Volkswagen was interested in such a film because its factory is as close to the edge of freedom as any major company in the world. Our factory is separated from the Iron Curtain of East Germany by five miles of open farmland. So Volkswagen wanted to make a film to show the people of the world who are free how good it is to be free. After all, the automobile is the very embodiment of freedom. In it you can go where you wish and see and hear for yourself — so there are few automobiles in a closed society. They have more trucks than cars — our ratio is the opposite.

Five Miles West dramatizes the story of the two Germanys — the free and the non-free. Incidentally, every time Khrushchev talks tough about Berlin — we get 100 bookings automatically. We can almost chart the cold war by watching our booking slips.

29,158 Group Showings Up to June 30th

That was the first film we made and it has been extremely successful, having had 29,158 group showings through the first half of 1964 in the United States. In it and in all our movies, Volkswagen has an integral part in the story but the Volkswagen is not the story.

We also try to make certain that each picture we make will be current for a long time. It must not be such a film that it would become obsolete in a year or two. Just as in our product we believe in non-obsolescence, so in our films. *Five Miles West*, though made seven or eight years ago, is as up-to-date, as pertinent, today as it was then. And this motion picture has universal appeal — at least in the Free World. It is as international as our automobile.

A Film on Value of International Trade

Our second film had as its theme an idea as basic to Volkswagen as air-cooling — the value of international trade. Volkswagen, as I

Scenes below and at right are from "Wolfsburg 221" which shows how Volkswagens are built and their performance proven on the test track.

have noted, sells in 130 countries to all kinds of people in all kinds of occupations from rich men to poor men, white men, black men, brown men, yellow men — all kinds of men — and our whole life depends on the exchange of goods and money.

Nearly 60% of our production leaves Germany to be sold around the world. Our prosperity and, indeed, our survival, depend on keeping these avenues of trade open. Therefore, we made a film to emphasize the value of trade among nations. The title: *The Give and Take*.

In this picture we emphasize the value to society of each bringing to the market place

that which he does best. We explain that every seller must be a buyer and every buyer must be a seller and nations must communicate and trade freely.

Here again, the Volkswagen plays a key role but it is not a product movie. I doubt if anybody walked away from a showing of *The Give and Take* saying that Volkswagen is a great car. But he might walk away saying that Volkswagen is a great company, a good citizen of the world.

That is really all we are trying to say because we can sell cars by advertising, by demonstrations, by sales promotions, but we sell basic concepts by our film program. We are trying to keep a good climate for Volkswagen — not trying to sell cars.

The Give and Take has become one of America's most popular television films with 1,278 showings so far (through June 30, 1964) in its three-year run through that same period. It has had 23,610 showings to groups and has been endorsed by the White House for use in explaining the need for an enlightened trade policy.

By Helping Countries, We Help Ourselves

Our next film also sold a *concept* and not an automobile. We wanted to show that when international companies like Volkswagen, General Motors and Ford go into a country and build a factory or set up a business, they don't ravage the land but they cultivate it, fertilize it and help it prosper. We wanted to show those countries of the world where we were investing our money that we were helping them, as well as helping ourselves.

The film is called *A Time Like This*. It's the story of teaching and learning, of the way men have learned to make the world better but that not all learned equally. So today some nations, those we call the developing nations, have to make up for lost time and companies and countries like ours are helping them. This film, too,

These scenes are from "*The Give and Take*," a film on the value of trade between countries.

Report on Film Viewership

As of June 30th, Modern Talking Picture Service reported 3,751,426 viewers for Volkswagen's films in 16mm self-equipped audiences (all six titles). An additional 45 million were in the estimated audience seeing two of these films on 1,449 nationwide telecasts.

16MM GROUP AUDIENCES

Title	Showings	Viewers
"Five Miles West"	29,158	1,285,414
"The Give & Take"	23,610	1,002,079
"Wolfsburg 221"	12,277	478,138
"Four Seasons of Austria"	8,092	397,206
"The Right Hand of Plenty"	8,553	361,535
"A Time Like This"	5,115	227,054

SHOWINGS ON TELEVISION

Title	Telecasts	Est. Viewers
"The Give & Take"	1,278	10,088,700
"A Time Like This"	171	5,759,600

has been in great demand with 5,115 showings through June 30 in the United States.

By 1961 we had three films in our library — all dealing with subjects of importance to us but of equal importance to nearly all international companies, except, of course, perhaps those who manufacture machine guns and tanks.

We feel strongly, as an international company, that the automobile is the most inter-

national product, not only in production but in use — it takes people across borders to see and learn for themselves. We feel even more strongly that Volkswagen is the most international automobile. Therefore, with our films and with our dealerships, garages, mechanics schools, assembly plants, our fleet of ships or whatever it is, we are helping in our small way to make the world a better place.

Picture of the Volkswagen in Production

So we made a picture to show everybody that our car is not built by slave labor, not by elves, not by underpaid and overworked people, but by men working under the finest conditions, producing a car as fine as can possibly be produced for its price.

It is the story of our inspection procedures, our workmanship and our attention to detail — yet it emphasizes the modern facilities, the excellent machinery. This film is called *Wolfsburg 221*, the telephone number of our factory in Wolfsburg, only five miles west of the Iron (CONTINUED ON FOLLOWING PAGE SIXTY-SIX)

Filming a scene for "*A Time Like This*," a picture of helping hands for developing nations.

Truck specialist Pat Cicco makes his big pitch out at the Owl Rock pit office — to owner Henry Dorfman and to his manager Matt Moran.

Motivating the Salesman to Sell on Performance

PRODUCT PERFORMANCE rather than price; ultimate profit to the buyer rather than initial cost are dominant factors which guide important purchasing decisions throughout all phases of business and industry today.

But not all salesmen have learned these obvious axioms. The easy road is through price advantage; the tendency to lean on generalities of reputation and well-promoted goods and services has lost many a sale in the critical period of "heavy going" when facts and figures were vital to success.

Links Problem and Product

To motivate its salesmen at the firm's Marketing Institutes, the Ford Motor Company continues its thoroughly-visualized approach into the heart of this situation with a new 32-minute motion picture on heavy truck selling that links both problem and product under the appropriate title, *Heavy Going*. In just five years, Ford has acquired some 13% of the heavy truck business and in-depth motivation such as this picture provides is an evident part of the company's success story.

Dealer-salesmen viewers out around the country will recognize a familiar face in *Heavy Going*. This Parthenon Pictures' subject again features the star of another Parthenon film for Ford, *The Hardesty Case*. It is again salesman Ed Hardesty who learns the facts-

of-selling and this time he's concerned with really big game: the huge haulers (more than 26,000 pound gross weight) which serve construction and highway transport users.

Taking Customer's Viewpoint

Hardesty and his fellows in the dealerships learn they must work up proposals from the customer's

"So there are options to think about," says dealer Earl Willoughby to salesman Ed Hardesty. "Well, it's all in the book."

Matt Moran, hard-bitten manager at Rock Products, is not impressed by Hardesty's pitch. Owner Henry Dorfman is dubious, too.

Down-to-Facts Picture Is Aimed to Help Ford in Heavy Truck Sales

point-of-view. Relevant facts must be assembled and organized into a solid presentation. Thousands of salesmen of "performance" products will identify themselves, can learn *what* to do, *why* they should do it and *how* to make this kind of sale.

Films like these typify the tremendous value of "role-playing" achieved only through the medium of the screen. The approach is traditional "photoplay" format — but identification by salesmen-viewers is no easy task. The challenge is met by Parthenon in *Heavy Going*.

Identification is Strong

The events which take place and the characters involved are utterly believable reflections of the salesmen and dealers in the audience. Humor is indigenous to the subject, used to make necessary points.

Recognizing the need for deep identification, Ford has had the courage not to sweep negative attitudes under the rug, but brings them out fair and square. Even to the extent of recognizing that dealer-owners don't always have the right answers.

There are two positive factors worth noting on *Heavy Going*.

Ed Hardesty takes some lessons from truck specialist Pat Cicco as he begins working up a proposal for those heavy trucks.

"You out of your cotton-pickin' mind?" asks Matt Moran. "We're running diesels and you pitch gasoline-fueled trucks to us!"

Worth re-emphasis are the natural, convincing roles played by a near-perfect cast. The sharp, fast Ed Hardesty is the "archetype" of all hot-shot car salesmen who ever sold a drop-in from a used Falcon to a new T-Bird with air. He advances from the light truck situa-

Ed Hardesty, played by Don Haggerty, plays lead role in the film.

tions in *The Hardesty Case* to the formidable problems of the big monsters.

Dealer Ed Willoughby, successful and urbane, is a hard competitor but wise enough to let his men do the heavy-lifting. Truck specialist Pat Cicco is the epitome of today's new type of high-ticket salesman — personable and friend-maker but basing his selling on the facts . . . "I'm not much of a spellbinder but I'm a heck of a good explainer."

And hard-bitten customer Matt Moran looks like he got his start driving one of the heavies he now bosses; he knows exactly what he wants and is damn well going to get it.

Together these characters and the situation bring together a film which is both suspenseful and strong.

The second memorable factor is the lack of "commercialism" in a picture concerned throughout with the good points of the Ford heavy truck lines. We accept these points as valid because of sheer transference to the mood of the internal audience for whom the film was intended.

Give deserved "assists" to cast, the writer and to the lens work of Ralph Woolsey, ASC, whose black and white cinematography is crisp and dramatic, as is the fast-paced editing which helps make this 32-minute production. It converted this reviewer into a hard-hitting salesman long before the end title.

quik splice

SPLICER & TAPES Do you know you can repair a torn film strip without losing a single frame...or that you can make splices on sound films that won't pop, hiss or squeal when projected? These are only two of the advantages you get with the QUIK SPLICE splicing system. You also get the fastest and simplest system of making positive splices on films that can be stronger than the film itself—and that won't let go. QUIK SPLICE patented splice tapes have a removable backing so that the adhesive is exposed only AFTER the splice is in exact position on the film. QUIK SPLICE will bond any film base to any film base—present or future—without scraping, cement, heat or special skills.

#230 SPLICER — for 8 or 16mm, Sound or Silent	\$19.50
#253 SPLICER — for 35mm and Filmstrips	19.50

Motive to Sell

PRODUCT PERFORMANCE is more than price; ultimately the buyer rather than the seller is the dominant factor in important purchasing decisions throughout all phases of business and industry today.

But not all salesmen have learned these obvious facts the easy road is through the marketplace; the tendency to overstate the realities of reputation promoted goods and lost many a sale in the period of "heavy facts and figures" we witness.

Links Problem

To motivate its salesmen, Ford Motor Company has made its thoroughly-visual presentation into the heart of this new 32-minute presentation on heavy truck sales. Both problem and the appropriate title. In just five years, the company has acquired some 13% of the truck business and recognition such as this presentation is an evident part of its success story.

Dealer-salesmen around the country are a familiar face in this Parthenon Presentation. Again features the Parthenon film for *Hardesty Case*. It is Ed Hardesty who leads

Pittsburgh Glass Film Gets Results

THAT CURRENT RETAIL sales training film, *Something for Mrs. Gibbs*, which was released to department stores and other retailers throughout the U. S. by the Pittsburgh Plate Glass Company earlier this year (BUSINESS SCREEN, No. 3, 1964), has already produced such excellent initial results for the company's Fiber Glass Division that a new series of advertisements has been prepared to herald the story in several merchandising trade papers.

The "drapery drama," as PPG calls the film, features Rudy Vallee and John Carradine. It was produced by Van Praag Productions, of New York. In test markets (Buffalo and Pittsburgh) the film produced these responses:

Buyer, downtown store, Buffalo — "It is not very often that a company will offer such a quality training film; clever characterization impresses on the viewer the unique qualities of fiber glass in a colorful and interesting fashion. While sales people are viewing this film, they are relaxed and will retain the material longer than if subjected to the usual flip chart training session."

Sales Training Director, downtown store, Buffalo — "It is good to get a training film which emphasizes the improvements of a product that has been on the market for some time. This updates the employees' sales technique. This is important, because the new homemaker reads about these things and then seeks the counsel of the sales person."

Group Manager, branch store, Pittsburgh — "This is one of the best I've seen. The soft-sell approach is excellent. It reaches the sales people and keeps them enthused."

Display Director, downtown store, Buffalo — "I think this film is a riot and its humor very forcefully brings out how to treat fiber glass; don't abuse it and it will last a long time."

PPG representatives are making the rounds throughout the country to arrange sales briefing sessions in stores for all sales people in drapery departments. When the film is shown a PPG representative is on hand to answer questions about any of the points brought up in the film and to also distribute a new sales training book, "If Your Customer Asks."

Positive Public Relations is
Keynote of A Second Picture
on This Thriving Region From
Rochester Gas & Electric Co.

Revitalizing Forces Are at Work in the Beautiful Genesee Valley

ROCHESTER, NEW YORK has a proud heritage, undiminished by its recent share of racial disturbance in the long, hot summer now passing. Its historic antecedents as America's first "boom town" date back beyond the digging of the Erie Canal, into the traditions of Indian lore which named the region "Genesee," meaning "beautiful valley."

That beauty has not been lost in the transformation of a frontier town into a metropolis. And "Genesee Fever," the itch for getting things done well, has helped to build the thriving economic area of nine counties in the Finger Lake country. To tell the story of the real Rochester and its region, renewing the faith and inspiration of its inhabitants, the Rochester Gas & Electric Company has sponsored a colorful, factual testament titled *Rochester, A City of Quality*.

Second Jam Handy Picture

The 27½-minute motion picture is the company's second recent venture. Like its predecessor, *City on the Horizon*, it was produced with technical skill by The Jam Handy Organization.

The occasion was the company's 15th anniversary of independence from holding company control.

City on the Horizon, released in 1956, observed the 10th anniversary of this wholly independent utility. That film told about the company, its employees and operations. The 1964 production is dedicated to the community and the region which RG&E serves.

Changing Face of the City

"Genesee Fever" has long been evident in the world-famed precision manufacturing industries, especially in electronics and optical goods, of Rochester. The names of George Eastman, Edward Bausch and Henry Lomb are part of that phase. And the city has not been idle in the transformation of its commercial and residential areas.

Midtown Plaza is a revitalizing force in the core of the city, has brought further downtown development into closer focus. Industry has been expanding into the suburbs; shopping centers have multiplied in all sections of the metropolitan area.

The community has also been living in the midst of an unparal-

leled road construction program. When eventually completed, every part of the county will be only minutes apart.

A City of Quality has unexpectedly become a very important community relations film. It reminds citizens of Rochester, of all races and creeds, of the positive assets they share; it reminds the young people of the region that they can build a future near at home, with opportunities offered nowhere else. And it is helping spread the word, refuting the doubters, that industry has found this area healthy and prosperous. One of the film's missions will include showings to prospective builders of new plants in the region.

Good Place to Work and Live

For communities everywhere, where people fear that growth means the passing of the comforts and amenities of good living, Rochester can proudly show the positive evidence that it is a wonderful place in which to live, work and enjoy life to the full.

Modern power facilities like these have helped spur growth of the economic area served by this company.

In this scene from "A City of Quality" executives at RG&E examine model of proposed atomic power plant.

GOLF CHAMPIONS

Buick's on Way to New Sports Audience Records With Annual Pictures of its Open Golf Tournament

THE SPORTS FILM has manifested its tremendous audience potential for adroit sponsors in such annual releases as professional baseball's *World Series* pictures, pro football "classics" and, within the past three years, in factual viewing figures which have brought the Buick Motor Division's films of its Buick Open golf tournaments to the top among sponsors of sports subjects.

Since the lensing of *The 1961 Buick Open*, this sponsor has provided its nationwide distributor, Modern Talking Picture Service, Inc., with four successive audience champions. The first three pictures are today the most widely-screened golf subjects in the country with a record of 19,536 showings to a cumulative reported audience of 41,865,402 viewers.

Get Calls Day After Win

Jim Davis, Chicago executive of Modern (circulating the Buick films from its 31 offices), adds this footnote:

"It's almost unbelievable, but we began to receive requests for the film of the 1964 Buick Open on the first day after Tony Lema's sensational victory at Warwick Hills last June. In this business, you have to call that spontaneous popularity."

Program Launched in 1961

Buick's golf film library came into being only 36 months ago. Created by Gerald H. Rideout, the company's director of public relations, this film success story was launched when he asked Jim Bostwick, manager of audio-visual services at General Motors Photo-

graphic, to produce a picture of the 1961 Open, the fourth such event sponsored by Buick.

This professional tournament ended in a dramatic finish when Jack Burke, Jr. defeated fellow pro's Johnny Pott and Billy Casper in a playoff. Rideout had his 28-minute color film, a crisp commentary by CBS' Bob Maxwell and he covered his bet with a modest allocation of prints to Modern.

That first picture had 2,441 group showings in golf and service clubs, churches and fraternal organizations, etc. and began to move with 578 local television station bookings which scored an additional 20 million viewers, following its September 1, 1961 release for telecasting.

200 Prints of the '62 Film

Stepping up the print allocation to 200 reels for *The 1962 Buick Open*, Rideout got 10,477 group audience reports from Modern (reaching 567,859 viewers) and 364 television bookings tallied an additional 12,794,300. Bill Collins' driving finish broke a three-way tie as he beat Dave Ragan by one stroke in that tournament. GM Photographic added an appreciated touch with instructional sequences of Collins' technique in slow motion.

No man to hedge with a good show going stronger all the time, Rideout read his mail. Thousands of written comments from appreciative viewers throughout the country (to date, there are 18,000 such messages in his office) were matched by widespread use of the films among Buick dealers. Nearly

all General Motors Divisions have borrowed prints for their own showings.

The 1963 Buick Open picture came up with a double winner! Julius Boros won the tournament just after a victory in the Colonial classic; soon after his triumph at Warwick Hills he also won the U. S. Open. Boros set a new Buick Open record last year with his 274 total score.

Camera Gets a Hole-in-One

But the 1963 film also includes the only motion pictures ever made of a hole-in-one from clubhouse to cup in bigtime professional (PGA) golf. Jerry Barber did it on the 222-yard 17th hole and through Jim Bostwick's foresight and great luck, he had Al Corona of GM Photographic's crew on Tower 2, 30 feet high over the 17th tee with a clear sweep over fairway and green.

As Barber swung away with his two iron, the camera never wavered as it followed the flight of the ball, caught the bounce, the long

Sensational putting by Tony Lema helped bring him triumph in the 1964 Buick Open Golf tournament.

a Wilcat!" And there was a Buick Wilcat waiting for him as a prize at the 18th green.

240 prints raised the ante on the 1963 Open film. As a result, this past year's distribution records at Modern tallied 5,464 group showings (a mounting total, reflecting only a single year). The audience of 317,685 was supplemented by 212 television station showings to an additional eight million viewers.

'64 Film a Lema Story

Now Buick has a 1964 addition to its golf library. Tony Lema was

JERRY BARBER SCORES A HOLE-IN-ONE

Above: four quick clips out of only film of a hole-in-one from clubhouse to cup in PGA competition. Right: Al Corona, of GM Photographic, shot this sequence.

and slowing uphill roll and its silent disappearance into the cup. It wavered ever so little then, a bit more with the mighty roar from the gallery. Then Corona panned the cheering throng and went back to dog the triumphant antics from the tee to the green.

Barber did a jig, turned his cap backward and shouted, "Hey, I'm

Tournament winner Tony Lema sandblasts out of a trap at the Warwick Hills Golf and Country Club; scene from the 1964 Buick Open picture.

ought in the middle of his hot break on the 1964 PGA tour. The winner of the Crosby tourney and of the Las Vegas' Thunderbird, he was the first pro of the year to win four U. S. Championships. There are now 260 reels of *The 1964 Buick Open* moving to enthusiastic viewers in clubs, edges, and waiting television program directors throughout the land.

Instructional sequences are now standard-fare. The current 28-minute picture features Lema in slow-motion. Commentary is by ABC-TV sports announcer Bill Lemming.

Buick Has the Combination

The Buick Motor Division has the winning combination in this growing library of thoroughly professional golf films: the greatest stars in the game, complete coverage of their action by GM Photographic crews, and a network of film libraries delivering near-perfect prints to every requesting group. GM Photographic has answered the challenging sports assignment in an entirely different field: the Buick Division's first venture into another popular sports area: the art of skiing. That Part Two of this Buick sports story.

Brief Reviews of Sports Series

Here are brief resumes of the Buick sports films. All are available for group showings via offices of Modern Talking Picture Service; free; and all are 28 minute 16mm color, sound films.

1964 Buick Open, starring winner Tony Lema; featuring Ken Venturi; slow-motion instructional sequence by Lema.

1963 Buick Open, starring winner Julius Boros (also in slow-motion instructional sequence); hole-in-one by Jerry Barber.

1962 Buick Open, starring Bill Collins in playoff win over Dave Ragen.

1961 Buick Open, starring Jack Burke, Jr. in playoff win over Sammy Pott and Billy Casper. Slow-motion instruction by Burke.

Ski With Buick, starring the world-famed skier, Stein Eriksen, with 16-minutes of excellent basic instruction. Filmed on location on Aspen slopes.

"SKI With Buick"

A New and comprehensive ski instruction film is the latest in a series of sports motion pictures sponsored by the Buick Motor Division of General Motors.

The picture's star, Stein Eriksen, is generally acknowledged as the greatest skier in the world. He is a four-time Gold Medal winner in Olympic and world championships. But the film features, as well, thousands of enthusiastic skiers in some of the most beautiful ski areas in the country.

Ski With Buick, produced by the GM Photographic Department under the supervision of James W. Bostwick, conforms to the letter

World-famed skier Stein Eriksen in 16-minute instructional sequence for the film, "Ski With Buick."

with the new, national standards for instruction established by the United States Ski Association, and in that sense is a part of the project to coordinate and standardize ski-teaching courses all over the country. Thus it is unique, for it is the only ski-instruction film available today presenting the new American system of teaching.

Skiing is a Family Sport

There are strong narrative values, too, in a perceptive script by Eddie O'Brien. The picture opens with the great Friday night exodus from American cities to the ski slopes, gets quickly to the story of how a family never on skis before comes under Eriksen's tutelage.

The family is a mother, father, boy of nine and girl of 12, and at the end they had become well-

advanced beginners, in Eriksen's words in the film: "Now you can ski any area; go on out to Colorado and I'll see you there."

It is the preponderant family-instruction sequences which develop strongly that skiing, pressing golf for popularity as the outdoor participant sport for the millions, is family recreation. Eriksen himself closes this theme in the last dissolve of the film with: "Remember, anyone can ski — and it's a great life."

Good Lessons on "How to Ski"

The instructional sequences, Eriksen on camera almost constantly, and in live sound, run more than 16 minutes and in themselves are a compact and authoritative course on how to ski.

Then, near the film's end, Eriksen provides a sequence of some of the most thrilling ski pictures ever filmed — his four-minute run

from 14,00 feet down to about 7,500 feet at Aspen.

Of all the shooting locales used, Aspen is the only one fully identifiable, but the side shots pacing the narrative do give the flavor of the trail skiing of the east, the lower-hill skiing in the midwest areas and the high-mountain skiing of the Rockies.

Today Stein Eriksen, a Norwegian by birth, is an American ski professional, a man who has dedicated his life to skiing. In the last few years he has been one of the leaders in the development of U.S. techniques and the American system of instruction.

Ski With Buick, 28½ minutes, color, is now available for free showings at ski clubs, resort areas, service clubs, schools and colleges, or for any group. It may be reserved at any one of 32 U.S. and Canadian offices of Modern Talking Picture Service, Inc.

Crew headed by Producer Jim Bostwick, director Don Norborn and the script's writer, Eddie O'Brien, at work with Eriksen on ski slope of Aspen Highlands. Note rifle mike used for lip sync in the film.

GM Photographic crew lensed action for "Ski With Buick" from this camera tower perched high on Aspen mountain.

"One immediate advantage of shipping by air is greatly-reduced exposure to damage and pilferage inherent in slow surface transportation."

AIR CARGO CONCEPT

Filmed Case Histories of Shippers Show Advantage of Air Transport in This United Aircraft Picture

THE JET-SPEED DISTRIBUTION of freight and express is the basic theme of a new 29-minute film, *Air Cargo — A Modern Marketing Tool*, sponsored by the United Aircraft Corporation for nationwide showing to business firms and traffic-oriented groups. The picture, produced by Coleman Productions, Inc., and distributed by Association Films, Inc., emphasizes the total distribution concept.

In a shipper-to-shipper story, a dozen actual case histories of beneficial uses of air cargo are presented. Time consumed in transit, the value of inventories, service to the customer and other cost factors are weighed in with actual transportation costs for the ultimate decision on moving goods from producer to consumer. The situations presented in the picture range from the experiences of large corporations in this country and abroad to those of small manu-

facturers and even a single New York delicacy shipper. Narration in several cases is presented by shippers actually involved.

United Aircraft's interest in air freight lies in its service to its customers and to these customers' clientele. The company is a principal maker of engines, propellers, helicopters and aircraft accessories.

Sequences for *Air Cargo* were lensed by Coleman crews throughout the United States, Europe, Australia and the Far East. The picture complements a United Aircraft national advertising campaign pointing out the advantages of shipping by air.

Prints are available for free loan use by corporations, business and traffic groups in the U. S. and Canada by Association Films. Address requests for showing dates to AF headquarters at 347 Madison Avenue, New York, N.Y. 10017.

Scene from "Air Cargo" shows a Canadair "Swingtail-44" aircraft which exposes a complete cross-section of fuselage for easy bulk loading.

Continental Airlines' stewardess turns on one of Ampex receivers used in that company's "Travelvision" system for video sight and sound.

Airlines Install TV Tape Systems to Entertain the Jet Passengers

JET PLANES of at least three passenger airlines are being equipped with closed-circuit television systems for in-flight showings of motion pictures, off-the-air television programs and for the reproduction of stereo music. American Airlines has introduced Astrovision on its Boeings and Pan American Airways has been flight testing a similar system, also designed and built by the Sony Corporation of America, for "Theater in the Air" programming on its trans-Atlantic runs.

Continental Airlines will introduce "Golden Marquee Theater" entertainment on selected non-stop Golden Jet flights between Los Angeles and Chicago in September. The company has contracted with the Ampex Corporation for a compact magnetic Videotape playback system "Travelvision" which will allow showings of first-run films and high-fidelity stereo music.

Three years ago, Trans World Airlines began pioneering airborne entertainment with conventionally-projected films. The system was designed and installed by the Reevesound Company for Inflight Motion Pictures, Inc. Apparently, the airlines have found passenger response gratifying, hence the rapid adoption of the idea by other carriers.

A KLM passenger service executive notes that the systems not only provide a-v entertainment but also a new means of communicating with passengers. For example, the life-vest drill and oxygen mask instructions may be pre-recorded and presented by merely pushing a button.

American Airlines' advertising

American Airlines' Astrovision system has Sony TV receivers between each pair of first-class seats.

of Astrovision sums up the program advantages: first run film entertainment, local television (when planes orbit over a city prior to landing), "live" camera shots of take-offs with telephoto close-ups of the scenery below, and stereophonic programs.

Astrovision sets are mounted in the seats in first class sections with one receiver for every two passengers; they're on the overhead shelf in Royal Coachman and Economy sections, with one set for every nine passengers.

Individual headsets provide a ready "off" switch for passengers who don't want to share the programs.

The Ampex Videotape reproduction unit being installed by Continental Airlines is a 96-pound portable setup which can store up to five hours of continuous visual programming plus an equal amount of stereophonic music.

The TWA film programs are beamed to the front of the first-

FLYING CARPET

Three Alitalia Airlines' Pictures Take Viewers into Europe, East

INTERPRETING THE WORLD scene in memorable color documentaries which have won numerous citations as well as millions of viewers in theaters and community audiences, is the special forte of Wilding, Inc. producer Mel London. His films of Thailand, of the Middle East and other fascinating areas of the world have been reviewed in these pages.

And they have brought this producer the important assignment of 11 color films, being released in five languages, for Italy's international air transport company, Alitalia Airlines. The first three of these subjects, to be distributed in the U. S. by Association Films and to audiences both here and abroad by offices of the sponsoring carrier, have now been released.

Show "Portraits of the East"

Though each is wholly different in content, the most fascinating of the trilogy is a 26-minute visit through five countries titled *Portraits of the East*. Focus is on specific individuals and events which combine to capture the essence of the Far Eastern lands they typify.

In India, a young girl prepares herself for a religious holiday, seeks the gift she will present the goddess of her temple. In Japan, a businessman takes part in an ancient ritual. In Australia, a man and his wife leave the routines of their "down-under" ranch to enjoy the festivities of "racing day." A young Chinese boy shares the excitement of Hong Kong on a first journey there with his grandmother. In Thailand, a monk performs traditional Buddhist rituals.

Scenes are beautifully-lensed;

the desire of viewers to visit these lands will be aroused by their honesty and the off-the-beaten path treatment.

The Colors of Italy lets the fidelity of today's superb color films take viewers along a terraced hillside, past the stillness of lakes and into the peaceful gardens of a monastery. Tempo shifts for the bustle of modern Rome and is slowed to the pace of romantic Venice.

The episode which contrasts the patience and skill of an old wood carver with the industrial vitality of urban Italy is the story of this land today.

"Europe from Dusk to Dawn"

Vastly different from both of these pictures is the swiftly-moving kaleidoscope of *Europe From Dusk to Dawn*. The colors are vivid, exciting and all-encompassing as the camera tours seven countries within its brief 18½ minutes of screen time. A sunset glimpsed from the top of the Eiffel Tower is followed by a trip to the sea where nets bring in the day's catch. The lusty songs of a German beer-garden give way to the hearty cheer of an English pub and to the throbbing rhythms of the Spanish flamenco.

The moods of European night and their exciting hours blend into the peaceful beauty of dawn . . . the fishermen returning home and their women on the shore. Lovers in Paris part to start a new day . . . bowler-hatted Englishmen stride purposefully to their shops and offices.

Subsequent Alitalia films in this series will include *Israel, Desert and Flower*; a *Jet Safari* (to Africa); *South America Fiesta*, *Middle East Caravan* and two business-oriented subjects: *Jet Cargo* and *Thousands of Experts*. Their translation into Italian, English, Spanish, French and German versions underscores the international value of today's travel films.

How to Obtain These Films

Prints of these Alitalia films may be obtained for group showing from Association Films at 347 Madison Avenue, New York City, New York 10017.

The Alitalia film "Portraits of the East" has scenic beauty as well as character. A scene from Japan, one of five countries which are visited.

"The Colors of Italy" are vividly portrayed in scenes of urban beauty as well as the contrast of terraced hillsides and peaceful blue lakes.

Pageantry colors "Europe from Dusk to Dawn" as the Wilding camera team visits seven countries to show changing moods of people and places.

These Growth Factors Dictate
Key Role for the Distributor

FACTUAL FILM PRODUCTION and its vital counterpart, the *use* of the many thousands of new titles flowing out of the nation's studios each year, has been on a steady uphill climb since the close of World War II. To match the growing ranks of professionals in writing, direction and behind the cameras of some 357 specializing production organizations (BUSINESS SCREEN, No. 1, 1964), is the impetus of additional thousands of both 16mm and 8mm sound projectors acquired by industry, its dealers, schools, churches, hospitals and community-organized groups.

The nation's theaters, both "hard-top" and drive-in types, have also survived their doubters and a recent surge of new construction adjacent to neighborhood shopping centers has, in fact, increased the total seats available throughout the U. S. within the past year.

Its formidable competitor, television, now supplies American homes from some 600-plus commercial and educational stations. And rounding out this vast potential audience for films are distribution channels which serve rural America, the seasonal resort communities and "shut-in" viewers in homes for the aged and the chronically ill.

One generic "key" to the future of factual films certainly lies in the ever-widening dissemination of what the industry calls, "sponsored films." This is the fare which industry offers the broad *public* audience. Actually, that audience is a *number* of special-interest audiences: i.e. youth groups, adult groups, factory workers, church groups, women's groups and other dimensions of age, sex and occupation. They have several things in common however.

The sponsored film audience, like the average movie-goer, demands quality in content and presentation; the interest-quotient determines the fate of many a sponsored offering.

The sponsored film audience is also national and regional in scope. Facilities to bring these viewers a 16mm print must, perforce, be *strategically-located* to minimize costs through travel over long distances. Modern automated equipment is now part of the minimum standard for proper care of sponsor prints as well as for vital record-keeping and the reporting of audience results.

This series will examine the role of the commercial distributor of sponsored films, his antecedents, aims and physical resources. •

United World Strives to Broaden Audience Horizon

NETWORK EXPANDS AUTOMATED FACILITIES AND SERVICES

United World Films, Inc., a subsidiary of Universal Pictures, Inc., draws upon the obvious strengths of its theatrical parent. An important phase of its *non-theatrical* operations brings a nationwide network of UWF film libraries into daily contact with thousands of groups who rent 16mm sound versions of theatrical entertainment subjects, both features and shorts.

Following its organization in 1946 by Universal, UWF purchased the Bell & Howell Filmosound library, up to then the largest rental library in the U.S. In the same year, UWF purchased outright the famed Castle Film operation, also a formidable factor in 8mm and 16mm sound and silent motion picture production and sales to the "home movie" user. Castle had also been active in the distribution of sponsored motion pictures; was for many years the principal contractor to the U. S. Government for the sale of its thousands of motion pictures and filmstrips.

Continuing Factor in Film Distribution

UWF continued its lively interest in sponsored distribution, serving such longtime clients as The National Livestock and Meat Board and The Natural Rubber Bureau. Adapting many of its theatrical film distribution techniques to the sponsored field and, equally important, using these established contacts to open new doors to greater audience areas, UWF has been a continuing factor in national sponsored film distribution.

With district offices in New York, Chicago, Los Angeles, Dallas, Atlanta and Portland, UWF operates through a network of 43 distribution libraries. Through the Universal affiliation, the company has both theatrical and television background as well.

New Headquarters Has Latest in Equipment

An important step forward occurred early in '64. Expanding production and use of sponsored films led UWF to equip its new headquarters facility at 221 Park Avenue South in New York City with the latest in electronic, automated film handling and record control equipment. It also expanded its policy of

UWF distribution facilities are housed at New York headquarters at 221 Park Avenue, South.

"Custom Service" to clients in the sponsored film field.

UWF people at headquarters believe that "the gross investment of time, talent and capital on the part of sponsors, merit more penetrating distribution and more definitive accounting of distribution results."

Through their distribution contacts in the 16mm field (an educational film division distributes teaching films to classrooms and the entertainment film division handles the feature productions of Universal), UWF believes that it can provide either mass circulation or selected groupings based on region, age, interests and buying power.

Building Audiences Thru Related Services

According to UWF vice-president John Desmond, in charge of the firm's distribution services, the broad and specific audiences continually contacted for other types of 16mm film requirements are automatically contacted for availability as viewers of sponsored films.

Staff artist prepares promotional brochure on an RCA film. UWF uses concentrated promotional techniques to develop sponsored film audiences.

UWF vice-president John Desmond (ctr) consults cumulative record of sponsored film activity with staff members at New York headquarters.

Here, in brief, are some of the steps taken by the company to expand the viewer horizon:

Expanded services in '64 include weekly news bulletins directed at more than 1,000 key people in television station operations. Prepared by UWF's public relations staff in New York, these bulletins suggest program ideas relevant to available titles.

The p.r. staff also interprets public relations stories for news use and obtains releases on regular t.v. news programs. Commenting on this idea, Desmond notes:

"We instituted this special service for sponsors because, we believe it is essential to UWF's complete fulfillment of client requirements."

Theater Contacts Offer Mass Audiences

Increased concentration on theatrical distribution of sponsored films, especially those designed to reach maximum saturation areas, is another factor in UWF's "new plan of operation." Working through contacts with theaters throughout the country (established through Universal's feature distribution), the company will place sponsored films before mass audiences.

Although the firm is enlarging its scope of sponsored film promotion and distribution, it continues to provide a "sponsor-generated" service through which organizations may do their own promotions and booking solicitation. In this event, UWF ships prints only upon the direct request of the client. Handling, servicing, inspection and shipment are its sole responsibilities.

IBM-controlled monthly reporting methods have been "stepped up" with monthly reports now expanded to show cumulative analysis of bookings and showings since the inception of a distribution program. Original signed cards from viewing groups provide audience reaction material. Advance booking notices are an accepted standard so that sponsors may tie in promotional planning.

Research to Study Effect of the Film

Since the launching of its expansion program, UWF has engaged the services of Continental Research Co., Inc., a national research organization. On request and at no additional charge to the client, the distributor will "conduct a survey to determine the actual effectiveness of a sponsor's motion pic-

ture program, providing long sought answers to vital questions arising during a public relations campaign."

"We offer this service," Desmond says, "to clients who need and want a careful analysis of their film programs. It is a service we recommend for we believe in the importance of its role in the successful use of public relations-oriented films. Too often sponsors invest time, money and talent in programs which do not produce desired results. It is our aim to aid our clients in getting the most mileage from sponsored films."

UWF's current list of clients is diverse, in-

cluding such sponsors as the American Stock Exchange, the National Aeronautics and Space Administration, the American Petroleum Institute, Quebec's Tourist Bureau, the Radio Corporation of America and the International Silver Company.

For these and other clients it has laid down a solid foundation for "service and satisfaction" through its sizeable new investments in film handling and record-keeping equipment and some 18 years of relevant experience which it believes are also capital assets to be used in the advancement of the sponsored film medium.

AUDIENCE RECORDS & REPORTS

UWF hooker in a district office checks print reference book for availability of a desired print before preparing 10-part record form.

Signed cards from exhibitors are sorted at New York headquarters. Cards showing reaction to film program are forwarded to the sponsor.

Expanded facilities have automated equipment for faster, more detailed reporting of audiences and for more efficient print handling.

FILM INSPECTION AND SHIPPING

Electronic film inspection by experienced personnel at all libraries is important feature of UWF's "Custom Service" to its clientele.

Editing team inserts replacement footage on a damaged reel to insure perfect presentation. All print damage is promptly repaired.

Film shipments enroute to viewing audiences; this scene is duplicated daily across the land as UWF libraries fill their booking orders.

Opening sequence for Matson film was shot aboard square-rigged barkentine off Honolulu. Frank Robinson is on bowsprit.

Container Fleet Sails "Highway to Hawaii"

THE ISLANDS OF HAWAII were condemned to an uncertain future by sailing masters of the past century. To the captains who lost crews deserting to the paradise of the Pacific, the islands' problem of supply seemed insurmountable. Mounting populations in more recent times, needing nearly all basic staples from the U. S. mainland, might well have shared their pessimism as living costs soared and goods remained scarce.

90 years ago a shipmaster scoffed that "the only hope for Hawaii is to build its own fleet." The Matson Navigation Company, principal sea carrier serving the

islands, has done just that and something more. That "something more" is the subject of a new 29½-minute color film, *Highway to Hawaii*, produced by Fraser Productions of San Francisco.

Research Led to First Cargo

Meeting Hawaii's most critical problem is the most efficient and economical handling of vast quantities of cargo. It was solved by a modern transportation miracle, the containerization process. Matson launched this approach in 1956 with an economic feasibility study by its then newly-launched research department.

Two years later, the first experimental Matson container was

Fraser Productions' camera crew (Frank Robinson, director; Hugh Salisbury, cameraman; Bill Maley, assistant) prepares for dramatic shot beneath moving straddle truck at Matson's Honolulu freight terminal.

New Color Film Shows a Modern Transport Miracle: Matson Navigation's Containerized Freight Program

placed aboard the freighter Hawaiian Merchant and with 19 other identical freight-laden containers headed out of the Golden Gate to Hawaii. These 24-foot Matson containers are steel-framed and of aluminum construction.

Consolidate Freight at Plant

They permit the consolidation of freight to and from Hawaii at the shipper's plant, plantation or assembly line. From that point on, the cargo is literally untouched by human hands until unpacked at its destination. The full scope of modern handling equipment swings containers aboard truck or rail platforms, off and on the docks and into the holds of freighters.

ing of the freight containerization operation all down the line — with undeviating thoroughness and clarity. It establishes the mood of the wide Pacific and the men who sail from islands to mainland in a seaworthy sequence filmed aboard the square-rigged barkentine "California" on the seas off Oahu.

Shot on ECO 16mm film with Arriflex cameras, the Fraser crew employed the Nagra recorder for excellent sound effects, used Color-Tran Quartz equipment to light yards, holds and many other location shots. The film was released on Eastman Color.

Tom Fraser, who served as creative director and Frank Rob-

Bill Maley checks a light reading for "Highway to Hawaii" sequence filmed in Honolulu control room of Matson's Diamond Head terminal.

Today's Matson container ship looks like a huge floating platform of boxes, mounting high above its decks.

The company's container program now represents a \$47 million dollar investment, comprising more than 3,500 containers of various types — special-purpose vessels, shoreside gantry cranes, over-the-road skeleton truck chassis, an inter-Hawaiian Island container barge system and related facilities.

But this revolution in cargo handling has brought millions of dollars in annual savings for the people of the islands as well as to Matson's freight customers. Other benefits include reduced cargo transit time and the virtual elimination of freight damage.

Highway to Hawaii presents its basic story — a detailed account-

inon, production manager, worked with chief cinematographer Hugh Salisbury to bring through an orderly exposition. Shooting had to be nearly pure "documentary" in style with the clamor of straddle-trucks, cranes and other freight-handling equipment. This made schedules practically unpredictable. The use of walkie-talkie transceivers helped considerably in cueing.

The Matson Navigation Company had its own beginnings in 1882 when Capt. William Matson sailed a three-master from San Francisco to Hilo. Today, the freight division is continuing to expand its vital containerization network to provide the state of Hawaii with the most advanced transportation operation serving any island-community in the world.

NEWS-EVENTS OF THE SEASON TOLD IN PICTURES

A memorable scene pictures the late Frank H. Arlinghaus, President of Modern Talking Picture Service, Inc., as he made what was to be his last public appearance on August 12th to present trophy for the "1964 Modern Viewership Award" to William H. Parshall (at right), Manager of Consumer Services, H. J. Heinz Company. Presentation ceremony took place in the Heinz Theater at the Festival of Gas Pavilion of the New York World's Fair and honored Heinz for the company's longtime favorite picture, *Ever Since Eden*. Released to general circulation through Modern in October of 1943, it has been shown more than 113,000 times in classrooms and community gatherings to nearly 8 million people.

National Audio-Visual Association's Exhibitors' Committee was lensed during recent 25th Anniversary Convention in Chicago. Pictured below (seated, left to right): William DeVore, Wichita, Kansas; Robert Newman, Jamaica, L. I.; Don Warner, North Hollywood, Calif. Standing (left to right): D. W. Metzdorf, Rochester, N.Y.; Seymour Jacob, Morton Grove, Ill.; Howard Turner, St. Charles, Ill.; and Cliff Squibb, Dallas, Texas.

At General Film Laboratories' plant in Hollywood, President William E. Gephart, Jr. greeted members of a Soviet Union film industry delegation, returning the visit he paid that country last year (member of SMPTE delegation). Pictured above (l to r) are: Vladimir Rudakov, USSR; Gephart; John Washburn, U.S. State Department; Nina Trofinova, USSR; Stacey O'Brien, GFL lab superintendent; John Aitkens, GFL v.p.; Solomon Bongard, USSR; and J. English Smith, GFL sales executive.

The Soviet Union film industry delegation had earlier visited the George W. Colburn Laboratory in Chicago. President George Colburn, at right above, is holding sign prepared in honor of group's visit. It read (translated) "We welcome you cordially." The visitors (l to r): Vladamir G. Rudakov, Head Administrator on Techniques for Cinema, USSR; Nina Trofinova, Chief Specialist of the Section of Film Processing, at the Institute for Techniques and Production, USSR; Solomon Bongard, Deputy Director, Scientific Research, Cine Photographic Institute; and John Washburn, U. S. State Department.

Meet the newly-elected officers and directors of the National Audio-Visual Association installed during the 25th Anniversary Convention. Seated, left to right: Robert P. Abrams, Philadelphia, Pa., Chairman of the Board. Harold Newman, Kalamazoo, Mich., president-elect; Eloise F. Keefe, Dallas, Texas, installed as first vice-president. Standing, left to right: Max H. Rarig, Seattle, Wash., second vice-president; and John C. Ellingson, Spokane, Wash., treasurer. Secretary Frank Bangs missed sitting.

EUROPE'S BEST INDUSTRIAL FILMS OF THE YEAR

(CONTINUED FROM PAGE 20)

"Ese Geht um die Sicherheit"

Sponsor: Daimler-Benz AG. Producer: Real-und Triebfilmstudie Armin Lang.

"Fruchtbare Boden"

Sponsor: Daimler-Benz AG. Producer: Universum Film AG, Berlin.

"In neun Minuten"

Sponsor: AEG. Producer: Deutsche Industrie-und Dokumentarfilm, Duesseldorf.

"Mit Farben begann es"

Sponsor & Producer: Farbwerke Hoechst AG.

"Menschen im Glaswerk"

Sponsor: Bundesanstalt fuer Arbeitsvermittlung und Arbeitslosenversicherung. Producer: Rhewes Filmproduktion GmbH, Duesseldorf.

"Neuer Turm fuer alte Weser"

Sponsor: Hubinsel GmbH. Producer: UFA-Werbefilm.

"Oel fuer Generationen"

Sponsor: Esso AG. Producer: Rudolf W. Kipp, Hamburg.

"Oelphabet B"

Sponsor: Esso AG. Producer: Roto-Film GmbH, Hamburg.

"Theatrum Machinorum"

—Die neue Maschinenkunst"

Sponsor: Volkswagenwerk AG, Wolfsburg. Producer: Franz Schroedter Studio KG, Hamburg.

"Unter Garantie"

—Reagenz und Methode"

Sponsor: E. Merck A.G. Producer: Leonaris-Film, Stuttgart.

"Ultramid"

Sponsor: BASF. Producer: Sasse Film KG, Muenchen.

"Von Punkt zu Punkt"

Sponsor: Arbeitsgemeinschaft der Bauberufsgenossenschaften. Producer: Panfilm.

Entries of Other Lands

The titles, sponsors and producers of other entries to London:

AUSTRIA

"Austria — Hallow Glass Ware"

Sponsor: Bundesmakler der gewerblichen Wirtschaft, Wirtschaftsforschungsinstitut. Producer: Dr. Erich Regler. 35mm, color, 13 min. (English).

- Design and finish have a double function: they serve purpose of everyday use and also bear witness to Austrian way of life and culture.

"Behind the Image"

Sponsor: Bundesmakler der gewerblichen Wirtschaft, Wirtschaftsforschungsinstitut. Producer: Walther Stoltzher. 35mm, color, 25 min. (English).

- The "other image" of Austria shows

that it has contributed not only to the music and gaiety of the world but to the development of our modern technology, particularly in the field of electronic tubes.

"Molybdenmark" —

40 Years of Molybdenum

Sponsor: Metallwerk Plansee A.G. Producer: Hormann Film. 16mm, color, 25 min. (English).

- From 50 employees 40 years ago to 1200 today in a social welfare conscious plant and community; from its use mainly in electric bulbs to research and development in many fields, including cancer treatment: this is the story of molybdenum and Prof. Schwarzkopf, the plant's founder.

BELGIUM

"Black Spot"

Sponsor: Ministere des Communications. Producer: Belgique-Cine-Production 104. 35mm, color, 13 min. (French).

- Portrays traffic problem of large towns, showing public transport as a valid solution.

"From Soda to Plastics"

Sponsor: Solvay et Cie. Producer: Sofidoc. 16mm, color, 33 min. (English).

- Film outlines the various industrial activities of Societe Solvay et Cie from manufacture of soda (their original product) to manufacture of plastics, of which the company has become one of the principal European producers.

"Ink"

Sponsor: Encore DRESSE. Producer: Sofidoc. 35mm, color, 20 min. (No narration).

- The art of litho printing is pursued with old-time craftsmanship in this film showing creation of a color print at firm of Beaudot in Paris suburb.

"New Materials"

Sponsor: Solvay et Cie. Producer: Films Storck. 35mm, color, 17 min. (French).

- Gives layman insight into research and development of new plastic from search in laboratory to industrial production. (Centenary of sponsor).

DENMARK

"B. & W. Vikings"

Sponsor: Burmeister & Wain. Producer: Bent Barford Film. 35mm, color. (No narration).

- The animated film shows history of ships from the stone-age "dug-out" to today's turbo-engined leviathans.

"Niro Atomizer"

Sponsor: Niro Atomizer. Producer: Bent Barford Film. 16mm, color, 16 min. (English).

- A visitor on his way to visit Niro Atomizer with a special problem in spray drying passes famous tourist attractions in this film aimed to further a general knowledge of spray drying and its applications in modern industrial techniques.

"Safer Roads Ahead"

Sponsor: Karl Kroyer. Producer: IB Dam Film A S. 16mm, color, 15 min. (English).

- The importance of road surfacing in helping reduce accidents and the development and use of SYNOPAL, a synthetic white aggregate, in this connection.

FINLAND

"Finland Makes Textiles"

Sponsor: Association of Finnish Textile Industries. Producer: Pentti Lintonen Oy. 35mm, color, 12½ min. (No narration — music).

- Tells story of the Finnish textile industry from big manufacturers to special weavers: its importance as an employer and enthusiastic response to Finnish design abroad, particularly in Scandinavia, is emphasized.

"Neste Oy"

"(Finland's National Oil Company)"

Sponsor: Neste Oy. Producer: Suomi-Filmi Oy. 35mm, color, 18 min. (Finnish).

- The history of Neste Oy, largest oil refinery in the North, from its establishment in January, 1948.

"Wartsilo Ships"

Sponsor: Wartsila-konsernen A B. Producer: Pentti Lintonen Oy. 35mm, color, 27 min. (English).

- Skilled craftsmanship and pride of work, qualities handed down through the generations, still live in the highly skilled workers employed by Wartsila, Finland's biggest shipyard, contributing to Finland's position among leaders in new tonnage completed.

ITALY

"A Bigger Brindisi"

Sponsor and Producer: Montecatini. 35mm, color, 17 min. (English).

- The new Montecatini petrochemical works at Brindisi is four times the area of the town itself. Film describes phases in development of factory and how local population is affected by opportunities in direct and indirect employment.

"A New Source of Energy"

Sponsor and Producer: Istituto Luce. 35mm, color, 42 min. (English).

- Construction of the Nuclear Power Station on the Garigliano River is illustrated from the moment the site was chosen to the building of the huge containment sphere.

"Biography of an Aircraft"

Sponsor: F.I.A.T. Producer: Cinefiat. 35mm, color, 25 min. (English).

- Illustrates a day at the Fiat Aircraft Factory. Watching the men of the Aviation Division at work, we live the history of a jet plane.

"Checking the Quality of Galvanized Plate"

Sponsor: Italsider. Producer: Emilio Marsili. 35mm, color, 10 min. (English).

- Technical film of the manufacture of tin plate by the electrolytic procedure at the Iron and Steel Center Oscar Sinigaglia of Italsider at Genoa.

"Defence of the Poplar Tree"

Sponsor and Producer: Montecatini. 35mm, color, 13 min. (English).

- Industrial demand has led to increased cultivation of the poplar tree. Experts in various fields, through research and experimentation, have enabled cultivators to obtain healthy timber of high commercial value.

"Fiat 850"

(Designing, Experimenting, Testing)

Sponsor: F.I.A.T. Producer: Cinefiat. 35mm, color, 20 min. (English).

- The new Fiat 850, from design to laboratory experiments and tests under all conditions, and its presentation to the technical press.

"Industrial Design"

Sponsor: Confederazione Generale dell'Industria Italiana. Producer: Gigi Martello. 35mm, color, 16 min. (Italian).

- Ideas and methods of industrial design as applied in industry. Made in consultation with A.D.I.

"Insects"

Sponsor and Producer: Montecatini. 35mm, color, 12 min. (English).

- How man protects himself from the costly damage insects wreak on plants through modern chemical weapons, used according to the biology of the insect.

"La Spezia's

Thermo-Electric Power Station"

Sponsor and Producer: E.N.E.L. (Ente Nazionale per l'Energia Elettrica). 35mm, color, 26 min. (Italian).

- Story of three years' work on building the La Spezia Thermo-Electric Power Station which when completed will be able to produce up to 12 billion kwh a year.

"Men and Closses"

Sponsor: Italsider. Producer: Corona Cinematografica. 35mm, color, 35 min. (Italian).

- This film illustrates the methods of evaluating labor introduced by Italsider.

"Old and New Gela"

Sponsor: Ente Nazionale Idrocarburi (ENI) Producer: Documento Film. 35mm, color, 35 min. (Italian).

What Kodak has done to get your messages listened to better

We're talking about listening to your sound movies—really attentive listening, the kind that leads to more learning, faster, better results. But if your projector's sound system cuts up, your audience won't listen, and you'll be wasting precious time and money.

Kodak has done something to prevent this.

Audiences will listen . . . and hear . . . when the sound is big enough and commanding enough to reach every pair of ears clearly, naturally, pleasingly. This is the kind of sound you get from a KODAK PAGEANT 16mm Sound Projector, Model AV-126-IR.

Its amplifier and speaker system are so matched that at high volume levels or at low ones, this projector sounds crisply good and understandable, even

in rooms or halls where you wouldn't expect it to.

Its 11 x 6-inch oval speaker is bigger than usual to give presence to the sound you hear. It takes the full 12 watts of power put out by the amplifier, without muffling the basses or thinning down the trebles. Since you can put the speaker as much as 40 feet away from the projector (the cord is that long), you can put the speaker up front where the sound is best. And this projector can also double as a P.A. system.

This projector's amplifier is capable of reproducing the ultimate sound that can be recorded on a film sound track. There's even an exclusive fine-tuning lever (fidelity control) that lets you focus the scanning beam exactly, so that it picks up sharply all the sound that's on the sound track.

This sound system is designed so it should never need fixing for the life of the projector.

Kodak has learned from many space-age projects that transistors are more

dependable than vacuum tubes, that a solar cell makes cleaner sound than a photocell, and that good printed circuits are more reliable than wires and cold solder. So we use transistors, a solar cell and printed circuitry in this projector.

What's more, we use an exciter lamp which is rated at so much higher power than will be fed to it that it, too, should last the life of this projector.

KODAK PAGEANT Projectors are also quiet running because there are fewer moving parts and because nylon gears and bearings run quieter than other kinds. This silence lets more of the important movie sounds get through.

If you would like to read about this projector in complete detail, check the box below. Or, if you'd like to see a demonstration, check the other box. Then send us the coupon at the address below.

TRADEMARK

INDUSTRIAL FILMS OF THE YEAR: EUROPE & AFRICA

(CONTINUED FROM PAGE 46)

- Describes the building stages of the ENI petrochemical plant at Gela and underlines the contrast between the new industrial civilization and the survival of Sicily's ancient customs.

"Order SIAC 82914"

Sponsor: Italsider. **Producer:** Slogan Film. 35mm, color, 15 min. (English).

- The manufacture of a special forged steel hat to be used for closing the boiler of a nuclear reactor has required solving of considerable technical problems.

"Order Spells Spoce"

Sponsor and Producer: Olivetti. 35mm, color, 20 min. (Italian).

- Animated cartoons combined with live-action show how new items of office equipment are planned and then put into mass production.

"The Planet 'Steel 2'"

Sponsor: Italsider. **Producer:** Alfa Cinematografica. 35mm, color, 18 min. (English).

- The Planet 'Steel' has its islands and its peninsulas as well as its continents (main plants) where many different kinds of steel products are made to serve many different purposes. Production at Trieste, Torre Annunziata, Campi, etc. is shown.

"380,000 Beyond the River"

Sponsor and Producer: E.N.E.L. (Ente Nazionale per l'Energia Elettrica). 35mm, black & white, 26 min. (Italian).

- At Pieve Albignola a 380,000 volt electric power cable is being thrown across the river Po. Though the line is one of the most important in Italy, few of the 1,000 inhabitants have become aware of the work going on.

LUXEMBOURG

"Structures"

Sponsor: Ste des Hauts Fourneaux et Acieries de Differdange. **Producer:** Ste des Fils A. Champeaux. 35mm, color, 18 min. (English).

- The film illustrates the activities of the HADIR Group Steelworks in Luxembourg and includes close up and diagram sequences.

NETHERLANDS

"Diozo"

Sponsor: Chemische Fabriek L. van der Grinten. **Producer:** Deltafilm. 16mm, color, 20 min. (English).

- The spectator is given a bird's eye view of the van der Grinten diazoprinting processes and potentialities.

"For and Wide"

Sponsor: Phs. van Ommeren. **Producer:** Forumfilms. 16mm, color, 20 min. (English).

- Aims at giving the general public a

picture of the many aspects of a services rendering company and the international field it serves on behalf of the Netherlands.

"From Seed to Sugar"

Sponsor: Friesch-Groningsche. **Producer:** Profilti. 35mm, color, 25 min. (English).

- Depicts the manufacture of sugar out of sugarbeets, from seed-selection, growing, transporting, processing, to application of sugar as well as its by-products.

"How The Radio Works"

Sponsor: Philips-Eindhoven. **Producer:** Cinecartoon Centre. 35mm, color, 8 min. (English).

- Non-technical, mostly humorous cartoons, make clear the basic principles involved in sound transmission and reception at a point far distant from its source.

"How to Solder"

Sponsor: Philips-Eindhoven. **Producer:** Philips TEO Filmservice. 16mm, color, 20 min. (English).

- The film deals with the soldering in radio and tv sets and extensively shows tools and materials and the way in which a correct joint is effected.

"Inert Gases"

Sponsor: Philips-Eindhoven. **Producer:** Netherlands Educational Film Foundation and Parcifal Films. 35mm, color, 22 min. (English).

- The exciting, step-by-step discovery of inert gas is taken from the dusty past into the present as the spectator watches the scientists Ramsay, Rayleigh and Traverse, portrayed as young, modern people, carry on their experiments.

"Spies Behind the Duphar Line"

Sponsor: Philips-Eindhoven. **Producer:** Joop Geesinks' Dollywood. 35mm, color, 16 min. (English).

- A grasshopper is sent by the other insects to spy on Duphar insecticide products. He sees how they are developed and tested. The insects are shown life-size and in all their horror.

NORWAY

"A Modern Adventure"

Sponsor: Esso Norway Ltd. **Producer:** Norsk Dokumentarfilm. 16mm, color, 28 min. (English).

- A picture of industrial progress in different spheres in Norway is seen through the eyes of an American visiting the country of his birth after 47 years.

"A World to Conquer"

Sponsor: Statens Filsentral. **Producer:** ABC-Film A S. 16mm, color, 22 min. (English).

- Shown in their historical setting, the experiments of Volta and Sir Humphry Davy in electrolysis high-

light this 150 year outline. The results and basic idea of the "Laws" are shown by animation techniques. Examples from Norwegian industry — aluminum, copper, magnesium, heavy-water plants — describe how electrolysis is the basic method for many modern industries.

"Art of Building in Concrete"

Sponsor: The Norwegian Cement Association. **Producer:** Tele Film Production. 16mm, color, 18 min. (English).

- Shows the esthetic and ornamental possibilities in the use of concrete, with outstanding examples of European technical and architectural solutions in concrete construction.

SOUTH AFRICA

"The Lion's Paw"

Sponsor: Prevention of Accidents Committee of the Transvaal & O.F.S. Chamber of Mines. **Producer:** Films of Africa (Pty) Ltd. 16mm, color, 36 min. (English).

- Authentic mining family and workers portray dangers of modern "jungle"; accidents for the unwary at work, at play, on the roads and at home.

SPAIN

"Cepsa 1964"

Sponsor: Compania Espanola de Petroleos. **Producer:** Mago-Film. 35mm, color, 40 min. (Spanish).

- A tour of the company's plant on the Tenerife Island, its fleet, scenes of the island, past and present, sequences on the company's social labor policy, etc.

"Installation in a Vertical Shaft of Pirelli Cables"

Sponsor and Producer: Telecine, S. A. — Movirama. 35mm, color, 22 min. (Spanish).

- The leading actor in this film is the Pirelli Of. Cable of 250,000 volts. Scenes of its manufacture, transportation and installation by highly specialized personnel are shown.

"Manufacture of Crankshaft M-5.337"

Sponsor and Producer: Telecine, S. A. — Movirama. 35mm, color, 10 min. (Spanish).

- Modern method of forging of crankshafts for 6 cylinder internal combustion engines for heavy-duty trucks, one of the many forging jobs carried out by La Farga Casanova.

"Men and Machines"

Sponsor: Sociedad Espanola de Cons. Babcock & Wilcox, S.A. **Producer:** Telecine, S. A. — Movirama. 35mm, color, 28 min. (Spanish).

- An artistic conception of the presentation of an industrial enterprise, taking into account human values and creativity as well as the actual processes of manufacturing, etc.

* the single entry from Africa.

SWEDEN

"Emergencies Don't Wait"

(Sponsor and Producer not given.)

- A husband and wife come in for a crop of accidents. After every type of accident, instruction is given on how to deal with the injury.

"Locomotive"

Sponsor and Producer: Nohab. 35mm, color, 15 min. (English).

- Shows the manufacture of Danish diesel electric locomotives and electrics such as the Swedish "Rapid," their delivery and use.

"Nohab Diesel Engine"

Sponsor and Producer: Nohab. 35mm, color, 17 min. (English).

- Research, development and manufacture of Nohab diesel engines; test runs, engines of all types in use, future possibilities are shown.

"Salestalk"

Sponsor: Svenska Saljledargruppen. **Producer:** Suecia-Film. 35mm, black & white, 15mm. (English).

- How a salesman, Ohlsson, improves through using five simple rules when selling by telephone.

"Shipyard of the Future"

Sponsor: Sveriges Radio. **Producer:** Thorild Anderberg. 16mm, black & white, 30 min. (English).

- The film shows building of the first ship in a new, revolutionary type of shipyard.

"Thousands of G."

Sponsor: Alfa-Laval AB. **Producer:** Lundgren. 35mm, color, 16 min. (English).

- Describes in the simplest and clearest possible way the idea and function of the centrifugal separator.

"Why Asea?"

Sponsor: Asea. **Producer:** Centralfilm. 35mm, color, 15.5 min. (English).

- The question, "Why have ASEA generators been chosen for this giant project?" is asked against the background of humming generators in the Tumut II power station of the Snowy Mountains Scheme.

"Wizards With Wood"

Sponsor: Foreningen Skogs — och Lantbruksfilm. **Producer:** Sol-film. 35mm, color, 25 min. (English).

- Scenes showing the beauty of wood and work in the forest lead into chemical treatment of the product and its indispensability to our existence.

SWITZERLAND

"Exciting Day at General Motors"

Sponsor: Gesellschaft zur Förderung der schweizerischen Wirtschaft. **Producer:** Condor Films Ltd. 16mm, color, 28 min. (German).

- The suspenseful and adventurous

(CONCLUDED ON PAGE 61)

DURING PERIODS OF GROWTH in organizations, there frequently is a time when problems multiply so rapidly that it seems nearly impossible to benefit from the opportunities presented. Such a time calls for far-sighted leadership and clear-thinking management.

It also offers an excellent opportunity for development of new techniques to give management a better view of operations, faster access to data and better communication with employees. Such was the case at North American Aviation's Space and Information Systems Division (S&ID) where, during the last two and one-half years, a new concept of closed-circuit television has evolved.

Late in 1961, S&ID was faced with a three-fold problem stemming directly from the award of Saturn S-II and Apollo development contracts: rapid growth in work force, dispersal of facilities and exacting technological requirements. The number of employees grew from 8,000 to 31,00 in a period of two years. To accommodate this expansion, entire departments had to be moved outside the Downey complex — to buildings in nearby cities, a new facility at Seal Beach and a recently-acquired facility at Tulsa, Oklahoma.

The technological developments required to perform under the contracts were extremely rigorous; highly-complex systems had to be designed to meet stringent environmental conditions for long periods of time and to perform with a reliability rarely demanded before.

The communications problem was enormous. Three-fourths of S&ID's employees were new to the Division and had to be indoctrinated. Departments in major programs were spread over several facilities, making management accountability difficult to maintain. Few people commanded the new technological tools that would make the S-II and Apollo possible; therefore many workers had to be trained.

As a partial solution to these problems, closed-circuit television was considered. In this report, we describe our present television operation at S&ID and the concept upon which it is based.

Operations Center Facilities

☆ The nerve center of S&ID's television system is the studio area, our Television Operations Center (see illustration). The Center has

two television production studios equipped with professional broadcast-type equipment.

In adjoining areas there are three Videotape recorders, a kinescope recorder (16mm video film) and a film chain for inserting motion pictures and slides into television programs. The signal distribution system has 55 miles of cable, extending from the Center to all major buildings in the Downey complex and terminating in approximately 500 outlets.

The system carries signals on four RF channels, readily expanded to seven. It can also feed the video signal directly (without carrier frequency) to monitors in nearby classrooms. The distribution system is supplemented by microwave and telephone company lines to all other facilities. Through the use of portable television receivers and a remote off-on control system now being installed, the Television Operations Center has absolute control over signal distribution.

The Center also has special television camera chains for use in testing operations. This equipment makes possible the observation of hazardous tests as well as those conducted in inaccessible locations. The visual results can be recorded on video tape. A record can also be made of the test engineer's narrative describing the test.

* * *

Staff Groups at the Center

The staff for the Television Operations Center is divided into three groups: Technical Operations, Programming and Systems Design. Technical Operations is responsible for maintaining all studio equipment and the distribution system. Programming is responsible for preparing scripts, collecting visual material (slides, film clips, artwork) and producing television programs.

Systems Design is a television consulting and engineering service which conducts engineering studies on request — for departments within S&ID as well as customers of North American — to determine the nature of their television requirements, the costs involved and the design of the system.

The normal flow of program development through the Operations Center begins in Systems Design. This group assists the requester in establishing objectives for t.v. programming, analyzes the tasks to be performed and determines the type of programming needed.

IFPA JOURNAL

INDUSTRY FILM PRODUCERS ASSOCIATION, INC.

CLOSED-CIRCUIT TELEVISION New Dimension in Management

by Fred K. Leary

Space & Information Systems Division, North American Aviation, Inc.

Costs are also estimated; they are usually compared with the existing methods of accomplishing the same communication task.

Cost Must Be Advantageous

If the request is a new requirement, the television costs are compared with the cost of other available methods. Cost reductions are frequently substantial. In some cases, the conventional method is precluded by its high cost: for example, the frequent presentation of motivational appeals to all employees.

When Systems Design has completed its report and the requester has approved the recommendations, the task of preparing script treatments, scripts and final production is turned over to the Programming Group. The Technical Operations group operates the electronic equipment during production, assists in video-tape editing and is responsible for transmission along company lines.

Programming at the Center

☆ Programming can be grouped into three general areas of service. The least complicated is instrumentation. Through this service, a test engineer can be provided with appropriate t.v. equipment to monitor tests and record results. He can also transmit this information to interested persons in his project, who need not leave their normal work areas to be fully informed of the test procedures. The test engineer can have full control of the camera views recorded or transmitted. He is provided with a monitoring console for each camera, an output switch and, when necessary, remote pan, tilt and zoom controls.

Direct management communications are the second type of programming. Division news reports and briefings are examples. Every day, at 4 p.m., a news report is transmitted to top management. (CONTINUED ON NEXT PAGE)

TV: New Dimension in Management . . .

(CONT'D FROM PRECEDING PAGE)

Important developments on the major programs, new proposals and contracts and special events are reported along with charts, photos and film clips as necessary.

Briefings are normally held with two-way audio, making it possible for viewers to ask questions, to participate in the briefing. This application has proven so valuable that it is now being used to conduct real-time, problem-solving conferences between Downey and S&ID operations at White Sands Missile Range, the Tulsa plant and the Florida facility at Cocoa Beach.

Training of System Employees

Training of employees is the third type of programming. This area includes the development of skills, familiarization and motivation. Somewhat more complex

than the previous two, it may well be the most rewarding. Experiments conducted indicate that televised training can be highly effective, both in reducing costs and in accelerating employee development.

When employees from several areas must be trained, class locations can be more convenient, thus reducing off-the-job time. The single-medium presentation can be highly efficient and worker performance can be improved. The Division's training department now has approximately 15 television courses either in planning or in production.

Motivational programs are *special*. Their purpose is to shape the worker's attitude, to gain receptivity of company objectives such as conservation, cost reduction and *reliability*. To make this possible, an appeal is made to those basic employee needs associated with company objectives.

For this reason, motivational

programs use a wide range of presentation techniques, a range typified by two recent programs: (1) a straight playback of the Apollo command module's first test flight using the escape rocket for propulsion and (2) a humorous skit on plant safety.

Company psychologists assist the script writer in channeling the content of motivational programs so that they provide well-recognized stimuli, such as the importance of each worker's job, pride in workmanship, feelings of loyalty and patriotism, and teamwork.

The importance of this type of program has been demonstrated at the Autonetics Division of North American, where a comparison of failure rates with dates on which motivational programs were shown revealed a marked improvement during the days immediately following.

Many training programs have been transferred to 16mm video (CONTINUED ON PAGE 52)

Floor plan of the Television Operations Center at the Space and Information Systems Division.

RCA MAGNETIC RECORDER/REPRODUCER SYSTEMS DESIGNED TO GIVE YOU WIDE RANGE USAGE

◆ MAGNETIC FILM RECORDER/REPRODUCER

RCA's PM-76 Single Film Recorder/Reproducer brings in the latest advances in mechanical design features to assure long-life, trouble-free, quality performance. The system, housed in an 84 inch cabinet, is available for 16, 17½, or 35mm film and in single or multiple track models. Features sync footage counter, high speed rewind, synchronous and interlock motors, and highest quality modularized plug-in amplifiers.

MAGNETIC FILM REPRODUCER ◆

RCA's PM-75 Magnetic Dual provides two complete and separate film handling mechanisms and associated items mounted in a single 84 inch cabinet. This cost and space saving system can be supplied as a dual reproducer each for the same type of film or for any two of the following: 16mm, 17½mm, or 35mm. It is also available as one reproducer and one recorder for any combination of film widths.

Two more winners from RCA are the self-contained PM-72 Portable Magnetic Sound Recording System, and the PM-77 ¼ inch Synchronous Tape Recorder/Reproducer. Want to know more about RCA's wide range of quality film recording equipment? Write: Dept. 100, RCA Broadcast & Communications Products Division, 2700 W. Olive Avenue, Burbank, California.

The Most Trusted Name in Sound

film by the kinescope recording process to provide S&ID's suppliers with an effective, low-cost method of indoctrinating their employees in the requirements of S&ID projects. Approximately 100 suppliers are now receiving prints on a regular basis and their response has been excellent.

* * *

S&ID's Concept of Television

The complexity of the TOC becomes apparent when we consider the tasks it is accomplishing, the highly-specialized staff and the large investment made in professional equipment. Increasing demand for the Center's services would seem to justify that complexity, affirm that it is a successful operation.

The comprehensive study of communications requirements initiated nearly 12 months before the first purchase orders were placed for equipment is a basic factor in this success. The study began with a survey of existing non-broadcasting television installations. The basic problem was often found to be a marked mismatch between equipment and utilization — much equipment, little use.

S&ID's approach was then decided upon: first study the requirements for television, then design a system that could meet those requirements efficiently with a minimum investment. After a total of 18 months of study and installation, the Television Operations Center telecast its first program.

* * *

Evaluation of the Results

The study phase has not ceased. Although the first year of operation has been largely devoted to solving the administrative problems of start-up, evaluation of results in terms of cost effectiveness has continued on a sustaining level.

The results, so far, have exceeded expectations. Now, with the workload and operations becoming stabilized, the evaluation effort has been expanded to include areas additional to cost effectiveness.

Evaluation of television's application as an instructional medium is receiving particular attention. The effectiveness of televised training is determined directly by its proper use, which is not always easy to define. For instance, proper use of t.v. demands careful selection of subject matter, accurate definition of what the student is to learn and specification of the

THE INDUSTRY FILM JOURNAL

TV: New Dimension in Management . . .

method and environmental conditions for presentation to the student, including the nature of any "live" instruction that may accompany the televised presentation.

Systems Design personnel conducted a survey of recent literature on instructional television and discovered neither conclusive results nor clear guidelines in these areas. A major reason for this is that much of the work in the field

shown without any special production devices to all three shifts of Apollo manufacturing personnel.

The response indicated nearly 100 percent positive attitudes. On the reverse side of their questionnaires, many employees expressed considerable appreciation for the opportunity to view the results of their own work. In a similar survey for a reliability program, the favorable response was approximately 85 percent.

In future evaluations, such surveys will be combined with data on shop performance to study the effect of the motivational stimuli on actual performance.

* * *

Conclusion: Summing It Up

☆ The development of the Television Operations Center, the study involved, installation and operation of the equipment and evaluation of the Center's effectiveness has brought together highly-qualified specialists. The industrial environment of North American Aviation has provided them with unique television experience.

For this reason, the Systems Design group, with the full backing of the other two television groups and the Corporation, is offering its services to other organizations with similar communications problems.

Modern problems must be solved by compatible techniques. Television has been in widespread use and abuse in America for about 16 years and it has been the subject of much controversy, from uncritical praise to undeserved derision. S&ID believes, however, that in the field of management communication, television has at last found a place where it can grow in dignity.

Control of Photography Key to TV Color Print Quality

☆ Optimum control of release print density in color films for television use can only be achieved by carefully controlled photography. This is the new recommendation of an engineering subcommittee working on the subject for the Society of Motion Picture and Television Engineers.

In the May issue of the Society's JOURNAL, Subcommittee Chairman John M. Wancor sum-

marized some of the findings of his group as follows:

. . . It is desirable to limit the density range of the color print, and to include a "reference white" and a "reference black" in the scene for the benefit of the video operator or automatic video control.

. . . The recommended maximum and minimum reflectances of fully illuminated materials that are to

be reproduced with good detail are 60 per cent for whites and 3 per cent for blacks, with existing film products and techniques.

. . . For a fully lighted day interior scene, a lighting ratio of 2 to 1 is recommended. Higher ratios may be used for special effects and night scenes.

. . . It is emphasized that the most important, practical and effective way to control the density range of the color print is in the staging and photography, rather than in the final printing.

Copies of the May Issue of the complete JOURNAL are available at \$2 from SMPTE, 9 East 41st. St., New York 10017.

Nationwide Sales and Service for the Eclair "npr" Camera

☆ Coast-to-coast rental, sales and service for the new Eclair "npr" 16mm motion picture camera is confirmed with the announcement that F&B Ceco, Inc. has been appointed exclusive sales agents and authorized service headquarters for the equipment in the Eastern U. S. Behrend, Inc., will handle the midwest territory. Gordon Enterprises, North Hollywood, is the recently-appointed Western U. S. distributor and authorized Eclair service facility.

Mark Armistead (rental only) in Hollywood and Camera Service Center, New York, are other participants.

A brochure on the camera is available on letterhead request from the Eclair Corporation of America, 7262 Melrose Avenue, Los Angeles, California 90046.

* * *

Closed-Circuit TV Network at Int'l Dental Convention

☆ For the third consecutive year, the American Dental Association will operate its own closed-circuit television network during the annual meeting of the ADA (the 105th) at San Francisco, Nov. 9-12. The network is being co-sponsored by the Colgate-Palmolive Company and the Association.

News of sessions, interviews with leading personalities, a report on the new ADA headquarters building in Chicago, and films on the latest techniques in dentistry are among program highlights. A full-time newsreel cameraman will film proceedings which will be taped by KOED and then televised directly into rooms of delegates at major convention hotels throughout the city. Programming will begin at 5 p.m. on the opening Sun-

day with subsequent telecasts arranged to avoid conflict with regular scientific and business events of the annual meeting.

The ADA tv network was originated at the 1962 annual sessions in Miami Beach

"Largest Sale in History" at S.O.S. Photo-Cine-Optics, Inc.
 ☆ The "largest sale in history" has been announced by S.O.S. Photo-Cine-Optics, Inc., New York and Hollywood, with "thousands of pieces of new and used equipment marked down for phenomenal savings, some as much as 84¾ percent," according to Alan C. Macauley, S.O.S. president.

A free 16-page Summer-Fall Photo News contains a complete listing of the many bargain items. It is available on letterhead request to: S. O. S. Photo-Cine-Optics, 387 Park Ave., South, New York, N. Y. 10016 or 6331 Hollywood Blvd., Hollywood Calif. 90028.

* * *

Form Dashiell Film Library in Hollywood for Stock Shots

☆ Partners Doris Dashiell and Mary Hawkins have announced the formation of the Dashiell Film Library at 725 N. Seward St., Hollywood, Calif. It has begun operations with nearly 250,000 feet of stock film for which it is exclusive representative.

In addition to offering stock library material, DFL will provide a custom film service to secure new film sequences anywhere in the world. Roving cameramen operating out of key cities will be given assignments for either 16mm or 35mm footage. Cataloging and handling of production negative for independent producers are other announced services.

The Camera Mart Announces New Equipment Franchises

☆ A number of new sales and rental franchises for film production equipment have been granted to The Camera Mart, Inc., New York City. Among the products now available are Bolex 16mm cameras and accessories (granted by the Paillard Company via an industrial audio-visual franchise); Stellavox battery-operated quarter-inch professional tape recorders; Siemens 16mm optical-magnetic interlock projectors; and Moviola crab dollies for location or studio use.

EXCLUSIVE WITH CFI

GOOF PROOF

There's no mistake about it. Our system makes mis-labelled or illegible 16 mm release print leader a thing of the past.

First, we include all identification data in the negative leader. It's then automatically printed on the head leader of all release prints. Next, we convert this clear film to reinforced opaque white leader thru our special, patented* process. Result: legibility, durability, infallibility. Makes old-fashioned, hand-labelled leaders obsolete. See for yourself!

Joint goal setting: a scene from "Evaluation: a New Integration of Management Theory" (story below).

Executive Development, Inc. Offers 1th Management Title

☆ Rounding out a first four-part series in the management orientation program being produced by Executive Development, Inc., Los Angeles, a new 100-frame color sound slidefilm, *New Frontiers in the Motivation of Others*, has been announced by the West Coast organization.

Titles of the three previous sessions are: *Evaluation, a New Integration of Management Theory*; *Self-Analysis for Executive Success*; and *Your Inner Dynamics as a Communicator*.

Each program session includes a color sound slidefilm and extensive collateral material (Leader's Guide, handouts, references, back-

The processing of inputs is pictured in slidefilm #3: "Your Inner Dynamics as a Communicator."

up material, etc.) to allow each work group member to immediately utilize the presented material. Collateral material for a "Review Session" permits the discussion leader or group trainer to evaluate practical results of prior sessions and to orient the group to future sessions now being prepared.

First subjects in the series have won both American Film Festival and NVPA awards. Further information may be obtained from Executive Development, Inc., 155 N. LaPeer Drive, Los Angeles, Calif. 90048.

Public Health Agency Has "Heart Research" Newsreel

☆ The Communicable Disease Center's Audiovisual Facility (U. S. Public Health Service) has

what's new in pictures

supplied the National Heart Institute with a 16mm b&w sound newsreel titled *Heart Research News*. The film is cleared for public service television showings and is being offered station program directors for immediate showings. Write the Center at Atlanta, Ga. 30333.

"Bicycle Rules of the Road" a New Cahill Safety Picture

☆ Continuing a production program in the field of safety education, Charles Cahill and Associates, Hollywood, has released an 11-minute 16mm color film, *Bicycle Rules of the Road*, to improve understanding among young riders of the elements which insure safe travel on their bikes.

Aimed at the elementary age

level audience, the film provides "rules" for safer, more pleasurable bicycle riding in three main areas. The film's message is highlighted by a Highway Patrol demonstration of driver reaction time and stopping distance, and by staged collisions.

Preview copies are available to potential sponsored print purchasers and school users, etc. through Charles Cahill and Associates, Inc., 5746 Sunset Boulevard, Hollywood, Calif. 90028.

TV, Employee Showings for Bay Area Crusade Picture

☆ Showings by all San Francisco Bay Area television stations and to some 300,000 plant workers in that region will help build a size-

able audience for *Somebody Knows*, a 10-minute color film just completed by Vista Productions for the United Bay Area Crusade.

The campaign will begin immediately after Labor Day. Goal of the Crusade is \$15 million, 30% higher than the 1963 goal for the 117 member agencies which are served. Script, written by Mary Wolcott and produced by Vista's Florence Fowler, centers on the Alaskan and Crescent City, Calif. earthquakes. 135 prints will be distributed to Bay Area industries.

11-Minute Kodak Film on "Pictoretaking at the Fair"

☆ Showing the prospective New York World's Fair visitor how to take good pictures at the show is a new 11-minute color film, *Pictoretaking at the Fair*, available from the Eastman Kodak Company, Rochester, N.Y.

Designed for showings by travel agents, industries and groups planning trips to the Fair, the film highlights a number of dramatic exhibits and pavilions, including the Swiss Sky Ride, prehistoric monsters in the Sinclair Oil exhibit, spectacular nighttime shots of the General Motors building plus the fountains and fireworks at the Pool of Industry.

Special advice is given on how to use the exposure information and picture possibilities listed at the 30 "Picture Spots" located throughout the fairgrounds.

"Driver's Choice" Captures Drama of Indianapolis "500"

☆ Dramatic events leading up to A. J. Foyt's victory in the recent Indianapolis "500" Mile Race are unfolded in *Driver's Choice*, a 30-minute color film released by Sportlite "500" Films, Chicago.

The film portrays Race Day activities with "live" sound and includes total coverage of the tragic second lap accident shot by eight cameramen from seven different track positions. It tells of the drivers' dilemma and how each decided the question of front or rear engines. Qualifying trials are covered in detail, including Jimmy Clark's record-breaking pole position run.

Previewed on August 5 at the Indianapolis Athletic Club, the film is now available from Sportlite "500" Films, 20 W. Wacker Drive, Chicago, Illinois 60606.

The NEW RESEARCH PRODUCTS OPTICAL PRINTER

NEW DESIGN CONCEPT INCREASES PRODUCTION

Reduces Down Time!

The Research Products Optical Printer is based on 25 years experience in the design of specialized equipment for the production of optical effects. Feature for feature . . . there is no other printer available today with its unparalleled control, flexibility, and ease of operation. Exclusive features include modular drive unit, skip-frame programmer, centralized controls, interchangeable film movements, 7-speed motor, and more.

Research Products has selected Acme camera and projector heads as the most accurate registration equipment available. Convertible, or interchangeable heads make possible the printing of all format sizes from 70mm to 8mm, in black-and-white or color. The fixed-pin registration camera has a manual variable shutter, as well as automatic drive for fades and dissolves. A variety of interchangeable camera and projector heads is available.

▲ **MODULAR DRIVE UNIT** — The entire mechanical drive system is easily removed for maintenance or replacement with a duplicate unit during servicing. Down-time is reduced to a minimum. This Research Products exclusive feature means more production, lower maintenance cost, and faster repairs.

▲ **OPTICAL BENCH** — One-piece, precision machined aluminum extrusion, 4-feet long for extremes of zoom, enlargement, etc. 9-inches wide to accept oversize cameras.

◆ **ELECTRONIC PROGRAMMER** — Skip-frame and multiple frame printing is controlled by holes in loop of 35mm film in desired sequences. Can also actuate automatic fader mechanism. Installed in a minute and can serve more than one printer.

Every printer is thoroughly checked and tested by Research Products' associate, Cinema Research Corp., to guarantee accuracy and capability under actual production conditions. Through this association, we can also train your operator to assure proper operation. The Research Products Optical Printer is available for sale with deferred payment plans or under a number of leasing arrangements.

Reliance Electric Turns to Humor to Make Sales Points

Hard-to-get purchasing agents and other industrial buyers of fractional horsepower electric motors are the target audience for a new sound film featuring a unique approach in product promotion.

The Reliance Electric and Engineering Co., Cleveland, Ohio, has Tim Conway (star of *McHale's Navy*, a video series) as the principal player in a film which aims to show that there are many differences in fractional motors and that purchasing agents must be highly selective in reviewing the relative merits of competitive makes.

A. G. Conway, who is not related to his star performer, supervised the production as Advertising Media Supervisor for Reliance. Fox Video Productions turned out the reel.

Tim Conway plays a harrassed young purchasing agent who is overpowered by the thousands of decisions he must make in his work. He dozes off amid a pile of brochures, catalogs and bulletins. The film dissolves to a nightmare sequence wherein he purchases an inferior motor, through carelessness or lack of concern. The motor burns out, causing the failure of an extremely complex machine.

The sequence of events which follow are "hilarious." But they serve as background for the selling points Reliance shows to its customers.

* * *

United Nations Signs Niles for Two Major Productions

☆ Production of two new major films for worldwide distribution has been announced by the United Nations. Scheduled for early 1965 release, the two projects have been assigned to Fred A. Niles Communications Centers, Inc. One will be shot in the U. S., the other will be filmed in Peru.

The U. S. film is being designed to persuade people the world over to support the UN aid program for children in underdeveloped lands. It will be shot in 35mm color without narration for international showings.

The second film, also in color, will encourage the advancement of native cultures in underdeveloped countries throughout the world. The idea for the film was brought to the UN by Katherine Dunham, famed dancer who is also well known for studies of native customs. She will accompany the Niles' crew on location in Peru. •

WIDE WORLD OF CURRENT SPONSORED PICTURES

Tim Conway, star of Reliance Electric's film, drifts off into one of those nightmare sequences in which he dreams he is awakened by persistent ringing of the phone, facing disaster caused by his purchasing negligence.

THE EXECUTIVE DEVELOPMENT SERIES:

For further information write:

Bowling and Golf Hints in Two New Miller Sports Films

☆ Two new additions to the Miller Brewing Company's extensive sports film library provide widely-popular fare on bowling and golf.

A 20-minute color film, *The Wonderful World of Bowling*, features "bowler of the year" Dick Weber in sequences on basic techniques and rules of alley technique. It emphasizes the modern bowling center as a "community recreation" area.

Two of the world's foremost golfers, Sam Snead and Bill Casper, team up in *High Life Golf Hints*, a 21-minute color picture lensed at the Greenbrier Club in White Sulphur Springs, West Va. Snead and Casper explain and demonstrate the proper grip, stance, address of the ball, follow through, ways to get out of the rough, blasting out of a sand trap, pitch shots, chipping, driving, fairway and bunker shots. The "whys and hows" of hooks and slices are also reviewed, along with correctional hints.

The two films join more than 2,000 prints of 200 sports titles available on free loan (return postage only) to social, civic, charitable and fraternal groups from the Public Relations Department, Miller Brewing Company, 4000 W. State St., Milwaukee, Wisconsin 53208. •

* * *

Continental Insurance Co.'s Revise N. Y. Fair Pavilion

☆ The Continental Insurance Companies' pavilion at the New York World's Fair was revised early last month. The slide presentation, *Cinema '76*, has been moved from its outdoor location to a new spot inside the building.

The designers of the pavilion had hoped to throw enough light on the screen outdoors so that the show could be viewed even on bright days. It just didn't work out — in fact, the screen images were not even adequately bright for cloudy days.

The outdoor screen has been replaced by a diorama of four life-sized marching Continental soldiers with a Betsy Ross flag waving in the background.

Cinema '76, now in the central area of the building, is composed of the stories of seven heroes of the American Revolution related in folksong and colorful artwork. The 25-minute presentation employs cartoons and photo effects produced by Mazin-Wyckoff Company, songs by Charles' chorale. •

"DataColor" System, Using Black & White Television Camera for Multiple-Color Television Images, Announced by G P L

☆ A method of using standard black and white television cameras to provide multiple-color television pictures has been disclosed by the GPL Division of General Precision Inc.'s Aerospace Group. The new system, called DataColor, is expected to find important applications in defense command and control, aerospace mission control, medical electronics and for industrial applications where the use of color would enhance product promotion.

Instead of viewing objects as black or white, GPL's DataColor system "sees" objects as different shades of grey. An electronic color reservoir, called a color discriminator, assigns various colors to different shades of grey.

The colors are pre-selected and color assignment by the color reservoir is arbitrary. For instance, black can be assigned the color red; dark grey can be blue; light grey can be green. Or the system can be easily modified so that black is displayed on television as green; dark grey is red and light grey is blue. Any number of colors can be assigned by the electronic color reservoir but assigned colors are generally limited to six, the number that can be easily identified by the human eye without reference to a color code directory.

The DataColor system uses a low-cost black & white vidicon

camera instead of an image orthicon or three-vidicon color camera. GPL television engineers said initial technical efforts have been made on behalf of command and control requirements as outlined by Defense Department specialists. First operational uses of DataColor are expected to be in military situations where color can substantially improve presentations of strategic and tactical situations to commanders and their staffs. •

"Santa Maria's" Owner Seeks Sponsor for an Historic Film

Just as Columbus sought a benefactor to back his voyages of discovery, so Lawrence H. M. Vineburgh, owner of the modern day replica of the "Santa Maria", now seeks a sponsor to bring the filmed story of his famous little ship to the public. John Campbell Films has been assigned to develop the film treatment.

The color film will show the construction of the ship in Barcelona by a centuries-old yard using 15th Century tools. The care in authentic outfitting will be seen in the original artifacts reflecting life on board — the iron cook-stove, the navigational instruments, even the clothes worn by Columbus and his crew woven on 15th Century looms.

This story of the "Santa Maria" is being dramatized by writer-director Rolf Forsberg who is under contract to Campbell Films for the assignment.

The "Santa Maria" is currently at the New York World's Fair where the theme of the exhibit, Space Ship 1492, provides a clue to the type of company that might consider sponsoring the film. Any organization in the travel, transportation or space-oriented fields could use the contrasting story of the "Santa Maria" to bring their own message before widespread audiences. •

Methodist Women Give 25th Anniversary Film to Tilton

The 25th Anniversary film of the Women's Division of Christian Service, Board of Missions of the Methodist Church of America has been assigned to Roger Tilton Films, Inc., San Diego, Calif.

Major documentary portions of the film will be lensed in San Antonio, Texas, Greensboro, North Carolina and New York City. Philip Stapp will do a special animation sequence. •

another fine CAMART PRODUCT

NOW SHOOT MULTIPLE IMAGES FROM A SINGLE SUBJECT WITH THE CAMART OPTICAL FX UNIT

Produces 2-7 Images in Rotation... Montages... Special Distortions... Unlimited Variations

Create unusual optical effects right in your own camera. Give your films drama and impact. The Camart Optical FX Unit can be used with motion picture cameras, TV cameras, animation cameras. The unit reproduces up to 7 multiple images from a single object. These can be rotated clock-wise or counter clock-wise... fast or slow... or photographed "still."

Camart Optical FX Unit with four surface prism, mount, revolving housing, camera base plate and double arm assembly **\$119.75**

Additional Prisms & Accessories Available. Prices on Request.

Kurtz to John Colburn Staff

☆ Oscar C. Kurtz will supervise educational material distribution at John Colburn Associates, Inc., Wilmette, Illinois producer. His appointment was announced in mid-July by studio president John Colburn. •

AV rear projection cabinets protect the investment you have in your projectors.

The AV rear projection cabinet lets you use any projectors you now own

Exclusive Buhl lens (optional) gives full-screen presentation from any projector.

You can install this remarkable audio-visual tool with no need to replace costly projectors.

The standard AV cabinet sells for \$180.00 f.o.b. factory. It accommodates most all projectors commonly in use. For projectors with two-inch lenses and larger (including slide and filmstrip projectors) we provide an exclusive built-in Buhl lens to give full screen picture. The extra cost: \$50.00. Riser modification for certain projectors (Bell & Howell, etc.), \$6.00 extra per cabinet. Cabinet delivered with all modifications made. Just tell us what kind of projectors you use.

The AV rear projection cabinet gives you a distortion-free 22"x28" picture on a new Polacore non-glare screen. It ends the need for costly darkened rooms. The lights stay on, the blinds stay up. It is self-contained with your projector installed and a big speaker built in.

Send for free folder containing complete information and specifications. Order direct from factory or your AV supplier.

Ellis, Richman Join Staff of Comprehensive Filmtreat, Inc.

☆ Ivan M. Ellis and Gerald Richman have joined Comprehensive Filmtreat, Inc., in New York and California, to coordinate the activities of that company's expanded service to business and educational film libraries.

Ellis will develop sales programs and activities in the New York area. He has had 18 years of sales and management experience. The California operation will be coordinated by Richman, a 10-year veteran in the film industry with experience in writing, editing, directing and production.

In announcing the appointments, vice-president Jules Leni noted, "for more than 30 years, Comprehensive Filmtreat has concentrated on extending the useful life of films for theatrical and television projection through its rejuvenation process. The company's enlarged department will enable us to meet the service needs of the rapidly-growing non-theatrical field in which audio-visual directors are most conscious of the need for maintaining print quality over long periods of usage." •

Movietone's Jack Kuhne (l) shows plans to Fred B. Adair, Jr., president of Manhattan Sound Corp., now operating the sound studios.

Manhattan Sound to Operate N.Y. Movietone Sound Studios

☆ 20th Century-Fox Film Corp. has entered into a long-term agreement with Manhattan Sound Corp. to operate the sound studios of the Movietone production complex on West 54th Street, New York. Manhattan Sound will continue its original sound studios at 411 Fifth Avenue, as well.

A joint statement by Fred B. Adair, Jr., president of Manhattan Sound, and Jack Kuhne, executive producer of Movietone, revealed that more than \$300,000 has been earmarked to modernize the Movietone sound studios. It is expected that they will be ready by November 1, and will be called Manhattan Sound West.

By maintaining an integrated operation, including closed-circuit intercommunication, between its east and west side studios, Manhattan Sound will be able to offer flexibility to its customers and easy availability through its expanded facilities.

Adair pointed out that Manhattan Sound West becomes the only sound studio in New York which functions as part of a motion picture production complex. Manhattan Sound will continue to provide services for television and radio production, as well as motion picture making — recording, dubbing, mixing, transfer, including 50 to 60 cycle, 16mm and 35mm optical and all sizes of magnetic tape.

The president of Manhattan Sound stressed that while his company will handle all of the sound requirements in the East for Movietone and 20th Century-Fox, this will represent only a small percentage of its capacity. The company will actively seek to expand its services to producers. •

along production lines

Wilding and Fedderson Agree on Acquisition of TV Studio

☆ An agreement in principal to acquire an 80% interest in Don Fedderson Commercial Productions, Inc. of Los Angeles has been announced by Wilding, Inc. Fedderson is a leading producer of television commercials on the West Coast as is Wilding in the midwest.

Spokesman for the national communications' concern indicated that this will make Wilding operations in this growing field a coast-to-coast service. The Fedderson acquisition is the first made by Wilding, Inc. since the public offering of the company's stock in April. The company has acquired four other firms during the past nine years, all previous to the public offering. •

Technicolor Reports Higher Earnings, Sales to July 31st

☆ Earnings of Technicolor, Inc. for the first six months of 1964 were \$2,137,015 or 71¢ per share as compared to \$1,971,204 or 67¢ per share for the same period last year. Consolidated net sales for the 1964 period were \$47,061,964 as compared to \$41,874,016 in the same six months of 1963.

Board chairman and chief executive officer Patrick Frawley noted that "the major portion of the increase for the first six months of this year is due to a substantial increase in sales and earnings in the Consumer Photographic Division.

"The Technicolor 8mm Instant Movie Cartridge Projector has been so widely and enthusiastically received in the marketing, indus-

trial, educational and military areas that sales for this unique concept will reach an all-time high this year." •

Tiesler Retires; Assigns Film Productions to Charles Hans

☆ Hans Tiesler has announced the cessation of Tiesler Productions as of August by reason of retirement. He terminates a 40-year professional career which began in Hollywood in 1924. Production activities will be continued by Charles Hans of Charles Hans Film Productions, 305 East 46th Street, New York City.

Hans' professional career began with Paramount in 1927 and for the last 17 years he was head of the Photographic Department of Depicto Films Corporation and co-owner of that Company. Upon disposing of his interests in Depicto, he formed his own production organization, producing slidefilm and motion pictures. With the acquisition of Tiesler Productions he will now serve former Tiesler clients in addition to his own. •

* * *

Marathon Opens German Office

☆ Marathon International Productions, Inc., New York film production firm, has opened a new office in Frankfurt, Germany.

Werner C. Prellwitz has been named General Manager and will be in charge of operations in the Frankfurt office. Mr. Prellwitz was formerly associated with the Public Relations and Advertising Department of Farbwerke Hoechst A. G., one of Germany's large chemical concerns. •

* * *

New Custom Optical Printer Installed by Eskay in Chicago

☆ Purchase of a new custom optical printer, designed and built by Research Products, Inc., of Hollywood, will expand the laboratory services of Chicago-based Eskay Film Services, at 1325 S. Wabash Avenue. The printer provides specialized optical effects in both 16mm and 35mm formats.

It includes such innovations as an automatic skip-frame programmer and provision for aerial image photography. All mechanical drive parts are contained in a single modular unit, eliminating service problems at Chicago since the unit can simply be exchanged for a duplicate sent directly from Hollywood.

Ed Nielsen, experienced in animation and optical effects, will head Eskay's optical department. •

AN IMPORTANT ADVANCE IN GROUP COMMUNICATIONS

16 mm. Cine-Educator by Busch

By utilizing the principle of transmission instead of reflection, LENSSCREEN Rear Screens by POLACOAT offer an important step forward in solving group communication problems.

LENSCREEN is NOT just another screen. The millions of tiny lenses on the surface of POLACOAT'S LENSSCREEN respond only to projected light. Reflectance of ambient room lighting is virtually eliminated. As a result, sharp, clear pictures can be shown in fully lighted rooms — by your present projector.

This achieves greater attention, speedier understanding and learning, plus increased memory retention.

Up-date your present projector by utilizing LENSSCREEN by POLACOAT.

Sell, train, display — the modern way!

For full information about how LENSSCREEN can benefit you — send for free LENSSCREEN Ideas Kit, today.

EUROPE'S BEST INDUSTRIAL FILMS OF THE YEAR

(CONTINUED FROM PAGE 48)
story of Jean-Pierre, a ten year old boy, frames the production process of a car at the General Motors Company of Switzerland.

"Beyond All Frontiers"

Sponsor: Universal Postal Union. Producer: Dr. H. Zickendraht. 35mm, color, 13.5 min. (English).

• Made for international use, especially in underdeveloped countries, this film shows development of Universal Postal Union from service to a limited privileged group to an international postal service for everybody.

"Bulach — Fur Glas Ein Begriff"

Sponsor: Gesellschaft zur Forderung der schweizerischen Wirtschaft. Producer: Pro Film Ag. 16mm, color, 20 min. (English).

"Industrial Planning"

Sponsor: Gesellschaft zur Forderung der schweizerischen Wirtschaft. Producer: Dr. Hans Zickendraht, Zollikon. 35mm, black & white, 35 min. (German).

• The film describes the planning required for the construction of a new factory to produce a series electric motor.

"Irga Pad"

Fully Continuous Wool Dyeing Process) Sponsor: Geigy A. G. Producer: Condor

Films Zurich 16mm, color, 15 min. (English).

• Difficulties in the dyeing process of wool due to increasing automation in the wool industry led to development of Irgapad. Simple moving diagrams help explain the working of the process, known as Irga-Pad, and some of the machinery which had to be developed in order to apply it.

"Le Centre Nucleaire de Wurenlingen"

Sponsor: L'institut federal de recherches en matieres de reacteurs. Producer: Documentarfilm S. A. 35mm, color, 27 min. (German).

"Signals"

Sponsor: Swiss Federal Postal Administration. Producer: Kern-Film Ag. 35mm, color, 38½ min. (French).

• Principals and development of telecommunication by telephone from the simple wire to wireless communication using a light ray (laser).

"Wood"

Sponsor: Gesellschaft zur Forderung der schweizerischen Wirtschaft. Producer: Standard Film SA. 35mm, color, 13 min. (Music only).

• Using specially composed background music only, film is intended to give viewer a general impression of wood in all its variety, practical usefulness and classic beauty, and to put on record Switzerland's modern woodworking machinery and tool industry.

Dear Al:

You'll be glad to know that the answer print of CON PREOCCUPACION Y ESMERO was exceptionally well received by the Upjohn people in Kalamazoo. The group comprised the managers of the International Division -- the men who will be actively using this Spanish-language version of WITH CARE AND CONCERN.

It's been a real pleasure working with you on this one, Al, and I certainly hope we're able to do it again sometime in the future. At every stage of production -- from translation and casting, through shooting, editing, recording and dubbing, right down to viewing the answer print -- your professional thoroughness was exceeded only by your personal concern, your very real "preocupacion y esmero".

With warm personal regards,

Sincerely,

John E.R. McDougall

Arriflex-16Q

New Light-Weight, Self-Blimped
Camera to Serve the Film Maker

USERS OF ARRIFLEX CAMERAS who have asked this leading maker of professional cine equipment for a light-weight, self-blimped camera will find their answer in the new Arriflex-16Q. It is an extremely *quiet* camera for synchronous sound recording so often required in industrial film production.

The 16Q, with its 400 ft. magazine loaded with film, produces only 31 db., measured with a General Radio Noise Level Meter at three feet. The quick-change magazine, similar to the Arriflex-16M, permits the camera to be loaded in mere seconds. Other key features: mirror-shutter, thru-the-lens viewing, combined tachometer and sync signal generator for synchronous sound recording, and precision registration film movement. The 16Q retains the rugged quality of this camera-maker's line.

Picture above shows simple film path of Arriflex-16Q. 400-ft. magazine is of the single compartment displacement type.

☆ In addition to its self-locking magnifying eyepiece, the 16Q has the same balanced, butterfly-type, mirror reflex shutter used in more than 10,000 other Arriflex cameras. 180-degree opening gives an exposure time of 1/48 sec at 24 fps.

In order to hold the long, front-heavy zoom lenses securely, a brand-new socket (patent applied) was designed. It is compatible to all existing Arri lenses of suitable focal length. Write Arriflex Corp. of America, 257 Park Ave. South, New York, N.Y. 10010 for a detailed descriptive folder.

Basic grouping of Arriflex-16Q (right) showing camera head, detached and blimped zoom lens; quick-change, pre-threaded 400 ft. 16Q magazine, at top.

Tripod-mounted, the Arriflex-16Q is no less "correct." Flat base has two tripod sockets; film gate is correctly located where it should be — in relation to tilting and panning axis of the tripod head.

Mechanism Upholds Arri Standards

☆ Film makers will also note that the 16Q uses the reliable standard Arriflex-16 film transport mechanism with its precision film gate and true registration pin movement. It was primarily designed for use with the zoom lenses, all of which have a long back focus.

Film drive mechanism (illustrated at left) is completely sound insulated from the magazine by means of rubber cushioning. Each magazine has its own feed and take-up sprockets and is preloaded in the darkroom, with a very simple threading path to follow. The magazine meshes automatically with the camera's drive gear and runs both forward and reverse.

Weight of the "Q" (complete with 400-ft magazine, governor-controlled motor and blimped Angenieux 12 to 120 zoom lens, is only 16 lbs. Approximate price of the Arriflex-16Q, complete with lens, is announced at \$4,500.

On Shooting Overseas:

(CONTINUED FROM PAGE 24)
ghanistan our chief cameraman, Jack Whitehead, was unable to get his visa cleared because of his English ancestry. If I hadn't been along, I doubt that we would have obtained any footage at all in that country. So you can see the wisdom of "team" effort, with one cameraman backing up the other. And each man should read his own exposure and not communicate with the other about it . . . at least, that's our experience.

* * *
• **SOUND RECORDING:** This can present problems abroad, since voltages differ so widely. Unless you're completely familiar with these changing current sources, it's best to use battery-operated recorders. That's what we carry, plus the gear to sync with the camera. Some of the more recent models of professional battery-driven tape machines have amazing fidelity so the quality of sound is no longer a critical problem.

Prepare a List for Customs

• **CUSTOMS:** Be sure to carry a mimeographed list which covers everything you carry. The fact that you have such a list seems to impress customs officers in most countries. But you'll still run up against unusual problems.

For instance, the 75 rolls of Ektachrome we brought into Calcutta, India at 1:40 a.m. on a very hot night. Customs thought that looked like too much film for our intended schedule. We explained that most of it was for use in countries to be visited later. Officials said they would keep the film in bond until our departure. We pleaded for air-conditioned storage and they agreed. We also paid \$250 to have the film guarded around the clock.

But on our departure date, we were informed that the film had been shipped to Bombay, where we could pick it up on our next stop out of India. When we got to Bombay, we were told that the film had been shipped to our next port of entry in Iran. To make a long story short, we have yet to find the film, although we did receive a \$180 invoice from the airline which presumably carried it.

A Crisis of Our Own in Iran

We reached Iran with only a few rolls we had concealed among our baggage and faced a final scene, involving the Shah of Iran, with only 100 feet of film on hand. It was barely adequate even if

Preparing to board a helicopter at Kuala Lipis for shooting in Malayan jungle on assignment for "Care" and "Medico" films.

things went just right. Fortunately they *did* go right and the Shah was very cooperative!

Remember what I noted about acting like a *tourist*? Local officials will then generally cut you loose in their country. You can take the film out in your suitcase, like thousands of camera fans do every day!

Nine trips to Europe, three journeys around-the-world and a complete shooting schedule in Latin-America have given us some really useful experience, most of it attained the hard way. But sometimes it's a rewarding adventure, too.

I recall shooting a film for Dow Chemical on the Riviera, in Monaco. We had nine cameramen shooting at one time, although we

brought only one of them from the U. S. We happened to know of these men and saved considerable transportation budget for the client. With all that shooting going

on, people in the area thought we were filming *Cleopatra*. But the cost of labor there isn't what it is at home and the whole thing was very big without a big overhead!

NEW PRODUCTS & ACCESSORIES FOR PRODUCTION AND PROJECTION

Videotape recorders in broadcast and closed-circuit application. Using the Ferrosheen coating process, the 145 tape requires no run-in time or burnishing on the recorder before initial recording. Static charge build-up has been eliminated and dust particle attraction minimized by use of conductive coating.

Manufactured at the Ampex magnetic tape division, Opelika, Ala. plant, the new tape is available for immediate worldwide delivery. •

F&B Ceco Converts Mitchell BNC's to Reflex Cameras

Successful conversion of the Mitchell BNC to a reflex camera has been announced by F&B Ceco, Inc. While smaller professional reflex motion picture cameras are being marketed, this is said to be the first time that the BNC Mitchell, a basic studio camera, has been thus equipped. The conversion makes possible direct viewing through the camera lens while the scene is being photographed.

Although the reflex conversion was designed especially to accommodate the new Angenieux 25-250mm zoom lens, the unit is noted as "eminently practical for regular filming as well." None of the regular features have been eliminated in the new construction.

A beam-splitting prism in front of the shutter is the basic optical device. This permits viewing through the lens during shooting, with a light loss of only 1/4 lens-stop reaching the film. A correla-

Correlator on BNC Reflex conversion has four-directional adjustments, designed to maintain optical center of lens reticle directly in line with the camera ground glass cross hair.

tor has been attached to the matte box bracket which provides absolute cross-hair centering of both camera and lens reticles. A large zooming knob has been attached to the zoom lens while the regular BNC follow focus has been extended to mesh with a gear mounted on the lens front. All regular lenses from 35mm upward may be used in addition to the zoom lens.

The regular external viewfinder with cams remains useful so that the cameraman may use either direct reflex viewing or the outside viewfinder. The company expects to have at least 10 more BNC Reflexes in use before the end of the year. •

Filming on Plant Location?

Here's the Useful Acousti-Pad

A highly-useful portable sound-dampening blanket for location interior shooting is the Acousti-Pad which combines fiberglass, polyurethane and muslin to provide a

97% sound absorbency factor.

About two inches thick, the four-by-eight foot pad rolls up for easy carrying; weighs only three pounds. Tests indicate that three or four of the pads will drop the ambient sound level of a 20 x 20-foot room to sound stage deadness. The material is certified flameproof for studio use. Acousti-Pads are also useful for dampening liveness in tight stage shooting where action is boxed in by scenery.

Write Sonex Cinema Engineering Co., Box 1189, Glendale, Calif. for full details and prices. Mention BUSINESS SCREEN. •

Research Products' Printer Features Modular Drive Unit

☆ Research Products, Inc., Hollywood, has introduced a new optical printer incorporating a modular drive unit that can be removed for maintenance or replacement in less than 15 minutes. The entire mechanical drive system, in-

Modular drive unit on printer can be changed in 15 minutes.

cluding all gearing, solenoids, cams and clutches are contained in a single, compact module weighing less than 27 pounds.

Compact construction is realized through the use of a special timing belt connected to the main drive motor and the use of many standard, commercially-available parts.

According to Research Products' president Hal Scheib, printer down-time due to drive unit maintenance is reduced to a minimum. One stand-by module can serve several printers. A brochure describing the printer and its design innovations is available on letter-head request from Research Products, Inc., 716 N. LaBrea Ave., Hollywood, Calif. 90038. Mention BUSINESS SCREEN. •

Beam-splitter prism on BNC Mitchell Reflex conversion is positioned in front of shutter, permitting direct thru-the-lens viewing during filming.

Arriflex-35, Model HB-T

New Arriflex HB-T Camera

Serves the Techniscope Process

★ The advantages and economies of the Techniscope process are now served by a new Arriflex-35, model HB-T camera, with complete compatibility to all Arri-35 accessories.

The new HB-T camera features two-perforation pulldown, 9.5 x 22mm film aperture and 200-degree shutter. It was factory designed and factory built to Arriflex precision standards. Special attention was given to the magazine system — standard Arriflex 200 and 400 ft. magazines are used without modification.

The Techniscope process uses short focal length spherical lenses instead of heavier, expensive anamorphic lenses, is said to save 50% of cost of original camera stock and an equal savings in processing. The same original negative may serve to make all of the most wanted print formats.

The new Arri-35, HB-T maintains this economy with a low \$2,180 user net price and is available in limited quantities through the company's franchised dealers. Write Arriflex Corp. of America, 257 Park Ave., South, New York, N.Y. 10010 for complete data. •

Quik-Splice Repair Kit for Cartridge-Load Projection

★ Increased industrial use of the new cartridge-loaded 8mm films has required new, rapid methods of splicing and repairing such films. As with all motion pictures, damage, such as burn-holes when film jams, torn sprocket holes and breaks, does occur with cartridge film. Such damage always occurs during projection and is compounded by the cartridge enclosure.

Thus, any splicing system designed for cartridge use must fulfill these requirements: (1) it must operate with film in the

cartridge; (2) it must be operated by students, salesmen, etc.; and (3) it must operate at the projector.

To answer this problem, the Industrial A/V Division of Hudson Photographic Industries has announced the Quik-Splice Cartridge Repair Kit, Model 133, which will repair any silent or sound 8mm film while loaded in cartridges — Technicolor, Fairchild, etc.

When using the Quik-Splice system, a few inches of film are pulled out of the cartridge and the point to be spliced is placed over the registration pins in the splicer. The film is cut by a slight pressure on the handle provided. This same handle has a dial permitting the user to select a 90 degree cut which is made on the frame line, or a 40 degree diagonal cut. The

The HPI Quik-Splice Kit

Quik-Splice tape patch is then applied with the film left in position in the splicer.

Quik-Splice Cartridge Repair Kit Model 133, including adjustable butt splicer and dispenser pack of 250 Quik-Splice tapes is available through HPI Industrial A/V dealers for \$8.50 •

Beckman & Whitley Develops 12 lb. 16mm Sound Camera

A revolutionary portable 16mm sound motion picture camera weighing less than the lightest high-quality equipment in professional use has been developed for ABC News by Beckman & Whitley, Inc., San Carlos, Calif. The 12-lb. Beckman & Whitley CM16 was last used at the Democratic convention in Atlantic City. It is a single-system camera, has only an eight-ounce motor.

Magazines (200, 400 or 1200-ft. capacity) are in back of the camera so that the cameraman can sight a full horizon. Sound is said to be the equivalent of a first-rate tape recorder. The CM16 utilizes all existing lenses designed for newsfilm cameras. Write Beckman & Whitley, Inc., San Carlos, Calif. for full technical data. •

Volkswagen's Film Program:

(CONTINUED FROM PRECEDING PAGE 31)

Curtain. Thanks to our non-obsolescence policy, this film, which is four years old, is still up-to-date. By the end of June this year *Wolfsburg* 221 had been shown to 12,227 groups. It is the closest thing we have to a product film.

Finally, our latest film, produced in 1962, tackles a problem of particular concern to Volkswagen. We wanted to show how up-to-date we are, how automated is our production and how advanced is our technology. A company like ours which makes the same product over a long period of time is often thought of as ultra-conservative and even anti-progressive.

1962 Picture Shows Advanced Technology

There develops a feeling that it can't keep up in a fast-moving world, that it may not be competitive. This hurts our reputation, not only among buyers, but among our dealers and distributors all over the world. We want to be sure that by keeping our car's appearance the same and not following the fads of the moment, we do not lose the confidence that people must have in us if we are to continue to grow. We do not want to be thought of as an old stick-in-the-mud company in a world of motion.

Tempo Keeps Pace With Spirit of Maker

So we made a film to show, in an exciting manner, how automated, how progressive, our company is, while it holds onto the old-world handiwork in those areas where that is essential to fine quality.

The film was made with a modern, fast-moving, jazz score, to emphasize the spirit of the car and the company. Dramatic lighting techniques were used along with all the razz-ma-tazz of in-and-out focusing and other tricks. We call it *The Right Hand of Plenty*, a film that played to 5,600 groups in its first year, and which has been released by Paramount as a theatrical short subject entitled *Melody for Machines*. Through the first half of 1964, this motion picture had been shown to 8,553 groups.

Films Well-Received in Many Countries

These are the five basic films on our company film library. What are the results? How well are they accepted outside the United States? After all, they were produced by an American company — Marathon International. Have they proved to be truly international? Did they translate well in places ranging from Pakistan to Peru, from Italy to Iceland and from Kenya to Kentucky?

There are 55 prints of each of these films in distribution in Germany with about 1700 showings a year. In Sweden there are 13 of each title in circulation with about 500 showings a year. In Italy there are 22 prints of these titles. And these are only three of the many countries all over the world where they are shown.

Prints Translated in Eight Languages

These pictures have translated well. They are available in eight languages. They are universal in their appeal and in the story that they tell. We think they are doing more than selling Volkswagens. They are selling ideas, ideas that we believe are even more important than our product: that men are inter-dependent; that countries must communicate and keep open

the channels of trade; that the developed are showing the way to the developing; that machinery is not the master but the servant of the worker; and that an honest product and an honest film bring results not only to the consumer but also bring satisfaction to the company that finances it and to the people who make it.

* * *

Volkswagen Signs Pact for Sixth Picture

☆ A contract to produce the sixth Volkswagen of America film, tentatively titled *The Way of a Ship*, has been awarded to Marathon International Films. This 35mm color production will tell the story of Volkswagen ships and shipping all over the world and has been scheduled for release early in 1965.

The Case For Modern

32
libraries
full of
best
sellers!

Modern maintains 32 film libraries—all at street level locations in or near the heart of major cities—strategically located to serve the greatest concentration of film users. More Modern-distributed films are shown, because more film borrowers get quicker local service. In fact, 18% of our film borrowers come in regularly to select and pick up their films, because they want and get personal service. Additional sponsor advantages: quicker print turnover, cooperative window displays on the libraries' premises, intimate knowledge of the community... more productive distribution for you. **Another** way in which you get the most from Modern!

How would you like to have 400,000 students a year learn the facts about your business?

The California Bankers Association expects that in 1965.

The Means

A teacher's resource unit, "The How and Why of Banking," is being distributed to public and parochial schools throughout California. CBA supplies these units to help assure that the teaching of banking is up to date and consistent with modern banking methods.

The Program

CBA was convinced that visual aids, charts and other materials were needed to bridge the gap between textbook teaching and what students actually needed.

Wilding edited and produced the entire package, consisting of: A storage cabinet standing 3' high by 15" square • Four full-color filmstrips • A 105-page Teacher's Guide in a looseleaf binder • Fourteen 58" x 30" wall charts coded to the Guide • Workbooks and examinations for each future bank customer.

Why Wilding?

Wilding was chosen because of our broad experience with

communications media and audiences of all kinds. We produce communications programs not only for business and industry, but also for educational institutions, associations and foundations. During the past year, for example, our clients included: Adult Catechetical Training Aids Foundation • American Society of Internal Medicine • Financial Public Relations Association • Michigan Cancer Foundation • St. Barnabus Hospital, N.Y.C.

Nation-Wide Organization

CBA selected Wilding for still another reason — our nation-wide facilities. They were able to work locally through our San Francisco office, yet draw on our writing, design and production talent throughout the country. Following development of a pilot program, production was centered in San Francisco to aid liaison and reduce transportation costs.

Consult Wilding

When your organization plans a communications program, large or small, contact the nearest Wilding office. A Wilding representative will be pleased to discuss your needs with you. No obligation, of course.

we work with you ...against the clock

Wherever in the world you are, if you're near a major airline, you're close to our laboratory's fast schedule for quality processing. Here are a few typical examples from our files.

In our home town, 35mm or 16mm negative in by 11 p.m., developed and dailies ready 9 a.m. next day. 16mm Ektachrome developed overnight.

Ektachrome in for developing ... color workprints in customer's hands in 3 to 4 days total elapsed time. (Some schedule for Honolulu customers.)

17,000 miles and through customs four times; Ektachrome developing and workprints delivered in 5 days. 35 mm color or b&w negative in 4 days.

Three days round trip for developing and dailies, for 35mm color or black-and-white negative, including four custom stops along the way.

For 35mm or 16mm, anywhere in Puerto Rico or the Canal Zone, the round trip takes three or four days for most processing assignments.

16mm release prints in quantity and top quality, color or b&w, from 16mm A and B rolls through dupe, five to ten working days.

2-8

How about you? Jet transportation, combined with General Film's fast gearing of procedures and facilities, has solved many producer problems.

Color Quality through color control. An advanced concept . . . COLOR ADDITIVE PRINTING. Making use of human knowledge, but eliminating human error. □ It begins with skilled Byron people, programming a controlling tape to tell the additive printer what to do. Once the precision equipment has been told, it makes no error. Punched tape automatically adjusts three light vanes—that control the intensity of each primary color—red, green and blue. Gone are the not-always-reliable filters of subtractive printing. The Color Additive Printing method gives a consistency of color and sharpness of image which never varies . . . print, after print, after print. Yours at Byron . . . where film producers from all over the world turn for the finest in 16mm color—Byron "Color-Correct"® Prints.

Spruill Becomes President of Assn. of Cinema Laboratories

The new president-elect of the Association of Cinema Laboratories is Dudley Spruill, vice-president and general manager of Byron Motion Pictures, Inc., Washington, D. C.

Active in the film processing industry since 1939, except for three years in military service, Spruill was elected at the Fall meeting of the Association, held concurrently with the SMPTE meeting at the Commodore Hotel in New York City.

William D. Hedden, vice-president of Calvin Productions, Inc., Kansas City, Mo., is the Association's new vice-president; Neal Keehn, vice-president of General Film Laboratories, Hollywood, Calif. was named secretary.

Two other officers were re-elected: Arthur J. Miller, vice-president of Du Art Film Laboratories, Inc., of New York City, will again serve as treasurer of the ACL; and Preston B. Bergin, Washington, D.C., continues as the executive secretary.

Congress Passes Extension of Nat'l Defense Education Act

The National Defense Education Act was extended for a period of three years by the U. S. House of Representatives' vote on October 1st. The Senate passed the measure on October 2nd and the bill now awaits the President's signature, confidently expected since this legislation has had strong Administration support throughout recent months.

The extension expands Title III of the act to cover history, geography, English, civics and reading and establishes teacher institutes in the proper use of new media. It provides for continuation of NDEA through June 30, 1968. The Act was originally scheduled as a three-year program and was then renewed for a two and one-half year period.

Significance of the three-year extension is that school administrators may now engage in long-range planning with reference to NDEA programs.

Both a-v materials and audio-visual equipment, as well as funds for institute costs, are thus provided on a matching basis with states throughout the nation.

A total of \$61,600,000 in Federal grants was provided to states

and territories for the fiscal year ending June 30, 1965 with such states as Texas (\$4,180,025); New York (\$3,455,786); California (\$3,650,031); Pennsylvania (\$3,256,140); and Illinois (\$2,206,469), among the leading participants.

Association Films Enters Field of Instructional Materials

Association Films, which has specialized in the professional distribution of sponsored film for over 53 years, has inaugurated a new film service, Association Instructional Materials, specially designed for use by schools, colleges, universities and other interested institutions.

The new division is now in the process of distributing a unique group of 63 films for use in Senior High School and for College Freshman Chemistry courses. These films, developed at Yale University, many under a grant from the National Science Foundation, are intended entirely for visualization of concepts, or unified points. Teachers use the films at appropriate moments but all teaching control is left in their hands. Films are in 16mm format but a large proportion of the group will be released in 8mm as well.

Association Instructional Materials has also concluded an agreement with the Westinghouse Broadcasting Corporation for the distribution of two important film series to schools, organizations, and educational TV stations: *The Meaning of Communism*, a series of 30 half-hour shows conducted by Profs. Marshall Shulman of the Fletcher School of Law and Diplomacy and Henry L. Roberts of Columbia University; and *The Fair Adventure*, 58 half-hour programs on Shakespeare and his plays with Dr. Frank Baxter of the University of Southern California conducting.

19th Annual Calvin Workshop to be Held Feb. 8-10, 1965

☆ The 19th Annual Calvin Motion Picture Workshop will be held on February 8, 9 and 10, 1965 on the sound stages of Calvin Productions, Inc., 1105 Truman Road, Kansas City, Missouri.

The three-day seminar program will feature talks and audio-visual demonstrations on all phases of motion picture production by Calvin staffers and guests.

"WASHINGTON City of the World"

"In every age there is one city which has seemed the capitol of the world..."

This is a different picture about Washington — it brings to the screen the things to see, but also what they mean... the things to do and how to enjoy them. All the beauty and significance of the world's most important city is captured as seldom before by Guy Adenis' breath-taking color photography. John Bryant's narration.

Of course there are the great traditional sights — the Jefferson and Lincoln Memorials, the Washington monument and the White House, the Tidal Basin, Georgetown and the quaint C&O canal ride, Arlington Cemetery and the Tomb of the Unknown Soldier... but where most travelogs confine themselves to exteriors, this film adds a fascinating bonus of interior scenes... the old planes in the Smithsonian, the Historical Wax Museum, making money at the Mint, FBI agents on the target range, and many others, ending with an unforgettable day at George and Martha Washington's Mount Vernon.

AUDIENCE COMMENT: "Beautiful color... thrilling music score... Best substitute for seeing the sights in person... Makes one proud to be an American."

PRINT PRICES

16mm — Color & Sound — 21 minutes — \$135. (Preview \$7.50, deductible from purchase). Also: 4½ minute Vignette Version — \$24.75. ("Fascinating... inspiring")

ARRIFLEX at work — ONE OF A SERIES *

Key projects at Western Electric's Princeton Research Center are transposed from color slides to motion pictures, through the use of this bench-top "studio," designed by John Carnevale, head of the Center's photographic team. The slides are filmed with an Arriflex 16, driven by an animation motor. Various optical effects are achieved with standard lenses and extension tubes. Creative use of the Arriflex' functional advantages produces highly profes-

ARRIFLEX[®] special assignment at *Western Electric*

sional results with a minimum budget... and virtually no outside services. Precise focus and hairline framing are easier with an Arriflex than with most other cameras. The cameraman sees a viewfinder image that is identical to the filmed image... identically focused, identically framed. This world-famous mirror-reflex finder simplifies animation photography... time-lapse, stop-motion, extreme-close-up action, and zoom techniques as well.

From the microscope to the missile range... from spot locations to sound stages... Arriflex professional motion picture cameras are the dominant choice of filmmakers in science, industry, and entertainment. They're lightweight, rugged, tremendously versatile — uniquely suited to a range of applications virtually without limits. Here are some of the features that give Arriflex cameras their remarkable capabilities:

- MIRROR-SHUTTER REFLEX VIEWFINDER • REGISTRATION-PIN FILM MOVEMENT • 21°-DIVERGENCE 3-LENS TURRET • CONTOUR HAND GRIP • FRAMES-PER-SECOND TACHOMETER
- COMPLETE ACCESSORY SYSTEM... lenses, standard and special-purpose electric drives, power supplies, time-lapse equipment, film magazines, sound blimps, tripods.

Modern Talking Pictures Elects Lenz to Presidency

CARL H. LENZ has been elected president and chief executive officer of Modern Talking Picture Service, Inc., the company announced on September 2nd, in New York.

William H. MacCallum, one of the founders of the company, has been named executive vice-president and chairman of the executive committee. Milton F. Lewis, vice president of A. G. Becker and Company and a member of the Modern Talking Picture Service board, will serve on the company's executive committee with Mr. Lenz and Mr. MacCallum.

The elections follow the death in late August of Frank H. Arlinghaus, president of the company since its founding in 1937.

Modern Talking Picture Service specializes in the distribution of sponsored and educational motion pictures through a network of 32 film libraries in the United States and Canada. The thousands of sponsored films, mostly public relations in nature, represent hundreds of business concerns. The educational films, which are handled through the Modern Learning Aids division, are widely used in schools and colleges.

Mr. Lenz began his career in the film distribution business in 1940. Following graduation from the Wharton School of Business Administration at the University of Pennsylvania, he joined Lipincott Pictures, in Philadelphia, a licensee for projection services from Modern, in the equipment sales department. After service in the Training Aids Section of the U.S. Marine Corps from 1943 to 1946, he joined Modern as manager of its first company-owned branch in Philadelphia.

Mr. Lenz's experience has been well-rounded throughout all phases of Modern's operations. He became division manager of northeast and central offices in 1951, vice president in charge of sales in 1960, and executive vice president in 1962. He has been widely known as a spokesman for the business film industry for many years, making frequent appearances before business groups and advertising and public relations associations. He lives with his wife and daughter in Stamford, Connecticut.

In a recent interview with BUSINESS SCREEN, Mr. Lenz said Modern would continue with its same active and enthusiastic staff to be an expanding company in an ex-

Carl Lenz, President of Modern

panding medium. He stressed that the great strength of film for education and for molding ideas lies in its potential for communications in depth, which is matched by no other medium. These qualities of the film have been thoroughly substantiated by extensive tests among armed service personnel and recent surveys of user groups, he said.

New ways of using film, among audiences in resorts and airports, will continue to be a Modern benchmark, Mr. Lenz said. He sees wide new vistas for the future of the 8mm format. Modern is forging ahead in 8mm experiments, and Mr. Lenz feels it will be one of the most exciting developments to take place in the industry in decades, allowing business and education opportunities to do things that have never been practical in the past.

Modern's Learning Aids division, which has been a special responsibility of Mr. MacCallum since its inception in 1960, is broadening its service to schools and colleges with new series of film on physics, chemistry and economics.

16MM EDUCATIONAL TITLES WANTED!

World-wide marketer of science films wishes sales rights to good quality recent productions on civics, English, history and geography at the elementary and high school levels. Full scale catalog and direct mail promotion is planned for this library, generating immediate sales through dealer and salesmen network.

1. Now, gentlemen! Let's get to it.
Business is fine, but it's been brought to my attention that there is a lack of recognition of Tri Art as the name of Du Art's color lab, and I propose to do something about it!

2. I'm going to change the name of Tri Art! It will confuse the hell out of anybody who tries to appease us by learning that name tomorrow. They'll wake up and start screaming Tri Art!... And we won't be there.

3. Now, I want you to come up with a brand new name for our color operations that will convey our new image. It's got to reflect the vitality of our young management and the soundness of our 40 years of experience. The new name must make clear that we have made a tremendous investment in new equipment in the last 10 years.

4. You're not getting the idea! It must have wham-o! Why with our new editing rooms for our customers our new fiber optics color printing, our tightened inspection and absolute quality control, we can beat anybody for service, quality and facilities! Let's try some more!

5. I've got it! I just thought of it! Just the name to say everything! It reeks of speed, our fantastic equipment, personalized, sensational service, and dynamic follow-up combined with the knowledge based on our unsurpassed 40 years of experience! Brace yourselves... Here it comes!
"Du Art Color Corporation."

6. How's that for a fresh approach?

MEMBERS OF THE Society of Motion Picture and Television Engineers, holding their 96th Technical Conference at the Commodore Hotel in New York City on September 29th through October 2nd, have elected Ethan M. Stifle, manager of engineering services for the Eastman Kodak Company's Motion Picture Products Sales Department's East Coast division, as their president.

Stifle, who will take office on January 1st, succeeds Reid H. Ray, president of Reid H. Ray Film Industries, St. Paul, Minn. in this post.

G. Carleton Hunt, president of DeLuxe Laboratories, Inc., New York, is the Society's executive vice-president-elect. Herbert E. Farmer, Department of Cinema, University of Southern California, Los Angeles, was re-elected editorial vice-president.

Conference vice-president-elect is Kenneth M. Mason, general manager of Midwest division, Kodak Motion Picture Products Sales in Chicago. Robert G. Huford, physicist for Kodak in Hollywood, was re-elected secretary of SMPTE.

The Society's new president-elect was graduated with high

Reevesound Hosts Program on Fair Film Techniques

Technical papers and demonstrations on instrumentation and high speed photography, space technology, laboratory practices, new equipment, television engineering and medical motion pictures were featured during the week-long sessions.

A special attraction was a demonstration of the techniques used in several of the complex film exhibits at the World's Fair.

Boyce Nemec, president of the Reevesound Company, was chairman of this session which opened with a panel discussion of the widely acclaimed multi-image motion picture, *To Be Alive*, which is showing at the Johnson's Wax pavilion.

NEW YORK TIMES film critic Bosley Crowther moderated the panel, which included William Szabo, vice-president of Reeve-

sound, Lewis S. Goodfriend of Lewis S. Goodfriend & Associates, and John J. Kowalak, vice-president of Movielab, Inc.

The panelists examined production, projection techniques and theatre design criteria involved in the presentation and analyzed the success of the film.

Following the panel discussion, Robert T. Vogel, vice-president of Wheel-Garon, Inc., described the technical problems encountered in the production of the Du Pont pavilion's show. Live performers are combined with life-size projected figures in the presentation, requiring exact coordination of projectors, movable projection screens, stage lighting and sound. Mr. Vogel explained the automated switching complex that permits the degree of coordination demanded by the unique nature of the show.

Sy Wexler, Wexler Film Productions and Larry Yust of Saul Bass & Associates described unusual production and projection techniques for *The Searching Eye*. Bass's multi-image motion picture at the Eastman Kodak pavilion is shown by a custom-designed system that includes two 35.70mm (CONTINUED ON PAGE TWELVE)

projectors. The machines are electrically interlocked to permit one machine to show 35mm film while its mate shows 70mm, allowing the producer a flexible screen format for telling his story. The authors discussed both the production techniques and the projection system used for the presentation.

David A. Mintz, associate producer and director of the test center for the Bell pavilion's controlled 1,000 chair ride, described the 65-projector 16mm system used in the presentation and analyzed the technical problems encountered in the production of the show.

The three-hour session closed with an examination of the multi-screen show at the IBM pavilion. Arthur Fury, audio-visual consultant for the show, explained the complex technical system used to show the Charles Eames production on 15 motion-picture and slide screens.

President of MPA Says Movies Are Prospering

Speaking at the opening day luncheon, Ralph Hetzel, acting president of the Motion Picture Association of America, said that the motion picture business is on a strong upward surge. He pointed out that 320 new motion picture theatres were opened last year, and in addition, 670 older theatres were remodeled.

Among new equipment items demonstrated during the confer-

ence were several of unusual interest.

Arthur Florman, president of F & B Ceco, Inc., introduced a new Mitchell BNC Reflex Conversion which permits this great work-horse of a studio camera to be operated as a reflex.

Mr. Florman said that parallax problems had always plagued BNC operators, particularly in the TV commercial business, with its great demands for exactness in framing during movements.

Ray Emmerich, F & B/Ceco engineer, who designed the conversion, explained that the beam-splitter system chosen was most efficient for use in the BNC, and that only a quarter of a stop light loss could be expected when using color film—this much being negligible with b w film.

The conversion has resulted in practically no changes in exterior appearance. Cameramen will feel completely familiar with it.

James Shows "Arriflex Story"

Vic James, Arriflex sales manager, unveiled a new film, *The Arriflex Story*, which describes the precision and devotion which has gone into the making of this great camera. It shows how the 1,000 parts are made in over 9,000 manufacturing operations involving some of the most sophisticated machining techniques in the world.

Yet for all the complexities and super-finishing of each camera, more time is spent in testing than in manufacturing—there are 5,000 inspections on each camera.

The film winds up with examples of Arriflex photography
(CONTINUED ON PAGE 61)

EXPERIENCED COMMUNICATIONS SALES EXECUTIVES

One of America's oldest full-line communications companies has sales opportunities for planned expansion.

The men we want currently will be generating an annual gross of a quarter-million dollars and accustomed to earnings in the \$25 to \$35,000 range.

Areas of expansion include Eastern, No. Central and Midwest. Men selected will be responsible primarily for sales, with some administrative and executive duties. On the basis of performance, positions can lead to area vice-presidencies. Must understand modern communications needs of industry, associations and government agencies. Remuneration commensurate with ability and experience.

If you qualify . . . WRITE TODAY TO:

Box 6A-64, BUSINESS SCREEN MAGAZINE

UNITED makes conversion from 16mm to 35mm simple and economical

With an ever-increasing volume of 16mm footage being converted to 35mm, United's vast processing and editing facilities (above), the most advanced in the industry are available at new, lower rates. An example of the excellent quality possible through conversion of existent 16mm, is the Coffee Brewing Institute's, "This Is Coffee."

Personally Speaking

John Desmond, Vice President, Distribution Services Division, United World Films, Inc.

Invariably, every prospective client asks what United offers that is "different." Our answer, just as invariably, begins with the phrase "custom service."

Custom distribution is a concept we introduced to the industry over three decades ago. Briefly, it means that you, as one of a limited number of select and distinguished clients would have at your command, the widest distribution network in the industry...the most knowledgeable staff...the most careful planning and research...the closest, most informative liaison with those you entrust with your message.

But above all, custom distribution would assure your films the *thoughtful, individualized* attention they deserve and consequently, *greater print turn-over and lower booking costs* than available through non-custom services.

This personalized approach marks United's efforts in every area of sponsored film distribution...16mm, television, theatrical...sponsor or distributor generated.

It is especially appropriate right now, with 35mm theatrical bookings on the rise, to underscore United's unique position in that field. As an affiliate of Hollywood's Universal Pictures, we have established a close and extremely positive relationship with theater owners.

We'd like the opportunity to put the whole "custom service" story on your desk...complete with case histories. It's sure to reward you with new insight into effective sponsored films distribution. Just phone or drop us a line today.

A.P.I.'s 35mm Entries Seen by 3,217,705 Theater-Goers in Six-Month Period

Theater Owners Enthusiastic With Audience Reception

Sponsored film offerings of the American Petroleum Institute reached a new high in theatrical exposure during the first half of 1964. Under exclusive United World distribution, they achieved a record 14,911 showings to an audience of approximately three and one quarter million.

United offered theater owners their choice of three films: "Born in Freedom," starring Vincent Price and telling the story of Edwin L. Drake who brought in America's first successful oil well; "Destination Earth," a clever cartoon expressing pride in the American way of open competition and freedom from oppressive controls; and "Man on the Land," also in cartoon format, telling the story of man's search for the power to produce in greater abundance. The films ranged from 10 to 28 minutes in length.

Theater managers joined their audiences in praising the A.P.I. films. Typifying their enthusiasm were the remarks expressed by Mr. Nat Warshaw, manager of the Orpheum Theater, Philadelphia, Pa. In a recent letter he said, "I have taken the liberty of holding over your 'Destination Earth' reel due to the fact that our audience not only found it very interesting and entertaining, but actually applauded when it was over. Even the children on Saturday and Sunday stayed glued to their seats while this subject was being run. Hope you will supply more of this type material."

In view of the great success enjoyed by their sponsored films this year, the American Petroleum Institute is now planning future efforts with a view toward even greater mass theatrical circulation.

New Clients:

- Atomic Energy Commission
- American Institute of Steel Construction
- New Zealand Government Travel Commission

The Atomic Energy Commission has selected United World for sponsor-generated 16mm distribution of more than 200 titles. Ranging in lengths up to 30 minutes, they include "Unlocking the Atom," a film produced in cooperation with the J. Arthur Rank Studios.

The American Institute of Steel Construction has turned over their library of 16mm titles to United for national sponsor-generated distribution.

New Zealand Government Travel Commission has appointed UWF for national distribution of its latest 16mm release "Destination South Pacific."

Theatrical Bookings Skyrocket; United Doubles 35mm Processing, Editing and Distribution Services

J. C. Penney, latest to go theatrical with 'Welcome Aboard' offering

Major American theatrical film distributors have been reporting a startling increase in business sponsored films.

Based on an average weekly audience potential of 40,000,000 theater-goers, this lucrative market presents an exceptional opportunity for the sponsored business film.

With this circulation prospect, many companies are rushing conversion of existing 16mm prints into 35mm formats or contracting for completely new 35mm vehicles. The current surge of interest in sponsored films for theatrical use can be traced to Hollywood's 1963 cutdown in short subject production. Rather than re-run previous "shorts," many theater owners are finding a happy (and profitable) solution in sponsored films of an entertaining or informative nature.

For sponsors, theatrical distribution offers many unique advantages: mass audiences with a high degree of economy in print and distribution costs; a superb showcase with excellent wide-screen reproduction; a built-in factor of controlled circulation.

United World Films, Inc., an affiliate of Universal Pictures Company, Inc., has been particularly sensitive to this trend. Close contact with theater operators, achieved through over three decades of satisfying their needs, indicates that a major opportunity for sponsored films is now available.

In view of this, United has completed a major expansion of its 35mm services. Based on an increased volume of processing footage, new low rates have been established for conversion of 16mm prints into 35mm formats.

Many of United's clients are now enjoying key theatrical bookings. And to this roster, other distinguished companies are being added. J. C. Penney, whose "Welcome Aboard" film is now ready for theatrical distribution; based on an exciting Caribbean cruise, and serves as a colorful vehicle for exhibiting the company's smart women's fashions. "Ski Happy," their second new film describes the vacation of two female models from the United States on the scenic trails of the Chilean Andes Mountains. They land at Santiago Airport and travel to the Hotel Crillon in Portillo. We see them on the ski slopes for the first time and at the same time we see some great Olympic skiers that make skiing look so easy.

United offers informative report on custom sponsored film distribution

FILMS FROM ABROAD will share screen attention with a National Aeronautics & Space Administration showing of *Lunar Bridgehead*, documenting the successful Ranger VII moon shot, at the 4th International Film & TV Festival of New York on October 21-23 at the New York Hilton Hotel.

International aspects of the three-day program are provided by two-hour screenings of selected industrial films from Sweden and West Germany on October 21st and 22nd. On Friday morning, October 23rd, international advertising consultant Harry Wayne McMahan will speak on "Breaking the Language Barrier in International TV Advertising" and show non-verbal films from abroad.

Films of Lunar Space Probe

Highlights of the program include the NASA presentation on Thursday, Oct. 22, when Walter E. Whitaker, director of the Office of Educational Programs and Services, NASA, will introduce a 7½-minute film of 200 shots taken by Ranger VII cameras (from a total of 4,300) and *Lunar Bridgehead*, a documentary film which traces the development of

this project and its complete mission from launch to the historic reception of close-ups of the lunar surface at the Goldstone Tracking Station. This film was produced by the Jet Propulsion Laboratory.

The Festival's annual awards presentation luncheon will be held

on Friday noon at the Hilton. Allen Swift, "The Man of a Thousand Voices" will m.c.

Useful Fare for Film Users

Three program events are of special value to business and television film makers and sponsors. On Thursday, Oct. 22, (11:00 a.m.) Leon Winik, creative director of Lance Studios, N. Y., will speak on "New Horizons in Film and Filmstrip Communication" and at 2:00 p.m. that afternoon, an orientation seminar will discuss "Selling Your A-V Program to Top Management" under the co-chairmanship of Charles Corn, Admaster Prints, Inc. and Hugh Robertson, Porter Henry & Co.

On Friday afternoon, at 4:00 p.m., Al Stahl, president of Animated Productions, N. Y. will present "Modern Fotomation Techniques" involving the use of photos, artwork and film sequences in his new approach to TV commercials and business films.

Program emphasis is also on

Robert E. Spinner, research company head, who will speak on "How to Measure TV Ad Effectiveness."

television on Friday as Robert E. Spinner, president, Marketscope Research Company, Inc., discusses "How to Measure TV Advertising Effectiveness" at 3:00 p.m. He will tell the results of a two-year study of the evaluation system and explain how a given commercial can affect consumers' attitudes toward a product.

The two-hour showing of industrial films from Sweden (3:00 to 5:00 p.m., October 21) was arranged by the Swedish Council for Personnel Administration, of (CONTINUED ON PAGE 61)

Fairchild 400 repeating sound projector

**the 8mm that's
better than 16!**

The Fairchild 400 is the most reliable rear-screen sound projector ever developed. Because it is the most efficient. Take film life, for example. You get eight to ten times the number of plays you get with 16mm. Three thousand plays from a single print is not unusual! And 8mm dupes, printed from the same originals as 16, cost less because they require only 1/4 as much film. Think of the savings to your film program. The Fairchild handles up to 20 minutes of sound color film on a single cartridge, repeats automatically, and needs no maintenance except an occasional bulb change. The Fairchild 400 weighs only 17 lbs, easier to carry than a portable typewriter. Its top flips up for front projection to larger audiences. It goes anywhere and performs brilliantly in broad daylight. A tireless demonstrator, it takes less than 2 sq ft of counter space, and runs absolutely unattended.

Write today for full information and prices.

SPECIFICATIONS

Screen Size—8½ x 11"
Dimensions—12 x 12 x 9¼ (closed)
12 x 12 x 19¼ (opened)
Weight—17 lbs

Amplifier—100%, transistorized. No warm-up (high quality Fairchild silicon transistors)
Frequency response—80 to 7000 cycles ±3db
Overall Amplifier output—3 watts
Speaker—4 x 6 oval P. M.

Lamp—high efficiency 8V 50W prefocused
Lens—f/1.6 7mm coated lens
Motor—induction type, constant speed
Power consumption—100 watts
Operates on 105-125 volts, 60 cycles A. C.

Films of 21 Nations to Compete at 5th International Industrial Film Festival

A Preview from London by Our European Editor Robinson P. Rigg

THE 5TH INTERNATIONAL Industrial Film Festival is all set to be the greatest industrial audio-visual event ever to take place.

That's a pretty bold statement, especially when it comes from Britain where the tendency is to play down on superlatives! But look at the evidence—twenty-one nations have shipped 133 motion pictures to demonstrate their industrial achievements—they are now held in the film vaults of the British Industrial Film Association, the Festival organisers.

Expect 500 to Share Five-Day Program

From the volume of advance reservations a record 600 delegates representing Britain's industry are confidently expected to attend for the full five days of screenings and convention events—plus 200 delegates from the industries of Australia, Austria, Belgium, Canada, Denmark, Finland, France, Germany, Holland, Israel, Italy, Luxembourg, Norway, Sierra Leone, Portugal, South Africa, Southern Rhodesia, Spain, Sweden, Switzerland and the United States of America.

Advance bookings from the U. S. A. already include Avalon Daggett of Baton Rouge, La. and Henry Strauss of New York, producers of two of the 15 films representing the United States and a large contingent from industry is understood to be negotiating with Pan Am and Thomas Cook's travel agency for a "packing deal" flight which will also take in a visit to Paris after the Festival.

Press coverage is unprecedented for an industrial a-v event, normally of interest to specialist publications only.

Wide Press Coverage in Britain, Abroad

"Old Thunderer" as the London Times is affectionately known to its 250,000 readers will publish a 9,000 word special survey on a-v communications in industry and the FINANCIAL TIMES, the first national daily ever to publish a regular industrial film column (initiated by B. S.'s European Editor, Robinson P. Rigg) will carry a special two page editorial broadsheet on the event.

The London Press Correspondents of the competing countries have indicated that they will interview their national delegates for press and radio coverage.

The British industrial, technical and educational press are standing by with space reserved for full reports of the Festival.

BUSINESS SCREEN will be represented by our European Editor and five of our special correspondents—Kerst Blaauw of the Netherlands, Dr. Hans Schaller of Western Germany, Giacomo Guiglia of Italy, George Baigneres of France and Jane Senior of Britain.

It is a sign of the times that the first international film festival ever to be held in Britain should be an Industrial event. Many regard the sponsored documentary film as Britain's

contribution to the cinema, for in the thirties the inspired work of John Grierson and others made people realise that industry has an exciting and interesting story to tell.

Prince Philip is Patron of the Festival

Not only has the Festival the support of industry but of royalty and the Government, for Prince Philip is the patron and each delegate and his wife will receive an invitation to attend a formal British Government reception at Lancaster House, historic site of many great international events.

The Federation of British Industries is host at a less formal cocktail party at the ancient Drapers Hall in the City of London. (The Drapers Hall was originally the house of the Earl of Essex and was bought by the Drapers Company from King Henry VIII 400 years ago—the full title of the Drapers Company, one of London's old Trade Guilds which traces its history back nearly 800 years to 1180 A.D. is "The Master and Warden and Bretheren and Sisters of the Guild and Fraternity of the Blessed Mary the Virgin of the Mystery of the Draper of the City of London"!)

Films to Represent 24 Industry Groups

The social events may be steeped in historic tradition, but the competing industries and their films are very much of the space age. In previous issues we have listed the national entries of the twenty-one competing countries and this presents a revealing picture of the use of film in industrial communication. Twenty-four main industry groups are represented and the number of films they have submitted are as follows:

Chemical - 16, Petroleum - 12, Iron and Steel - 9, Automotive, Electricity - 8, Light Engineering, Construction, Public Utilities - 7 each, Mining, Commerce - 6 each, Aircraft, Agriculture, Civil Engineering, Electronics, Food and Drink, Glass, Graphic Arts, Heavy Engineering, Nuclear Power, Office Equipment, Pharmaceuticals, Shipbuilding, Textiles. Transport, all are represented by 5 or fewer films.

The prime intention of 56 of the films is to

offer sales information. 49 films were made to influence opinion and 28 are intended to provide technical information and assist industrial training.

Many of the 16 films representing the chemical industry feature new applications of plastics in Belgium, Canada, Germany and Great Britain and U. S. A.

Films on Oil Refining and Petrochemicals

The important role of oil refineries and petrochemical plants is emphasised in the petroleum industry's 12 films—those from Finland, Germany, Great Britain, Italy, Norway and Spain all feature refinery or petrochemical techniques and products.

Sources of power have inspired a number of films about hydroelectric developments in Australia, the Far East, France, Germany, Italy, Norway, Spain and Sweden. In contrast, there are only four films about nuclear power—from France, Italy and Switzerland.

Iron and Steelmaking Techniques Shown

Films on iron and steel manufacturing techniques show developments initiated by Bethlehem Steel (USA), Italsider (Italy), La Farga Casanova (Spain). A new form of cast iron is demonstrated by le Compagnie de Pont-

Here's the Shell Center in London, England where showings of outstanding industrial films from 22 lands will be featured in the Centre's theater during the 5th International Industrial Film Festival which opens on November 2nd.

a-Mousson (France) - in Australia, the Broken Hill Company offers a film intended to attract immigrant workers to their steel mills.

The work of the Differdange plant in Luxembourg is to be seen in one film and in another we learn that a Babcock and Wilcox heavy engineering plant at Bilbao has been at work in Spain since 1918. Krupp of Germany in one film illustrates a new technique of removing ore dust from converter gasses and in another Sofresid of France shows how a new iron smelting plant was set up at Dunkirk.

Auto Makers Show Manufacturing Skills

In fact many new and revolutionary industrial processes will be on show—on film. To take the automobile industry for example, FIAT (Italy), General Motors in Switzerland, American Motors in Canada, Daimler-Benz and Volkswagen in Germany—all demonstrate new manufacturing, quality control and testing developments.

Some films will undoubtedly attract popular attention—particularly the two about the World Land Speed Record. British Petro-

Read how Fairchild's amazing new MoviePak cartridge multiplies the value of your entire sound film program

At last you can show any film, anywhere, anytime—without threading, film handling or rewinding.

Simply select the Fairchild MoviePak sound film cartridge you want, snap it into the Mark IV rear-screen projector, and play. In broad daylight. In a prospect's office. In showrooms. At trade shows. On sales counters. In training classes. In the boardroom. To switch instantly to another film, just snap out one cartridge, snap in another.

Every film you have can be easily converted to 8mm and threaded into the MoviePak cartridge. Duplicate prints are less expensive than 16mm, too. Now you can unleash the full power of your entire sound film program.

The Fairchild Mark IV projector is portable, weighs only 20 pounds and is always ready for action. No warm-up time required.

For display use, it will run without supervision, repeating automatically. It takes up to 22 minutes of film with a single MoviePak.

To see for yourself, just send in the coupon.

HOT SPLICER
with a built-in
CARBIDE
SCRAPER BLADE*

The Maier-Hancock Hot Splicer was designed expressly for continuous, heavy-duty work. The patented built-in scraper which is **GUARANTEED FOR LIFE**, cuts work time in half and eliminates slow hand scraping. You get "low visibility" precision splices that are stronger, and free of annoying combination frames. Two sets of pilot pins permit splicing with perforations toward or away from operator, precluding need to loop film around splicer when using "A" and "B" rolls. More than 11,000 Maier-Hancock Hot Splicers are in daily use by motion picture and TV studios, schools, special study groups, industrial plants, and government agencies.

Model 1635: For 16mm or 35mm film, / Model 816: For 16mm or 8mm film.

FESTIVAL REPORT FROM LONDON:

(CONTINUED FROM THE PRECEDING PAGE 17)
leum's *Muloorina* (G. B.) sees Donald Campbell's 1963 attempt through the eyes of an Australian sheep farmer. In contrast *Spirit of America*, made for Shell Oil Company and Goodyear International, shows Craig Breedlove designing, building and racing the car which he is claimed to have driven faster than 407 mph. Another American entry of sporting interest is *America's Cup Races* sponsored by Thomas J. Lipton Inc.

The range of industries is wide, from graphic arts and printing—represented by Belgium's *Encre* showing the printing of a litho print and America's Hallmark Cards, to diamond mining—seen in a film from Sierra Leone.

Pictures on Administration and Training

In this year's Festival there is also an encouraging number of films made to assist management in industrial administration and training, indicating that for the first time this important aspect of a-v communication has gained universal acceptance.

Il Disegno Industriale (Italy) demonstrates how good industrial design ideas and methods are being applied with success over a wide range of products. The Pittsburgh Plate Glass Company (U.S.A.) offer a film, *Adventure in Color*, which deals with the decorative, functional and emotional values of paint and color. *Ordini e' Spazio* made by Olivetti of Italy demonstrates the effects of good office planning. *Business Connections* (Britain) is a film about a company which loses business through inefficient telephone communications. *Point Mort* (Belgian Ministry of Communications) shows the effect of overcrowded city conditions on business efficiency. In two films, I.B.M. World Trade Corporation (U.S.A.) shows Latin America—*Tomorrow Today*—and the Far East—*Area in Action*, how, in developing countries, data processing techniques can assist the rapid growth of business.

Show Applications of Data Processing

On the technical side *Introduction to Control* (Britain) sponsored by Associated Electrical Industries illustrates the applications of data processing and other automatic techniques (CONTINUED ON THE FOLLOWING PAGE 48)

What'll You Do If...? received a Chris statuette as one of the best information films. This Parthenon production was a marked improvement over the drive safety film shown in the past.

"The Home Made Car" won a Chris statuette for British Petroleum Limited. It was the best of the Business and Industry entries.

"Emergency Room" was the winner of a Chris statuette in Health & Mental Health films. Crosby Broadcasting Corp. produced.

"Lincoln Heritage Trail" was one of the best pictures to share Chris statuette honors. It was produced by Walter Harrison Smith.

"A Letter to Nancy" won the Chris statuette for the film produced by Concordia Films.

OHIO FILM JURISTS UPHOLD A FINE TRADITION

Cite 11 Titles for "Chris" Award at 12th Annual Columbus Festival

INFLUENTIAL CITIZENS representing a wide cross-section of business and educational interests take the factual medium seriously in the Greater Columbus (Ohio) region. As members of that area's Film Council, they devote countless hours to evaluation and review of the hundreds of motion pictures and filmstrips which annually compete for "Chris" statuettes and certificate honors at the Film Festivals which have been held in Columbus for the past 12 years.

The Council's 12th Annual Chris Awards were presented at the Center of Science & Industry on Friday evening, September 25th. Nine motion pictures received highest honor of the Festival, the traditional "Chris" statuette award. Two of the statuettes were given to outstanding filmstrips. A total of 184 motion pictures were awarded Chris Certificates and 31 Chris Certificate Awards were given to the best slidefilms submitted this year.

Business Group Co-Sponsors

The awards program is co-sponsored by The Columbus Area Chamber of Commerce, whose general manager Kline L. Roberts welcomed guests to the awards program. Daniel F. Prugh of the Franklin County Historical Society, president of the Film Council of Greater Columbus, was chairman of the evening.

Winner of the top (statuette) award for Business & Industry motion pictures was *The Home-Made Car*, sponsored by British Petroleum Limited. Three Chris statuette awards were given in the field of Travel films. The Pan-American Airways' motion picture, *U. S. S. R.*, produced by Henry Strauss & Company, shared this honor with *Ecuador, Land of the Equator*, produced by LeMont Films and *Lincoln Heritage Trail*, produced by Walter Harrison Smith Associates.

"Chris" to Douglas Picture

In the category of films for Special Fields, the Douglas Aircraft Company received a Chris statuette for *Eclipse of the Quiet Sun*. The Crosby Broadcasting Company's film, *Emergency Room*, received the Chris statuette in the category of films for Health and Mental Health.

There were two winners of Chris statuettes in the category of Information and Education motion pictures. The safety film, *What'll You Do If...?*, produced by Parthenon Pictures, was a winner and the other statuette award went to Sterling Educational Films' entry, *The City and the Future*.

Chris statuette winner in the field of religious films was *A Letter to Nancy*, produced by Concordia Films.

Two Awards to Slidefilms

Statuettes for the outstanding slidefilms in the 12th Festival competition went to Johnson's Wax for *Wizard of Ooz*, in the Business & Industry category; and to the National Urban League for *Charm by Choice*, entered in the Information-Education film-strip category.

The generously-bestowed Chris Certificate Awards were shared by producers and sponsors from all over the U. S. and Canada. Parthenon Pictures was one of the statuette winners who also received five additional certificates in four Festival categories. The other statuette recipient with numerous Certificate Awards was Henry Strauss & Company, with honors for two Business & Industry entries and for the public affairs film, *Beyond Three Doors*, produced for the Bell System (BUSINESS SCREEN, No. 5, 1964).

Winners of Multiple Honors

A number of companies received multiple Certificate Awards. Among these were Audio Productions (2); Bell System (4); The Centron Corporation (4); American Cyanamid (3); Aetna Life Affiliated Companies (2); The Jam Handy Organization (6, three motion pictures and three filmstrips); The National Film Board of Canada (8); Burt Munk & Company (4); Pace Productions (2); Smith Kline & French Laboratories (4); Vision Associates (9); and Wilding, Inc. (3).

Chris Award screenings preceded the honor ceremonies on Wednesday and Thursday evenings, September 23, 24 at the Center of Science & Industry in Columbus. Of interest to specialists in factual film production were these

quotes from chairmen of the various Festival categories:

"Not one of the some 60 films submitted for judging in the Business-Industry category stood out as something bold and new in production technique. Most of them, however, showed refinements of techniques developed within the past decade. Zoom lens use is now commonplace and effective; animated stills and cartoons are used only where they help tell the story; colors are better than ever; simulation of old-time movie footage is no longer an experiment but an art; and sound tracks, both in terms of clarity and integration of music, effects and the human voice are excelling the standards of Hollywood and the popular screen," noted Galvy E. Gordon, chairman, Business-Industry film category.

More Medical-Health Films

Dr. Peter A. Volpe, chairman of the Health & Mental Health film group, said: "Some of the films in this category were highly technical, others highly dramatic in messages which attempted to stimulate the general public to better health care. A greater percentage (of the Health & Mental Health films) were devoted to the education of professional personnel, covering a wide range of topics in health and hygiene, mental health, general medicine and professional medicine. There were more entries this year than in each of the past two years."

Kenneth B. Hobbs, chairman for Informational - Educational films, had these comments:

"A total of 84 16mm films, one series of 8mm films, 85 35mm slides and 93 filmstrips were previewed and ratings assigned by judges in this category.

Outstanding Entries Cited

"It was indeed most enjoyable and rewarding to screen such excellent productions as *The Eclipse of the Quiet Sun*, *The Restless Sea*, *What's In a Story?* and *Breath of Life*, along with dozens of other fine productions submitted this year.

"Among the unique films was *Schooled in Safety*, produced by Parthenon Pictures for the American Oil Company. We had expected more 8mm entries this year due to the increasing interest in the field, but this was the lone 8mm entry in our category. *Schooled in Safety* is a series of eight black & white, silent films (CONTINUED ON PAGE SIXTY)

Autoload[®]

Specialist, Autoload and Filmosound are registered trademarks of Bell & Howell

With some projectors "automatic loading" means *almost*. With the Autoload[®] projector it means *completely automatic threading*, and a whole lot more!

It threads itself completely, automatically, start to finish. No other 16mm sound projector, anywhere in the whole wide world can.

It stops on a single picture for discussion, reverses so you can get back to a scene fast, throws a brilliant picture in lighted rooms, sets up in seconds.

Features like these have made the Bell & Howell Specialist Autoload Filmosound the largest selling 16mm sound projector anywhere.

Bell & Howell

builds photographic instruments a little better than they really have to be

THE EDITORIAL VIEWPOINT

THE FIRST YEAR OF A GREAT FAIR

THE FIRST YEAR of the New York World's Fair will soon be history. The record was predictable for this 1964 version — with success obvious for those exhibits and pavilions which had provided for the *enjoyment and relaxation* of their guests. The General Motors Futurama show was approaching the 14 million attendance mark as these lines were written, a most satisfying percentage of the Fair's visitors; others, like Ford, General Electric, Du Pont, and the Festival of Gas pavilion were typical of the "most popular" attractions. The Johnson's Wax film, *To Be Alive!* was judged by many as the Fair's outstanding picture.

In the weeks ahead we will endeavor to assess the record of *both* failure and success. On the negative side there was surely a lack of adequate training among the multitude of projectionists who descended on all exhibits featuring film showings of any kind. Lines that were too long and tedious will have to work their way down to tolerable limits.

The network of color televised films though slow in getting underway, was a good idea that will bear repetition with improvement. And it's easy to predict that many exhibitors will find it profitable to create new films with which to attract a larger share of audiences next year.

Several films will be helping to attract visitors to the Fair in '65. The Bell System will offer an excellent *Ballad of the Fair*; Francis Thompson (co-producer of *To Be Alive!*) is working on a color film of the Fair itself with his partner, Alexander Hammid. Come October 18th, the gates on the Flushing Meadow will close, the lights dim for a long winter and the watchmen cometh to await the Spring.

* * *

Over 1.2 Million Color Television Sets to Be Sold This Year: Films Are Needed!

The president of Zenith Radio Corporation predicts that "dollar sales of color (television) sets could pass dollar sales of black-and-white within a year." In 1964, he noted, there will be 1.2 million (or more) color sets shipped out of an industry total of nearly nine million units.

With RCA selling close to 600,000 color sets, Zenith expects to market approximately 300,000. The Zenith executive predicts that there will be two and one-half million color sets sold in 1966. What does this mean to the producer, sponsor and distributor of color films. It obviously is going to bring a great deal of potential to all of these and to the nation's leading color film laboratories.

The challenge is for *new and creative content* in factual color films as well as the inevitable television commercials. We can be heartened by the success of documentaries of all types in recent years: there is a continuing fascination with travel, science and related subjects. Great artistry in such films will serve the sponsor best

for exciting, *different* films are always welcomed by station program directors who reflect the interest of their color set owners, an ever-increasing segment of the total viewing audience.

This Publication Endorses Chuck Percy — Our Candidate for Governor of Illinois!

Those who vote in Illinois are proud of the campaign for the governorship being waged by *one of our own* — Chuck Percy. Through all of his years at Bell & Howell there was a sense of destiny about this exceedingly able young man, reflected in his active public citizenship during the Eisenhower administration and in the unsparing way he has served this industry.

The Publisher of BUSINESS SCREEN has known and worked with Chuck Percy for nearly 25 years, ever since those early chaotic days of World War II before he joined the Navy. We *believe him* to be superbly equipped for the task of state administration. We *know him* to be one of this country's most able candidates for leadership and break a long-standing precedent to endorse *our first and only candidate for public office*.

Charles Harting Percy merits the vote of every reader of this publication eligible to cast that vote in Illinois and of every voting member of their families, their friends and all who can be persuaded to help assure him the office of governor of this state.

Americans Should See the Film, "Mekong," Story of the Vital Mekong River Project

These columns reviewed a truly great documentary motion picture, *Mekong*, the story in sight/sound of the Mekong River Project, sponsored by Shell International. This film is not yet available in the United States and will not be until arrangements for its distribution here are made by the Shell Oil Company. But it *should be seen by every thoughtful American citizen*. Its message transcends the misery and travail of the campaign in South Viet Nam.

For this is the story of the possible salvation of Southeast Asia, of the work being done to double the growing acreage to feed another 10 million in the lands bordering the vast Mekong River. This project *has united peoples of the area*; its support holds far greater promise than the battles now being waged. •

14 U. S. Pictures, Submitted by CINE, Are Cited at the Edinburgh Film Festival

One U. S. film production has been awarded a diploma of merit at the Edinburgh Film Festival and 13 other pictures entered by the U. S. Committee on International Nontheatrical Events (CINE) were programmed during the recent 1964 showings. The "abstract" color film, *Help! My Snowman is Burning Down*, produced by Carson Davidson of New York received the diploma. The same film received a Special Jury prize at the Cannes Film Festival earlier in the season.

Other CINE entries programmed at Edinburgh (the equivalent of an award since this event is non-competitive) include: *Dissent Illusion* (Morton Goldsholl Design Associates, Northfield, Ill.); *The Homing Pigeon* (Robert Ford Productions, Evanston, Ill.); *Miracle in Minnesota* (produced by Empire Photosound of Minneapolis for the Minnesota Theater Company); *Still Waters* (Elgin Ciampi, New York); and *The World of Henry Ford* (MPO Productions, Inc., New York).

Producers and sponsors of these and other U. S. films shown at the Scottish event will receive citations from The Honorable Michael Robb, Information Counselor of the British Embassy, at the 7th annual CINE program to be held in Washington, D. C. on November 10th. In addition, these and other films will be presented with CINE's own Golden Eagle Award, symbolic of acceptance as U. S. entries to overseas festival events in 1964.

490 More U. S. Movie Theaters Open in '64, According to Hollywood Film Executive

☆ These items from recent news are worth noting: Arnold Picker, executive vice-president of United Artists disclosed in Chicago (during the Theater Owners of America convention in early October) that 320 new motion picture theaters were built last year, 670 older houses were remodeled and 170 which had been closed were reopened.

"In the first eight months of this year," Picker said, "movie box offices showed a 20 percent increase over the similar period last year." It's a welcome thought! ■

The operation was a success...but the patient died

You, too, can lose "patients" through some small detail... such as titles not up to the standard of the rest of your production... Guard against loss of clients by protecting your large investment in time and money by a very small investment in Knight titles.

THE MOST USEFUL SOUND PROJECTOR EVER DESIGNED

SIEMENS DOUBLE/SIXTEEN

The Siemens 2000 16/16 is a high quality optical-magnetic sound projector interlocked with a high quality 16mm magnetic deck. It is an unusual combination and it can do unique things for you:

- Record professional 200 mil track on the 16mm magnetic deck
- Record, or re-record on 100 mil striped picture film
- Mix—put sound-on-sound—use any of the more than 9 different ways to record and re-record
- Playback single-system optical
- Playback single or double system magnetic tracks, all in perfect synch!

Use it as a preview projector, as a multi-lingual projector, as an editing projector! Use it as a supplement to existing facilities—or as a complete "sound studio in a suitcase." Use it to bring interlocked projection to your sound work. The Siemens 2000 16/16 sound projector is the modest cost answer to dozens of sound film problems. Perhaps it is the answer to yours?

Winners of National Safety Film Awards to Receive Plaques at Congress in Chicago

☆ Among the 12,000 persons who will attend some 400 meetings when the 1964 National Safety Congress assembles in Chicago on October 26 through the 29th, will be the fortunate recipients of seven bronze plaque awards for the outstanding safety films of 1963.

Six motion pictures and one sound slidefilm accorded this highest honor given by the National Committee on Films for Safety will be shown in the Grand Ballroom of the Conrad Hilton Hotel on Monday evening, October 26. Committee chairman, W. L. Robinson, associate director, Traffic Engineering & Safety, American Automobile Association, will introduce the seven films and present plaque awards to the following winners:

Producer Les Novros, Graphic Films Corporation, will receive the bronze plaque award for his series, *Man and Safety*, produced for the U. S. Air Force.

Charles Cahill, head of the film production company bearing his name, will receive a plaque for *E. V. O. C. (Emergency Vehicle Operations Course)*, one of two winners in the traffic and transportation group. Employers Mutuals of Wausau will share another plaque in this category for *The David Hall Story*, produced by Productions of Florida, Inc.

Producer Fred A. Niles, president of Niles Communications Centers, Inc., will be given a bronze plaque for the sole sound slidefilm top winner, a series of six subjects, *Nix the Six*, produced for the American Gas Association.

Westminster Films' occupational safety motion picture, *The Inner Mind of Milton Whitty*, produced for the Construction Safety Associations of Ontario, will be another plaque recipient as will a second Canadian-produced film, *They Called It Fireproof*, produced by The National Film Board for the Dominion of Canada Fire Commissioner.

The final plaque award of the evening will again be shared by the U. S. Air Force when *Passport to Safety* receives that honor. Filmasters, Inc. was the producer of this realistic parachute safety training subject.

The event is an impressive salute to the medium and previous ceremonies (which include the showing of winning films to delegates) have been well-attended. Motion pictures and filmstrips on a variety of subjects will also be shown at other National Safety Congress sessions.

For example, chairman Robinson will again preside at an evening program on Tuesday, October 27, when the latest driver education films will be shown in the Oceanic Room of the Knickerbocker Hotel in Chicago. •

RCA OPTICAL FILM RECORDING SYSTEMS FEATURE QUALITY AND VERSATILITY

◆ OPTICAL FILM RECORDING SYSTEM

RCA's PM-80 is a complete optical sound recording channel with a fully transistorized plug-in module amplifier system, filters, control facilities and a high quality film recording mechanism using the RCA Variable Area Recording System. The PM-80 features: negative and direct positive recording; factory pre-assembly and adjustment; compact, rugged construction; and easy installation.

OPTICAL FILM RECORDER ◆

RCA's PR-32 for 16mm or PR-33 for 35mm is designed to work as an integral part of the PM-80 system. The recorder provides high quality recordings of either double-bilateral negative or direct positive variable area sound tracks. The PR-32 and PR-33 feature tight loop film drive, constant speed, low flutter, reversible operation, and positive film take-up.

RCA is in first place all the way with a wide range of quality film recording equipment. Want to know more? Write: Dept. 806, RCA Broadcast & Communications Products Division, 2700 W. Olive Avenue, Burbank, California; or 36 West 49th Street, New York, New York.

Steel's Role at Fair Shown

in "Designs Against the Sky"

A new version of *Designs Against the Sky*, which tells of the important part played by steel in the construction of the World's Fair pavilions, has just been released by the American Iron and Steel Institute.

The new film is an up-dated version of a similarly-titled picture which was put out by the Institute last year. Both versions were produced by Audio Productions, Inc., for the Institute through the public relations firm of Hill & Knowlton.

Whereas the original version concentrated on the design and framework of the pavilions in construction, the new film brings the steel frames to completion in a world of sweeping and graceful shapes against the sky.

Among the steel-framed building particularly singled out are the Johnson's Wax "flying saucer" of a theatre, IBM's extraordinary "egg," Traveler's big red umbrella, GE's vast domed carousel, Bell System's unusual cantilever design, the Festival of Gas startling steel-framed umbrella roof, GM's tremendous "floating" edifice and Ford's beautiful motif of steel against the sky.

Designs Against the Sky will be distributed by all offices of Association Films, Inc.

Philip Morris International Premieres New Tennis Picture

☆ An important addition to the nation's sports film libraries was

premiered in New York last month when Philip Morris International showed a 40-minute picture, *Great Moments in the History of Tennis*. Joseph F. Cullman, 3rd, was host and sponsor, as president of Philip Morris, Inc.

Narrated by sportscaster Chris Schenkel, the film reviews the highlights of the outstanding exploits of players who have appeared on the courts during the past 85 years. Attending the premiere at the Hotel Vanderbilt were world-ranking tennis stars. Don Budge, former player and tournament promoter, introduced the picture.

* * *

Board of Fire Underwriters Shows New Fire Safety Film

☆ A new fire safety film, *Trouble Takes No Holiday*, has been released by the Board of Fire Underwriters, in New York.

The film is designed expressly for showing before secondary school audiences. It is motivational and will impress upon students that the smart thing to do is to take fire seriously and avoid its dangers.

Trouble Takes No Holiday, 15 min., color, portrays the aftermath of a false alarm turned in by a student in a typical high school, his eventual repentance, and subsequent development into a school fire safety leader.

The film was produced for the National Board by Depicto Films Corporation, of New York. Distribution will be through all offices of Association Films.

World-famed tennis stars at premiere of film "Great Moments in the History of Tennis." L to r are: Roy Emerson of Australia; Manuel Santana of Spain; Don Budge, tennis great who introduced film; Chris Schenkel, narrator of picture; Joseph F. Cullman, 3rd, president of Philip Morris Incorporated, the sponsor of the film, and Rafael Osuna of Mexico.

**Your message
printed here.
In 10 seconds.
55¢.**

You can put your message on a Polaroid Land transparency in 10 seconds for a mere 55¢. That's about 23 hours, 59 minutes, and 50 seconds faster, and 1 dollar less expensive than an ordinary slide.

All you do is load the film into the camera. Snap the shutter. 10 seconds later you have your transparency.

After a quick hardening just slip the slides into the snap-together plastic frames. And you're ready to go.

There are 2 different kinds of transparency film.

Polaroid PolaLine transparency film is designed especially for line copy work. The blacks are really black, the clear areas are extremely clear. That makes it ideal for charts, graphs, diagrams...anything set in type or drawn in pencil or ink. It develops

in only 10 seconds.

The other film is for continuous tone work. You make slides of pictures and objects with it in 2 minutes. You can even take a picture of someone in the audience. And a few minutes later show it on the screen. That's guaranteed to liven up the presentation.

Both kinds of slides fit any standard lantern slide projector. Both kinds of slides can be made with the many Polaroid Land cameras that accept Series 40 film, except for the J-66.

And both kinds of slides have terrific impact when they're projected. Just imagine how much more this ad would have impressed you if it had appeared 3 feet tall on your office wall.

THE PURSUIT OF INNOVATION

Creativity is Challenging Topic as Industrial A-V Executives Hold Fall Sessions at Tarrytown, N. Y.

CREATIVITY IN BUSINESS — how to foster and manage it — was the topical theme of the annual fall meeting of the Industrial Audio-Visual Association, Oct. 5-8, at Tarrytown House, Tarrytown, N.Y.

To many businessmen oriented entirely to advertising and public relations, creativity, or the lack of it, has been a constant nagging companion for many years — for innovation is necessarily the mother of most good advertising and public relations work.

Recently, with the advance of the pure technologists throughout all phases of business and the advent of thousands of technical computer programmers, the need for creativity in management on a broad scale has become an increasing challenge.

It is one which now calls on the best skills of communication people and IAVA men are finding themselves drawn into finding new ways of fighting the purely technological approach to business management.

Buch Is Program Chairman

Program chairman William Buch (Lederer Laboratories) oriented the activities repeatedly to this important theme. Speakers Irvine Milgate (Impecomation Communications Laboratories), William Smith (U.S. Steel Corp.) and Darrell Rathbun (American Standard Radiator Co.) each brought a new viewpoint to the assembly.

Milgate said that the great amounts of data now accumulating on every sort of knowledge was such that solutions problems were all over the place if we only know the critical question to ask — and this is of absolute essence.

"All of the fancy ways of moving electrons in the thousands of new communications tools will not do anything to the heart of man unless we find the human key," he noted.

Milgate urged businessmen to avail themselves of the services of the behavior scientists for solving many of the increasing complexities of communications. The big screen, he believes, cannot do the job in manpower development. "Far more effective are the 'one-to-one' small screen systems for individual audio-visual training.

Bill Smith told about the identification and management of crea-

tive personnel at his company, U.S. Steel. In general, he said, the creative person tends to be gullible, sensitive, open, non-conforming, and to make more mistakes than his less creative fellow workers. But his creative qualities are invaluable, and management must find ways to provide a proper atmosphere for them.

Panel Discusses Creativity

Darrell Rathbun led a panel discussion on the many facets of creativity and how to use it or lose it. Starting from a critique of *The Creative Organization*, by Gary A. Steiner, a paper published by the Graduate School of Business, University of Chicago, the discussion led into an interesting round-robin, involving the entire IAVA group. Other panel members were Vincent Hunter (Union Pacific Railroad), Larry Warnock (Link-Belt Co.), Martin Broadwell (Southern Bell Telephone Co.) and Jerry McGarry (Wyeth Labs.).

Throughout the meetings, new, different and creative films were interjected from time to time. Among these were Carson Davidson's highly original theatrical short, *Help, My Snowman's Burning Down* and the Calvin Workshop's business film farce, *We'll Check and Let You Know*.

Robert McCaslin (Caterpillar Tractor Co.), president of IAVA, opened the sessions by urging his fellow members to watch and listen particularly for new ideas — that techniques without ideas are meaningless. About 50 members and guests took part in the three-day meetings. The next IAVA national meeting is scheduled for the Ambassador Hotel, Chicago, May 3-6, 1965, with William E. Morris (Baxter Labs) as program chairman.

New members who joined the Association at this meeting were: Solomon Dworkin (Bell Telephone Labs), Harry E. Hultman (Beloit Corp.), Alan F. Lydiard (John Hancock Co.), Herbert McCartney (Southern Bell Telephone Co.), Fred Movroydes (Bucyrus-Eric Co.) and H. Loren Robinson (Roche Labs).

While this was a meeting devoted largely to ideas rather than hardware, all birds must have wings to fly, and several new interesting audio-visual "wings" were shown during the meeting. •

Tarrytown House — this former country estate now provides an ideal site for executive seminars such as IAVA's recent fall meeting program.

IAVA panel on creativity (l to r): Vincent Hunter (Union Pacific); Larry Warnock (Link Belt); Darrell Rathbun (American Standard Radiator); Martin Broadwell (Southern Bell); and Jerry McGarry (Wyeth).

New members of IAVA (l to r): Herbert McCartney; Harry Hultman; Solomon Dworkin; H. Loren Robinson; and Fred Movroydes (see column two).

Antics of Aniform characters drew appreciative chuckles when this new technique for animation was demonstrated by Don Smith of Wilding, Inc.

TRUE MAGAZINE's new sales promotion film, now being shown to space buyers across the country, is the first major presentation to be seen in the men's magazine field in many a moon. It is a powerful and effective performance, relying on solid content to carry it along, but with skillful use of audio-visual aids of several kinds to give it wings.

True's story is principally that of editorial excellence. It points out that the professional ad man—the largely Madison Avenue-oriented magazine reader—may overlook the national strength of a magazine such as True. Yet, the leading executives and much of the working force of most of the big agencies came from “back there,” and that is where the big strength of True's 2,400,000 circulation lies. Readers are generally solid citizens, home-owners, married, and well-fixed with \$8,000 median incomes. And they average five hours an issue reading the magazine.

Weight to Vital Intangibles

Almost all of the figures in any big agency's computer regularly come up with True's statistical potency. The magazine gets out handsome brochures (“The Most

Massive Men's Market in Print”) to reiterate these facts. What the new visual presentation is intended to do is to give more weight to the important intangibles that are still responsible for much space-buying, computers or no. True has an impressive story to tell from any angle, for computer students, or for media buyers who fly by the seats of their pants.

Last year, another Fawcett publication, WOMAN'S DAY, put on a presentation in which each of its salesmen delivered the verbal part of the show accompanied by a background of colored lights, slides and other effects.

Following a Good Example

This worked out so well that Mort Berkowitz, Fawcett Advertising Director, and Walter Ferrigan, True Advertising Manager, decided to use a somewhat similar sort of vehicle to extoll the virtues of True.

They called on Visualscope, Inc., which had produced the Woman's Day presentation, to do

a new show that would provide visual fireworks to back up True's space salesmen much in the manner of the Woman's Day show. Titled *The Power to Say Yes*, the new presentation is playing daily to groups of ad men at the Colonades of Delmonico's Hotel on Park Avenue in New York.

It will run here for four weeks, while another unit will be playing a circuit of Los Angeles, Seattle, Portland, San Francisco, Denver, Detroit, Chicago, Boston, and other cities not yet scheduled.

“Most Exciting in a Decade”

Reaction has been universally good. Several dozen letters about the film were received from agency executives in the first week after its opening. One, from an agency senior vice president, acclaimed it as the most exciting media presentation in the past ten years.

Advertising executives arriving at the luncheon meetings note first the big letters TRUE in the foreground of the screen at the head of the room while revolving

colored lights play on the background. During the introductory scenes, the letters slide individually off the wide screen into the wings.

The presentation is basically simple, despite its use of a great many interrelated audio-visual devices. Interwoven into the show are wide-screen sound motion pictures, standard screen sound motion pictures, a live speaker, taped music and voice introductions, colored lighting effects, wide-screen slides, and wide-screen slidefilm with crawl effects.

Salesman is Star of Show

But most important of all the elements in the presentation is the speaker. Almost all True salesmen serve turns as “the man at the lectern”—the star of the show. Each of these men speaks to the agency group that he normally calls on. Thus the presentation is always *personal*.

Happy Felton, the ex-Brooklyn Dodger broadcaster who is now Fawcett Publicity and Promotion Manager, and Bob Plante, True Promotion Manager, who have been responsible for much of the presentation's success, note that as different men give the show each day its character changes slightly.

Some men are slower than others, some give emphasis to certain parts more than others, but each has made the show *his own*, fitting it to his own personality. Felton and Plante rehearse each of the speakers before the performance and although certain standards of timing and elocution are set, the speakers are encouraged to be themselves—*believable*—above all.

Simple and Foolproof Setup

The screen effects accompanying the speakers are achieved by two Visualscope men working on cues from the script, allowing the speaker to go at his own pace.

Equipment involves a big Powerhouse slidefilm projector, a Bauer P-5 16mm sound projector, Wollensak tape recorder, and a 4½ ft. by 12 ft translucent screen surrounded by black velvet draperies. While at first glance the system might seem complex, in practice it has proved to be simple and foolproof. It is not a gimmicky show—no effects are used that do not have a definite place in enhancing the script of the presentation.

Hold Visuals in Exact Focus

One foolproof part of the system that is worth noting is a method devised by Visualscope tech-

The scenes at the top of this page and below are from True Magazine's new widescreen presentation.

nicians for insuring exact focus in the motion pictures even when interchanging half-inch and one-inch lenses on the projector during the middle of the show for wide-screen or normal proportion images. A steel ring is mounted around each projector lens and fixed with a set-screw—thus the lens may be inserted in the projector up to the ring which is the point of exact focus. Never fail accuracy so far.

The whole show can be packed into four crates, none longer than six feet, allowing easy transport in a station wagon. This method will be used to move the show to eastern and mid-west cities. For west-coast meetings, True contracted with Flying Tiger airlines

to move the show from city to city on daily schedules.

After the intensive schedule of luncheon meetings from coast to coast, True will still not leave any group unexposed to the message if possible. The whole show has been put on 16mm film, and during the coming year it will be shown to any group which missed it the first time.

Also Shown in 8mm Sound

Not only groups will be covered by the back-up film, but individuals, too. An 8mm version has been prepared to be used with Fairchild 8mm desk-top projectors. True salesmen will be able to walk into any ad office in the country and quickly put on *The Power to Say Yes*. •

Bell Laboratories' scientist examines the "trumpet-shaped ruby crystal, the heart of the continuously-operating ruby laser, shown in the picture.

NEW DIRECTIONS FOR OPTICS & ELECTRONICS

Exciting Potential of the Laser Told in "The Conquest of Light"

A LITTLE OVER SIX YEARS AGO two scientists at the Bell Telephone Laboratories came up with some new ideas on how to harness light waves. These ideas have since grown into the laser, a device which has opened new directions to the science of optics and electronics.

The Conquest of Light, a new nine-minute Bell System color film which explains the background and potential of the laser, has just

been released by the associated companies for free loan use by any interested groups.

The film, which was produced by Owen Murphy Productions, directed by Paul Cohen and photographed by Michael Livesey, shows how from an intense concentrated beam of light, such as never shone on earth before, may come heat hotter than the sun, unlimited communications channels, and surgery without cutting.

Basically, the film shows, a laser consists of cylindrically shaped active material—solid, liquid, or gas—excited by some external source of energy. Reflective surfaces at both ends of the rod permit energy to reflect back and forth, building up on each passage.

Such a device can generate a powerful and highly directional beam of light which is coherent (well organized) and of nearly a single frequency. This beam may someday provide a carrier signal with a very large capacity for telephone, television and data transmission.

Indeed, "Tomorrow, light may be a major medium over which men communicate—a possible answer to the ever-growing need for channels of communication. Science itself cannot know the total promise, for it stands now only at the threshold of its exploration. Yet, this narrow pathway of light leads surely to tomorrow. Because it spreads so little, it may help man to map the moon—projected toward the shadowed valleys, a quarter of a million miles away, a laser beam can be focussed on a tiny area only a few hundred yards wide. A bridge of light—a bridge across which man may communicate—on earth, and in the endless reaches of outer space." •

Dane Rigden of Bell Telephone Laboratories checks alignment of helium-neon gaseous laser designed to emit coherent radiation in visible spectrum. Scene in the Owen Murphy production, "The Conquest of Light."

Longest laser ever built is this 33-foot gas laser at Bell Laboratories, Murray Hill. Here, Robert N. Zitter (foreground) and George G. Douglas, conduct experiment to measure the power of the light in scene from film.

Many new film and recording techniques were employed to "involve" the audiences seeing "Quest." Crew above is shooting outdoor beach scene.

"QUEST" FOR THE UNUSUAL

Many Visual and Sound Techniques Used to Make 70mm Eastman Chemical Film One of Fair's Best

ONE OF THE MOST unusual industrial motion pictures at the World's Fair is *Quest*, produced by Filmex, Inc., for Eastman Chemical Products. It is one of the first non-theatrical motion pictures to be shot in 70mm film with five-track stereo sound.

The film, which graphically demonstrates the basic theory of chemistry as well as its practical applications by Eastman Chemical, is shown in conjunction with dramatic displays that are integrated with the movie action.

Images Surround the Viewer

The purpose is to surround and involve the audience with the film experience—an effect heightened by the fact that no screen is used: the image is projected directly on the circular wall of the Eastman Chemical building, part of the Kodak pavilion, and is 32 feet wide, or about 20 degrees of the round building. In addition, house light-

ing which changes to match the background color of the film imparts a three-dimensional effect to the filmed images.

A great many film-making and sound recording techniques were used in the production of the picture, many for the first time in 70mm format: live action, on sound stage, location, in factory; animation (the most animation ever used in a 70mm production) both art work and photographic; stop motion; original sequence and stock footage.

Another first was the use of zooms and pans or multiplane effects, never done before on 70mm.

Something New in Film Music

Highly unusual scoring and sound effects were employed. In addition to a symphony orchestra and a three-piece jazz combination, the film uses five unique instruments sculpted by Francois

Bachet in glass and metal and on formal display in a special exhibition at the Louvre. Electronic music, composed via circuitry and tape recorders, forms part of the score.

Part of the live action was photographed underwater, never before done on 70mm. A special watertight enclosure had to be built to house the 70mm camera

to lens this important sequence.

"One of the gratifying aspects of making the film was being asked to produce it," says Robert Bergmann, president of Filmex, Inc. "Because Eastman Kodak is closely associated with the finest in photography equipment and photographic technique, our very selection was an accolade of the highest order."

Technique for the Budget-Minded

Fund Film Points Up Cost Advantages in Fotomation

AMONG THE FILMS being shown to World's Fair visitors on the 236-outlet RCA television receiver network is a seven-minute color motion picture about the New York Herald Tribune Fresh Air Fund, *Give Summer To A Child*. It is sponsored as a contribution to the Fund by American Express Company.

The film is seen regularly on the network which consists of monitor-receivers set up in lounges, executive suites and adjacent

for Animated Productions, faced some unusual problems in putting all the various pieces of material together to make a good-looking film that hangs together smoothly.

Because of a tight budget situation, it was necessary to do almost all the film-handling chores, effects and editing in the animation camera before going to the lab. For instance, the whole finished film was done on one piece of film, ready for printing without the use of A and B rolls.

All the sound—music, effects and narration by CBS news commentator Ken Banghart — was completed first, and then the film was carefully planned and shot to synchronize with the finished track.

Ingeniously, pieces of existing 16mm footage from another Fresh Air Fund motion picture were used as part of the new film, and spliced in during the middle of dissolves so splices would not show on the finished print. Other dissolves were made in the animation camera.

Mr. Stahl estimates that this method of "emergency" production on a public service film for an outstanding charity organization saved over \$600 of actual expense in addition to considerable production time.

Fresh Air Fund film scenes above and at right below are from publicity art adapted by Animated Productions in Fotomation technique.

to lines of people waiting to get into crowded exhibits.

Animated Productions, Inc., using its Fotomation process, produced the film using many diverse pieces of material from the files of the Fresh Air Fund, including 16mm motion picture footage, 35mm slides, small snapshots, mural-size photographs, posters, booklets and cartoons.

The film tells about the activities of the Fresh Air Fund since its founding in 1877. It shows how the Fund has sent thousands of city children annually to summer vacations at camps and nearby friendly towns.

Al Stahl, producer of the film

Surrounding film viewers in the Eastman Chemical Product's exhibit at the N. Y. World's Fair were stereo sound, wide-screen sequences like these. The Filmex production "Quest" was shot in 70mm color.

**"Push-Button" Sermons
Light Cinebox at Fair**

ONE OF THE NEW YORK World's Fair's proven exhibit tools was the six-foot high Cinebox, used continuously by visitors to the Churches of Christ exhibit in the Protestant and Orthodox Center. At the Fair, the Cinebox was used to present a choice of 40 three-minute sermons on color film, operated by simply pressing a push-button after making a selection of a favored subject.

The sermon selections featured Church of Christ minister Batsell Barrett Baxter, well-known radio and television evangelist of Nashville, Tenn. Sermon films included *Baptism, The Lord's Supper, The Influence of Christ, How Relative is Truth, Our Heritage* and others. Sermons open with Mr. Baxter

"Push-button" film sermons were seen and heard on the Cinebox in the Churches of Christ exhibit at the New York World's Fair.

seated at a desk in his book-lined study. In some films, the camera then moves on to scenes of action that emphasize the subject matter, in others, the camera remains fixed on Mr. Baxter.

All 40 titles are listed on a selection board, similar to the one on a music juke box. The user turns a selection wheel to the number of the sermon he wants to see and hear, then presses a button to start the film mechanism. The film is then projected on the large screen at the top of the unit (see picture).

The 40 *Sermons from the Bible* films used in the exhibit were produced by Fidelity Film Productions, Abilene, Texas. After the closing of the Fair in mid-October, the Queens (N.Y.) Church of Christ which raised the funds for the exhibit, will offer the Cinebox program to other fairs.

THE LADY IS A FILM MAKER

Petite Avalon Daggett Matches Skills With Talent

THE WORLD OF business-sponsored and documentary films has countless millions of women viewers in its audiences but all too little of the feminine touch behind the camera!

A charming and extremely able exception to masculine dominance is petite Avalon Daggett, of Baton Rouge, Louisiana, head of her own releasing company and a phenomenon in this profession. One of her recent pictures, *Miles Over Water*, produced for the Louisiana Department of Highways, is among the 15 outstanding films selected to represent the United States at the 5th International Industrial Film Festival in London, November 2-6th.

Child's Hobby Began Career

This remarkable career began as a hobby when, on her eighth birthday, her family presented her with a box camera. Born on a Louisiana plantation, she developed her appreciation for nature by exploring woods and fields, recording her discoveries by camera. She continues to use "stills" as reference material in preparing her motion pictures.

Educated in the West, Miss Daggett majored in speech arts and drama, earning her B. A. and M. A. degrees at the University of Southern California. She taught these subjects for a few years in California's secondary schools and, at the same time, acted, produced and directed in various community theaters. Taking an interest in civic affairs, she served as president of the Junior group of one of the Far West's largest lecture clubs.

Took Over Construction Firm

The next phase of her life brought an extraordinary turn of events. When the head of her family's construction company was drafted into service, Avalon Daggett took over the reins. She turned out to "boss" these jobs in the roughest kind of weather and terrain, worked with shovel operators, truck drivers, major contractors and government agencies (seasoning for her present films on bridges and highway construction projects).

And she learned the hard way the exigencies of running a business. She also developed her natural talent for making friends with people in all walks of life. This ability has been a major profes-

sional asset, opening many closed doors, enabling her to capture scenes and subjects beyond the reach of the casual film maker.

Films Won Lecture Bookings

Avalon Daggett's entry into her present field of work came almost by accident. While on a trip East, she made a film "record" for her own enjoyment. Viewers of the picture were so impressed by its color and imaginative qualities that they urged her to get into the field of travel films. She began to devote all her energies toward the mastery of the medium—and what had been merely a fascinating hobby emerged as a lifetime career.

For several years she appeared on the film lecture circuit, from Coast to Coast, holding audiences enthralled at Town Hall and Columbia University in Manhattan, at auditoriums in San Francisco and Toronto (appearing with the Canada World-Adventure Series) and at scores of other towns and cities. For 14 consecutive years, Avalon Daggett Productions filmed the annual Rose Parade in Pasadena on New Year's Day, with both 8mm and 16mm editions released to home movie enthusiasts in the U. S. and abroad.

Cited for Educational Films

Educational film making was a natural turn of events. Her documentary films on the American South and Southwest, purchased for school and college libraries, have won 25 awards at national and international film festivals.

And in recent years she has emerged as an equally talented maker of sponsored pictures for public relations and industrial use.

Canyon walls and bridge girders, are part of Avalon Daggett's day . . .

Avalon Daggett, with friend

Currently, she is filming the construction story of the Mississippi River bridge on Interstate Highway 10, another sound and color picture for the Louisiana Department of Highways.

Those who think that the life of a film maker is some kind of holiday adventure should join Miss Daggett on location. In her sturdy station wagon, she ventures alone up mountains, across deserts and into swamplands to seek out and capture on film the dramatic scenes and stories of America which few others have ever seen.

Wins Respect of Men on Job

She will arrive on a construction job when the day begins for a hundred or more workmen, departing with her camera at quitting time. At first, she wryly notes, few of these hardy characters are inclined to take her seriously. But when they realize she also has a job to do and means to do it well, they make every effort to be helpful to that "picture lady."

During the filming of *Big Span*, on a particularly high bridge, one foreman nearly lost his precarious footing in consternation when he saw Miss Daggett, lugging tripod and camera along a nearby girder, some 10 stories in the air.

When the workprint of a new picture has received sponsor approval, she completes final production details with dependable service suppliers in Hollywood. Miss Daggett gives full credit for the many awards and sponsor accolades which have been accorded her pictures to the staff of experienced technicians with whom she has worked for many years.

Avalon Daggett is very much aware of the latent power in a properly-aimed and well-produced motion picture. She firmly believes that no other medium has such great latent power.

University of Marketing

Techniques of Top Earners Are Combined With Built-In Proof That Salesmen Absorb and Apply — Presented in New Course From Better Selling Bureau

Everybody tells the salesman what he should do; these University of Marketing programs show him how to do it . . .

Men welcome the vigor of ideas based on professional methods. "Think juices" flow freely when exposed to proper motivation.

"Qualifying the Sale" is developed in Session Five, highlighting the need to find logical prospects for the company's products.

"How to Qualify the Prospect" concentrates on how to seek and sell the man who can say "yes" at this critical point of the sale.

EVERY SALES EXECUTIVE will agree that, no matter how much training his men receive, it is only what they absorb—and apply in the prospect's presence—that delivers results.

Men outwardly confident in sales meetings are often nervous inside themselves. This is a sales training situation given primary consideration in the new University of Marketing Course of Sales Training.

Programs Easy to Set Up and Conduct

Based on methods used by professional sales consultants—techniques that put men in the highest earning bracket—the six meetings of this Course are easy to set up and easy to conduct. Divided between color filmstrips, recorded instruction, and discussions, this training avoids monotony and stimulates men to look forward eagerly to the next session.

That the principles taught are understood and absorbed is revealed by the Salesmen's Notebooks. Varied tests, including filling in blanks left in printed sentences, underscore what has been remembered from the previous session and what has been taught in the current one. The Manager Trainer sees at once which men require additional help.

Lifting Salesmen Toward Higher Goals

The salesman's attitudes, his belief in himself and his company, its products or services—his skills in meeting and educating and convincing the prospect—are lifted to higher goals, with the inspiration of University of Marketing techniques geared to today's intensive competition.

Top-ranking company executives know that, though countless problems can now be fed to computers, when it comes to developing salesmen to their highest potential, the communication of ideas from expert to trainee still demands the inspiration of human interchange, and the infectious quality of enthusiasm.

Treats Subjects With Appeal, Clarity

By providing access to the acknowledged skills and methods of the most successful of the current breed of professional sales builders, this training course makes it easy for other sales training specialists to employ methods that provide the maximum motivation to sales personnel—from the beginner to the most experienced.

Clarity in communicating ideas, first essential to successful teaching, is assured through a generous use of vividly colored cartoons. The subjects treated are those consciously or unconsciously practiced by all sales experts, but the University of Marketing presentations give them appealing freshness. Salesmen learn how to take "objections" for what they are—invitations to tell more about the product or service. They save time by being able to distinguish the gulf between a "condition" and an "objection".

The basic teaching principles of P-E-S-O-S

—that prepare men by showing why they should use a particular method; that explain the steps of the process to be learned; that show, by turning words into performance of the objective discussed; that observe how the trainee practises the method, noting and correcting errors; and that supervise, until the method or skill is learned—multiply the success-potential of this training.

The power of productive planning, the way to make big achievements by taking small bites, the immediate versus the far goal, win the cooperation of trainees who are stimulated by the vigor of the teaching.

Meeting Leader's Guide Aids Supervisor

The man who supervises the training will find the format of the Meeting Leader's Guides, bound separately for each session, a great convenience, with full script of the recordings and narrations over the cartoons. At any point in a meeting, the leader can take over, if he wishes, to talk some of the text, or relate it specifically to company conditions or product data.

This course makes it clear that a salesman is as good as he wants to be, as good as his knowledge allows him to be, but that few men are as good at selling as they can be. This training is designed to meet the inherent need a man has to feel proud of his accomplishments, not to be just good, but the best.

Distributed by the Better Selling Bureau

Created and produced by Methods and Motivation, Inc., the University of Marketing Audio-Visual course is distributed exclusively by the Better Selling Bureau, of Los Angeles, which specializes in improved methods for better sales training.

"Productive Planning" is the project covered in Session Six of the University of Marketing course. It shows the money value inherent in making analytical plans in advance.

FILMS VIA PICTUREPHONE!

N. Y. Agency Test Uses Phone Circuits to Transmit
Filmed Spot and Show Media to Washington Station

SIGHT SOUND COMMUNICATION has a new working partner. The Bell System's Picturephone Service, utilizing telephone lines, has begun to transmit both films and live show material between major U. S. cities. The service is currently available between Chicago, New York and Washington, D.C.

In Chicago, the Picturephone Center is located in the Prudential Building; in New York at the Grand Central Station. The Washington installation is at the new National Geographic Society building. Thus far, the service has been used for a wide variety of purposes, including a face-to-face bank loan transaction, a toy maker's new product demonstration and employee interviews between New York and Chicago.

Test Opens a New Door . . .

But the first experiment by an advertising agency for the test transmission of a combined television commercial, involving both live demonstration and film may have opened a new door in audio-visual communications.

N. W. Ayer & Son, Inc. conducted the test transmission between New York and Washington, D. C. with a Sealtest combination commercial as the subject for a well-rounded test of audio-visual transmission quality for live demonstrations, visibility of props and receivability of film.

Under the direction of Samuel C. Zurich, Ayer vice-president in charge of commercial production;

Gilbert Rose, supervisor of film-technical operations; and Ayer television producer Roger Harvey, the Picturephone call was made to Lawrence Fraiberg, vice-president and general manager of station WTTG and Lee Reynolds, program personality on the Washington station.

How to Handle a Commercial

From the Picturephone center at Grand Central, Harvey demonstrated the desired manner in which the commercial should be handled, explaining the assembly of the display used, action of Sealtest's "Mr. Cool" puppet and the switch to a 60-second filmed spot. It was received at the National Geographic building center.

Generally, a performer has contact with the agency and client through correspondence or actual commercial copy only. "The copy will tell him what to say and how to demonstrate the product," Reynolds said, "but often the cold print can be misleading and result in poor interpretation. With Picturephone service, the performer can be put in direct contact with the people who conceived the spot (or film) and be shown exactly how they want it done, assuring proper presentation."

Other Applications in Media

Other recent tests by Ayer over Picturephone service show potential usefulness for the new communications medium in transmitting art layouts, graphic material, packaging designs, sales presenta-

Closeup of the Picturephone set shows clarity of transmission during test call between N. W. Ayer & Son, Inc. and station WTTG officials.

tions and new product introductions.

It is in these fields, beyond brief television commercials and into the larger area of business film work-

medium may involve both film producers, show creators and sponsor clients. At present, the service is limited because of the existence of only three demonstration centers but the service will undoubtedly expand.

The cost of a three-minute Picturephone call is \$27 between Chicago and New York; \$21 between Chicago and Washington, D. C.; and \$16 between New York and Washington. Calls are dialed over regular telephone lines and are completely private, both picture and voice. Rates for additional minutes of service beyond the basic call are \$9 for each additional minute between New York and Chicago; \$7 between Chicago and Washington; and \$5 between New York and Washington, D. C.

Attendants at the Picturephone Centers arrange with called parties to come to the distant Picturephone Centers at an agreed-upon time. Callers may use the hands-free Speakerphone in service. •

N. W. Ayer television producer Roger Harvey demonstrates live portion of a Sealtest combination TV commercial to WTTG station officials via Bell System's new Picturephone service between N.Y. and Washington, D.C.

N. W. Ayer team preparing for the first transmission of a television commercial via Picturephone service. Call was made to officials of station WTTG in Washington, D. C.

Filmed sequence from Sealtest TV commercial is projected by Gilbert Rose, Ayer supervisor of film, technical operation. Picturephone camera is behind the projector.

It's Showtime for Pride Carpets

TALK ABOUT RECORDS in business meeting show production! Bell Industries, a subsidiary of Fulton Industries, acquired Pride Carpets just nine months ago. They planned to hold their first annual area managers' meeting in a Chicago hotel in mid-September.

Wilding, Inc. was contacted to produce the one day meeting on August 28th; a show presentation was made for Pride officials the following September 8th. Within seven working days between September 8th and the show date, September 18th, Wilding staffers produced the following program and materials:

A complete full day show, which ran from 8:30 a.m. to 5:30 p.m., included six musical numbers, four skits, 15 executive speeches, two large-slide arc presentations, was produced with a cast of five, not including company personnel.

Wilding also helped to develop a new Pride "logo" and designed it for illuminated signs, posters and area manager handout material. The communications' company also designed and produced the complete carpet and rug display for the meeting.

Finally, Wilding show people also set up a dinner and show for Chicago area retailers on the evening of the September 18th meeting with 500 dealers and their wives in attendance. One of the features was a drawing for a new Ford Mustang.

As a followup, Wilding also produced props for sales seminars held on the day following the managers' meeting. Show coordinator and account executive for Wilding, Inc. was R. R. Rockwell; creative

Fulton Industries' president Bernard Mitchell presented the keynote talk which opened the Pride Carpets' meeting in Chicago. . .

director and writer was Paul Zarra. Sam Johns was the producer; the display designer and producer was Jack Loney. Collateral materials' art was directed by Frank Mattucci and the technical director in charge was Wayne Thing.

"How NOT to Sell Carpets" was presented in one of the Pride Carpet show skits pictured above.

Pride Carpets' first annual area managers meeting, held in Chicago in mid-September, featured two 30-foot stages flanking the central podium area. Wilding, Inc. produced meeting show within a seven day period.

The Computer: a Servant of Man

IN THE FEW DECADES since its introduction and development as a primary scientific and industrial tool, the computer has acquired a strange and extraordinary mystique through no fault of its own.

Though most of us are familiar enough with some of the computer's flashier performances such as extrapolating dental records on television for a toothpaste company, predicting elections, and punching neat rectangular holes in our monthly gas bill, for a variety of odd reasons the computer is still commonly misunderstood by the general public.

A Monster or a Messiah?

The question still prevails: Is it a monster or a messiah? And no wonder: The computer has been exploited by science fiction writers, burlesqued by comic strip artists, maligned and harassed by labor, sanctified by its advocates, and rendered impotent by the poets.

The facts have been disguised so thoroughly in this welter of poppycock, that few people really know what makes a computer tick — or hum — or go beep-beep.

Now Vision Associates has produced a new motion picture in which the computer has been made the "star."

IBM Grant Made it Possible

But the film is strictly non-fiction. In an unusual screen treatment, produced for the National Science Teachers Association under a grant from IBM, the computer is stripped of its glamorous facade. Its protective curtain is peeled away revealing, in its miserable nakedness, the true facts behind this wonderfully remote, romantic, mysterious machine: this so called electronic brain is nothing more than a frumpy bag of nuts and bolts, transistors and knobs, belts and motors, and typewriter ribbons. Several million dollars worth, to be sure, but not one brain cell, human or otherwise. For without *man* the computer is nothing.

The argument is hammered out a score of times in this picture, aptly called *The Information Explosion*. In 20 swift minutes, none of which are wasted on superficialities, *The Information Explosion* takes a hard look at the circumstances of our century that gave birth to the computer: the avalanche of information that has

been collected since the beginning of recorded time. The fact is that man has collected more data about the world he lives in than man himself can possibly handle.

The invention of a machine that can store all this information, interpret it, and provide the answers to problems that would take man a thousand years to solve, has brought us to the threshold of an era that has been heralded as the Second Industrial Revolution.

Many Facets Are Explained

The Information Explosion examines the many facets of this revolution, looks behind the doors that have been unlocked by this remarkable instrument. The film comes to grips with the problems the computer has created as well as the promises it has fulfilled, and concludes that this new Industrial Revolution, like most revolutions, belongs to the young men and women who can master the complexities of a modern world. Thus the film is really a persuasive and unquestionably effective recruitment film, encouraging our gifted youth to pursue a career in computer technology.

The viewer is left with the unmistakable impression that a career in the computer field promises more excitement, greater personal fulfillment and richer rewards than perhaps any other career in our modern world.

Film in a Teaching Package

The Information Explosion was initiated by the National Science Teachers Association's Project On Information Processing at Montclair State Teachers College in New Jersey. The film is part of a package of related written material which is being distributed to schools throughout the country with particular emphasis for the gifted high school student and college freshman.

This 21-minute Vision Associates' production, was photographed at computer installations at the Goddard Space Center in Maryland, the Bell Telephone Laboratories in New Jersey, and at IBM factories in New York.

A trenchant visual counterpoint was photographed in a garden of wildflowers in Costa Rica, a filing cabinet warehouse in Manhattan and the empty stage at the Delacorte outdoor Amphitheatre in Central Park. A startling musical score (CONCLUDED ON PAGE 52)

MISSILES IN THE NEW NAVY

Thiokol's Informative Film of "The Missile Navy"
Shows Versatile, Flexible Fleet Ranging the Seas

IN THE TECHNOLOGICAL PROGRESS of the last half century — and particularly of the past 20 years, since World War II — man has taken his most awesome stride into the age of nuclear power and the supersonic guided missile. In keeping pace, the United States Navy has undergone a period of adjustment and rapid modernization.

Today, in a very real sense, a new Navy ranges the oceans of the world, a versatile and flexible fleet armed for the first time with a revolutionary, new weapon, the guided missile. Supersonic, accurate, carrying warheads many times as powerful as those of any shell fired in World War II, the Navy's new family of missiles has been made possible, to a large extent, by the dynamic development of new, high-performance rocket propellants and propulsion systems.

Emergence of Naval Rocketry

In *The Missile Navy*, a motion picture produced by Carl Ragsdale Associates, Inc. from a script by Tom Carroll, Jr., commentator Chet Huntley tells this story of the emergence of naval rocket power and of the missiles, currently in the fleet, which are capable of performance, accuracy and reliability never before possible in tactical weapons systems.

The film is sponsored by rocket builder Thiokol Chemical Corporation. It traces the development of rocket propulsion beginning with the early experiments of Dr. Robert H. Goddard, today recognized as the world's foremost pioneer of modern rocketry. Rare historical footage of Dr. Goddard at work, of an early experimental firing by members of the American Rocket Society, and of early German rocket experiments help to illustrate the work done on rocket power by a few visionaries before World War II.

Founding of Reaction Motors

Scenes of German V-1 and V-2 missile launchings underscore the events which prompted the United States Navy and other services to embark on a program of intensive research and development and which led to the formation of America's first rocket engine company, Reaction Motors, Inc. The development of naval rocketry during the Second World War and

onward through the '50's is depicted in sequences on such missiles as Bat, Gorgon, Lark, Viking and the products of the Navy's Bumblebee program.

Today, there are more than a dozen missiles, either operational in the fleet or on the way, surface-to-surface, surface-to-air, air-to-air and air-to-surface, each with its own specialized job to do. In *The Missile Navy* each of the operational missiles is put through

Pictured aboard USS Enterprise during filming of "The Missile Navy" are (l to r) Thiokol agency exec Tom Johnston; producer Carl Ragsdale; narrator Chet Huntley.

its paces, including the Navy's big, strategic ace-in-the hole, the fleet ballistic missile, Polaris.

Crews Aboard Several Ships

To film the picture, Producer Ragsdale placed camera crews aboard several Navy ships, including the carriers Forrestal and Enterprise, the cruisers Boston and Long Beach and the destroyer Yarnell. In addition, to dramatize the Navy's role in amphibious operations, the film includes scenes of Marine Corps' landings at Camp Pendleton, N.C., and, to illustrate the effectiveness of naval air power, scenes of Attack Squadron 81 in action near Oceana, Va.

On-camera scenes of narrator Chet Huntley were shot, on location, in the Combat Information Center of the nuclear-powered attack carrier, Enterprise.

Of the many hurdles which had to be overcome during photography, perhaps the most unique was the requirement for safety procedures to be followed during shooting of the assembly of the various missiles. During any photography of missile storage or assembly in ships' magazines, special explosive-proof lighting equipment

The nuclear-powered aircraft carrier USS Enterprise makes knots into the wind. This attack carrier is backbone of modern naval striking power.

and completely enclosed, spark-proof camera set-ups had to be used.

The sponsor of *The Missile Navy*, Thiokol, is a company with a true historical interest in the Navy's missile capability. For Thiokol claims the original rocket company, Reaction Motors, as one of its divisions.

This company's continuing interest in Naval rocketry makes it, today, the producer of the engine for Bullpup, a deadly accurate air-to-surface weapon descended from the dive-bomb.

Bullpup is powered by a new breed of powerplant — a pre-packaged liquid propellant rocket engine which is completely assembled and loaded at the factory. It combines the simplicity of solid propellant engines with the best features of liquids.

Thiokol also makes the engine for SUBROC, a brand-new, highly sophisticated missile designed for use by U. S. submarines against other, enemy submarines. Thiokol's solid propellant engine for SUBROC is the first rocket powerplant ever designed to be fired underwater and propel a missile up through the water and into the

air, so that the payload will travel to its target miles away.

For many people who haven't been keeping especially up-to-date on the changes and refinements which have taken place throughout the United States Navy in recent years, *The Missile Navy* will provide a new, comprehensive, and possibly surprising, look at the world's finest, most modern fleet — still maintaining its nearly 200-year-old tradition of superiority on the seas, but, today, capable of extending its influence, to every corner of the globe. •

Tartar anti-aircraft missile in action. This compact weapon has a very fast reaction time.

Typical of the new weapons which strengthen today's Navy is Talos, a long-range, surface-to-air guided missile, now operational in the fleet.

Light-Polarizing Film and a Photosensitive Resist Unlock Mass Production of Animated 35mm Slides

by Frank L. Wooley, Head, Engineering Department, Technical Animations, Inc.

IT LOOKED LIKE an ordinary 35-mm slide . . . until it was projected onto the screen. Then strange things began to happen.

The image—a color diagram of a human heart—began to move. Students watched blood flow to and from the heart; saw the valves operate and muscles contract to cause heartbeats.

Sound impossible? Not at all. Today, Technical Animations, Inc., is manufacturing mass quantities of these 35mm slides, each featuring the same animated motion used in larger "TECHNANIMATIONS"® (a varied line of displays including outdoor billboards, TV weather maps, and scientific displays for conventions, museums and institutions.)

Complex Action on Slides

Thanks to a new in-plant photographic system—based on light-polarizing film and a photosensitive resist—it is now possible to miniaturize and incorporate complex movements on heretofore static 35mm slides, and at a sharply-reduced cost that brings them into the mass markets of education, sales promotion, display and home entertainment. This new development is based upon a patented technique licensed to Technical Animations by the inventor, Philip Boone of Winchester, Massachusetts.

The Military Services, for example, have found these slides extremely valuable in place of conventional display panels which are bulky, expensive and difficult to maintain. One 35mm slide can now do the job of a mechanical

training device, an item often carrying a price tag as high as \$10,000. Moreover, it is possible to compress all the visual aids needed in a complete training course—enough training panels to fill an entire room—in one slide tray.

Used by Industry and Schools

Sets of these slides are also being marketed to schools around the country. Working in continuous repetitive motion, each scientific visualization demonstrates the topic under discussion. The human circulatory system pulses, gases explode, currents flow, planets revolve in orbit. It is possible to trace the movement of fluids through a plant, or plot the path of a rocket to the moon.

Segments of industry, too, are utilizing "Technamated" slides, primarily for promotional and sales training purposes. Television stations are investigating their application in 10-second spot commercials.

New Approach Lowers Costs

All of these applications are now feasible because of a newly-developed photographic production method which fractionalizes costs of mass manufacture of "Technamated" slides, so that now the quantity price is under a dollar.

To understand how a "Technamated" transparency or slide works, it is necessary to understand something of the principle underlying its animation characteristics, a process utilizing the unique characteristics of polarized light to create movement.

In a light-polarizing film or fil-

ter, the molecules are oriented in a given direction or axis. Light entering the filter is polarized in this direction. When the light, thus polarized, enters a second light polarizing filter whose polarizing axis is parallel to that of the original filter, it is transmitted freely by the second filter. However, if the polarizing axis of the second filter is at right angles to that of the first, the polarizing axes are crossed and practically no light will pass through the second filter. The amount of light which can pass through the two polarizing filters, then, is dependent on the angular relation of their polarizing axes.

Steps in Re-Creating Motion

This phenomenon is utilized in creating motion. Let us assume that we start with a conventional picture of a human heart in color, and that we wish to animate certain areas. We make a transparency of the picture in color and in desired dimensions. The areas within which we wish to add motion are selected. Each of these motion areas is associated with a light polarizing area having several different directions or axes of polarization.

When polarized light having a given polarizing axis strikes these areas, they transmit the light in varying degrees, depending on their respective axes, which are, typically, 0, 45, 90 and 135 degrees in a preferred construction. Now, by varying the polarizing axis of an incident beam of light, that is, by constantly turning a light polarizing filter in front of

a light source, we continually and progressively change the relation of its axis to those of the polarizing areas. One area after another appears to progressively change in density and the illusion of movement is created.

From a manufacturing standpoint, no particular production difficulty would be encountered in a manual technique of making reasonably large-sized animated transparencies. In one method we can start with color artwork, select the areas we wish to animate, and make the transparency by preparing polarizing segments or sections to fit the specific areas and manually bond them to the back of the transparency. Numerous problems arise, however, when we try to apply these methods to the manufacture of small 35mm slides.

We first attempted the production of 35mm slides, on a large scale, three years ago when we made up an order of 40,000 slides.

35mm Size Presented Problem

Our regular manual techniques for large transparencies, we soon discovered, required the skill and patience of a Swiss watchmaker. Girls working with magnifying glasses applied the separate light-polarizing sections with pressure-sensitive cement. Even so, we were unable to produce an animated slide smaller than 2" x 2". Moreover, the amount of animation material that could be added was extremely limited; not nearly up to the degree possible for a large transparency.

Working with these handicaps, it took twenty people three months to complete the project. Quite obviously, we were going to have to find a far more economical method of manufacturing slides if we ever intended to market them on a mass basis.

The answer proved to be a new photographic process by which we

Animation patterns are created to fit areas of original art where movement is desired.

Animation art is mounted on optical printer. Light source is directly behind the art. The camera of the printer is then loaded with coated polarized film used in process.

were able to completely miniaturize all polarizing components producing animation, utilizing the fine accuracy of direct photographic images. Key to this system was a specially prepared light polarizing film which is sensitized with a photosensitive resist before use.

Special 35mm Polaroid Film

The film basically is a specially prepared 35mm Polaroid film stock composed of a central support and a special layer on each of its outside surfaces. Each of these layers has been treated with a dichroic dye to render it differentially light polarizing because each outer layer has its polarizing axis oriented at right angles to the other.

Thus, as above described, no light can pass through the film stock and it appears opaque. The angles of axial orientation of these polarizing layers correspond to those employed in making our large animations. One length of film stock is prepared having layers oriented, for example, at 0 and 90 degrees. A second film strip is prepared having its axial orientation at 45 and 135 degrees.

Coat Each Layer With Resist

Each light polarizing layer is then coated with a photo-sensitive resist. This coating is Kodak Ortho Resist or KOR, a tough, new plastic which can be applied in liquid form to almost any surface, forming a water-insoluble and water-resistant coating. After exposure to light, non-exposed areas develop away in organic solvents, leaving a resist pattern. KOR also is one of the few substances which will adhere tenaciously to the dyed polyvinyl alcohol light polarizing layers of the film.

Coating is accomplished in a machine of our own design and manufacture. Operating at a speed of 50 feet per minute, the machine automatically applies a 1/10 mil layer of KOR to both sides of the

Technamation is bringing animated movement to the miniature 35mm slide through use of polarized light.

polarized film. The coated film is then solidified in a special drying cabinet and taken up on a collection spool.

Cooperation Made It Possible

The cooperation of Polaroid Corporation in supplying the basic film stock has been of material assistance in our ability to produce slides economically and in mass quantity. Moreover, because the KOR-coated film enables us to use a direct photographic process, we are able to provide a maximum of animation in the slides.

In production, the original color artwork for each slide is prepared full-size by our artists. The full-size animation art is prepared in outline on white paper rather than on the light polarizing film stock as is the case in our technique of making large transparencies. This is because the film stock is light polarizing in the polarizing directions or axes that we require to start with.

The animation art or photo-

graphic subject, a complete image with the areas to be animated specially designated or blacked out, is then photographed by a special pin-registered copy camera and developed as a negative image. The color artwork is photographed on the same pin-register camera and developed to form an Eastman 5251 color master negative.

Both black and white animation negatives and color negatives are prepared in 8" x 10" size and punch-registered, using the Kodak punch system.

5 Exposures on Each Slide

The negatives are then put into a special optical printer and are used to make the positive prints for our slides. Each "Technamated" slide we manufacture is the result of five separate exposures in this printer, one for each of the four animation image portions or sequences required and one negative for use in preparing a full-color print of the photographic subject. The printer provides spe-

cial lighting for both black-and-white and color photography and insures that all elements are in perfect registration. One of each of the animation negatives is mounted on the stage of the printer. A powerful light source projects the image forwardly through the negative onto the 35mm polarizing film stock coated with photosensitive resist.

The light passing through one animation negative produces exposure of one side of the coated polarizing film. The film is reversed and a second animation negative is used to expose the other side of the coated film. This means that we have two animation positives exposed on opposite sides of the same frame of polarizing film that have been made possible by the fact that no light has penetrated through the film because the polarizing axes of the polarizing layers are at right angles to each other. The procedure is repeated for the second assembly of

Now the polarized film is being coated with Kodak Ortho Resist before being exposed . . .

Then the coated polarizing film is dried in the specially-built drying cabinet below . . .

Final step: Technamated filmstrip is checked for registration of the polarized animation.

ANIMATE 35MM SLIDES:

(CONT'D FROM PREVIOUS PAGE)

photosensitive resist coated film stock using the other two animation negatives.

After both film assemblies have been exposed, the coating of KOR is developed. Wherever light has reached the photosensitive resist it hardens and remains as a resist pattern, protecting the dichroic-dye polarizing film material directly underneath. Wherever light has not reached the KOR, it does not harden and, as a result, is washed away.

Dichroic Dye "Bleached" Away

Next, the dichroic dye of the polarizing layers, unprotected by the hardened resist, is "bleached" away; that is, everywhere, except in the areas protected by the KOR. This leaves two light polarizing images of the desired animation sequence corresponding to those of the animation art.

The film is next washed and dried. The master color negative is finally placed in the optical printer so as to be in exact registration with the pins which held the animation art negatives. We change the light to a color-balanced source and shoot as many frames of 35mm Eastman 5385 motion picture print stock from the color negative as needed.

Three Frames Are in Register

After the color print frame of film has been completed, it is fastened to the two completed frames of light polarizing animation material by means of eyelets through the sprocket holes. The three perfectly registered frames are then mounted in a 35mm mount in a standard mounting machine.

The results of this method are very satisfactory. The process is quick and efficient. We are able to get far more, and much finer animation in a single slide than has ever before been possible. The method eliminates tedious, time-consuming manual techniques and enables us to mass produce far better slides at a cost which is economically practical for the ultimate user in the field.

General Electric's new film "Rapid Transit" offers major U. S. cities an answer to growing traffic congestion through balanced transportation systems such as the solution pictured in this art sequence.

ANSWER TO URBAN TRAFFIC

New General Electric Film Shows "Rapid Transit" as Vital Link in Balanced Transportation System

MORE THAN 15 American cities will be building new rapid transit systems before 1980—eight of them will begin construction within the next six years.

In all, 30 U. S. cities will have rapid transit lines under construction by the turn of the century.

These are predictions made in a new film, *Rapid Transit—The Vital Link in a Balanced Transportation System*, recently released for showing to civic groups by the Metropolitan Transportation Development Unit of General Electric in Erie, Pa.

Scenes of Existing Systems

The 12½ minute color film shows scenes of existing systems in the United States and Toronto, Canada, and forecasts new rapid transit facilities soon to come in Washington, Los Angeles, Atlan-

ta, Pittsburgh, Miami, St. Louis, Seattle and Baltimore.

Today, only five cities—New York, Chicago, Boston, Philadelphia and Cleveland—have rapid transit.

Key to Better Urban Living

General Electric believes that balanced transportation is the key to better living in our large metropolitan areas, the film points out. By "balanced", the company means a combination of autos on expressways, feeder buses, outlying parking and high-speed rapid transit—each used to its best advantage to enhance the value of the others.

Rapid Transit... was produced by GE's Audio-Visual Communications Section

New WRI Picture Shows How Contractors Save Time, Costs

☆ Case histories of building projects throughout the U. S. are used to show how contractors saved time and money by use of welded wire fabric in the current 24-minute, 16mm color motion picture, *Structural Fabric—Time Saved for Builders*. The Wire Reinforcement Institute, sponsor of the film, is offering prints on free loan through Modern Talking Picture Service, Inc.

The film also reports on the increasing use of structural fabric with big wires up to half-inch in diameter. Case histories shown in the picture range from high-rise apartments in New York to warehouses in Colorado, from a new field house in New Hampshire to a jail in Michigan and include an air terminal in New York as well

as an auditorium in Tennessee. Throughout these sequences, emphasis is on time saved on the projects through the use of wire fabric.

The Institute, which represents manufacturers of over 85% of U. S. and Canadian wire fabric production, prepared the film as part of its continuing program of information and service to the building field. Construction firms—their engineers, superintendents and foremen; local, state and provincial contractors' associations; private and public awarding authorities; and others interested in

Nabisco Bakery addition in the Chicago area is pictured in this sequence from "Structural Fabric" film, showing how large sheets of structural welded wire fabric are used to reinforce floors.

building construction may obtain the film without charge (except for return postage) from regional libraries in the U. S. and Canada.

Address loan requests to Modern Talking Picture Service, Inc., 3 East 54th St., New York, N. Y. 10022. The film will be shipped from the nearest library.

Two Pictures for Foundrymen Announced by A-D-M Division

☆ The Foundry Products Division of Archer Daniels Midland Co., Minneapolis, has released two new films in color of special interest to foundrymen. Titles are: *The Hot Box Process* and *Bentonite—the Wonder Clay*.

The *Hot Box* picture includes sequences showing the use of this process by major foundries in the U. S. and Canada, runs 20 minutes. *Bentonite* title covers a 15-minute film of mining and quality control operations and includes typical uses in foundries, pelletizing, oil well drilling, water seepage control of ponds and water-logged construction areas as well as fire-fighting from airplanes.

AT THE AWARDS BANQUET, climax of the recent 1964 conference, Robert J. Gunther became the first one ever to receive the Gold Honorary Membership card of IFPA.

"Honorary Membership," so states our by-law, "may be granted upon recommendation of the Honorary Membership committee, when confirmed by three-fourths of the National Directors . . . Honorary Members shall be exempt from payment of all dues."

Bob Gunther's card was presented by his long-time friend, Robert S. Scott, like Gunther a past National President of IFPA. In fitting tribute, Bob Scott declared that to him and most other IFPA members, "Bob Gunther has always been Mr. IFPA."

One of IFPA's Founders

In the fall of 1956 Bob Gunther was one of the group of interested people who, in monthly meetings, became aware of the need for a professional society of in-plant film makers.

IFPA was formally organized in 1957. Its first constitution and by-laws were very simple to allow quick adoption and get IFPA going.

During the next two years Bob Gunther radiated an infectious enthusiasm for IFPA. To list the committees he served on, the offices he held, or the many odd jobs for which he volunteered would only belabor the point. Suffice it to say that, in two years, he gained enough experience and reputation in IFPA to be elected National President for 1959-60.

We Achieved National Status

During his administration it became apparent that IFPA was developing into a national organization and would need to incorporate, eventually, as a non-profit corporation. The original constitution and by-laws had been designed for a purely local group and were so unsuitable to the new scope of the organization that an amendment or patch job was considered impractical. A new constitution and new by-laws had to be drafted.

By a strange and fitting coincidence, these by-laws, adopted during Bob Gunther's presidency, were the first to provide for Honorary Memberships.

For five years thereafter, the Honorary Membership category was dormant. But Bob Gunther was not! With the same enthusiasm as before he propelled IFPA and served IFPA through national

and the ranks of the members to determine if anyone was truly qualified. The committee consisted of Don Whaley, Brent Inman, and myself as chairman, all old-timers in IFPA. Our choice was clear.

Laurels, when rested upon, tend to wilt. Bob Gunther must know this — or else, why would he serve again currently as a National Committee Chairman? IFPA is indeed blessed if his kind of infectious enthusiasm never dies.

Congratulations, Bob, on becoming our first Honorary Member — the first of a group which, we hope, will grow as more and more members join and serve IFPA!

Let's Hear from Chapters. Members With Editorial Notes

☆ With our Editorial V.P. again performing in the films, there's urgent need to file news of the chapter meetings, elections, and notes on your programs.

Drop your items into the mail c/o National Headquarters' P.O. Box 564, Hollywood, Calif. And remember we're interested in news of your own film activities.

Scene in "Rendezvous in Space" which Graphic Films produced for Frank Capra and the Martin Marietta Corporation for World's Fair showings. Les Novros' IFPA talk, "New Techniques in Animation" follows on page 44.

On New Techniques in Animation

Producer Les Novros Details His Company's Experience on Four World's Fair Projects

TOO OFTEN, the claim for new techniques in animation turns out to be disappointing, either because the technique may not be new at all or because novelty, of itself, just isn't sufficient to recommend it.

For example, the manipulation of frames to suggest movement with a minimum of visual change is as old as animation itself, yet the phenomenon is constantly being re-"discovered." Computers do not contribute anything to the animated film when they merely replace the assistant animator.

New experiences require new modes of expression, but not necessarily new techniques. The early UPA films were not essentially different *technically* from the Disney films, although they differed widely in form and content.

New Forms in Our Future

On the other hand new forms do invariably follow from technical discovery and invention. The forms of contemporary architecture, for example, derive from the availability of materials made accessible by new industrial processes. "Glass alone," said Frank Lloyd Wright, "with no help from

us (the architects) would eventually have destroyed classic architecture, root and branch."

In film, the wide screen in itself produced nothing, whereas the stereo-film of tomorrow, used by film-makers aware of its expressive power, will encourage—or more—demand, the creation of new forms. The present uses of visual and acoustic elements and their dynamic inter-relationships that have assumed the authority of principles, may all be incompatible with the new technique. Content itself may be subject to its strict demands.

Four Films at World's Fair

During the past year, Graphic Films was largely involved in the production of four films for the New York World's Fair. Of these, two use familiar techniques and the somewhat incongenial limits of the Cinemascope field.

A third film is a version of one produced earlier for an Abbott Laboratories' exhibit in Chicago: *Chemical Man*. What was novel there was the shape of the screen, which was round, and its position—in the floor of the theater.

We had to accommodate the

design of the film to the circular field and to a 360-degree viewing ramp. This meant an up/down, right/left orientation that shifted with each viewer. However, it was not until we were asked to produce the Cinerama film for the KLM exhibit that we were confronted with formidable problems requiring novel technical solutions.

Exploring Space on a Dome

Cinerama had used a dome to house the Boeing exhibit at the Seattle Fair and wished to use it again in New York. There were two conditions: First, a greater technical control and a greater variety of content. From a number of themes under consideration we finally chose to develop one which came to be titled, *To The Moon And Beyond*.

The film is, in fact, an exploration of space—the vast events in outer space and the intricate workings of molecular and subatomic space. A rough script and the most tentative of storyboards were developed. (A final storyboard was never produced because we could never render in static drawings the qualities of continuous change that we were

seeking. There were doodles, fragmentary pieces of action, charts, working diagrams, abstract patterns, camera tests, countless photographs cut from magazines and mounted on the wall in the hope that they might suggest a clue for the organization in a few shots of the inexhaustible variety of matter.)

Modified a 65mm Mitchell

Simultaneously, Lin Dunn was modifying a 65mm Mitchell camera for the project . . . one camera which we were later to mount on the animation rig, dismount and remount in an airplane or a trip for the live sequences and dismount again for use on the optical printers. These actions were not consecutive so that the tactics of the job, in view of a fast-approaching deadline, were not the least of the difficulties we faced every day.

The building that housed the exhibit—the Transportation and Travel Pavilion—was not completed until the day before the scheduled opening. So we were never to know whether our calculations were accurate until it was too late to make corrections.

Simulated Dome in the Studio

The best we could do was to set up a small dome at our studio; it had a nine-foot diameter and was tilted on its side. The projector was used primarily to analyze

The Varied Skills for Aerospace Production

Below: Graphic Films' director Ted Parmalee (at left) discusses the story board and models for sequences in "Rendezvous in Space" film.

Animation rig and camera capture scene from the molecule sequence in "To the Moon and Beyond." Director Con Pederson is at lower right.

the distortions with which we would have to cope.

The dome of the building would measure approximately 106 linear feet across its surface from edge to edge, about three times the area of any previous motion picture field. The actual film image has a circular aperture about two inches in diameter, twice the size of a standard 70mm image. Only 10 circular 2-inch frames could be exposed per second. Since the film would be projected at 18 frames per second, we were forced to work with ratios which, in the live action photography, accelerated normal speeds.

Had to Avoid Tracking Shots

This fact, the inadequacy of the camera for tracking shots of any kind, the lens and the shape of the dome—all were factors in the choice of specific content. So, in our film, a spider may spin its web, but no birds fly.

The 160-degree lens was designed especially for the project. The front surface measures almost a foot in diameter and its weight required that it be fastened to a large solid steel bed on which the camera was also mounted.

The form of the film was largely influenced by the picture field of the dome. In the traditional film, the dimensions of the screen furnish the coordinates for the basic pictorial plan. The dome effectively destroys the two-dimensional screen surface. We are only once removed from the stereo-field. Objects may occupy

Moon background for the Cinerama film: the distortion required by projection on the dome was "built into" the layout and painting.

any place in the vaulted area, suspended or moving without reference to a frame. When the dome is filled, the viewer experiences a space, shaped but unbound. He is enveloped and sometimes engulfed.

Picture Has Four Sequences

The content of the motion picture is roughly divided into four sequences: 1. Prologue; 2. The origin of galaxies and stars; 3. Earth; and 4. Sub-microscopic space and substance. Animation and 3-dimensional models were used for all sequences except the exploration of earth.

In the representation of galactic space, verisimilitude was of primary importance. This ruled out the use of painted representations, in the ordinary sense; brush-strokes and the grain of paper magnified over 600 times would certainly weaken the effects we wished to create.

Astronomical photographs were also ruled out. For one thing, the stars recorded on photograph plates, due to long time-exposure, possess softening halations; when projected on even the small dome, it was found that great magnification made them lose their sharp, star-like quality and appear, instead, as large, soft, blobs of light.

Giving Viewer Depth Feeling

Further, we wished to intensify the viewer's experience of depth and movement, to surround him

the picture and the movement through these elements.

Three-dimensional models of galaxies and nebulae with suspended points of light representing stars were inadequate for our

Below: this nine-foot dome was constructed for viewing dailies on "To the Moon and Beyond." Les Norros is standing at the projector.

On New Techniques in Animation:

purpose. Bright clouds of incandescent gas and dark clouds of dust had to be penetrated by the camera. "Stage-smoke," even if its movement and density could be controlled, would in no way resemble the formations of galactic clouds.

After a great deal of experimentation, a process was developed employing special pigment suspended in liquid, by which the various galactic cloud and dust formations could be duplicated with considerable accuracy and control. The luminosity, density and color were regulated through photographic processes and transparent dye.

Achieving Scale and Depth

The suggestion of immense scale and depth was achieved by plotting the relative movements of all the component elements and moving them, while being photographed, along an extremely fine scale of increments, sometimes figured in thousands of an inch per frame.

The experience of depth was increased through multiple exposure and travelling mattes. For large, bright stars, it was necessary to use small, intense light sources shining directly into the camera lens. Diffraction gratings were used to produce the flares.

In approaching the earth, movement through cloud formations was photographed from a specially modified aircraft. The camera had to be mounted upside down and in a manner which would not include in the frame parts of the aircraft itself—particularly difficult due to the wide-angle coverage of the lens.

Visual Experience in Nature

We shot canyons in Death Valley, redwoods in the California State Park, fish underwater; we shot a dandelion, ants in their

hole, a butterfly, an owl and a spider. In deciding to include the spider we reckoned without his behavior patterns. The native spider spins only in the summer months and we were obliged to import willing specimens from Mexico.

Several methods were devised to represent sub-microscopic space. Depth was usually suggested by superimpositions of many levels of art-work, and for some sequences a multi-plane device was constructed using large circular panels of glass. The molecular structures delineate a protein-building process, slowed down about 100 times.

A unique computer-driven device was used for part of this sequence. It could be programmed to follow an infinite number and variety of eccentric movements. By shooting through variably arranged apertures, simple geometric shapes were broken up into myriads of projected images and, by a repetitive process called "stepping," evolved into intricate and complex patterns.

No Precedents for Reference

In reviewing the making of the film and taking into account that there were no precedents to which we could refer . . . that the day the camera came out of the shop it went into production . . . that there were days of equipment mishap beyond our understanding . . . that we relied almost completely on mathematics of a sort to transform distorted images into an enveloping visual experience . . . we recall almost with unbelief that day when the first audience came into the theater, the projector switch was turned on and the dome was filled with a great flow of images and sound that combined to form a unique film experience. •

These Americans Need Your Help

Food for Business & Community Discussion in Two Pictures on Unemployment and the Migrant Worker

TWO RECENTLY-RELEASED motion pictures offer many discussion points for business, industrial, education and community leaders working to improve employment and living conditions. *The Newcomers*, a 25-minute black & white film, was produced by The Methodist Church, which is also one of seven denominations in the National Council of Churches sponsoring *The Captive*, an Edinburgh Festival entry (black & white, 28½ minutes).

The Captive documents poverty in West Virginia. Herb Honaker, 33, an unemployed coal miner

"The Captive" takes the viewer into the life of one unemployed man . . .

with a wife and three small children, tries to find "some kind of substantial work to do."

Herb's conversations with his wife and neighbors are recorded "just as they happened."

Getting Rapport With Herb . . .

The producer-director, William C. Jersey, of Quest Productions, was asked how he established rapport with Herb. He credited Herb's confidence in his neighbor, Rev. Jack Weller, the narrator. Mr. Jersey said, "You have to respect the people and the situation before you can ask them to be themselves."

Throughout production, Jersey worked with Rev. Dr. Henry A. McCanna, Executive Director of the Department of the Church in Town and Country of the National Council of Churches, which in March 1962 undertook a film to point out the extent and effect of poverty, especially poverty of the spirit. It is intended to help stimulate discussion of steps toward elimination of poverty. Dr. McCanna's discussion guide is provided with *The Captive*.

A Stimulus to Government

To Dr. McCanna, C. B. Gilliland, Executive Secretary of the Advisory Committee on Rural

Areas Development of the Department of Agriculture, wrote,

"*The Captive*, with its human interest story, has stimulated much poignant thought and discussion among Federal people as to just how the government programs can assist the people in most need. The job of motivation will be one of our greatest challenges."

Problems of "The Newcomers"

The Newcomers shows Appalachian families who have migrated to Cincinnati and the inner-city church workers who do their utmost to help the migrants find jobs, decent housing and the companionship of people from "back home."

A former coal miner, Curtis Ayres, and his wife and five children, the Burton family who are "bulldozed" by slum clearance projects, and numerous newcomer children and teenagers are befriended by Mrs. Worley of State Avenue Church, Bill Nelson of Emanuel Community Center, and the Rev. Robert Sinks.

How Communities Can Help

Staff members' remarks and the narration were scripted by the director, George C. Stoney, "by re-writing material I gathered in taped interviews." As the church personnel demonstrate practical guidance, they indicate additional help needed from the community. Eight steps for helping newcomers are suggested in the discussion guide.

Under the supervision of Dr. Philip C. Edwards, Director of the Department of City Work in The Methodist Church, *The Newcomers* was produced to guide groups exploring the 1963-64 Mission Theme, "The Changing City Challenges the Church."

Job Corps Using Both Films

One indication of the usefulness of *The Newcomers* and *The Captive* throughout community and nation is the fact that both are used in staff training by the Job Corps, part of the Office of Economic Opportunity.

The Newcomers may be purchased from A-V Services, The Methodist Board of Missions; *The Captive*, from the Broadcasting and Film Commission, National Council of Churches. Both are at 475 Riverside Drive, New York, N.Y. 10027. The price of each film is \$140.00. •

PREVIEWING THE INTERNATIONAL IN LONDON:

A five-day festival organised by the British Industrial Film Association with the support of the Federation of British Industries and the British Employers Confederation under the auspices of the Council of European Industrial Federations.

(CONTINUED FROM THE PRECEDING PAGE 18) techniques in modern industry—intended for management and industrial administration students.

Film has long been recognised as a powerful sales training aid and Sweden's *Sales Talk* (Svenska Saljledargruppen) outlines the principles of effective selling by using the telephone.

Specialized Films for Industry Viewing

In more specialised fields, *Shutdown*, B. P. Ltd. (Britain), details an effective procedure for planning and carrying out the shutdown of an oil refinery for its periodic maintenance and cleaning operation. *Critical Path*, sponsored by Britain's Richard Costain Company, explains P.E.R.T. for production engineers. Shell International Petroleum shows *Frontiers of Friction* which explains the principles and effects of friction to trainee engineers, Philips of Eindhoven (Netherlands) presents *How to Solder* for electronics operatives and *Metal Bandsawing Tips and Techniques* is sponsored by Simonds Saw and Steel Company (U.S.A.) to assist many industrial training situations.

Examples for even greater specialization in the use of motion pictures in training are Pan American World Airways' *Man the Manager* which relates the development of management responsibility to the jobs of the company's own managers. An interesting corollary is seen in the German Württembergische Metallwaren-

Fabrik's *Die Praemie* which provides a challenging film to stimulate teen-age workers to argue about the social and economic advantages of hard work and promotion.

Job, Accident Films from Mining Industry

For management and supervision in Britain's newly automated coal mines there is *The Team on 204s* which defines the jobs and their inter-relationship to a new coal face operation.

Mining offers the majority of accident prevention films—seven short Do's and Dont's from France *Serie de Films Minute* (Houilleres du Bassin de Lorraine)—a similar treatment in *Von Punkt zu Punkt* (Germany) and *The Lion's Paw* made by South Africa's Transvaal & OFS Chamber of Mines especially for African miners.

Two Keynote Sessions for the Conferees

Two significant features at this year's Festival are the "keynote" convention sessions—"The Value of the Industrial Film as a Medium of Promoting Sales" about which there is considerable divergence of opinion between the U. S. and British sponsors on the one hand and certain European sponsors on the other.

This should be a lively one with top line industrial speakers from many countries. The other session on "The Means by which Films can be shown to International Audiences" will be a fact-finding survey of the most effective

international distribution and presentation channels throughout the world. There will be experts from many lands ready to share their experience and ideas with their counterparts from Britain. See you in London in November!

STATEMENT OF OWNERSHIP, MANAGEMENT AND CIRCULATION (Act of October 23, 1962; Section 4369, Title 39, of Publication: Business Screen Magazine. 3. Frequency of United States Code). 1. Date of filing: October 12, 1964. 2. Title of Publication: Business Screen Magazine. 3. Frequency of issue: published eight times annually, at six-week intervals. 4. Location of known office of publication: 7064 Sheridan Road, Chicago, Cook, Illinois 60626. Location of headquarters of general business office of the publishers: same. Names and addresses of publisher, editor, and managing editor: Otto H. Coelln, 7064 Sheridan Road, Chicago, Illinois 60626.

7. Owner: If owned by a corporation, its name and address must be stated and immediately thereunder the names and addresses of stockholders owning or holding 1 percent or more of total amount of stock. If not owned by a corporation, the names and addresses of the individual owners must be given. If owned by a partnership or other unincorporated firm, its name and address as well as that of each individual must be given. Business Screen Magazines, Inc., 7064 Sheridan Road, Chicago, Illinois 60626; O. H. Coelln, 7064 Sheridan Road, Chicago, Illinois 60626; Robert Seymour, Jr., 442 West 57th Street, New York, N. Y.; D. D. McCutcheon, Chicago, Illinois; Helen Speer McCutcheon, San Francisco, California; Catherine M. Baker, Evanston, Illinois.

8. Known bondholders, mortgagees, and other security holders owning or holding 1 percent or more of total amount of bonds, mortgages or other securities (If there are none, so state): NONE. 9. Paragraphs 7 and 8 include, in cases where the stockholder or security holder appears upon the books of the company as trustee or in any other fiduciary relation, the name of the person or corporation for whom such trustee is acting, also the statements in the two paragraphs show the affiant's full knowledge and belief as to the circumstances and conditions under which stockholders and security holders do not appear upon the books of the company as trustees, hold stock and securities in a capacity other than that of a bona fide owner. Names and addresses of a corporation which itself is a stockholder or holder of bonds, mortgages or other securities of a publishing corporation have been included in paragraphs 7 and 8 when the interests of such individuals are equivalent to 1 percent or more of the total amount of the stock or securities of the publishing corporation.

10. Total No. Copies Printed (Net Press Run): Average No. copies each issue during preceding 12 months: 8,500; Single issue nearest to filing date: 8,500. B. Paid Circulation. 1. To term subscribers by mail, carrier delivery or by other means: average number of copies each issue during preceding 12 months: 7,500; single issue nearest to filing date: 7,289. 2. Sales through agents, news dealers, or otherwise: none. C. Free distribution (including samples) by mail, carrier delivery or by other means: average No. of copies each issue during preceding 12 months: 1,000; single issue nearest to filing date: 933. Total number of copies distributed (sum of lines B1, B2 and C) Average No. of copies each issue during preceding 12 months: 8,500; single issue nearest to filing date: 8,500.

I certify that the statements made by me are correct and complete. O. H. Coelln, Publisher

SCIENCE + SPEED = SATISFACTION

NEED A FILMSTRIP IN A HURRY? *Special meeting? New product? Client presentation?* At CFI, we know what it's like to meet tight deadlines. Our experts really work with you timewise, and your rush jobs get tender loving care, backed up by the best lab facilities. *How fast can you get a filmstrip?* Our normal delivery is one week. On super rush jobs, given half a chance, our experts will meet a tight schedule. *Need a special piece of art? Hand lettering? Type setting? An original frame?* Our art talent can do. Or we'll copy your flat artwork up to 24" x 32" (32 field). *Product to shoot?* We'll photograph it right into your filmstrip against a colorful background. *Different size transparencies?* We shoot directly from 35 mm through 8 x 10 with no intermediate reduction step to cause loss of color or detail. With speed and service, at CFI you always get the same faithful color balance in all filmstrips, with minimum contrast gain and frame to frame correction to insure over-all balance. And our unique continuous-loop printing equipment assures you absolutely uniform filmstrip prints from scratch free negatives. *Just want comfort?* Pick up the phone and talk to us. Ask for Lou Livingston at HO 2-0881.

Your filmstrip benefits from the superior facilities and technology that have been developed to meet the high standards of the motion picture industry.

SEE RIGHT TO DRIVE SAFELY

Film Series Shows That Eyes Hold Key to Road Safety

A NEW SERIES of five 10-minute driver training motion pictures, scheduled for release later this year by the National Safety Council, carries as its central theme the fact that the eyes hold the key to safe driving.

Aimed for showings to professional drivers of trucks, taxicabs, buses and other commercial vehicles, the new film series assumes that members of this audience have the necessary mechanical driving skills, so the subjects concentrate on teaching these drivers to do a better job of using their eyes to avoid trouble.

The series is being produced by Pilot Productions, Inc., Evanston, Illinois. Because the concept of a realistic "seeing" situation calls for the camera to be in what normally would be the driver's seat, Pilot is using a specially-built right-hand drive camera truck.

The five films are based on the same number of principal points in the Smith System of driver training, as developed by Harold L. Smith of Los Angeles. Smith is assisting in the technical supervision of the series. The first film, *Aim High in Steering*, tells how steering is improved by high visual aim and how it helps the driver keep a larger "space cushion" around his vehicle.

The second film, *Get the Big Picture*, explains how to use fringe vision as a scanning device to select the critical elements in the traffic situation as they are to be brought into sharp focus. It also tells how the expert driver constantly concentrates on the situation his vehicle is moving into.

Keep Your Eyes Moving spells out the dangers of "fixed stare" driving as it explains the need to develop the practice of shifting eyes every two seconds. The fourth film, *Leave Yourself an Out*,

Keep your eyes on the road, not the girl, is "message" in this scene from driver safety series.

Pilot camera truck used special right-hand drive to film series.

gives tips on ways to anticipate what the other driver might do to set up a dangerous situation—and how to avoid traffic traps. Finally, *Make Sure They See You* tells how to communicate to the other driver to make him aware of your presence.

The series will be available on release from the National Safety Council, 425 N. Michigan Avenue, in Chicago.

Films Build Career Interest for Occupational Therapists

☆ *To Pick A Life*, a new film designed to attract young men and women to occupational therapy, an allied medical profession unfamiliar to the general public, has been released by the American Occupational Therapy Association, a non-profit professional organization.

The film, and a series of related TV film spots were produced by Vision Associates for the Association under a grant from the U. S. Vocational Rehabilitation Administration, Dept. of Health, Education and Welfare.

Filming, under the direction of Seymour J. Weissman, took place in the children's and adults' occupational therapy department at Bird S. Coler Hospital on Welfare Island in Manhattan. The hospital was selected from other New York City facilities for the unusual charm of its environment.

The film and TV spots show two young student therapists "treating" a variety of physically disabled patients who overcame formidable crippling handicaps through occupational therapy treatment. The patients' joy in performing well for the camera lends much warmth to the film.

To Pick A Life, which was written by Milton Robertson, is 16mm color, five minutes in length. The TV shorts are b/w and run 60 seconds and 20 seconds, respectively.

THAT "WELCOME" GREETING

The Story of "The Welcome Wagon" Is Brought to Screen

NEWCOMERS TO TOWNS and cities throughout the country will fondly recall the friendly visit paid to them by a Welcome Wagon hostess; established residents, too, have found reaffirmation of community spirit when these ladies have remembered the occasion of important family milestones, such as wedding anniversaries and reunions.

Behind the Welcome Wagon idea, founded in 1928 by the late Thomas W. Briggs of Memphis, Tenn., are some 5,000 hostesses now operating in more than 2,000 cities, covering all 50 states, Canada, Puerto Rico, Trinidad and the United Kingdom. On Monday evening, September 21st, Welcome Wagon International leaders attended the world premiere of *The Welcome Wagon*, at the First National Bank auditorium in Memphis. Some 240 supervisors plus many local friends of the organization were present.

A 28-Minute Color Picture

Memphis Mayor Ingram and Norfleet Turner, board chairman of the bank, joined Mrs. Rosanne Beringer, president of Welcome Wagon International, in brief talks of welcome preceding the showing. Mel London, of Wilding, Inc., producers of the picture, was also introduced at the premiere.

The 28-minute color picture traces the evolution of the welcome wagon from the 19th century pioneers to today's station wagon, which has replaced the Conestoga of the 1800's. The spirit of community service which hostesses in all parts of the country and abroad bring to their work is a key theme.

Helping Their New Neighbors

The film shows graphically how Americans and Canadians are still a restless people and yet eager to put down roots, to "be at home and at ease" in their new communities. "It is Welcome Wagon's spirit of community service," the film says, "which helps a newcomer to adjust quickly and pleasantly to his new surroundings."

Prints will be used by the or-

ganization's supervisors for their own community premieres throughout the areas they serve. They were instructed at the leadership conference held during the period of the premiere on arrangements for showings, publicity, and physical details on projection, etc. The new picture is also intended to help in recruiting hostesses.

200 Atomic Energy Pictures Available from United World

☆ More than 200 16mm sound motion pictures produced for the U. S. Atomic Energy Commission will be distributed on a free loan basis by United World Films, Inc. Designed to serve as a key part of the Commission's information and education program, the films explain various aspects of atomic energy and are grouped in two separate catalogs.

One group has been designated as films for professional level group use and the other catalog lists films for non-professional or "popular" showings. Some of these subjects are cleared for television use and are so designated in the catalogs.

The professional-level films cover such subjects as Biology and Medicine, Aerospace programs, Research and Test Reactors, Industrial Applications, Peaceful Uses of Nuclear Explosions and other advanced studies. They are unsuitable for viewers below the university level or for non-students other than professional scientists, engineers and technologists.

Popular-level subjects deal with Atomic Energy Principles, Nuclear Propulsion, Atoms for Space, Radioisotopes, Radiation Hazards and other subjects, all of these presented in non-technical fashion.

How to Obtain These Films

Groups interested in arranging for free loan of these films and the scheduling of exhibition dates should write to the Free Film Department, United World Films, Inc., 221 Park Avenue South, New York, N. Y. 10003.

"High-Speed Basketball" is Latest in Coaching Film Series

The latest in the growing series of widely-useful coaching films offered by the National Collegiate Athletic Association is *High-Speed Basketball*, a success story of Loyola University of Chicago's 1963 NCAA championship team that averaged 91.8 points per game to lead the nation in scoring.

Like other NCAA films on track and football, *High Speed Basketball* was made with the financial cooperation of Brunswick Sports — maker of MacGregor athletic equipment, and Nutrament, the "liquid meal for athletes." It was produced by William J. Ganz of the Institute of Visual Communications.

Loyola's continuously pressing offense has been referred to as "organized confusion." The film shows how Coach George Ireland's highly organized practice sessions teach the team to get off 40 per cent more shots than the competition on the theory that you can't score unless you shoot, and you can't win unless you score.

As a result, Ireland's practice program contains a marked emphasis on developing scoring skills. Included in *High Speed Basketball* are such fundamental practice patterns as drilling with smaller basket rims, "falling in love with the basket" where players practice tip-ins and lay-ups from every angle, "dunking", rebounding for scores, and a form of automation with a mechanical ball retriever so the players can shoot continuously.

In addition, Coach Ireland illustrates such other coaching fundamentals as speed-up drills for sharpness in ball handling, running backwards to develop agility and a knack of footwork for proper covering, an actual mode of acquiring peripheral or split vision, and a top-speed dribbling routine of musical chairs.

High Speed Basketball should prove especially valuable and exciting to the 821,341 college, high school and junior high school basketball players of the country and their 31,593 coaches, as well as the 12,000,000 other occasional participants in the game.

The 28-minute film, which is offered on a free-loan basis to NCAA members, is also available for rental or sale in b w or color, to high schools, junior colleges and other groups from the National Collegiate Film Service, 420 Lexington Ave., New York City. •

FILM SERVICE BREAKTHROUGH

Producer-Lab Cooperation Brings Color Films of Pro Football Games to TV Viewers in Three Days

COLOR FILMS of each Sunday's National Professional Football League games are being televised throughout the country the following Wednesday evenings as the result of a technological breakthrough in engineering by Washington, D. C. and Philadelphia film production firms with the cooperation of the nation's airlines.

Backstage generals of a task force which starts working when the whistles blow in major football league cities around the nation over the weekend and don't stop until the footage is delivered to television stations from coast-to-coast on the following Wednesday are Edwin W. Sabol, president of Blair Motion Pictures, Inc., of

Philadelphia; Dudley Spruill, general manager of Byron Motion Pictures, Washington, D. C.; and Sid Atkins, of Eastman Kodak's color processing plant in Washington.

Film Games in Seven Cities

The service was initiated on Wednesday night, September 16th. As Sabol explains the split-second film maneuvers on this first operation, teams of 13 cameramen in the seven National Football League cities from Los Angeles to Philadelphia started shooting the plays and halftime excitement in color, while in the press boxes trained observers were writing down descriptions of the plays.

At the final whistle, messengers were waiting to rush the film and paperwork to airports in the league

cities where the cannisters were marked for special handling and were soon winging their way to Washington on commercial carriers. Other messengers were waiting at Washington's two airports and at Friendship in Baltimore to rush the footage to Eastman's color lab on Okie street where films of each of the seven contests were processed into 2,000 feet of color film.

Edited into 900-Foot Reels

Film by film, each series was then rushed back across the nation's capitol to Byron Motion Pictures' plant on Wisconsin Avenue in Georgetown where a team of technicians and editors from Blair Motion Pictures edited the games down to 900 feet each. The edited film was then timed and printed by a special team of Byron technicians and whisked back to Eastman for processing . . . back to Byron for final editing and on to the airport for shipment to television stations in 13 National Football League cities where fans saw their teams in action on Wednesday night.

Sabol estimates that the 14-week operation will cost \$450,000 in film stock, production, rights and transportation alone. In addition, Blair will produce half-hour color and end-of-season highlight films for 10 of the teams and a color film on the NFL World Championship Play-Off Game. •

INFORMATION EXPLOSION:

(CONTINUED FROM PAGE 38)

was provided by a human orchestra as well as an electronic one.

The Information Explosion was directed with strength and clarity by Seymour J. Weissman, who punctuated this telling message with a brief episode at the conclusion of the picture, in which our chief computer technician turns his back on the whirling machine and breaks its main power cable. He swings around in his chair and gloats: "I just wanted to show you who's boss."

The film is available for rental or outright print purchase from Association Films' offices. •

You can improve immediately the effectiveness of audio-visual instruction with this new aid from Audio Visual Research, Inc.

This new rear projection cabinet relieves the five most common AV headaches

"Our darkened visual aids room goes unused too many hours every day."

"I'm never sure what's going on while the lights are out."

"Preparing to show a film wastes too much time."

"I usually see the film for the first time when I show it to my class."

"Storage of projection equipment creates real problems."

The new AV rear projection cabinet demolishes all these frequently-voiced complaints. It ends the need for costly darkened rooms. The lights stay on the blinds stay up. Instructors maintain supervision at all times.

The AV cabinet rolls easily from room-to-room, completely self-contained with your projector installed and a big built-in speaker. It per-

mits instructors to preview at their convenience. Easily, quickly stored.

GIVES YOU THESE ADVANTAGES

It gives you a distortion-free, 22"x28" picture on a new Polacoat non-glare screen. Cabinet accommodates most late-model projectors. Exclusive Buhl built-in lens (optional) provides full-screen presentation from projectors with two-inch lenses and larger, including slide and filmstrip projectors. Riser modification available to accommodate Bell & Howell projectors.

Prompt delivery guaranteed. Send for free brochure containing complete information. Order direct from factory or your AV supplier.

Troup Heads Eastern Sales for Acme Labs in New York

Robert C. Troup has been appointed vice-president, sales for the new East Coast offices of Acme Film Laboratories, recently opened at 400 Madison Avenue in New York City (Murray Hill 2-4100). The appointment was

Robert C. Troup

announced by Acme general manager Mel Sawelson of the Hollywood-based firm.

Acme maintains complete processing facilities at their headquarters' location. Mr. Sawelson noted, "Mr. Troup's eastern clientele will receive our usual in-by-

nine, out-by-five service with jobs getting back the same night for the next day delivery in the East."

A graduate of the University of Illinois and former Marine Corps captain, Troup came to Acme from VHF-Reeves, was previously associated with CBS-TV Production Sales and International Media, Inc. He resides in New Canaan, Conn., with his wife and son and is well known in tennis circles.

Niles v. p. Charles Ticho

C. J. Ticho Vice-President of Niles Communications Centers

The general manager of the New York studio of Fred A. Niles Communications Centers, Inc., Charles J. Ticho, has been named a vice-president of the national communications company.

Ticho has won numerous awards as a director. Among his recent achievements, he directed the 360-degree motion picture produced by the Niles organization for the New York World's Fair exhibit of the Port of New York Authority.

President Fred Niles noted that Ticho has been with this company since 1956, when he became an assistant director in New York. He had earlier been associated with Niles in 1950 when he served as assistant director on the television series, *Old American Barn Dance*.

A graduate of the Illinois Institute of Technology, Ticho spent the period from 1953-1956 producing motion pictures abroad, primarily in Israel. There he worked on such feature films as *Hill 24 Does Not Answer* and *Every Mile a Stone*, as well as numerous short subjects.

Technicolor Officers Become Directors of Eversharp, Inc.

President Melvin H. Jacobs and executive vice-president Edward E. Ettinger of the Technicolor Corporation have been elected to the board of directors of Eversharp, Inc., parent firm of the Schick Safety Razor Company.

The announcement was made in mid-September by board chairman Patrick J. Frawley.

NEWS OF STAFF APPOINTMENTS AND A-V INDUSTRY DEVELOPMENTS

Perham Heads Bay Area Sales of the Better Selling Bureau

Marshall Perham, recently retired Lieut. Colonel, U. S. Army (after 20 years of service), has been appointed audio-visual consultant and sales director in the San Francisco Bay area for the Better Selling Bureau, Los Angeles' based audio-visual communications firm.

BSB president Dick Westen, in confirming the appointment last month, noted, "Marshall Perham's most recent assignment as director of audio-visual communications for eight states of the Sixth

Army, with headquarters at the Presidio, enables him to bring professional knowledge of inter-organizational communications that will be of great value to industry in applying new developments in audio-visuals to recruiting and training manpower and in selling."

Wagner Joins VPI Industrial Staff as Production Manager

A former Broadway stage manager, George Wagner, is the new production chief for VPI Industrial Productions, Inc. He will manage both industrial shows and

films. Prior to joining VPI, Wagner worked with Wilding, Inc. and at McCann-Erickson, Inc. as a production manager and production supervisor, respectively.

* * *

Burt Grodin Named President of ABC Camera Corp., N. Y.

Burton Grodin has joined ABC Camera Corporation, new professional motion picture equipment rental and sales organization at 352 W. 44th St., New York City.

Mr. Grodin has been in the photographic industry for 18 years, and was formerly a sales executive at Camera Equipment Company and at Camera Service Center. He is now president of the new company.

ABC will offer personalized rental and maintenance service to motion picture producers, including a deferred payment plan.

A fully-equipped machine shop and electronic engineering lab will operate on the premises under Max Blaine, former partner of Cine 60 Co. Among the new items of equipment to be offered will be a 400 ft. Auricon conversion. The new company is franchising selected audio-visual dealers nationwide as rental agents for professional motion picture equipment under the ABC label.

Science Research Associates Name Lewis as A-V Director

Science Research Associates, Inc., subsidiary of International Business Machines Corporation, has named Stephen Lewis as director of audio-visual materials. He will be responsible for the production and development of motion pictures, filmstrips, records and other audio-visual materials used with SRA learning systems in reading, mathematics, science, social studies and language arts.

The appointment was announced last month by Lawrence V. Willey, Jr., vice-president and executive editor of the company's Materials of Instruction Division. Lewis was formerly editor in the text-film division at McGraw-Hill Book Company and previously worked at Encyclopaedia Britannica Films and at Screen Gems.

He received his BA degree in English literature from Harvard University and spent a year in graduate study at Columbia. He also received a certificate from Centro Sperimentale di Cinematografia in Rome, Italy.

SOME SOUND ADVICE

When sound problems arise and you need technical help, consult with a Colburn Engineer.

Our versatile staff and facilities are well known throughout the industry.

Sound filmstrips, 8mm and 16mm, magnetic tape, 1/4 inch, 1/2 inch, 3/4 inch, 1 inch, 2 inch, 3 inch, 4 inch, 5 inch, 6 inch, 8 inch, 10 inch, 12 inch, 14 inch, 16 inch, 18 inch, 20 inch, 22 inch, 24 Barbre's Jerry McGuire

McGuire to Direct Sales at Barbre Productions, Denver

✧ Jerry McGuire has joined the staff of Thos. J. Barbre Productions, Denver, Colorado, where he will manage sales, advertising and customer relations. A Denver advertising man and free lance writer, McGuire is a native of that city and attended the University of Colorado.

His advertising experience, with agencies and as a free lance writer, has included work for more than 60 consumer and industrial advertisers in the Rocky Mountain region. Just prior to his current assignment, McGuire was assistant advertising manager at Coors Porcelain Company, Golden, Colorado.

Name Barwick as Manager of Instructional Materials Division

John H. Barwick has been named Manager of the Association Instructional Materials Division of Association Films.

Mr. Barwick, 39, joined Association Films in 1963 as a consultant on educational film techniques. He previously had been associated with the U. S. Information Agency, and directed the U. S. government's film program in Austria.

After leaving the government in 1953, Mr. Barwick worked as Director of Sales Development for Seminar, Inc., specializing in the

John H. Barwick

design and development of training programs for business and industry with emphasis on the use of student participation techniques, single concept films, "films that talk back" and programmed learning.

Roto Slide Continuous Projector

Self-Contained "Roto Show" Projects Up to 100 Slides

☆ Rear-projection of color slides for continuous showing in counter or window displays, product demonstration, etc. is the function of "Roto Show" a new self-contained projection with a 14" x 14" rear-screen surface. Made by Sawyer's Photographic Products of Chicago, the machine is being marketed by the H. A. Bohm Company.

The Roto Show has 100-slide capacity for continuous operation and automatic cycle repetition. Cycle sequences of 100, 50, 25, 20, 10 or 5 different 2"x2" standard slides are possible. A built-in auto timer permits interval changes of from six seconds to one minute per slide. Lamp life is said to be up to 200 hours.

There is also provision for sound attachment thru a built-in 4" x 6" speaker which may be connected to tape reproducer or PA system. List price is \$350; weight 31 lbs; screen folds away when not in use. Write New Products Desk, c/o BUSINESS SCREEN, 7064 Sheridan Rd., Chicago, Ill. 60626 for further details.

RCA Has New Line of Audio Equipment for Professionals

☆ A new line of professional audio equipment for recording studios and other users requiring high-quality sound reproduction has been announced by the RCA Broadcast and Communications Products Division. Several of the products were developed in RCA's audio laboratories at Princeton, N. J.

Typical of the newly-developed items is an audio delay line which duplicates by electronic means the time-lag occurring in sound waves as they travel from the point of origin. The effect, in an auditorium sound system installation, is an immediate "person-to-person" sound wherever the listener is seated.

Another new product, a synthetic reverberator, provides a

a-v equipment trade fair

NEW PRODUCTS & ACCESSORIES FOR PRODUCTION AND PROJECTION

compact, effective electronic substitute for the conventional sound reverberation chamber. The device creates the illusion of rich "concert-hall" sound when used with amplification systems in small studios.

☆ Arrival of the new Arriflex-35 Model II C has been announced by the Arriflex Corporation of America. The camera features a new, completely re-designed optical reflex viewing system. Innovations and improvements are said

Technicolor Model 600 in Action

Technicolor Shows Model 600, New "Instant" Rear Projector

☆ A new rear-projection Model 600 cartridge-loading 8mm "Instant" Technicolor silent motion picture projector has been announced by the Technicolor Corporation. Designed for instructional and industrial application, the new projector operates on an improved system of rear-projection.

A wholly new mirror and lens system which "offers substantially brighter projection," is used in the Model 600, perfected in Technicolor's research facilities at Costa Mesa, California. The basic concept was developed, refined and tested in a two-year program using the research model 800E.

No room darkening is required for its use; the cartridge containing the 8mm silent color (or b&w) film may be loaded to show the image on the integral screen within seconds.

During the experimental program, the company worked with film producers to obtain suitable subjects and format. Today, some 38 producing companies are offering more than 700 "single-concept" 8 mm subjects for this cartridge-load equipment.

Below: Close-up of the Model 600 shows controls, large rear screen.

Arriflex-35 Model II-C features a new optical reflex viewing system.

to result in a "much brighter and clearer finder image with greater versatility and operating convenience."

The finder has been enlarged to show the full field for Cinema-Scope (.735" x .868") aperture. The eyepiece is a new, detachable unit which can be interchanged with special eyepieces; also permits use of the Arriflex Periscope Finder.

Stray light is blocked from the finder by a new closure mechanism. This can be replaced by an anamorphic lens element to "un-squeeze" the finder image formed by anamorphic objectives. The camera, when thus equipped by the factory, provides accurate viewing selectively with both spherical and anamorphic lenses.

Several models are available. A complete description of the new Model II C is available from Arriflex Corp. of America, 257 Park Avenue South, New York, N. Y. 10010.

Five New Motion Picture Films introduced by Eastman Kodak

Four new types of motion picture films have been announced by the Eastman Kodak Company. They are said to offer greater range and ease under various operating conditions.

The films include: (1) Eastman Reversal Color Print Film, Type 7387, 16mm, with superior color reproduction, especially in greens and reds, improved sharpness, somewhat finer grain and higher speed; and,

(2) Eastman 4X Panchromatic Negative Film, Types 5224 7224, 35mm and 16mm. This will permit cameramen to shoot under extremely adverse lighting situations. With twice the speed of the Eastman Tri-X Panchromatic Film which it succeeds, the new stock has value for news and industrial cameramen and for night shots.

(3) Eastman Fine Grain Duplicating Positive Film, Types 5366 7366, 35mm and 16mm, is faster than present fine grain duplicating positive films and makes possible a fourfold increase in printing speed, without a resulting increase in granularity. Scene information can be placed more easily than with earlier types. The film can be processed at high temperatures.

(4) Eastman XT Panchromatic Negative Film, Types 5220 7220, 35mm and 16mm, has special value for exterior motion picture work. This film is said to provide extremely fine grain and sharpness for outside shooting or for other situations where the inherent light level is high. It has approximately one-third the speed of Eastman Plus-X Panchromatic Negative, Types 4231 and 7231.

While the new Eastman 4X Pan

will extend available speed range on the high side, Eastman XT Pan will extend the speed range on the low side. Color sensitivity and filter factors for XT Pan are about the same as those for other Eastman negative films.

Kodak has also noted the introduction of a fifth new film: 16mm fine grain release positive, intended to provide a print film which takes a maximum advantage of the improved characteristics of the company's new camera negative (XT Panchromatic Negative, Type 7220) noted above.

Select HPI Slide Theater for Triennale Design Exhibition

The HPI 10-Square Slide Theater has been selected for display at the world-famous Triennale design exhibition in Milan, Italy. This represents the third time that the HPI 10-Square has been selected as an outstanding design in the past year. Previously, the Museum of Modern Art in New York selected it for display in the permanent design collection. Last December, Industrial Design magazine selected it as an outstanding design of 1963 in its field.

The Triennale is one of the most widely-attended and influential design exhibitions in the world. It is the international showcase of new developments in decorative and industrial arts. Products to be exhibited at the Triennale were selected from a vast number of entries by a distinguished jury composed of many outstanding designers in the U. S.

The HPI 10-Square Slide Theater was designed in 1963 by Eugene Martinez, one of the founders of Hudson Photographic Indust-

HPI 10-Square Slide Theater

ries and head of its design and marketing departments. He is a graduate of Cooper Union and prior to HPI designed display and packaging materials.

The HPI 10-Square Slide Theater is a desk top slide projector with built-in screen that accepts 2 by 2 slides in any type of mount. It features a chrome steel top and hand-rubbed walnut base. Its selling price is \$99.50. It is being used as a selling tool by many American business concerns, as well as an instrument for viewing 2 by 2 slides in schools, museums, government agencies and in the home.

Offer New Filing System for 8mm "Single Concept" Films

Meeting a growing need for proper storage of the new 8mm "single-concept" film cartridges (for Technicolor "Instant" projectors, etc.) is a new filing cabinet with indexed compartments announced by the Jack C. Coffey Co., Inc., North Chicago, Ill.

Cartridges are numbered for proper placement in the filing drawer; the librarian's master index on film subjects is similarly numbered for quick reference.

Two New "Studio One" Lamps Introduced by Westinghouse

Two new "Studio One" lamps of the sealed beam type have been introduced by the Lamp Division of Westinghouse for indoor motion picture lighting. A unique dichroic coating on the lens, which changes color temperature of the light produced makes these new FAP and FBN lamps satisfactory for indoor shooting with daylight film.

These Studio One blue filter lamps contain an exclusive collector grid which gathers the oxidized tungsten, minimizing lamp blackening and prolonging life of the bulb. The lamps are rated at 650 watts and have an average eight-hour life.

New San Francisco Studios to House Fraser Productions

☆ Establishment of new studio headquarters and extensive remodeling by Fraser Productions, San Francisco motion picture studio, has been announced by the company's president and creative director, Thomas H. Fraser.

Formerly located in the Columbus Tower, Fraser Productions now occupies the entire top floor of the McGuire Building at 38 Hotaling Place in historic Jackson Square.

The colorful quarters that now house Fraser are held on long-term lease, located in one of the few buildings in downtown San Francisco to survive the 1906 Fire-Earthquake. Popular addresses for advertising agencies, art services, wholesale interior decorating shops and other creative services are found in this recently restored business district of San Francisco—Jackson Square.

Extensive electrical, sound-proofing, ventilating, fire protection and other construction work was required to transform what had remained essentially the same turn-of-the-century shell into a modern film producing facility. The building once housed the stables, hayloft and delivery carriages for Wells Fargo Express and Zellerbach Paper Company. Architectural features of the building include twelve-foot ceilings, massive iron shutters on windows and a private passenger elevator equipped with a settee. •

Aetna Is Sending Safety Spots to Over 600 Television Stations

☆ A 60-second television film warning against home accident hazards is currently being distributed by the Aetna Life Affiliated Companies to more than 600 television stations.

The film is the second of four to be made available by the Aetna Life companies to television stations this year as part of the companies' public service program. It points out that falls, leading cause of fatalities in the home, can largely be prevented by taking simple safety precautions.

A film dealing with the prevention of car thefts was released earlier this year and two spots on skiing safety are scheduled for distribution in November to television stations in Northern states.

The 1964 releases bring to 22 the total of one-minute television messages produced and distributed by the Aetna Life companies since their television public service program was initiated nine years ago.

Subjects have included Christmas tree safety, boating, mouth-to-mouth resuscitations, hunting, swimming and driving. A driving safety short released in 1963, titled *Drinking and Driving*, has won six awards from various motion picture organizations.

In addition, a number of longer motion pictures on safety subjects produced by the Aetna Life companies have been distributed to television stations. In 1963, an estimated 25 million persons viewed 12 of the companies' films on television. Ranging in length from eight to 27 minutes, the films illustrate safety aspects of such subjects as driving, skiing, boating, Scuba diving and home fires. •

CFI Begins a Ninth Season of Popular Monthly Film Clinics

☆ Consolidated Film Industries, of Hollywood, has announced another series of monthly "Film Clinics" for West Coast film users.

Each program covers an entire afternoon, includes a 90-minute lecture, projection demonstration and tour of CFI facilities. Reservations can be made through Jack M. Goetz at lab headquarters. •

AN IMPORTANT ADVANCE IN GROUP COMMUNICATIONS

16 mm. Cine-Educator by Busch

By utilizing the principle of transmission instead of reflection, LENSSCREEN Rear Screens by POLACOAT offer an important step forward in solving group communication problems.

LENSCREEN is NOT just another screen. The millions of tiny lenses on the surface of POLACOAT'S LENSSCREEN respond only to projected light. Reflectance of ambient room lighting is virtually eliminated. As a result, sharp, clear pictures can be shown in fully lighted rooms — by your present projector.

This achieves greater attention, speedier understanding and learning, plus increased memory retention.

Up-date your present projector by utilizing LENSSCREEN by POLACOAT.

Sell, train, display — the modern way!

For full information about how LENSSCREEN can benefit you — send for free LENSSCREEN Ideas Kit, today.

Show Proper School Lunch in 'Starvation Without Hunger'

More than 500 California school children and adults cooperated in filming the documentary story of the school lunch program in that state, told in a new 13½-minute color motion picture titled, *Starvation Without Hunger*. The film was produced for the Dairy Council of California by Chapman 5 Productions, Inc., Burbank, California film maker.

Key idea in the picture is to inform parents of the finding of scientists that children study better when they're nourished properly. Scientists express alarm over the poor dietary habits which teen-age girls, especially, have developed. Correction is urgent, they and nutritional experts feel, because of this relationship of diet to school capability and also because girls are marrying younger and will face motherhood inadequately prepared.

The school lunch program in California was designed to insure each child a full third of essential daily nutritional requirements. The cost of a nutritionally-balanced lunch is actually less than a sack lunch of equal nutritional value, augmented by the same amount of

milk as that provided with the state's model lunch menu.

Premiere showing of the new picture was held in Portland, Oregon last month at the national meeting of the American School Food Service Association. Dairy Council manager W. B. Woodburn reported an enthusiastic reception.

The film was written by Sidney A. Mandel and directed by James H. Flint. It was filmed on location at schools in Santa Fe Springs and Burbank with Wayne Mitchell behind the camera. Sound work was handled by George Wickham, Jr., manager of the Film Production Center in Burbank. Color prints were by Consolidated Film Industries, Inc.

Starvation Without Hunger has been recommended for statewide showings to PTA and other adult groups. Requests for prints from out-of-state groups have been numerous, according to the Dairy Council of California.

Hollywood 28, California

Dear Al:

I would like to take this opportunity to congratulate you and your organization on the outstanding job you recently completed for Douglas Aircraft Company in the French translation and narration of the Air Afrique film "The Wind of Change".

Mr. O. B. Marble, Director of Marketing Communications, and I premiered the film for Mr. Cheikh Fal, President of Air Afrique, last month in Paris. Mr. Fal's comments were very enthusiastic on the French version of the film. I would like to add my kudos, realizing this was not just an everyday type job for many of the African pronunciations seem to be impossible. The delivery and quality of Mr. Morsac's voice greatly added to the presentation of the film. A Job Well Done!

We are looking forward to using your services again in the future.

Sincerely,

W. J. Gibson

ANIMATED PRODUCTIONS, INC.
 1600 Broadway, New York 19

THE ASPEN FILM CONFERENCE was born a year ago under the sponsorship of the Aspen Institute for Humanistic Studies. It was apparent at the time that American film makers had no forum in which each could have an equal voice; the film community had long been divided into separate camps, loosely designated as "industrial," "educational," "television," "Hollywood," and so forth.

The Aspen Institute undertook to provide a meeting ground for the discussion of concepts and problems common to all film makers and their audiences. The setting in Aspen, Colorado — world famous as a ski resort — is ideal for the airing of arguments and ideas and the Paepke Auditorium, the seminar building, and the grounds were designed specifically to accommodate such discussions.

"Young American Film Makers"

The second annual Aspen Film Conference, September 3 through September 8, examined "The Young American Film Maker and his Contemporaries." Program director Robert Murray assembled an outstanding group of speakers to discuss the challenges which face young men and women seeking opportunities in film.

Among the speakers representing creative talents from Hollywood were director Lewis Milestone (*All Quiet on the Western Front*), writer Abby Mann (*Judgment at Nuremberg*), director Jack Garfein (*The Strange One* and *Something Wild*), actress Carroll Baker (Mrs. Jack Garfein), and radio and screen writer Norman Corwin, who delivered the keynote address.

Cites "Senseless Vices"

In his opening speech, Mr. Corwin addressed himself primarily to "the Hollywood establishment," attacking such "senseless vices" as "an outmoded star system, outlandish prodigality, and a reluctance to encourage new talent." The challenge of this address set the tone of the conference, which concerned itself in the main with the problem young film makers face in gaining experience and, ultimately, in seeking financial backing and distribution for their efforts.

Critical and historical viewpoints were presented by critic Arthur Knight and Richard Dyer MacCann, writer and lecturer on motion pictures.

Mr. McCann was the first speaker to touch upon the im-

FILM MAKERS SHARE CONCEPTS AT THIS FORUM

Aspen's Second Film Conference

as Reported by Film Writer Stan Phillips

portance of educational, industrial, and non-theatrical films as a training ground for young film makers. In previous years, television provided apprenticeship for many young people who have since moved into theatrical film making.

He stressed that many more opportunities exist *outside* entertainment motion pictures and that talents in these fields deserve equal attention and encouragement.

The question of government subsidy of the film industry, similar to plans offered abroad, was debated, and there was general agreement that film makers would not accept any form of subsidy which restricted their freedom in the selection and treatment of subjects.

New Talent for U.S. Films

George Stevens, Jr., Director of Motion Picture Services of the U. S. Information Agency (now on leave), explained the role of the USIA in the training and sponsorship of new talent for the production of government documentary films.

Last year the USIA produced 300 newsreels and 300 information and training films for distribution in 110 nations abroad, making the agency the largest producer of "non-theatrical" fare in America.

Mr. Stevens has been instrumental in encouraging young film makers; and by "young" he does not mean inexperienced or amateur, for his film program is under constant scrutiny by Congress, and his record of successes is enviable. Films made under the USIA program have been well received and acclaimed by vast audiences abroad, proof enough that young American film makers *can* and *do* say things of importance when

Arthur Knight addresses conference, Robert Hughes is at right.

given the opportunity to channel their talents.

James Blue and Charles Guggenheim, two film makers who have worked for USIA, were present at the Conference and attested to the freedom which Mr. Stevens' policy permits in producing films for the agency. One of Blue's films for the USIA, *The March*, was screened; it was an exceedingly well made, moving report on the civil rights demonstration in Washington in August, 1963.

Speaks on Sponsored Films

Charles Guggenheim (president, Guggenheim Productions, St. Louis) was alone in representing the position of the "industrial" film producer at the Conference. While Hollywood's talents must ultimately answer to the "front office," and government agencies to Congress, the industrial film maker is responsible to the sponsor.

Even so, Guggenheim stated, "I've never made a film I didn't want to make," which is to say that a choice always lies with the

film maker; he must approach his subject — whatever its source or purpose — with integrity and a belief in its message.

A proof of this statement was seen in Mr. Guggenheim's *Children Without*, produced for the National Education Association, which powerfully expressed the problem of educating underprivileged children in large cities.

Other young film makers whose work was screened at the Conference include Robert Hughes and Albert and David Maysles. Hughes produced and directed *Robert Frost: A Lover's Quarrel with the World*, which won the Academy Award for the best documentary last year.

The Maysles brothers' *Showman*, a study of producer Joe Levine, and *What's Happening! The Beatles in the U. S. A.*, represented a new direction in documentary film production, the "direct cinema," or "cinema verite," which seeks the undirected responses of people before the camera.

Screenings of student films from UCLA, arranged by Gary Essert, demonstrated that colleges and universities are providing crops of important new talents which will one day make their marks in the film community.

These brief highlights by no means cover the depth and scope of the Conference. Enrichment to the discussions was given by "outsiders," commentators on the film scene from other disciplines. Among the more vocal were psychiatrist Dr. Karl Menninger, cartoonist Robert Osborn, and educator Dean John Burchard, each of whom repeatedly emphasized the power of the film medium and the responsibility of film makers to their audiences.

Essence of "the Aspen Idea"

What is the meaning of the Aspen Film Conference to the readers of BUSINESS SCREEN?

Simply this: it is the only forum in America where the voices of all people concerned with film in its many aspects can be heard.

The problems of economics and distribution may vary, but the methods and — most important — the audiences are the same for the film maker, whether he is working in Hollywood, television, the government, or the sponsored film. Problems common to all these fields can be aired and discussed without the usual "blind spots" encountered when specialists confer among themselves. This is the essence of "the Aspen Idea." •

The Aspen Film Conference was held in this modern Seminar Building.

WHEN GENERAL TIRE WANTED TO DRIVE HOME THE IMPORTANCE OF TIRE SAFETY?

The importance of tire quality is a story that's recorded in long black skid marks on streets and expressways across the country. But The General Tire & Rubber Company felt that too few car owners knew or heeded the moral of the story. So the company asked Jam Handy to dramatize the superior stopping ability of their General Dual 90 tires. The resulting 8½-minute film is, literally and figuratively, a gripping story. Called "Split Second," it points up the fact that many accidents could be avoided if the tires involved would stop the car even so much as a fraction of a second sooner. Dealers report getting a lot of mileage out of the film, as a point-of-purchase sales aid. To help accomplish similar results for you, all we'd need would be your specific message and your specific audience—employees, dealers, customers or the general public. Just ask help from **THE JAM HANDY ORGANIZATION**

CommuniCam

another Business Communications product from Wilding

CommuniCam panel being filmed for Imperial Oil of Canada was part of Imperial's 1964 Dealer Service Program, developed and produced by Wilding.

How a unique film panel technique motivates men to accept ideas

The Problem. How to get men to accept new ideas, or to improve their on-the-job performance is a problem faced by most organizations.

The Wilding Answer. Bring together the best men from the field. Get them to talk about how they have used a new idea, or a new product, or how they do their jobs. Add a skilled moderator to guide the discussion, and put it on film. Then show the film to your people. It will spark discussion on how the experts' experiences can be applied to local problems.

Effective Way to Teach Success. This relatively inexpensive film panel technique is called CommuniCam, and it is probably the most effective way to teach success. The dis-

cussions are believable because the panelists are talking about experiences of their own. They do not echo "the management line." Men accept what their counterparts say and easily understand the message.

Used Successfully. CommuniCam was developed by Wilding and has been used successfully by many Wilding clients, such as Imperial Oil, Ford, DuPont, Republic Steel, Seagrams and many more.

Consult Wilding. If you'd like more information about CommuniCam, contact our nearest office for a free booklet. Or ask to see a Wilding representative. He'll show you sample programs and discuss your particular needs.

Du Art Labs, N. Y. to Handle U. S. Government Print Sales

Print sales of approximately 5,000 titles of United States Government films will be handled by Du Art Film Laboratories, Inc., 245 West 55th Street, New York City. Irwin Young, Du Art president, has announced that his company has been licensed by the General Services Administration to make available for sale to schools, public and private libraries, industry, health groups, etc., official U. S. films.

Covering such subject areas as agriculture, aviation, electricity and electronics, health, languages, safety, social studies, science and vocational training, these films were produced by many U. S. agencies and departments, including the Public Health Service, Department of Defense, Department of Health, Education and Welfare, Department of Agriculture, Veterans Administration, the U. S. Information Agency, and the State Department. All prints are available at nominal rates.

Entries Being Accepted for 1965 Safety Film Competition

The National Committee on Films for Safety which will host its 22nd annual awards program for outstanding safety films next year, has announced that the entry lists are now open for eligible 1964 productions.

Contest categories for the 1965 awards program include Occupational, Traffic and Transportation, Home and General Safety for 16mm motion pictures and sound slidefilms. Theatrical and television film subjects are classified separately. Deadline for entries is February 19, 1965. For further information and entry forms, contact William Englander, secretary, National Committee on Films for Safety, 5th Floor, 425 N. Michigan Avenue, Chicago, Illinois 60611.

National Visual Presentation Association Announces Officers

The National Visual Presentation Association, Inc. has elected William W. Walton of the I B M Corporation as its president for the next year. Norman Lindquist, vice-president of the Fred Niles Communications Centers, Inc., is the new NVPA vice-president (trade) and George R. Jacobsen, of the New York Telephone Com-

pany, is vice-president, representing users.

John P. Tierney, Standard Oil Company (N.J.), is secretary-elect and Charles E. Behymer, The Pan Media Co., Inc., NVPA's treasurer for the coming year. The new slate of officers held a "get-acquainted" meeting at the I B M Building in New York City on November 19th. Dates and places for the 1965 "Day of Visuals" program were discussed as well as general plans for the organization's traditional awards event.

Hollywood Ad Club Announces 5th Annual Broadcast Awards

Twelve categories for television commercials have been announced for the 5th annual (1965) International Broadcast Awards' competition, sponsored by the Hollywood Advertising Club. Don Estey, president of Tel Advertising, has been appointed chairman of the judges' committee by general chairman James G. Riddell.

Deadline for entries is December 1. The awards banquet will be held February 23, 1965, at the Hollywood Palladium. Elton Rule, vice-president of the American Broadcasting Company, is chairman of the television entries. Entry kits are available to U. S. producers and sponsors of filmed and taped television commercials (and their agencies) as well as to their European and overseas counterparts from the Hollywood Advertising Club, 6362 Hollywood Boulevard, Hollywood, California 90028. The Club's telephone number is HOLLYWOOD 5-1183.

Galon Miller is President of Educational Film Librarians

Galon R. Miller, A-V director of the South Bend (Indiana) Community School Corporation, has been elected president of the Educational Film Library Association. Other officers named at the annual meeting of that group's board of directors, held in New York last month, are James L. Limbacher, A-V director of the Dearborn (Mich.) Public Library, named vice-president; and William J. Speed, A-V director of the Los Angeles Public Library, who is the new secretary-elect.

Speed is also a new member of the EFLA board, representing public libraries and general education. Another new director, representing public school membership, is

Lewis Saks, A-V director of the East Detroit Public Schools. Elliott H. Kone, director of the Audio-Visual Center at Yale University, was re-elected to the board, representing colleges and universities.

* * *

Late Alexander F. Victor is Cited for SMPTE's Honor Roll

The late Alexander F. Victor, a pioneer in the motion picture industry, has been named to the Honor Roll of the Society of Motion Picture and Television Engineers.

Mr. Victor, who died in 1961 in Carmel, California at the age of 82, became interested in motion pictures in 1896, when he witnessed a demonstration in Paris of one of the first motion picture projectors, the Lumiere Cinematographe.

In 1909, with the backing of the White Lily Washing Machine Company of Davenport, Iowa, he built the first of many portable motion picture cameras and projectors. His firm was first called the New Victor Animato-Graph Company. The name was changed to the Victor Animatograph Company in 1915.

Long an active member of SMPTE, Mr. Victor joined the parent organization — the Society of Motion Picture Engineers — in 1916, the year it was founded. He held more than 60 U.S. patents in the field of motion pictures, and was one of the leaders in promoting the use of safety film for home and school projection.

Tri-Dex Display Corporation, Detroit, is Acquired by Wilding

The acquisition of Tri-Dex Display Corporation in Detroit, has been announced by Wilding, Inc. The company, located at 13790 Nelson in the Motor City, designs producer displays and exhibits for trade shows, conventions and point-of-sale. The facilities cover an area of 20,000 square feet, including workshop, storage space, design and drafting rooms and a model-building studio. Operation as a Wilding subsidiary will begin on or about December 4th.

It was noted by principals involved that the acquisition will give Wilding needed display and exhibit production facilities and personnel to complement those of Wilding-Dramaturgy, a wholly-owned subsidiary in Cleveland.

BUSINESS & FINANCIAL TRENDS OF THE TIMES

Movielab Sales Set Record; Up 26% in First Nine Months

Growing strength of the film processing industry was reflected in the November report by Movielab, Inc. (ASE) that sales for the nine-month period ending October 3rd, were \$6,247,571. Board chairman president Saul Jeffee noted that the figures represented an increase of \$1,276,498, or approximately 26% over the \$4,971,073 of sales in the comparable period last year.

Net income of the first nine months amounted to \$333,324, or 90¢ per share, an increase of 59.8% over the \$208,547 or 57¢ per share reported for the same period in 1963. Both per share earning computations were based upon 368,441 shares presently outstanding.

"This is the highest peak attained for any equivalent nine-month period in the company's 33 year history," Mr. Jeffee said. The company is now introducing its Multi Rank Release Printing method which it predicts will give lab clients still higher standards of quality, both picture and sound, better service and price benefits. "The increase in volume which this printing method will make possible," Movielab's chief executive concluded, "will in turn generate increased profits for the company."

Wilding Sales Increase 20% in First Nine Months of '64

Net earnings of \$300,776 for the nine-month period which ended September 30, were reported to shareholders of Wilding, Inc. last month. The figures represented a 20 per cent increase over the same period last year. Earnings for the three quarters were equal to 75¢ per share, based on 399,420 shares presently outstanding for the publicly-held communications agency.

For the third quarter only, the company earned \$267,521 or 67¢ per share; in the same period last year, earnings were \$368,660 or \$1.06 per share. Sales were \$4,473,083 and \$4,888,511 for the two comparative periods noted.

H. Williams Hammer, president of Wilding, noted, "we operate on a completed-job basis, and in the third quarter of last year a greater volume of our major jobs reached completion and were credited to sales and earnings than in 1964."

He continued, "However, as our overall volume increases, the in-

dividual quarterly fluctuations become less significant. We continue to expect 1964 to be the largest and most successful year in our history. Our present backlog indicates a very successful 1965."

Byron Acquires Allservice Film Laboratories in New York City

The purchase of Allservice Film Laboratories, Inc., 35 W. 45th Street, New York City, by Byron Roudabush, president of Byron Motion Pictures, Washington, D. C. has been announced. The company is active in the processing and printing of both 16mm and 35mm black & white motion picture films for television and industrial use. The parent company, Byron Motion Pictures, specializes in all phases of film laboratory services, including color.

Mecca Film Laboratories Corp., 630 Ninth Avenue, in Manhattan is another Roudabush property. The new owner is a past-president of the Association of Cinema Laboratories, treasurer of the Society of Motion Picture and Television Engineers and an honorary member of the Edison Pioneers. He recently authored the technical handbook of the ACL.

New officers of Allservice include Mr. Roudabush, as president and treasurer; Burton Stone, of New York City, is executive vice-president and general manager; Peter Agnew, of Washington, D. C., secretary; and George Beuchert, also of Washington, will serve as assistant secretary.

Consumer Division Contributes to Technicolor Sales Increase

Technicolor, Inc. and its wholly-owned subsidiaries earned \$3,306,589, or \$1.10 per share, on 3,011,675 shares outstanding for the first 39 weeks of 1964 as compared to \$2,936,109 or 99 cents per share on 2,958,924 shares for the same period of 1963. Consolidated net sales for this 1964 period were \$73,414,919 as compared to \$63,433,420 for the same period of 1963.

Commenting on the announcement, president Melvin H. Jacobs stated: "The Consumer Photographic Division continues to contribute substantially to 1964 profits after just barely reaching the break-even point during the past year. This accelerating upward trend has been accomplished by an increase of the industrial, commercial and educational sales"

SALESMAN MOTIVATION and SALES TRAINING

THE PARTHENON METHOD

Make him identify
Make him want to — Show him how
Leave him steamed up.

"THE HARDESTY CASE"

Do your salesmen concentrate on a few pet items and neglect the full line? *The Hardesty Case* is a kidding-on-the-square comedy designed to persuade Ford car salesmen that they should — and can — put some sales effort on the light and medium truck lines... and along the way it reviews some key sales-work fundamentals.

"HEAVY GOING"

Do your salesmen tend to sell a "performance" product on a price basis? *Heavy Going* persuades Ford heavy truck salesmen to earn their deals—to dig up all the facts and organize them into a solid proposal that will prove to the customer he'll make a profit if he buys.

"FILE ON HENRY ROYALL"

Did some of your men join the company expecting to make their careers "inside"—and now they're expected to go outside and sell? *The File on Henry Royall* was made to persuade the 800 Bank of America branch managers that selling is necessary today — that they can do it — and here's how.

Cinema Editors Honor Solow for "Industry Contributions"

☆ An Honorary Life Membership and a plaque citing Sidney P. Solow "for his many contributions to the industry" were presented to the newly-elected president of Consolidated Film Industries by the American Cinema Editors. Solow was the guest of honor at a luncheon sponsored by the Editors' group in Hollywood on October 21st. 180 studio executives joined the film editors in honoring him.

ACE president Gene Fowler, who made the dual presentation, outlined the lab executive's many contributions to the film editing profession as well as his active role in the motion picture indus-

Sidney Solow (left) accepts ACE plaque from Cinema Editors' president Gene Fowler at luncheon.

try. Joining the editors at this luncheon were Victor Carter, Robert Stabler, Sid Rogell, Robert V. Newman, Gordon Sawyer, Norwood Simmons, Albert Dorskind and Bob Norvet. ACE vice-president Norman Colbert, was chairman of the day.

"This was one of the most sincere tributes I've ever witnessed," Colbert reported, "as 180 very busy people took this time to honor Sid, coming from studios in every corner of the city . . . a sincere tribute to one of the most deserving men in our industry."

Solow paid tribute to the editors in his response by saying,

"In a business that has a lot of baloney, the film editors are the hard-boiled realists of film making and are ruthlessly honest in their work." He concluded his brief remarks in a characteristic manner, "I am overwhelmed by this honor. I will try to continue to be a useful citizen in our industry." •

Glatfelter Co. Observes 100th Birthday with Historic Picture

The P. H. Glatfelter Co., paper manufacturer of Spring Grove, Pa., is observing the 100th year under

the same family management with the release this month of *Focus on a Century of Communications*, its 27-minute Centennial color motion picture.

The film shows the past 100 years of history and communications, as recorded on paper. It covers the period from Lincoln's Gettysburg Address to a modern-day rocket launch. Produced by Victor Kayfetz Productions, Inc., of New York City, the picture also points up the direct relationship of man's progress to his increased ability to preserve and communicate thoughts and ideas to others.

Visuals used in the production were collected during years of search through archives of government agencies and private sources by the Kayfetz organization. Even personal family albums provided material. Animation techniques were applied in lensing the historical pictures and these were integrated with live historical motion picture sequences.

Focus on a Century . . . is narrated by Dwight Weist and original music, including a new "folk song" titled "Land of Lincoln" was created by Ray Martin and sung by Miss Ronnie Gilbert. The sponsor is using the song as centennial theme music.

The film may be obtained for group showings on request from the P. H. Glatfelter Co. Film Library, c/o Creativision Inc., 1780 Broadway, New York, N. Y. 10019. It is available to schools, clubs as well as TV stations for public service showings. •

Department of Communication Set by National Meat Board

A new Department of Consumer Communications has been set up by the National Live Stock and Meat Board to consolidate a number of its consumer service activities. Kenneth R. Franklin has been named to direct the new Communications' department, with William J. Nelson as assistant director.

Areas of responsibility under their supervision include the Board's transcribed, taped and Videotaped radio and television services, newspaper food page services, educational motion pictures, filmstrips, slides and other audiovisuals for consumer and student viewing. Educational literature and consumer point-of-sale materials are also under their aegis.

Franklin has been with the Board for 17 years and for a considerable time has headed the organization's literature, audio-visual and color photography programs. Before joining this staff two years ago, he worked as a radio-television specialist. Nelson was associated with radio station WLS in Chicago and worked in television.

Influence of German Youth is Shown in "Day of the Young"

The Day of the Young is a new 27½-minute film report on the Germany of 1964 that is now being offered to television stations for the German Information Center by Sterling Movies U.S.A.

The film shows that the young people of Germany are an iconoclastic generation; their watchword is "constructive skepticism;" they thrive on political and social satire.

The Day of the Young finds them in eager pursuit of knowledge and experience — as well as the pursuit of happiness. They are living a new kind of life and living it fully in an ever-growing spirit of independence. On the political scene the film reveals them as anxious to accept responsibility — questioning everything — taking

nothing for granted. Their demand for the material benefits of modern technology are a strong influence in their county's economy.

Production was by Marathon International Productions, Inc. •

Filmed TV Commercials in 50 Product Groups Available

☆ Product category reels of 6,200 television commercials which were entered in the first five American TV Commercials Festivals are being made available at cost to advertisers and agency creative workshops.

50 categories are offered in separate reels. In each instance the reel is headed by the "Best" and "Runner-Up" selections for the year, followed by Finalists and other entries. The library is operated on a non-profit basis, with charges limited to a nominal fee to cover assembly, inspection, maintenance and booking of the 16mm film prints.

In addition to these product reels, the Festival is also circulating 16 prints of its "1964 Award Winners" to ad clubs, agencies and advertisers in the U. S. and abroad. Seven of these prints are being distributed by regional district officers of the Advertising Federation of America. Write Wallace A. Ross, Festival Director, American TV Commercials Festival, 40 E. 49th St., New York, N. Y. 10017 for further details on any of these films. •

Personally Speaking

John Desmond, Vice President, Distribution Services Division, United World Films, Inc.

No other avenue of sponsored film circulation offers as many advantages as those of 16mm nontheatrical exposure. Handled intelligently, it enables you to achieve:

- 1) **Controlled Geographic Programming** in the national, regional and local areas most important to your marketing objectives.
- 2) **Audience Selection** at the income and professional level at which your product is directed.
- 3) **Prime Viewing Conditions** through homogeneous groups eager to receive your message.
- 4) **Measured Results** through detailed booking reports and audience-reaction studies.

The elimination of waste circulation and expense and full enjoyment of these benefits demands a high degree of efficiency in distribution. This, in turn, depends on how well your distributor understands your product, your public relations strategy, your marketing problems.

It is on this working relationship that United's custom distribution service is based. We feel that every one of our client's films deserves thoughtful, individualized attention and personalized direction. To achieve this end we offer, to all of our clients, the widest distribution network in the industry... the most knowledgeable staff... the most careful research... and over three decades of success in sponsored film distribution.

In case after case, United's custom film services have put new life into sponsored film efforts. We'd like to tell you how. A collect phone call or postcard to us will put the whole story on your desk.

"BORN IN FREEDOM", American Petroleum Institute film, has to date been seen by approximately 7,000,000 viewers. The breakdown is 2,000,000 16mm nontheatrical; 5,000,000 35mm theatrical. Distribution is handled exclusively by United World Films, Inc.

American Petroleum and National Livestock 16mm Films Viewed by Million-Plus

The offerings of the National Livestock and Meat Bureau and the American Petroleum Institute, already record holders in every avenue of sponsored film circulation again received millions of attentive viewers in a one year period.

API's titles, including such outstanding films as "Born in Freedom" starring Vincent Price, amassed a circulation of 1,949,000. NI & MB's entries, featuring helpful cooking ideas for women, reached a total of over a million viewers. All titles were distributed exclusively by United World Films.

To date, API's 16mm sponsored films have reached an audience of approximately 12,000,000 through 120,174 bookings. NI & MB's titles have been seen by 18,897,000 through a total of 191,386 bookings.

United Holds Line On Rising Sponsored Film Booking Rates; Rejects "Extra Charges" Policy!

The years 1959-1964 saw an estimated average of 15% increase in the cost of sponsored film distribution. Major distributors attributed this to the rising costs of technical services, increased plant overhead and higher handling cost.

Mr. Arthur McLaughlin, United's Sponsored Film Manager, last week stated that modernization of business management practices have to be used by distributors to hold down booking costs in order to fill this gap between rising costs and fixed budgets. He demonstrated how such techniques have minimized United's increases to an industry-wide low of .001% over the past five years.

Resort Hotel Market Opened to 16mm. Sponsored Films

A recent Test Project by United has succeeded in opening promising vacationland markets to film sponsors. The test followed a study of resort areas which revealed that luxury and semi-luxury hotels are a vast, untouched market for sponsored films.

During last summer United offered sponsored films to resort hotels throughout the nation as a tie-in with their feature films. Their success was outstanding, for instance in one area 325 hotels responded with requests for bookings. These films were seen by approximately 100,000 viewers.

Hotel managers were pleased by the entertaining nature of the films and expressed a desire for more sponsored film showings during the 1965 season. For sponsors, this offers a prime consumer market of above average income and professional status.

Expanded "Sponsor-Generated" Booking Service Gains New Clients

With the entry of highly specialized industries into the sponsored film area, United has arranged for more efficient and economical flow of prints to selected groups.

Just recently United was selected to handle "sponsor-generated" bookings for The American Institute of Steel Construction, and The Atomic Energy Commission.

We have found," Mr. McLaughlin said, "that more efficient in-plant procedures have enabled us to absorb many charges without passing them along to our clients. Our one booking rate includes, as always, handling charges to and from audiences, market and field research, audience reaction data, statistical summaries and advertising promotions and electronic inspection of every print after exposure. We have not found it necessary, as others have, to list any of these as 'extra services' subject to additional billing. This results in 20% additional distribution for our clients for every dollar in their budget."

Mr. McLaughlin then illustrated the effects United's corporate flexibility and physical facilities have on circulation costs. "Because of our affiliation with Universal Pictures and Music Corporation of America there are many areas of distribution which are open to our clients which would not otherwise be readily available. United's Entertainment Division alone, for instance, distributes over 1,200 feature films through their nationwide network of 43 libraries. Consequently, United's audience acquisition and servicing costs are considerably lower and we achieve a faster turnover with fewer prints."

Mr. McLaughlin was confident that this custom service along with the increased distribution potential has accounted for last year's record growth in new clients. Many of these new clients never before realized that they could obtain such wide distribution as they have without substantially increasing their budget.

Television Circulation Potential Zooms to Over 61,000,000!

United Adds "News Parade" Service For Clients.

With 56,400,000 home television sets now operational in the United States, television exposure continues to gain importance in sponsored film distribution. Illustrative of the mass circulations obtainable through this medium, is the multi-million-audience that United World Film recently secured for NASA's "Friendship Seven" film. This was achieved through 313 television bookings.

A study by United has revealed that of the 668 television stations now broadcasting, over 85% accept sponsored films for regular programming. Because of close personal contacts established through non-

commercial feature film distribution, and by means of extensive direct mail promotion, United has succeeded in establishing excellent reception for its client's film with all these stations.

DRIVE-IN THEATER "TIE-INS" FOR 35MM PRINTS

Several United World Film clients have reported excellent success with merchandise tie-ins on drive-in theater bookings. These special promotional films are sometimes tied to products handled by drive-in theater purveyors.

ACME FILM TRANSFERS

Seek Computer-Oriented Films for World Congress Next Year

The world of computers will hold a congress of its own in May, 1965 when the International Federation for Information Processing gathers in New York City for the IFIP Congress 65 and Interdata Exhibition. It will be an international conference on advances in the information processing sciences with at least 5,000 delegates from all over the world expected to attend.

The Congress 65 will again feature (as in its previous meeting at Munich, Germany in 1962) an Information Science Cinema at which it hopes to show some of the latest films available. According to John P. Kelly, chairman for information, Science Cinema Committee, films need not be directly concerned with computers or their applications but should be concerned with subjects related to computers.

For example, he notes, films could focus on appropriate phases of space, social events, the behavioral sciences, physical sciences, etc. The main criterion is that a film's subject should be one that is logically in some substantial way, related to information processing.

Noting also that the Congress 65 may provide an ideal site for the world premiere of contemplated 1965 productions ready for showing by May 24, the chairman has asked BUSINESS SCREEN to invite possible sponsor participants to address inquiries to John P. Kelly, Information Science Cinema, IBM Corporation's Development Laboratory, Post Office Box 390, Poughkeepsie, New York 12602. Although review of available films was expected to conclude in early December readers are asked to communicate with the group if they have any relevant or impending film material.

AFL-CIO Takes Labor's Story to Schools and Youth Groups

☆ The American Federation of Labor and Congress of Industrial Organizations (AFL-CIO) are telling labor's story in a 28-minute b&w documentary narrated by Ralph Bellamy. The picture, *Land of Promise*, contains a foreword by president George Meany and is addressed to the nation's young people. Woven into a skein of American historical sequences is a theme of labor's fight for recognition. The Princeton Film Center is promoting showings in schools and among youth organizations. •

Rank to Distribute Films Overseas for Association Films

☆ Extending its activities in the international field, Association Films has concluded an arrangement with The Rank Organization, London, England, to offer its sponsor clientele film distribution in the United Kingdom, Eire, the European continent, Australia, New Zealand, South Africa and Japan. The firm acquired a Canadian subsidiary, Association-Industrial Films of Toronto, in 1963.

The sponsored film medium abroad has grown rapidly in the past few years, according to Robert D. Mitchell, president of Association Films. "The distribution arrangement we have with Rank will provide American companies with an unusual opportunity to reach audiences in areas where their products or services are available," he noted.

The Rank Film Library in the UK now serves about 40,000 film-using groups. Founded in 1933, it is one of the largest independent distribution services in Europe, employing more than 200 persons in film handling, maintenance and promotion. Apart from sponsored-film distribution, the organization provides audiences with feature films and short subjects, educational films and training aids. The Rank Audio-Visual Division markets American-made 16mm sound projectors.

Distribution charges are comparable to fees in the United States: \$3.00 per booking (up to two reels in length) in the United Kingdom and \$5.00 in European markets. Booking charges include outgoing postage, promotion, print maintenance and audience reports. •

Sturgis, Arden Speak at 7th Beverly Medical Conference

— Speaking on "Medical Films and Continuing Education" Warren Sturgis, president and executive producer of Sturgis-Grant Productions, Inc. and Hal Marc Arden, associate producer, participated in the 7th Annual Beverly Conference on Graduate Medical Education on November 6-7th.

The 1964 conference, "Continuing Education for the Practicing Physician," was sponsored by the Department of Medical Education at Beverly Hospital, Beverly, Mass. The two medical film specialists also participated in a panel discussion of "Medical Films and Television — Practical Concepts and Application." •

"THE WAY TO KILL A BEAR...

... is to kill a bear"

This ancient Iroquois proverb makes two meaningful points as a guide for communicating ideas today:

FIRST . . . communication programs must be creatively produced to affect specific audiences in *specific ways*.

SECOND . . . the ultimate goal must be to develop both the desire and the capability for more effective *action*.

Airline passengers enjoy free films at the Greater Cincinnati airport.

Modern Sets Up "Skyport Cinema"

PASSENGERS WAITING for airline departures at the Greater Cincinnati Airport are now watching free sponsored films in a Skyport Cinema theatre which has been set up on a pilot basis by Modern Talking Picture Service.

The theatre has been running about three months. Equipped with a dual 16mm projection system and seats for about 40 people, it

features continuous showings of a wide range of public relations films.

Bill Oard, Modern's vice president in charge of operations, notes that the theatre has regularly been drawing between one-third and one-half of the people waiting in the terminal — those not drinking in the bar, eating in the restaurant, or shopping for souvenirs.

Several things have been done to keep this percentage up. Attractive signs have been spotted about the waiting rooms, and every hour announcements are made on the public address system calling people's attention to the free movie theatre.

Screen Gets Rapt Attention

Viewers seem to enjoy the films. Mr. Oard notes. Once seated, they seem to stay for as long as there is a bright screen. As a matter of fact, one of the passenger agents complained that three of his passengers missed their flight because they were watching the movie!

Most of the audience seems to be composed of businessmen. Less than five per cent of the attendance in the theatre has been children; 10 per cent have been women; and the remaining 85 per cent are adult males. This is a type of audience which is usually harder to reach with films than any other group.

Viewers Return Survey Cards

Modern has prepared an attractive folder which is placed on theatre seats to describe Skyport Cinema. It offers a free catalog, and includes a survey card which asks the viewer where he lives,

what his occupation is, and how often he visits the Cincinnati airport.

From the cards received back during the first few weeks, Modern believes that it is reaching an exceptionally high quality audience. Among the occupations listed were eleven engineers, several vice presidents, a general manager and a company president.

Comments were almost universally good. A sales manager noted:

Wall plaque credits the sponsor.

"This is a wonderful idea, and I enjoyed Equitable Life Insurance film very much." A quality control engineer wrote: "Best way to spend time between flights. More terminals should have." An oil company division engineer commented: "I very much enjoyed (CONTINUED ON PAGE 20)

1. Now, gentlemen! Let's get to it. Business is fine, but it's been brought to my attention that there is a lack of recognition of Tri Art as the name of Du Art's color lab, and I propose to do something about it!

2. I'm going to change the name of Tri Art! It will confuse the hell out of anybody who tries to appease us by learning that name tomorrow. They'll wake up and start screaming Tri Art!... And we won't be there.

3. Now, I want you to come up with a brand new name for our color operations that will convey our new image. It's got to reflect the vitality of our young management and the soundness of our 40 years of experience. The new name must make clear that we have made a tremendous investment in new equipment in the last 10 years.

4. You're not getting the idea! It must have wham-o! Why with our new editing rooms for our customers our new fiber optics color printing, our tightened inspection and absolute quality control, we can beat anybody for service, quality and facilities! Let's try some more!

5. I've got it! I just thought of it! Just the name to say everything! It reeks of speed, our fantastic equipment, personalized, sensational service, and dynamic follow-up combined with the knowledge based on our unsurpassed 40 years of experience! Brace yourselves... Here it comes! **"Du Art Color Corporation."**

6. How's that for a fresh approach?

your films during a stopover at the Cincinnati airport. Such a service has excellent advertising and public relations appeal for the companies exhibiting."

Modern's operations people believe that Skyport Cinema, if it were to become an established channel of circulation in many of the airports, would enable them to offer a number of new kinds of services. For one thing, it would permit showings of free films on a very tight time schedule. For example, if a sponsor wanted to use a film as part of a new model introduction, it would be possible to give him specified markets for specific months. This is not practical for present free-film distribution systems.

Theaters at Other Airports

Modern is planning to expand to a number of other airports across the country to set up Skyport Cinema theatres. Leading U.S. airports range from busy O'Hare in Chicago, with 6,270,020 annual departures, down to Cedar Rapids, in 33rd rank with 67,696. These airports account for 32,793,896 departures a year.

If even a portion of this audience could be reached, it would

Another glimpse of a typical "Skyport Cinema" audience at Cincinnati.

represent a tremendous new market for film sponsors.

Color Films on Africa, Israel Join L'Italia's Film Library

Two additional titles have joined the popular L'Italia film library created by Mel London of Wilding, Inc. (BUSINESS SCREEN NO. 5, 1964)

Africa, Jet Safari is a 13½-minute color film which gives a sweeping view of five countries on that continent as the camera roams

across plains, through the brush and to the water hole beneath the unique Treetops Hotel. Rainbow-hued Victoria Falls, ceremonial dances and Nairobi's high-rise buildings are contrasted with a game reserve at the city's edge.

Israel, the Desert in Flower, also a 13½-minute color subject, depicts the progress being made in this pioneer land where rising cities and cultivated farms have been wrested from wastelands.

Contrasts between the modern

luxury hotels and the ancient Biblical cities serve as a constant reminder of the great strides being made in this land. Kibbutz living is highlighted in a sequence showing a triple wedding celebration.

Produced by Wilding, these and earlier films in the series are available on free loan from the airline's offices or from regional libraries of Association Films, Inc.

Goodyear's Driver Education Film Directed at Teen-Agers

☆ A half-hour color film designed to show driver education students and other young drivers the importance of tires in safe driving is being offered by The Goodyear Tire & Rubber Company.

Footprints 4 goes into the classroom and onto the road to demonstrate why tires are the single most important item — next to the driver — in controlling a car. Proper selection and maintenance of these "control points" is emphasized.

The 27-minute film is available for showing free of charge by writing — giving a specific showing date — to the Audio-Visual Department, The Goodyear Tire & Rubber Company, Akron, Ohio, 44316.

THE EDITORIAL VIEWPOINT

COLOR ERA LOOMS FOR TELEVISION

HEAVY BUYING of color television receivers this Yuletide season and the continuing popularity of higher-fidelity, more dependable sets now on the market is a fact-of-life that will greatly affect processors and producers of filmed color "documentaries" as well as commercials. Color viewing is a highly-entertaining experience. Such programs as the Disney Sunday night show, followed later that evening by *Bonanza*, the nightly Carson show and NBC's sports programs can count on the increasing numbers of color set owners.

Zenith, for example, reported in November that "record sales volume for the third quarter and the nine months was sparked by the significant and continuing growth of color television. With production and factory shipments during the third quarter double the year before color accounted for better than one out of every five Zenith television receivers sold." If that record holds up over a year's period, this single set maker will move about 300,000 color receivers into American homes.

The opportunity is clear, the potential is big, for really *creative* sponsored short subjects to meet the color set owner's insatiable appetite for *interesting* programs. Travel subjects of all kinds, but especially those with *colorful* scenes, should obviously do well. Surprising, though, are the still-numerous sponsors of "flat" black & white commercials which appear within color programs. These sponsors should watch the spots which Chevrolet is using so effectively with *Bonanza*; also active in color advertising are Kraft (excellent!), Green Giant, Chrysler, to name a few.

But watch the census of color receivers at the yearend. ABC and CBS, among the networks, seem to be dragging their heels in color programming. But they won't long avoid the medium, not with the most affluent segment of the viewing audience equipped to receive color and turning to NBC or such powerful local outlets as Chicago's WGN for their fare!

Failure of U. S. Entries at London Offers a Challenge: Let's See What Europeans Like!

The 5th International Industrial Film Festival, recently concluded in London, brought four "firsts" and the Grand Prix to Great Britain's film entries: France achieved two "firsts" and the other "first" went to a Swedish-produced business film. Not a single one of the 15 U. S. entries even placed in this predominantly all-Europe competition in '64! So what's wrong with the American entries or what's different about the way in which Europeans view the industrial screen?

Remember first that in such countries as Germany, the government "blesses" acceptable sponsored films with grants-in-aid (cash)

and they are exhibited for the most part in entertainment theaters as part of the regular program fare. They're either *no-sell* or *soft-sell*, to say the least. Slower-paced, eye-filling to the viewer, they're imaginative in effects and content. But they don't try to sell anything but a pleasant experience and a good feeling.

On the other hand, it would be hard for anything "made in the U.S.A." to beat the British winner (Category G) which truly illuminates the vast land conservation effort being made in Southeast Asia, titled *Mekong*.

Well, Britain has Harold Wilson and Labour to contend with. Perhaps they should have this virtual sweep of the 5th International as a consolation prize! But, seriously, it could be a great educational experience for U. S. business to see the seven first-place winners, to study the techniques and to learn that America's films intended to promote trade abroad had better keep in mind the basic differences between what "goes well" at home and what won't "go" at all in Britain and on the continent.

U. S. Funds Aid Computer-Automated Film Cataloging Project at Southern California

THE UNIVERSITY of Southern California's Department of Cinema has received a \$112,586 grant from the U.S. Office of Education to study the feasibility of an automated cataloging service for all the audio-visual materials now in use in an eight-county southern California area.

Conducted with the cooperation of all audio-visual libraries in Los Angeles, Imperial, Orange, Riverside, San Bernardino, San Diego, Santa Barbara and Ventura counties, the study will extend over a two-year period and could well result in the largest computerized film library in the world.

USC earned the right to conduct this research because it already has developed imaginative, computerized techniques capable of revolutionizing the film libraries of the world. The whole idea began with one man — USC's Director of Film Distribution, Mr. Glenn McMurry.

It was McMurry who first envisioned getting all the detail related to USC's own rather extensive film library on computer tape. Because there was no other way to do this and because of his personal interest in the concept, McMurry first taught himself how to program an

ASSOCIATION FILMS OFFERS OVERSEAS DISTRIBUTION THROUGH RANK ORGANIZATION

Through an arrangement with The Rank Organization in London, Association Films now offers its sponsors distribution in the United Kingdom, Eire, Europe, Australia, New Zealand, South Africa and Japan. This move into the international field is part of an overall expansion program that started last year with the acquisition of a Canadian distributing firm, Association-Industrial Films of Toronto.

40,000 Groups Served

"The sponsored film medium abroad has grown rapidly in the past few years," according to Robert D. Mitchell, president of Association Films. "The distribution arrangement we have with Rank will provide American companies with an unusual opportunity to reach audiences in areas where their products or services are available."

The Rank Film Library in the United Kingdom now serves about 40,000 film-using groups. Founded in 1933 it is today the largest distribution service in Europe, employing more than 200 persons in film handling, maintenance and promotion. Apart from sponsored-film distribution Rank provides audience groups with feature films and shorts, educational

(continued on page 4)

Hugh Downs in new UNRWA Film

Hugh Downs, popular television personality and star of the "Today" show, is featured in "To Become a Man", a new film on the UNRWA vocational training program for Arab refugees in the Middle East. An earlier film, "Journey to Understanding", released last March, has been seen by more than 10 million persons on TV and at community showings.

"This film was so successful", Mr. Downs asserted, "that we recently sent a film crew back to the Middle East to explore the subject in greater depth, using a technique of unrehearsed discussion with refugee boys and girls in the training centers."

The 27-minute film is now released to TV stations and will be available to community organizations shortly through Association Films.

Free-loan public relations and special purpose films are a most important part of TV programming according to the latest station survey by Association Films. Of the more than 300 stations responding to a questionnaire, 99% said they used free films and that commercial distributors were sources from which they ordered "most free films."

The survey bears out what Association and its sponsors have long realized: that PR films offer station programmers a vital program service. Among the other results obtained: stations like films in series developed by distributors, greatly prefer special "identifying series titles" and like to learn about new films by mail, over any other methods of promotion.

Here are the results, published in full: (Note: Where totals exceed 100% stations have indicated more than one preference):

1. Do you televise **FREE FILMS** on your station?
Yes: 99%
No: 1%
2. From which sources do you order most **FREE FILMS**?
Government agencies, the Military, etc.: 53%
Commercial distributors: 73%
Individual companies or associations: 45%
Industry services such as TAC: 16%
3. How many **FREE FILMS** a week do you show (approximately)?
Films: 5
4. What running time do you prefer?
Half-hour: 87%
Quarter-hour: 56%
Full-hour: 6%
Other: 16%
5. Do you order **FREE FILMS** in series, developed by a distributor?
Yes: 63%
No: 37%
6. If "yes" to question No. 5, which do you prefer?
Half-hour series: 88%
Quarter-hour series: 41%
Full-hour series: 3%
Other: 2%
7. If "yes" to No. 5, do you prefer having an identifying series title on each film in the series?
Yes: 71%
No: 3%
Immaterial: 25%
8. Do you ever televise **FREE FILMS** in color?
No: 85%
Yes: 15%
9. If "yes" how frequently?
Regularly: 51%
Occasionally: 44%
No Reply: 5%
10. How do you prefer learning about new **FREE FILMS**?
By telephone call: 7%
By mail (special listings, catalogs, individual flyers, etc.): 98%
Advertising in trade journals: 2%
Other: 1%
11. Do you televise short 3 to 5 minute films?
Yes: 71%
No: 29%

Salute to CINE

Few organizations have done so much to present America to the peoples of the world as CINE, the Council on Nontheatrical Events. It was created in 1957, as a mechanism or "clearing house" for entering American-made films in various international film festivals.

If there is any guideline that would sum up CINE's objectives it would seem to be: "Does the film achieve its purpose fairly and accurately reflect America?"

During 1963, 119 films — America's "Olympic team" of films — were chosen from 10,000 productions to represent America at some 39 festivals. These films received the CINE Golden Eagle Award, in addition to the distinction of being shown in international film events all over the world.

We congratulate the talented filmmakers responsible for these creative accomplishments and the dedicated men and women who have labored so long and well to make CINE such a success.

These words from CINE's president, Willis H. Pratt, Jr., sum up its achievements: "The years have seen CINE's work increase ten fold, keeping pace with the increasing excellence of American films. Indicative of this growth, CINE this year became a nonprofit organization with a board of 23 directors and 183 regional jurors.

"With the cooperation of producers, sponsors, and distributors, more than 350 American films were submitted and 119 judged worthy of representing the United States abroad. Although the year is not yet over, these films have won greater honors in international competition than ever before.

"This is indeed an accomplishment in which we may all take great pride."

VOICE OVER

THE SPONSORED SCREEN SCENE

the Sponsor Speaks

Our guest columnist is Ben L. Williams, Manager Public Relations, Pittsburgh Plate Glass Company.

Williams

Most of the film activity at Pittsburgh Plate Glass comes under the Public Relations Department. As a part of our custodianship of this responsibility, we make both periodic and annual reports to management. We make no secret of the fact that this is a selling job, not just for films, but for our entire Public Relations operation.

As an example, we point out that "An Architect At Work" has, by almost any frame of judgment, returned its cost many times over. This 28-minute color film, produced for us by Dynamic and distributed by Association, has been in constant demand since it was first offered late in 1962. At the time of our report to management it had been shown to approximately 2,000 select live groups with more than 175,000 persons in the audience. A great many of these 175,000 persons have been men who can influence contracts, determine the design of buildings, and in other ways mean anywhere from \$50,000 to \$500,000 to \$5,000,000 in business for us.

Hopeful that we had our people nodding in agreement and smiling at their wisdom in authorizing the expenditure, we pointed out that during 1963 this film had more than 220 free television showings. A number of these were on prime time in major markets. We estimate the minimum television audience at 11,000,000.

Not being one to quit while ahead, I quoted Association Films as saying that this was one of the most active films of its type in their library and then report that "Architect" received top awards and certificates from the Columbus Film Festival, San Francisco Film Festival and the American Film Festival in New York.

sports shorts

Meredith

Dog tales: Gaines Dog Research Center has proved to be dog's best friend over the years, by giving his master some sound pointers (no pun) on dog care. For example: "Training You to Train Your Dog" (a new film that tells just what the title promises). Other films in the Gaines group are: "Best Dog in the Show", "International Dog Show, 1964" and "The Gentle Doctor", narrated by Burgess Meredith . . . Game Fishermen (and non-Walton's too) will find American Airlines' new piscatorial trilogy, "Kings, Cod and Stripers" an exciting and stunningly-photographed quarter-hour . . . bicycling has long been recommended by health authorities as an excellent way to slim-away body bulges and add muscle tone. Huffman Manufacturing Company sponsors two films on this splendid sport: "Road to Adventure" (American Youth Hostellers exploring the American and European countryside) and "Singing Wheels" (how bicycle clubs are encouraging the sport of cycling) . . . the Bicycle Institute encourages bicycling, too, and makes a very strong case for bicycle safety in "Play it Safe" and "Bicycling Safely Today."

Big Box Office At Bank's Bijou

NEW YORK — First National City Bank's "Little Theatre", is an employee facility that specializes in sponsored films. A service of the City Bank Club and supported by the bank's 7,000 employees, the Little Theatre, in the bank's uptown headquarters at 399 Park Avenue, has three shows a day running continuously from 11:45 to 2:30 p.m.

About 300 bank employees attend the daily performances. With a demand for five-day-a-week programming and two complete program changes a week, the Theatre depends upon Association Films and other services to supply its needs.

'Iphansis' — It's Greek to Us!

Weaving is an age-old art. The Greeks called it, "Iphansis", and not at all by coincidence it's also the name of a new Technicolor film from Burlington Industries. In 10 crisp, colorful minutes it tells the history of weaving and takes audiences into the wondrous world of warf and woof today, where ingenious machines produce textiles of great beauty and originality. It's an excellent example of the "new look" in industrial films — fast-moving, rhythmic, and richly-photographed.

"Iphansis" was produced by Rose-Magwood in association with Film Counselors, Inc.

Quote Us!

We'd be delighted to have you quote from, or reprint, any of the articles and items in "Audiences". Just a tear-sheet of anything that reaches print is all we ask.

Why Grouse? Ted Tells

The sand hills of western Nebraska are wild, windswept and desolate. Good country for the wily grouse, who's quick, alert and beautifully camouflaged. It takes a man who knows this tricky terrain to find him.

Ted Williams is the man, and he shows how it's done in the new Sears, Roebuck and Co. outdoor adventure, "Grouse Hunting." He stalks the grouse, flushes him out and brings him down neat and clean. A 20-gauge semi-automatic does the job. Lest Ted make it seem too easy, the narrator points out that if you work the grouse for 10 hours you're lucky to get in two minutes of actual shooting.

In a delightful sequence, hidden cameras capture the unusual living and mating habits of two types of grouse, the sharp-tail and the square-tail. The exotic drum dance the males perform is a strange and beautiful ritual (that few lady grouse can long resist).

"Grouse Hunting" runs 21 minutes, was filmed in color and is distributed by the Consumer Education Division of Sears, Roebuck and Co.

TRUE-LIFE HOSPITAL STORY WITHOUT CASEY OR KILDARE

The televised doings of Doctors Casey and Kildare are no match for the true-life drama found in "Cost of Hope", a new documentary about a typical general hospital. This 28-minute Johnson & Johnson film gives audiences a candid look at the complex that is a hospital, a place of hope and healing and, above all, dedication.

Six patients are shown, each with a problem demanding critical diagnosis, treatment and ten-

der care. Each is a drama, far more compelling than anything a television writer could contrive.

The film has found very wide acceptance on stations for public service telecasts, where it premiered last summer. It is now in general TV and 16mm release with bookings running months ahead. It was produced by Dynamic and sponsored by J & J for the American Hospital Association in cooperation with the American Medical Association.

UNICEF'S 'Small World' Looms Large on TV

One of the delights of the New York World's Fair was (and will be again in '65) "It's a Small World", sponsored by Pepsi-Cola and created by Walt Disney Productions for UNICEF. This magical boatride into UNICEF's world, populated with marvelous animated children, was utterly charming. (And it would make a wonderful sponsored film!)

For many years we have been distributing films about the real world of children for the United

Nations Children's Fund. The films now in release have been televised 1,366 times to a cumulative audience of 61,458,707, thus bringing the "small world" to the very large world of home TV. Most popular of the UNICEF films is Danny Kaye's "Assignment Children", a touching Technicolor tour of the countries where pennies raised by American children are helping underprivileged youngsters.

Where the news is, so is Newsweek, as audiences will see in "A Sense of Anticipation". Filmed in Viet Nam, Rome, Tokyo, Paris, India, London, New York and other world capitals and news centers, the film gives first-hand impressions of today's big stories, as interpreted by Newsweek correspondents on the spot. Filmed in Techniscope and Technicolor, the 23-minute Peckham Production, recently played a 26-theatre "Premiere Showcase" engagement in New York City (in CinemaScope), and is being shown in community organizations and on TV all over the country through Association Films.

WAX MERRY WITH JOSETTE AND PAMELA

"Ski Happy," the latest film from J. C. Penney, has all the makings of a sponsored success: pretty girls, breathtaking scenery, top ski pros and a well-known personality doing the narration. Filmed high in Chile's Andes, it features Pamela and Josette, two young debs who exercise their ski legs for the first time.

U. S. Olympic Champion, Penny Pitou narrates as the girls turn and tumble, always managing to look fresh and lovely — especially since they are outfitted in Penney's latest ski fashions. This skiing special has appeal for ski experts and tyros alike as well as those with an eye on winter fashion.

'INFORMATION EXPLOSION', Film on Computers

"The Information Explosion", a 21-minute color film on the role of the computer in our society, is now available for sales and rental through Association Informational Materials, a division of Association Films. The film, which is non-technical and intended for high school audiences, industry, and community groups, stresses that the computer is the tool of man and that man does the thinking which directs its efforts.

It was produced by Vision Associates for the Project on Information Processing of the National Science Teachers Association under a grant from IBM. It is available for sale at \$194.00 and rents for \$5.00 a day.

'Wall Street Journal' Finds Films 'Bolder', 'More Imaginative'

"Soft Sell Movies: Entertaining Approach Helps Firms Promote Their Products on Film," was the headline for a story on the sponsored film industry in the October 14, "Wall Street Journal." The article, by Ron Shafer, cited as examples "The Story of Dr. Lister," "Ballad of Soup du Jour," and "A Leaf Through History," all distributed by Association Films.

Of the "Lister" film (from Warner-Lambert) Shafer said "Its talented cast and slick production illustrate the increasing emphasis on making such films more effective by making them more entertaining."

Most new industry-sponsored films, he continued, "reflect a bolder, more imaginative approach to the medium." And, quoting Ted Westermann of Audio Productions, "The trend in business films is like the trend in women's fashions — shorter, tighter and more enjoyable."

The article discussed the increasing exposure sponsored films are finding in motion-picture theaters. As an example Shafer mentioned "A Leaf Through History," which Association Films booked into first-run theaters playing "The Night of the Iguana" and "The Unsinkable Molly Brown."

"So far 'A Leaf Through History' has been seen by 600,000 persons in 110 playdates and is averaging more than 5,000 persons per playdate, or twice the average for a sponsored film," Shafer said, quoting distribution statistics reported by Association Films. (The film is particularly suited to theatrical release: it was photographed in 35mm Eastman-color, runs 12 minutes and combines history with dramatic entertainment. It has been equally well received in 16mm release having been shown 2,837 times in adult community organizations to an audience of 161,189 persons.)

"The Wall Street Journal" article is just one of several important stories on the industry in recent weeks. "The New York Herald Tribune" did a Sunday

feature (which we will reprint in its entirety in our next issue); "Variety" a special on Prudential's "Twentieth Century" and our Association Telefilms activities; and "Television Age" an article on our station survey.

'PEYTON PLACE' STAR STARTED WITH AF

Mia Farrow, the delightful ingenue in the new top rated ABC-TV series, "Peyton Place", made her motion picture debut less than a year ago in Seventeen magazine's "The Age of Curiosity." This quarter-hour film profiles today's teenage girls, their interests, attitudes and concepts. It was filmed in a suburb of Philadelphia, decidedly unlike "Peyton Place" we might add!

Mia is the daughter of Maureen O'Sullivan and the late John Farrow, director of "Wake Island" among other memorable feature films. With such talented parentage it's little wonder she received raves from most of the TV critics when the series premiered.

To date "The Age of Curiosity" has been seen by 141,000 teenagers and adults in school and group showings and another 1,600,000 on TV. Mia's new fame should rocket "Curiosity" to even greater heights. Vavin-De Rochemont produced the film — and picked a star!

OVERSEAS DISTRIBUTION (continued)

subjects and training aids. The Rank Audio-Visual Division markets 16mm sound projectors.

Costs Comparable

Distribution costs are comparable to Association Films' charges in the United States: \$3.00 per booking (up to two reels in length) in the United Kingdom and \$5.00 in European markets. Booking charges include outgoing postage, promotion, print maintenance and audience reports.

Association Films recommends that sponsors provide 15 prints of general interest films for distribution in the United Kingdom and Ireland, and three to five prints each for Belgium, France, Switzerland, Denmark, Sweden and the Netherlands. Fifteen to 40 prints are desirable in West Germany, where the number of projector-equipped groups is unusually high. Outside the United Kingdom it is necessary for films to be dubbed in the spoken language. These arrangements can be made through Rank. English language prints may be used in all countries for selected high-level showings to governmental, industrial and educational audiences.

The Rank Library publishes an annual sponsored film catalog and a quarterly film bulletin which are sent to active film-users.

Gulf 'Stream' Rolling Along

A beautiful British-made color documentary, "On Stream", tells how the supply and demand for oil has linked the economies of two totally disparate nations, Kuwait and Denmark. This 17-minute film, sponsored by the Gulf Oil Corporation, shows how Kuwait — a tiny new Republic on an "underground sea of oil" — is helping Denmark meet its oil needs. Outside of Copenhagen Danish industry has constructed a refinery, modern in every respect, to which Kuwait crude is brought.

Apart from its fascinating story the film is a well-knit, well-photographed document that in just a few months has been seen by 65,985 viewers at club, school, and community showings. It's part of AF-TV's "Your Neighbor — the World," "Kyle Rote's World" series and is being extensively promoted as a TV special for local station use.

CONTINUED FROM THE PRECEDING PAGE 22)

electronic computer and how to operate the business machines associated with it.

Next, he "trained" the computer and the machines to handle the mountain of data necessary in cataloguing, advertising, and distributing films, and keep a running record of the whole operation.

The Office of Education grant will permit McMurry and his small staff — aided by the audio-visual libraries in the eight-county area — to apply what they already know will work for the film library of a large university to all the materials in all the educational audio-visual libraries in the area.

Eligible for inclusion in this experimental cataloguing service will be the materials now in the hands of schools libraries and all other non-profit organizations.

The federal grant directs McMurry, his staff and the cooperating AV librarians to "examine

Planning automated film catalog are (l to r): project director Glenn McMurry; Rodney Pickup, asst., and research associate Charles Vento.

the feasibility, problems, costs and all details related to such a computerized service."

Development of USC's own film Systems Cataloguing began more than five years ago with McMurry's first experiments in automating cataloguing techniques with the use of punched cards and then was extended to the computer. Techniques invented to date involve all phases of cataloguing from information preparation to inexpensive printing of catalogue information.

"Instant Reporting" on Any Film Title

USC's automated approach to the problem of film cataloguing permits McMurry and his staff to get "instant reporting" concerning any film title as to its print number, a summary of the material included in the film, where previewed, to whom rented or sold, transportation charges, and total charges. The same techniques have been applied to detailed mailing lists. From memory tapes, the computer will select all of the churches, or all the churches in just one state; all the schools, all the industrial addresses. The computer will print out each such address with the appropriate addressee: "The Minister," "Audio-Visual Director," or other title.

With the Office of Education grant, McMurry's research team expects to build the prototype of a system which conceivably, could one day cover the nation and possibly the world.

Change films in 2 seconds flat!

Read how Fairchild's amazing new MoviePak cartridge multiplies the value of your entire sound film program

At last you can show any film, anywhere, anytime—without threading, film handling or rewinding.

Simply select the Fairchild MoviePak sound film cartridge you want, snap it into the Mark IV rear-screen projector, and play. In broad daylight. In a prospect's office. In showrooms. At trade shows. On sales counters. In training classes. In the boardroom. To switch instantly to another film, just snap out one cartridge, snap in another.

Every film you have can be easily converted to 8mm and threaded into the MoviePak cartridge. Duplicate prints are less expensive than 16mm, too. Now you can unleash the full power of your entire sound film program.

The Fairchild Mark IV projector is portable, weighs only 20 pounds and is always ready for action. No warm-up time required.

For display use, it will run without supervision, repeating automatically. It takes up to 22 minutes of film with a single MoviePak.

To see for yourself, just send in the coupon.

"POLAROID" AND "COPYMAKER" ®

It makes slides.

(Perfect ones, in 10 seconds, for 55¢ each.)

So why do we call it The Copymaker?

Because it also makes perfect 10-second copies. And we didn't want to hang a complicated name on such a simple machine.

The Copymaker has a Polaroid Model 160 Land Camera precision-mounted above an easel. It will copy charts, maps, printed text or even objects, in any size from 11"x11" down to 2 3/4"x3 3/4" (or 1:1). Correct camera settings for all field sizes are listed for you. Two fluorescent lamps light the board evenly. And with the built-in electric timer you can clock exposure and development accurately.

Ten seconds is all it takes to shoot and develop copy prints or "line" slides. Continuous tone slides take 2 minutes.

And anyone can do it.

You focus. Push a button. Pull a tab. Wait a moment and remove the transparency or the copy. (After a quick hardening, transparencies snap into frames, ready for projection.) That's all there is to it. Slides in 10 seconds for 55¢. Copies in 10 seconds for pennies.

Now. Would it make sense to call a machine that's *that* easy to use "The Slideandphotographiccopy maker?"

The Polaroid Copymaker

1965 American Film Festival Entry Deadline Is Announced

☆ Entry forms for the submission of motion pictures and filmstrips suitable for the 1965 American Film Festival will soon be available from the offices of the host organization, the Educational Film Library Association. The Festival will be held April 21-24 of the coming year at the Biltmore Hotel in New York City.

Detailed information about the competition will be mailed to film producers, sponsors and distributors. Entries must be filed with EFLA by midnight, January 20, 1965. All 16mm films and 35mm filmstrips released in the United States during the calendar year 1964 are eligible for the Festival competitions; entries chosen for Festival screening will be nominated by EFLA-supervised committees of audio-visual specialists.

There are 34 competition categories grouped under the general headings of Art and Culture; Business, Industry and Public Relations; Education and Information; Health, Safety and Medicine; and Religion and Ethics. If material is not received within the coming month, write Administrative Director, Emily S. Jones, Educational Film Library Association, Inc., 250 West 57th Street, New York, N. Y. 10019.

Front Projection Corporation Announces Jenkins Agreement

☆ A licensing agreement with Will F. Jenkins, inventor of the Front Projection Process, has been announced by Sherman Fairchild, president and founder of the Front Projection Corporation. The agreement permits the company to manufacture and sell equipment patented by Jenkins for the composite photography of live models and projected backgrounds.

In making the announcement, the noted industrialist and aerial camera pioneer, said: "Until now, only a few large studios could afford the expensive custom-built Front Projection units available. But now that we are able to go into production, we will be able to bring this exciting new background system to still photographers, large and small, across the country."

"MEET JOHN DOW"

The Film That Helped Elect a Congressman

A seven-minute motion picture played a vital role in the upset election of at least one new Congressman in the 1964 election. Even with a possibility of a Johnson landslide, Democratic candidate John G. Dow was given no chance at all to unseat Katherine St. George, who had been the incumbent Republican Congresswoman from New York's 27th Congressional District for eighteen straight years without even being threatened by a close contest.

The 27th District comprises the four counties of Rockland, Orange, Sullivan, and Delaware, where registered Republicans outnumber registered Democrats by majorities as high as eight to one in some local districts. In the face of such overwhelming odds, it was obvious that a film would have to reach independent and Republican voters.

Theater-on-Wheels Went to the Voters

The problem of reaching the audience, was solved by equipping a Volkswagen station wagon with a continuous projector and rear-projection screen, which traveled to shopping centers and parking lots every Friday and Saturday night. Manned by volunteer workers, the VW was placed in high-traffic pedestrian locations and proceeded to project a seven minute motion picture, *Meet John Dow*, which had been scripted by Stanford Sobel and produced and directed by Sidney Milstein, Presi-

President Johnson wishes John G. Dow luck in his campaign for Congress in New York's 27th District; a scene from film "Meet John Dow."

dent of Aegis Productions. During the final stages of the campaign, this schedule was increased from week-ends to every night of the week except during rain.

As each shopper, attracted by the film, stopped to see what it was all about, a campaign worker handed him a piece of Dow literature, in which the candidate's qualifications and positions on various issues were stated in detail. Practically nobody refused to accept the literature, and most people put it into their shopping bags, taking it home with the groceries.

Film Was Shown to Over 75,000 Adults

The campaign literature thus provided a remarkable accurate count of the audience, and according to Dow's campaign manager Arnold Moskowitz, the film reached in excess of 75,000 adult residents of the district during the (CONTINUED ON THE FOLLOWING PAGE 110)

VIEWPOINT

U. S. Business Needs a Workshop on Films for Overseas Trade

To the Editor:

★ In our January New Year message to clients in U. S. industry, we predicted tremendous growth of world markets for the 1964-1974 decade. Political, economic and social changes throughout the world are causing phenomenal and mercurial growth in world markets which are bound to affect our total U. S. economy and many individual companies.

In the increased competition within the U. S. market from abroad and in our efforts at successful penetration and preservation of foreign markets in competition with rival countries, time-tested business practices are outmoded. The goal of management for the next decade, if we are to survive, must be to build tremendous volume of sales and equivalent profits abroad, even to a higher level than in the domestic market.

This is the only safe way to protect our home market as well as to insure worldwide growth and profits for our economy.

Your magazine's report of the FPA-ANA Film Workshop (held in New York City earlier this year and attended by many film sponsors, producers and advertising executives) considered "The Use of Films to Achieve Marketing Goals." It was of great interest to us. We have pioneered in the dissemination of information on the use of film as the best media for promoting opportunities for the sale of U. S. goods and services abroad, as well as in fostering better understanding of U. S. mores and customs.

But these aims are not achieved unless the films speak in the language of the overseas viewer, carrying the sponsor's message in the appropriate tongue, accurately translated and expertly dubbed. Conversely, poorly-prepared and ineptly dubbed films can cause grave damage to the corporate image and the sponsor's interests.

I suggest that from your altruistic vantage point, the Editors of BUSINESS SCREEN can also render valuable and timely service to U.S. companies with overseas trade interests, by urging the organization of special workshops for the discussion of "How Films Can Help Achieve Foreign Market Goals."

In addition to discussing methods for the effective use and dis-

tribution of films abroad, other collateral problems must be considered. Typical of these are the proper preparation of scripts for films destined to convey the sponsor's message abroad. These must be mindful of differences in cultures, customs and geography which motivate the thinking and buying of people in those markets. These must be carefully researched. Important norms to follow in adapting some "do's and don'ts" in the preparation of the film for foreign distribution must be thoroughly reviewed.

How can a sponsor ascertain that his message in a dubbed film has not been garbled by either inaccurate or too literal a translation? How does he know that his corporate image will not be subject to ridicule because of the use of improper language or by the ludicrous results of poor synchronization?

These and many other problems exist. They are confirmed, all too often, by the unfortunate experiences of many U. S. sponsors. The suggested "Overseas Markets Workshop" would be extremely helpful to all concerned and a very important contribution to the economic future of our country.

Albert J. Amateau,

"Selective distribution" delivers real people, not just numbers.

We can get you millions of viewers for your sponsored film, if that's what you want. But, if you want a better defined audience, we can deliver that, too. Want emphasis on adults, rather than teenagers? A predominantly female audience? Community leaders? You name it.

Sterling Movies U.S.A. developed "Selective Distribution" to give sponsored films pin-pointed exposure, not a haphazard collection of anonymous viewers. Call us. We'll show you how we can set up a specific distribution pattern which will zero in on your film's objectives.

what's new in pictures

Audio Completes a Third Film on Refinery Safety for Ethyl

The third in a series of safety films on refinery operations has recently been released by the Ethyl Corporation.

Safe Opens and Downs for Refinery Units shows that the job of closing down a refinery for maintenance or repair is a critical operation — a task requiring the coordinated teamwork of thinking men. Highly complex technical animation describes the actions of liquids and gasses in a catalytic refractory unit as it is prepared for shut down, and as it is restored to operation again.

Safe Opens and Downs for Refinery Units, like earlier safety films in the series, *Danger! Air!* and *Danger! Water!*, were produced by Audio Productions and directed by Alexander Gansell. They are part of Ethyl's extensive series of films designed as a service to the petroleum industry.

Public Service Television Spots Help Alleviate Coin Shortage

★ Television stations are being asked to join an important public service campaign to help alleviate the nationwide coin shortage. The American Bankers Association, working in cooperation with the U. S. Treasury Department, is providing taped TV spots for this "Calling All Coins" program. It has the endorsement of the Advertising Council.

Theme of the spots is to urge getting coins out of household accumulations and into circulation to help tide the nation over its temporary shortage until expanded mint production solves the problem permanently.

* * *

Medical Benefits of Spirits Told by Wine Advisory Board

★ The latest scientific data on the uses of alcoholic beverages — wine, beer and distilled spirits — in modern clinical medicine are presented in a new 28-minute color motion picture with the intriguing title, *Rx: C2-H5-OH*, produced by Fraser Productions of San Francisco.

The client, the Wine Advisory Board of the California State Department of Agriculture, found that this new information was needed by the medical profession. The Board commissioned Fraser to create a film "of viewing interest as well as fully informative."

The result: a presentation of much that is new in scientific research which also explodes many colorful but unscientific myths.

The production introduces three nationally-recognized authorities in the field — Dr. Chauncey D. Leake of the University of California, past-president of the American Association for the Advancement of Science; Dr. Salvatore Pablo Lucia, chairman of the department of preventive medicine at the University of California; and Dr. Milton Silverman, director of medical research for the Wine Advisory Board. Bob Dunn serves as moderator, sparking the film's spontaneous, informal discussion sequences.

Burlington Industries' Film Takes Weaving Art Thru Ages

★ A 10-minute Technicolor film, titled *Iphansis*, brings the age-old art of weaving up-to-date, showing how this art has expanded over the centuries from an ancient craft to an all encompassing industry where textiles are produced for a myriad of purposes, including fabrics for apparel, home and industrial use.

The title derives from the Greek word for weaving but the film focuses on the great diversity of modern textile products as imaginative color photography picks up the rhythm and beauty of the industry as it spins and weaves for all America. Burlington Industries, Inc. was the sponsor. 16mm prints are available for loan from regional libraries of Association Films, Inc.

"Grouse Hunting" is Pictured in New Sears' Sports Film

☆ If you're a grouse or "upland hunting" enthusiast, there's a fine new 21-minute color picture which sports groups will thoroughly enjoy. *Grouse Hunting with Ted Williams* takes the viewer to the sand hills of Nebraska to flush the sharp-tail and square-tail grouse. A former baseball star turned general sports' spokesman, Ted Williams uses a 20-gauge semi-automatic shotgun, retrievers and plenty of leg-power as he roams windswept hills to seek out this elusive game.

In a special sequence, hidden cameras capture some of the unusual living habits of these birds. The exotic drum dance where the bird beats its wings against the ground as it does an intricate "dance" was caught by cameras and microphones concealed during the night and turned on at the first flush of dawn.

The film was produced with the cooperation of the Nebraska Game, Forestation and Parks Commission and is available on free-loan to appropriate viewing groups from the Consumer Education Division of Sears, Roebuck and Co. Association Films is the national distributor.

"Atlantic Holiday" is Second in Series of Cruise Pictures

☆ Three years ago, the American Export Isbrandtsen Lines presented a 27-minute color film, *Mediterranean Holiday*, featuring the SS. Independence on a cruise to the Mediterranean. Since its release the picture has been shown

on 370 television stations to an estimated 10 million people, in addition to which more than 3,700 audiences of 16mm viewers have asked for and booked the film.

Encouraged by this wide public acceptance, the company has now released its newest travel film, *Atlantic Holiday*, showing the liner Atlantic on cruises to the Caribbean and Mediterranean.

The picture, made on a modest budget, shows the fun of a holiday on a modern ship designed particularly for vacation cruises. Well-

Happy tourists on "Atlantic Holiday"

photographed Caribbean stops include San Juan ("shaded by palms, irrigated by rum"), Martinique, Curacao and Nassau, with bikinis galore. A second trip on the Atlantic, included in the film, takes us to Tangier, Naples and Cannes.

Paul Alley Productions produced the film. Mr. Alley wrote the commentary, which is narrated by TV weatherman Tex Antoine. Cliff Poland and Jacques Alexandre handled the cameras and Jack Shaindlin provided an original music score.

Distribution is via Sterling Movies U.S.A.

Viewing "Tools for Freedom" award are Leonard Quartin, Kalart export exec; coordinator Dora Narzynski.

Kalart Company Is Cited by "Tools for Freedom" Program

The "Tools for Freedom" Foundation has bestowed a special award on The Kalart Company, Inc., one of seven Connecticut industrial firms who have donated some \$600,000 worth of new equipment to be used in the International Center for Advanced Technical and Vocational Training, a United Nations' sponsored facility for the developing nations recently established in Turin, Italy.

"Tools for Freedom" is a non-

profit organization formed by the U. S. business community to advance technical training in underdeveloped countries.

Through its audio-visual division (the Victor Animatograph Corporation), Kalart donated a Model 70-25MP 16mm sound projector with a 12-inch separately-cased speaker. This unit includes a special built-in amplifier and interchangeable sound heads which permit projection of either optical or magnetic sound tracks.

PGL Lenses U. S. Grand Prix Auto Race For CBS Telecast

PGL Productions, New York, has filmed the U.S. Grand Prix auto race at Watkins Glen, N.Y., for a one-hour CBS television show in the cinema-verite style.

This race, to be shown in late January, 1965, is depicted through the eyes of Jimmy Clark and the Lotus team. It was directed by Henry Trettin. The director of photography was Ken Snelson, who is experienced in the "hand-held-camera - with - sync - sound" school of shooting. Specialized location equipment was provided by Filmmakers, Inc. Seven cameramen and seven assistants were used.

U. S. Films Gain Three Diplomas at

Science Film Congress in Athens

OVER 170 FILMS from twenty-four nations and international organizations were screened during the XVIII Congress of the International Scientific Film Association, reports Alec M. Hughes from Athens.

Meetings of the Council General Assembly, and the three sections (Research Film, Education, and Popular Science) were held in the Athens Hilton and Festival performances of popular science films and a "Retrospective of Scientific Cinematography" were screened in the Trianon Cinema. Diplomas of Merit were awarded by each Section to outstanding films, nine by the Research Film Section, fifteen by the Popularisation of Science Film Section, and ten by the Section for Films for Higher Education and Basic Science.

Films from the United States gained three Diplomas. Three short films from the Plant Science Film Studies (intended either for screening on 16mm with sound or as 8mm silent film loops) won an award in the Higher Education Section while the "Popularisation of Science" Section awarded two

Diplomas. One went to Academy Films for their *Fish, Moon, and Tides*, a fascinating account of the spawning habits of the grunion, which inhabits the coastal waters of Southern California. The other went to Robert B. Churchill for *Exploring the Human Nervous System* — an animated study made with a grant from the National Institute of Health.

* * *

Randall Whaley, President of the American Science Film Association is also President of the International Scientific Film Association and was re-elected to this post for 1965. He led a Council which included representatives from both West and East Europe, the USSR, Latin America, and Japan. He announced to the General Assembly important developments in the work of the International Association including the progress of the ISFA Film Reference Library in Brussels, work on a survey of the use of films in university teaching sponsored by a grant from UNESCO, and the establishment of a new committee to coordinate Section interests in the field of television.

September 22, 1964

Mr. Alberto Amateu
Institute of Foreign Languages
7046 Hollywood Boulevard
Hollywood 28, California

Dear Alberto:

Just a note to thank you once again for an excellent job on the Spanish language translation of our film "COUNTER ATTACK" for Parke, Davis and Company. The release of this Spanish version to the Latin American countries has brought most complimentary comments wherever it has been shown. We all know it is most difficult to prepare a Spanish language version that will be acceptable to all, so this reaction has been most pleasing to both our client and ourselves.

Especially outstanding was your handling of the foreign language narrators as they appeared in the English version. The Korean, Chinese, Hindu, Liberian, Iranian, and Brazilian narrators speaking Spanish and yet retaining the flavor of their natural origin was indeed a noteworthy accomplishment.

Congratulations again on a fine job. We are looking forward to the French and German versions you are currently preparing on this same picture.

Best regards,

Most sincerely yours,

Jerry Fairbanks

Dear Al:

The French, Italian and Dutch versions of the film, "William Tell '62" which you translated, narrated and edited for Lockheed-California Company, were all enthusiastically received at world-wide military installations. Many thanks for an exemplary job!

Your conscientious regard to do each production phase well and efficiently is a welcome attribute. It makes working with you a real pleasure. You can be certain that when the need for your special skills arises, we will be calling you.

Most sincerely yours,

Betty Jane Williams

THE WINNERS AT LONDON

23 Pictures from Nine Countries Share Honors at 5th International Industrial Film Festival

HIS ROYAL HIGHNESS, Prince Philip, Duke of Edinburgh and patron of the 5th International Industrial Film Festival held in London, England from November 2nd through the 6th set the keynote for the 651 registered delegates from 17 countries who attended this significant event:

"Films have a growing importance in industrial communications. They can help in every part of industry and commerce from training to selling, from information to research and from image promotion to safety propaganda. Furthermore they are easily adapted for use anywhere in the world. There is still a great untapped potential in films for industry."

Sir Peter Runge Cites Films' Value

Later, at the Festival's Awards Banquet ceremonies held in London's swank Dorchester Hotel, Sir Peter Runge, President of the Federation of British Industries, enjoined Prince Philip's opening words when he remarked:

"We all believe that these international industrial film festivals are of great value to industry. They provide a unique opportunity to study the use of film as a tool of industry and allow delegates to see the latest techniques that are being used by each other's countries (see page 44 for complete text)."

Films from Britain Take Six Awards

And then Sir Peter rewarded the 23 winners of first, second and third prize honors in the Festival's seven categories. Great Britain, in turn, received the International Jury's highest honors with four first prizes, one second and a third prize. French entries scored highly, also, with two first prize awards and a second and third prize. Sweden took the other first prize with films from Germany scoring two seconds and two third prizes. National Film Board of Canada-produced films won two third prizes for that country; the Netherlands carried home one second award and an Italian picture won a third prize. Switzerland was also a second prize winner and Belgium took a third in the same category.

15 films submitted by the National Association of Manufacturers from the United States failed to win a single award at London this year. The Festival is sponsored annually by the Council of European Industrial Federations and the Federation of British Industries was joined by the British Employers' Confederation as vice-patrons of this year's event. Sir Peter Runge was also Chairman of the Festival Executive Committee.

Festival Director this year was J. Michael Shersby, Esq. His Publicity Director was our own European Editor, Robinson P. Rigg, Esq. and the Festival Officer was D. G. Stephens, Esq. The Festival was organized in London this year by the British Industrial Film Association.

The 23 prize-winning films were selected by

members of an International Jury, largely composed of representatives of industry and industrial associations, from such countries as Austria, Belgium, Denmark, Finland, France, Germany, Great Britain, Italy, Netherlands, Norway, Spain, Sweden, and Switzerland. The Belgian jurors, for example, were M. Raymond Haulot, L'Acroissement de la Productivite and M. Karel Simons, of the International Audio-Visual Technical Centre; Finland's jurors were Herra Osmo A. Wiio of the Finnish Employers' Confederation and Dr. Kaarlo Larna of the Federation of Finnish Industries.

Great Britain's representatives of the International Jury were Edgar Anstey, British Transport Films; Clive Barwell, Mullard Limited; R. W. Rolfe, Transport and General Workers' Union Record; Brigadier G. B. Still O.B.E., British Oxygen Company Limited; and Ronald Veltman, British Productivity Council.

133 Films Entered in 22 Countries

There were 133 films entered by the 22 countries which competed in this year's Festival (17 countries had delegates in London). They were screened through the week of the program in the ultra-modern theater at Shell Centre, South Bank and the Central Office of Information Cinema, on Hercules Road.

The Festival week also featured two major conference sessions. Chairman of the Conference which discussed "The Value of Industrial Film as a Medium for Promoting Sales" on Tuesday, November 3rd at the Institution of Electrical Engineers was Brigadier G. B. Still, O.B.E. Brig. Still was joined by Dr. Wilhelm Packenius, Badische Anilin — & Soda Fabrik A.G. of Germany and Gordon Begg, of Imperial Chemical Industries Ltd., London, in talks on this important subject. All three men represent companies which are extremely active users of the industrial film medium.

Discuss International Film Showings

The second major conference of the week took place on Thursday, November 5th, also at the Institution of Electrical Engineers. Here conference guests heard a discussion of "The Means by Which Films Can Be Shown to International Audiences." Conference chairman was M. W. Pitts-Tucker, Esq. of Courtalds Ltd. He was joined by John Drummond, Shell International Petroleum Co. Ltd. and Kert Bla-

(CONTINUED ON THE FOLLOWING PAGE 115)

At right: festival delegates enjoy a well-deserved "break" in the continuous screenings of the many entries. Lounge is outside the fine auditorium theater of Shell International Centre, where the majority of films were previewed by nearly 700 delegates.

Receiving the Grand Prix of the Council of European Industrial Federations from Monsieur Maillet, President of the French Federation of Industries (left) is Bonnie Tritton, Chairman of the British Industrial Film Association, at right.

Festival discussion session on "The Means by Which Films Are Shown to International Audiences" with Kert Blaauw, Technical Film Centre, the Hague, Netherlands at the podium. Panelists in front row, (l. to r.): Jean Pierre Dubied, of Schafilm Zentrale, Switzerland; M. Dager, of Cefilm, France; and Sven Hallonsten, of Council for Personnel Administration, Sweden.

Sir Peter Runge, President of the Federation of British Industries (center, above) greeted delegates and guests at the inaugural reception. At left, Miss Avalon Daggett, U. S. producer, is welcomed by Mrs. Laing, wife of the President of the British Employers Confederation.

John Bewg (at left), Director of the Central Office of Information, receives a first award for "Discovery — Penicillin" from Sir Peter Runge, President of the Federation of British Industries.

Hugh Wickham, Shell International Petroleum, receives the first prize awarded to "Mekong."

Miss Juliette Redgrave, of Richard Costain Ltd., receives first prize award for "Critical Path."

Sven Hallonsten of Sweden accepts first prize award on behalf of producers of "Sales Talk."

Below: M. Bureau, of Houilleries du Bassin de Lorraine accepts the first award in Category C.

AWARD-WINNING FILMS AT THE FESTIVAL IN LONDON

CATEGORY A

Films about industrial questions. Economic, social, technical or scientific of general interest—for showing to public.

FIRST PRIZE: FRANCE

"LES EXPERTS DES ANNEES QUATRE"

Sponsored by Gaz de France
Produced by Son et Lumiere

SECOND PRIZE: SWITZERLAND

"SIGNALE"

Sponsored by the
Swiss Federal Postal Administration
Produced by Kern-Film A. G.

THIRD PRIZE: BELGIUM

"POINT MORT"

Sponsored by Ministere des Communications
Produced by Belgique-Cine Production

CATEGORY B

Films about specific industrial products, materials or projects, intended for showing primarily to the general public.

FIRST PRIZE: GREAT BRITAIN

"DISCOVERY—PENICILLIN"

Sponsored by the Foreign Office,
Commonwealth Relations and Colonial Offices
Produced by T.V. Cartoons Ltd.
for Central Office of Information

SECOND PRIZE: GERMANY

"ULTRAMID"

Sponsored by
Badische Anilin- & Soda-Fabrik A. G.
Produced by Sasse Film K. G.

THIRD PRIZE: FRANCE

"LE NOUVEL AGE DE PIERRE"

Sponsored by Syndicat National
Des Maitres Carriers de France
Produced by Les Analyses Cinematographiques

THIRD PRIZE: CANADA

"MAGIC MOLECULE"

Produced by National Film Board of Canada

THIRD PRIZE: GERMANY

"NEUR TURM FUR ALTE WESER"

Sponsored by Hubinsel Gmb H
Produced by Ufa-Werbefilm

CATEGORY C

Films aiming less at information than do the films in Categories A and B, but which have the purpose of contributing to the prestige of the industry concerned, or of a firm, intended primarily for the general public

FIRST PRIZE: GREAT BRITAIN

"MEKONG"

Sponsored and produced by
Shell International Petroleum Co. Ltd.

SECOND PRIZE: GERMANY

"MIT FARBen BEGANN ES"

Sponsored and produced by
Farbwerke Hoechst A. G.

THIRD PRIZE: CANADA

"AN ESSAY ON SCIENCE"

Sponsored by the National Research Council
Produced by the National Film Board

THIRD PRIZE: GREAT BRITAIN

"SNOW"

Sponsored by the British Railways Board
Produced by British Transport Films

CATEGORY D

Films about specific industrial products, materials or projects or about industrial techniques (management methods, measures for increasing productivity, efficiency and output, rationalization, automation, application of modern techniques, etc. intended primarily for specialist audiences.

FIRST PRIZE: GREAT BRITAIN

"CRITICAL PATH"

Sponsored & produced by Richard Costain Ltd.

SECOND PRIZE: GREAT BRITAIN

"POLYOLEFINS"

Sponsored by Shell Chemical Co. Ltd.
Produced by Shell International Petroleum Co.

THIRD PRIZE: ITALY

"DIFESA DEL PIOPPo"

Sponsored and produced by Montecatini

THIRD PRIZE: GERMANY

"EIN NEUES VERFAHREN DER ENSTAUBUNG VON KONVERTER-GASEN"

Sponsored by Fried. Krupp Industriebau
Produced by Indoc Industrie-und
Fernsehfilm-GmbH

CATEGORY E

Films: an industrial application of scientific principles and research intended primarily for special audiences, including educational establishments, rather than for general showing.

FIRST PRIZE: GREAT BRITAIN

"FRONTIERS OF FRICTION"

Sponsored and produced by
Shell International Petroleum Co. Ltd.

SECOND PRIZE: SWEDEN

"THOUSANDS OF G"

Sponsored by Alfa-Laval AB.
Produced by Rygaards AB.

THIRD PRIZE: GERMANY

"UNTER GARANTIE"

Sponsored by E. Merck A. G.
Produced by Leonaris-Film

(CONCLUDED ON THE FOLLOWING PAGE 42)

worldwide audiences for sponsored films

INFORFILM is an association of leading film distributors providing a unique international service for the overseas distribution of sponsored films. The INFORFILM member in your country handles every detail of arranging distribution including responsibility for print inspection and maintenance, active promotion and audience reports. Information on dubbing or subtitles in the national language is available.

This invaluable service extends horizons for sponsored films immeasurably . . . to the millions of viewers in clubs, schools, churches and community and industrial groups wherever your products or services are used.

*Two brand new
Ansco black & white films...
one negative and one reversal!
Four outstanding new
color reversal emulsions
...and don't forget the other three.*

New Ansco Versapan® Negative Type 2531. The new medium-speed, fine grain black & white negative material that produces superior results under a wide range of conditions. Daylight 80. Tungsten 64.

Ansco Super Hypan Negative Type 2660. This high-speed, medium grain black & white film is ideal for photography at low light level where a master negative is required. Daylight 200. Tungsten 160.

New Ansco Super Hypan® Reversal Type 2960. The high-speed, good definition black & white reversal film ideally suited to TV news coverage and other applications where low light levels are encountered. Daylight ASA 200. Tungsten ASA 160.

Ansochrome® D/50 Type 2311. The improved "standard" speed Ansochrome, with sharper definition, better color saturation and richer colors. Daylight ASA 50.

Ansochrome D/100 Type 2210. Introduces important advances in color fidelity, fine grain and sharpness in high-speed color film. Daylight ASA 100.

Ansochrome T/100 Type 2210. The same sharpness, fine grain and rich colors in a high-speed film balanced for tungsten. Tungsten ASA 100.

Ansochrome D/200 Type 2230. The very high speed film with amazing color fidelity and sharpness at extreme low light levels. Daylight ASA 200.

Ultra Speed Ansochrome Type 2290. Nominally rated at ASA 250, Ultra Speed Ansochrome may be "forced" in processing to speeds as high as ASA 800 for instrumentation and other special purposes.

Ansochrome Professional Type 2420. Quality color release prints begin with originals photographed on Ansochrome Type 2420. This low-contrast camera film is balanced for tungsten light, and is especially designed to counteract the increased contrast found in release prints made from ordinary camera films. Has extended tonal scale in areas of maximum and minimum exposure.

Ansochrome Duplicating Film Type 2470. This exceptionally high quality film has color saturation and sharpness that makes duplicates or reduction prints as good as—or even better than the original. For quality duplication it can't be beat.

FESTIVAL REPORT FROM LONDON

The Festival Chairman's Address
at the 5th International Awards Banquet
by Sir Peter Runge

Chairman, Festival Executive Committee

UNLIKE HOLLYWOOD which has to scan box office figures with such anxiety — there is one part of the film industry which is thriving without any box office revenue at all — the part which makes films for industry to help it sell its products, broadcast its viewpoints and train its personnel.

Twenty-two nations have shown their best industrial films at our Festival in London this week and the representatives of seventeen of them are here tonight.

But unlike most film festivals it has been no glamorous, glittering occasion. The stars are the industrial achievements of the western world, seen in a hundred and thirty-three films which together present a complete and exciting picture of 20th century industrial development.

Total of 651 Delegates Signed Register

The Festival has attracted a very great deal of interest here and abroad. Over 650 delegates have attended — industrialists, diplomats, specialised film producers and journalists, who have studied each other's methods and techniques.

We have seen how engineers are developing vast areas in the Middle East, how a petrochemical works has been built outside Brindisi in Italy, and how the beaches of Dunkirk have been transformed by the construction of a giant iron smelting plant. Even international sporting events have crept in, including the America's Cup Races, Donald Campbell's speed attempts and those of his U.S. rival, Breedlove. From plastics to poplar trees, from snow to atomic power — every aspect of industrial achievement has been on show, presented by the world's best specialised film makers.

Value of Festival to Industry Is Noted

We all believe that these international industrial film festivals are of great value to industry. They provide a unique opportunity to study the use of film as a tool of industry and allow delegates to see the latest techniques that are being used by each other's countries. However, perhaps the most valuable part of a festival is the opportunity it affords for delegates to meet together and discuss problems of common interest. I am sure that you have profited immensely from the meetings you have had in the delegates' lounge at Shell Centre, and (CONTINUED ON THE FOLLOWING PAGE 46)

FESTIVAL REPORT FROM LONDON

(CONTINUED FROM THE PRECEDING PAGE 44)

the two conference sessions held on Tuesday and Thursday. At the evening receptions we hope that you have had an opportunity to meet together and, at the same time, enjoy some of the history and tradition of London.

Great Britain a Most Gracious Host

As Chairman of the Festival Executive Committee you would like me, on behalf of all of us, to thank the Federation of British Industries and the British Employers' Confederation for giving us such a wonderful reception at the Drapers' Hall on Monday evening, and also to thank Her Majesty's Government for the wonderful reception which they gave us at the Banqueting Hall in Whitehall on Wednesday evening.

We are extremely grateful to the Industrial Federations for all the help that they have given in making this Festival possible and in supporting it with such a strong entry of films and for sending so many delegates. The Committee also wish to record their appreciation of the support given by the Films Sub-Committee of the Council of European Industrial Federations which is responsible for making the rules that govern our Festival.

An Appreciation to Members of the Jury

The prizes are awarded by the International Jury — I would specially like to thank them for all the very hard and immensely important work they have done in viewing films.

Lastly I am certain that you will all join with me in congratulating Mr. Michael Shersby, our Festival Director and his team for their untiring effort and excellent organization. No detail has been overlooked and the success of the festival redounds to their credit •

Festival interlude: European Editor Robinson P. Rigg and Mrs. Rigg chat with Carl Lenz, President of Modern Talking Picture Service, New York (at right) during the London festival.

Mme. Yvette Roze, of Les Analyses Cinematographiques, receives third prize given their film "Le Nouvel Age de Pierre" in Category B.

The European Editor of BUSINESS SCREEN, Peter Rigg, served as the Festival's press and publicity representative throughout the arrangement period as the Publicity Director. •

Pilot Productions cameraman, part of crew on location at Louisville, Kentucky.

Movie Tells How One of World's Largest All-Welded Bridges Was Built

A 20-minute color and sound movie tells the story of how Allied Structural Steel Company fabricated and erected structural steel for one of the World's largest all-welded truss bridges, which spans the Ohio River at Louisville. The film produced by Pilot Productions, Evanston, Illinois, is being shown to engineers, national, state, county and local gov-

ernment officials; engineering students; technical associations; and civic groups. It explains the unusual welding practices, special equipment, and X-ray testing techniques used. Movies can help you reach and sell important prospects with your "how-it-was-done" story—whether you build bridges or watches. Write Pilot Productions, Inc., 1819 Ridge Avenue, Evanston, Illinois. Or call collect at Davis 8-3700.

RCA MAGNETIC RECORDER/REPRODUCER SYSTEMS DESIGNED TO GIVE YOU WIDE RANGE USAGE

◆ MAGNETIC FILM RECORDER/REPRODUCER

RCA's PM-76 Single Film Recorder/Reproducer brings in the latest advances in mechanical design features to assure long-life, trouble-free, quality performance. The system, housed in an 84 inch cabinet, is available for 16, 17½, or 35mm film and in single or multiple track models. Features sync footage counter, high speed rewind, synchronous and interlock motors, and highest quality modularized plug-in amplifiers.

MAGNETIC FILM REPRODUCER ◆

RCA's PM-75 Magnetic Dual provides two complete and separate film handling mechanisms and associated items mounted in a single 84 inch cabinet. This cost and space saving system can be supplied as a dual reproducer each for the same type of film or for any two of the following: 16mm, 17½mm, or 35mm. It is also available as one reproducer and one recorder for any combination of film widths.

Two more winners from RCA are the self-contained PM-72 Portable Magnetic Sound Recording System, and the PM-77 ¼ inch Synchronous Tape Recorder/Reproducer. Want to know more about RCA's wide range of quality film recording equipment? Write: Dept. 806, RCA Broadcast & Communications Products Division, 2700 W. Olive Avenue, Burbank, California; or 36 West 49th Street, New York, New York.

**Acme Film Laboratories
Add Three New Ampex Units**

Acme Film Laboratories, Holly-
wood, has completed installation
of three new Ampex videotape re-
corders, and the equipment be-
came operative November 1, ac-
cording to Mel Sawelson, general
manager of the firm which special-
izes in tape-to-film transfers and
tape-to-tape duplicating. The lab-
oratory continues its 16mm devel-
oping and printing in color and
black and white.

Two of the new VTR's are Am-
pex VR-1100's; the third is a
VR-660. Together, they represent
a capital investment of approxi-
mate \$135,000. These new machi-
nes, combined with one Ampex
VR-1000C, three black-and-white
TV film recorders, and one color
TV film recorder, make Acme's
facilities the largest among the
independent companies, according
to Sawelson.

Increased demand for tape syn-
dication by film producers, Acme's
expansion into a national company
and the recent opening of their
New York office were cited by
Sawelson as the reasons behind
this major equipment acquisition.

"We believe that the latest Am-
pex equipment will enable us to

News Along the Film Production Line

continue to make important con-
tributions in quality of reproduc-
tion to this quality-conscious in-
dustry," Sawelson said. The new
equipment also will enable Acme
to keep up with the demand for
their in-by-nine, out-by-five daily
service, a system where prints are
air-expedited and jetted back the
same night for next-day delivery
in the east.

Acme headquarters are at 1161
North Highland Avenue, Holly-
wood. The New York office is
located at 400 Madison Avenue.

**Synchro-Sound Handling Music
For ABC-TV Cartoon Series**

☆ Work has begun on a new ABC
television show for which Synchro-
Sound, Inc., New York, will han-
dle the music requirements. The
series is a cartoon show being pro-
duced by Hal Seeger Productions
and will contain original songs and
background music written and
scored for the series.

The company now has regular
shows running on all three net-
works. It also supplies music and
sound effects for documentary and
industrial films, and is currently

working on several theatrical spe-
cial features for Matteo Associ-
ates, of Chicago.

NEWS of Distribution and Production

Closed-Circuit T V Division

New at Sterling Movies U.S.A.

A service designed to open new avenues of visual communications for its clients has been announced by Sterling Movies U.S.A., distributor of sponsored films and other visuals.

Sterling Movies' president, Charles Dolan, said that Herbert T. Green has been named director of the new Closed Circuit Television Division. Green has been a broadcast and closed circuit television executive since 1948.

Dolan described the new activity as a "complete service package." It includes total production planning, facilities arrangements, program presentation, and the distribution of videotape and film transfers. He also noted that Sterling Movies is now staffed to handle both the live program and the nationwide distribution of a taped or filmed version transcript.

Listed as specific areas of interest to Sterling Movies' new division are: sales promotion shows on an intercity basis; the transmission of programs of special interest to convention delegates who are housed in one or more hotels in a given city; and the recording of seminars or lectures on videotape.

One of the division's first assignments was the video recording of a scientific discussion sponsored by the Interdisciplinary Program of the New York Academy of Sciences. An edited version of the tape will be transferred to 16mm film which will be studied by interested groups throughout the country.

Sterling Movies U.S.A. first ventured into the closed circuit field in 1962 when it originated TeleGuide, the closed circuit network feeding 45,000 rooms in New York's major hotels with a daily program of information to visitors to the City.

New Studio Center for Logos

in Arlington Expands Service

A new studio center at 3620 S. 27th St., Arlington, Virginia, was occupied in early October by Logos, Ltd. production firm in the nation's capital. Michael Chaney, general manager, noted:

"The center gives us badly-needed space, power and technical facilities required to provide necessary production capabilities for this growing area." The new building provides a central 5,000 square-foot studio and facilities for both color and b&w television production, in which Logos specializes. Two docks accommodate the company's two mobile television units. Logos' tape-to-film transfer department was the first operation to be moved to the new location.

Identicolor Laboratory Moves to Larger Plant in Los Angeles

New and larger plant facilities at 849 N. Highland Avenue, Los Angeles, for the Identicolor Laboratory, Inc. have been announced. D. B. "Skip" Creaser, president, confirmed the acquisition of the Master Film Service, the lab division of Execugraf Corporation.

New Identicolor laboratory services include "mastering" for the Vista-Sell projector and other continuous filmstrip formats, visual aids and a variety of cartridging and packaging for 8mm subjects as well as the expansion of Identicolor's narrated travel slides. The new facilities include a projection room, soundproof recording room and complete vault storage for all masters, negatives and original material.

William Beale, vice-president and plant manager; Merle S. Ewell, slide duplicating and production department; and Hiro Yoshida, filmstrip production and photography, are named as among key personnel at the new location.

4TH FILM FESTIVAL OF NEW YORK

Honor 78 Industrial Films, Filmstrips & TV Spots

at 4th International Film & TV Festival of N. Y.

THE 4TH INTERNATIONAL Film & TV Festival of New York, held at the New York Hilton on October 21-23rd, proved to be a generous host to agencies, sponsors and producers who submitted entries for the four principal areas of competition. A total of 24 silver and bronze awards were bestowed in the eight categories for Industrial Films, including a Grand Award to Saul Bass & Associates for the Eastman Kodak N. Y. World's Fair picture, *The Searching Eye*.

In addition, five silver and bronze awards were given to film-strip entries and another five went to public service television programs. 38 awards for outstanding television commercials were shared by 16 U. S. film producers and eight companies from abroad. Notable among the agencies represented in this group were the Campbell-Ewald Company, Carson, Roberts/Inc., Erwin Wasey, Ruthrauff Ryan, Inc., Fuller & Smith & Ross, Inc., and Ketchum, MacLeod & Grove, Inc.

Discussion seminars, another feature of the three-day program, included a presentation by Harry Wayne McMahan on "Breaking the Language Barrier in International TV Advertising," and a talk by Robert E. Spinner, president of Marketscope Research Co., on "How to Measure TV Advertising Effectiveness." Another program feature was a presentation on "Modern Fotomation Techniques"

by Al Stahl, president of Animated Productions, New York, who developed the technique.

The awards to industrial films, filmstrips and public service television programs:

TROUBLE IS OUR BUSINESS...

*The world's finest
repair shop
is at your service.*

*Finest Technicians
Finest Equipment*

ONLY EXPERIENCE MAKES AN EXPERT. Our camera technicians

and repair personnel range from 10 to 35 years of experience.

■ F&B Ceco employs more than 100 of these fine factory trained technicians. We repair over 2,000 cameras, over 800 Moviolas, mount and service over 2,000 lenses, convert over 200 Auricons, service over 800 items of sound recording gear and we custom design and build over 500 special items of equipment, each year.

■ Backing up our expert technical staff is the world's most complete stock of factory parts and a magnificently equipped machine shop, an optical laboratory and electronic laboratory.

(1) We know how to diagnose the equipment problem.

(2) We have the needed parts in stock.¹

(3) Because of our experience, we complete the repair in less time, at less labor cost to you.

(4) We GUARANTEE the repairs. Your equipment will again operate like new.

HERE'S HOW TO GET YOUR EQUIPMENT REPAIRED: (1) Send it to us right now. (2) You will receive a diagnosis of the problem, an estimate of the cost for parts and labor, and a delivery date for the finished job. All this is FREE. (3) Promptly on the date promised, you will receive your GUARANTEED repaired equipment.

When in New York, why not visit and inspect our facilities. You will enjoy meeting and chatting with our technical staff. Please consider this your cordial invitation.

¹In our \$150,000.00 parts inventory.

Send your equipment in

HELPING TO make both management and film producers aware of the urgent need for more good films to aid company managers, the nation's oldest professional management society, The Society for Advancement of Management, launched its first International Management Film Festival at the Americana Hotel in New York City on October 14-17. Dr. Henry A. Singer, executive director of the Society and Peter Livingston, film festival co-ordinator, supervised the event.

68 entries were judged in four categories on the basis of their merit in using "the film medium as a force for management education." A total of 15 pictures were

given awards in the four festival categories. Films sponsored by International Business Machines won top honors, winning three of the prizes. Grand prize winner was a Volkswagen Co. of America production, *The Right Hand of Plenty*.

Judging the entries for the SAM were: John F. Mee, chairman, Mead Johnson Professor of Management, Indiana University; C. G. Cady, division manager, Pacific Telephone & Telegraph Co.; Dause A. Bibby, president, Stromberg Carlson; Edward D. Kemble, general manager, Mine Safety Appliances Co.; and Professor Oliver J. Sizelove, Newark College of Engineering.

This first year's festival event

Films for Management Compete at First International Festival

Society for Advancement of Management Jury Names Fifteen Motion Pictures for Honors in Four Categories

was held during the annual gathering of Society members and showings were well-attended, having been given prominent program identification. The organization will continue the festival competition in 1965, noting that "the general feeling was that for a first year the results were excellent."

A film industry committee, which included representative producers and the Editors of BUSINESS SCREEN, helped launch the event

but panels of qualified management personnel were in full charge of preliminary screenings and finalist judging. Only 12 of the 68 films were eliminated because of non-conformity with category definition. The aim of this first International Management Film Festival was for *quality and relevance*, rather than sheer numbers of film entries. The goal was achieved with distinction as the Society provided a *relevant* new awards program •

INTERNATIONAL MANAGEMENT FILM FESTIVAL

The Society for Advancement of Management

New York City • October 14, 16, 1964

Grand Prize: "The Right Hand of Plenty"

Volkswagen Company of America, Inc.

Winners of Golden Eagle awards were presented to this capacity audience which saw the CINE festival films.

cine: a sky-full of golden eagles

Capacity Audience in Nation's Capital Sees Exhibition of Films of Merit and Presentation of International Film Awards in the N. E. A. Auditorium

THROUGHOUT THE WORLD, the "Film Festival" is a way-of-life, a prized attraction for attracting tourist visitors to cultural centers like Edinburgh and Venice, to spas like Cannes. To the entertainment film industry, the "festival" is a marketplace where trophies lead to boxoffice receipts. Some festivals are specialized, as in Cortina, Italy where the "sports motion picture" is king; or in Padua, where medical-scientific interests rules in a medieval university setting.

Festivals run to flowers, as at Trieste, Italy; to religious concerns, as in Valladolid, Spain, which held an "International

Week of Religious Cinema" this past spring. In 1964, there were festivals to be served at such far-flung places as Buenos Aires and Cordoba in the Argentine; at Kampala, in Uganda (an African Film Festival); in Iran, Pakistan, Poland and at Adelaide and Melbourne in distant Australia.

What Festival Viewers Like

For the most part, throughout the wide world of festivals, the most common denominator of audience interest is in the art of the film, the appeal of the unusual or the cultural reflection of the country of origin. The exceptions are specific: i.e. sports, medicine, religion, science. Only a relative few

Cesare Guoli (left) Italian Embassy counselor, commends Dick Pope, Cypress Gardens, Florida, for the silver medal award from Cortina.

of the world's crop of festivals have any specific interest in the industrial film in the methodology

of business. The exception is the European-oriented "5th International Industrial Film Festival" recently concluded in London.

But, paradoxically, it is in these "galleries" of art and culture where the U. S. motion picture *not* for entertainment — the short film, the documentary, the abstract and experimental, the medical and the scientific pictures — runs into stiff competition for the minds and hearts of men from highly-competitive film makers of the Soviet Bloc countries. Well-heeled legions of Communists visit these events en masse. U. S. representation (except at Cannes where Hollywood stars are active) is often sparse, with a single lonely delegate and little or no funds for entertainment.

Awards Night in Washington

☆ All of this is prelude to a recent and important gathering in Washington, D. C. where members of the Council of International Non-theatrical Events were hosts on November 10, at an Exhibition of Films of Merit and an awards ceremony in the Crabtree Auditorium of the National Education Association. Here, on a gala evening and before a capacity audience, winners of international film festival trophies received their prizes and 119 of CINE's own "Golden Eagle" award certificates were bestowed on sponsors and producers of motion pictures which had been selected to represent the U. S. at 38 worldwide festivals this year.

The Council's efforts this year brought U. S. entrants a Silver

The U. S. Undersecretary of Labor, John Flemming (left) accepts Golden Eagle for "Wonderful World of San Francisco" (his home town) as presented by president Bill Pratt.

CINE Board of Directors, pictured at NEA headquarters in Washington, D. C. Front row (l. to r.): Dr. Harold Wigren, coordinator; Alden Livingston, secretary; James Culver, treasurer; Brig. Gen. Willard Webb, vice-president; Willis H. Pratt, Jr., president; J. Edward Oglesby, vice-president; Charles Dana Bennett, vice-president; Dr. Anna L. Dyer, vice-president; John Flory, past-president; and Thomas W. Hope, vice-president. Second row: Stan McIntosh, O. H. Coelln, Randall M. Whaley, Don G. Williams, Eyre Branch, Robert Disraeli, Peter Cott, Frank S. Rollins, Ralph Creer, and the Rev. Michael Mullen, C. M. Picture was made during recent meeting.

Bear award (for *Sunday Lark*) from the 14th International Film Festival at Berlin; a special jury prize for the "creative-experimental" short subject, *Help! My Snowman's Burning Down*, from the International Festival at Cannes; the silver cup of the Automobile Club of Italy from the International Competition of Sports Motion Pic-

tures at Cortina, Italy for *The Sound of Speed* and a silver medal from the same festival to *Sports, Wacky & Wet*.

"Silver Sail" from Locarno

At Locarno, the 17th International Film Festival bestowed its Silver Sail Award on the film, *Hangman*. Bilbao, Spain selected the television documentary, *Crisis: Behind a Presidential Commitment*, for the top award in the television film category. 15 of the 38 festivals in which CINE selections were entered put one or more of these subjects on the program and bestowed diplomas of merit, in addition to other awards noted.

Council's "Golden Eagles," at which Dr. William C. Carr, executive secretary of the National Education Association delivered the speech of welcome. The NEA has been host and helper to CINE since its inception. Dr. Harold Wigren of that organization is the coordinator in Washington, D. C. Dr. Anna L. Hyer, another NEA executive staffer, is a member of the CINE Board of Directors.

Council president is Willis H. Pratt, Jr.; vice-presidents are Thomas Hope, Edward Oglesby, Miss Hyer, Charles Dana Bennett and Brig. Gen. Willard Webb. James Culver is treasurer; and Al-

Thomas Ware, president, International Minerals & Chemical Corporation, (2nd from left) receives Golden Eagle award from Mr. Pratt for the film, "This Garden England," produced by William S. Yale and directed by Richard N. Jamieson (both are at right) of Empire Photosound, Inc.

Dr. William G. Carr, executive secretary of the National Education Association, welcomes sponsors and producers at CINE Awards dinner.

The Council, now incorporated as a non-profit organization and formally recognized as such, began its work in 1957. It replaced the chaos of individual sponsor, producer participation in the innumerable festivals with an orderly process of selection. Regional screening committees, many of them composed of experienced sponsor, distribution and educational film executives, help "clear" the large number of original entries for finalist selection in the spring of each year.

Governments of the countries involved have been enthusiastic supporters of the Council program. Counselors and attaches of the various embassies officiate at the annual awards event. International awards were presented in Washington on November 10 by The Honorable Michael Robb, Information Counselor of the British Embassy and by Cesare Guoli, Counselor of the Italian Embassy; French and German government representatives were also on hand to present awards from their respective lands.

Dinner for Awards Winners

The CINE awards' presentation program was a day-night affair. A dinner honored recipients of the

den Livingston, secretary of CINE. The immediate past president is John Flory.

Past President Flory has called the CINE selections "America's

CINE'S PRESIDENT BILL PRATT PRESENTED THESE AWARDS:

Peter A. Mooney, Audio Productions, Inc., accepts three Golden Eagles.

Mr. and Mrs. Gilbert Altschul received their Golden Eagle award.

Mel London, Wilding, Inc., accepts Eagle for picture "To Live Again."

Avalon Daggett receives the award for her motion picture, "Big Span."

Jack Borland, Smith, Kline & French Laboratories, accepts Golden Eagle.

George A. Johnston, Washington Video Productions, was also cited.

Scene from the Pan American motion picture, "U.S.S.R." takes viewers inside the Kremlin walls in Moscow, to a corner of Cathedral Square.

THE PEOPLE OF THE U. S. S. R.

Clear-Eyed, Fresh Look at the Land and the People of Soviet Union in Strauss' Film for Pan-American

RUSSIA

Sprawling four thousand miles from the Baltic to the Pacific. A land so vast that when a housewife in Odessa is just waking up, a fisherman in Vladivostok is tying off his lines for the night. Mountains, deserts, lakes and oceans. Broiling summers on vast plains and numbing snow-storms in the Arctic tundra.

And the Russians.

The criss-crossed design of humanity that so fascinated Dostoevski, inspiring him to write, "I like, when roaming the streets, to look attentively at certain wholly strange passersby, study their faces and speculate: who are they? . . . how do they live? . . . what is their occupation?" The Russians—ranging from the blond, blue-eyed families on the Finnish Gulf to the descendants of Turks in the Middle-East and Tartar warriors in the Orient.

How to condense the scope of this giant land and the spirit of these many peoples into a half-hour film? How to do it without turning out 'just another travelogue'? How to do it with absolutely no political overtones?

These were the problems faced

by Henry Strauss Productions, Inc. of New York when they set out to make a travel film on Russia for Pan American Airways.

The result: *U.S.S.R.*, a 16mm color film of unusual depth and beauty which admirably fulfills the demands placed upon it.

* * *

As the latest in a series of award-winning travel films Henry Strauss has made for Pan Am, *U.S.S.R.* continues the successful pattern of the earlier films, delving deeply into the eyes and soul of the Soviet Union; for it is about the people of Russia, not simply the things they have built—the tourist attractions.

To be sure, the tourist attractions are there: the Bolshoi, the Pechersk Monastery at Kiev, the fantastic palaces and gardens of the Czars, but when we see them, we are made aware of the dreams that inspired them, of the centuries of different cultures and traditions that influenced them and of the influence they have on the people of Russia today.

The format of the picture is like the country itself—a patchwork of design and color, now blending, now contrasting. The flashing brilliance of the Moiseyev

dancers is a short step from the twirling aerialists at the Circus, and the face of a grain reaper operator easily gives way to that of a turban-topped old shepherd, smoking a hand rolled cigarette in a battered holder. But Zina Voinova's sensitive and often humorous editing reflects the contrasts as well as it does the blends. The bustling, modern Moscow subway lighted by Victorian rococo lamps; the face of a young soldier reflected in a train window and that of a seventy year old flower seller in the bright sunshine; the opulence of the palace at Peterhof, with a stoutish "moujik" lady waddling down the marble staircase.

* * *

Many things might surprise the viewer. The sight of Moslems praying in Kiev as we learn that Prince Vladimir once considered bringing Russia into the Moslem faith. The impressive collection of the Leningrad Art Museum with its incredible store of French Impressionists. The glamorous resort towns of the Black Sea, looking for all the world like the Riviera. And the fact that in Moscow it is illegal to blow a car horn or to run over a pigeon.

The narration matches the poetry of Henry Strauss' photography and direction—supplementing it, never merely repeating what the audience can see for themselves. Dotted here and there throughout the sound track are quotes from some of the great Russian writers: Dostoevski, Sholokov, Turgenev, Rustaveli. As they talk, we see their words spring to life on the screen—in a barge traveling up the Volga, in the face of a young Georgian girl, or in the petals of a bright sunflower by a farm house in the Steppes.

In six weeks of shooting on two

separate trips, Henry Strauss and Walter Raft, vice-president of Henry Strauss Productions, covered 7,000 miles of Soviet territory, exposing more than 12,000 feet of film along the way. Although the Russian government had offered them help in the way of crews and equipment, they decided to be as unobtrusive as possible and set out on their own, with their Soviet Tourist Office guide, much as they would if they were any other American tourists. In this way, they were unhampered by rigid schedules and were able to capture many 'target of opportunity' sequences which we might otherwise have been denied.

The decision to employ this production technique was made after careful examination of Pan Am's needs and aims for the film. This typifies the philosophy and modus operandi of the Strauss organization.

* * *

A Chris Statuette Winner

Specifically, the success of *U.S.S.R.* was shown in September when, shortly after the film was released, the judges at the recent 12th annual Columbus Film Festival unanimously decided to honor it with their highest award, the Chris Statuette. Cited was "the excellence of the film, from its beautifully unobtrusive camera work to the wit and intelligence of its editing."

Yet, for all its beauty, gaiety and spectacle, *U.S.S.R.* is not a paean to Russia, not an obvious 'hands-across-the-sea' propaganda vehicle. It is a clear-eyed, fresh look at a land and a people who often stir our curiosity. This film helps to satisfy that curiosity. It is available on free loan from local Pan Am offices, nationwide.

Multitudes on the march: scene from the Pan Am film shows Moscow's anniversary celebration of the October Revolution as it enters Red Square.

Focus on faces and places: cameraman-director Henry Strauss lenses a group of school children as they perform an Uzbek dance in Tashkent.

a born thoroughbred!

The new model Arriflex 16M can be relied upon to behave like a thoroughbred from your very first assignment because it incorporates the best features of its time-proven forebears, the famed Arriflex 16 and 35 professional motion picture cameras. The model 16M is certain to become another important tool for our cinematographer friends all over the world whose specific needs and suggestions motivated its production.

The Arriflex 16M combines the extreme compact lightweight portability of the standard Arriflex 16 with the larger film capacities and quick change, gear-driven magazine features of the Arriflex 35.

Designed from its inception to be used only with magazines, the model 16M is much more compact with attached magazines than the standard Arriflex 16 with the same capacity magazine. This has been accomplished by eliminating the internal 100 ft. film capacity within the camera head. Thus the head has become much smaller and permits the mounting of even the largest magazine (1200 ft. capacity) in a matter of seconds.

The literally millions-of-footage-proved mirror-shutter reflex system and registration pin movement of the famed Arriflex 16 have been retained as well as the 21° divergent 3 lens turret. And in addition, the new Arriflex 16M features a built-in 60 cycle sync generator and automatic electric start and scene marker for synchronous sound filming with all 1/4" tape recorders in common use today.

The new Arriflex 16M is ideally suited for location, studio and special assignments where compact portability, ruggedness, dependability, fast handling and extended filming runs are essential requirements.

HERE'S WHY

Because the magazines for the new Arriflex 16M have feed and take-up sprockets built-in, time consuming and critical threading of film is conveniently done when loading the magazine. And in loading, a precise 39 frame loop is automatically formed outside the magazine.

HERE'S HOW

To get set for filming, merely drop the loop inside the camera, secure the magazine via a quick-acting latch, place the loop into the film gate with registration pin retracted, and you're ready to roll! This simple fool-proof procedure takes only seconds! Attaching the magazine to the camera automatically connects camera and magazine drive mechanisms. No belts to change, no torque motors needed. As a consequence the magazines (except 1200 ft.) will automatically run forward or reverse.

MOST IMPORTANT

Arriflex's reputation for precision and rugged reliability is not compromised in the new 16M model because NO PART OF THE FILM GATE IS INCORPORATED IN THE MAGAZINES THEMSELVES! The aperture plate, rear pressure plate, side guide rail—every component part essential to locating film precisely in the focal plane is protectively located within the camera head! Only this system meets the demand for fast operation and precision and reliability. In addition, the cost of magazines is thereby kept low. No small saving when outfitting with more than one.

MAGAZINE SYSTEM

The new line of quick-change magazines for the Arriflex 16M now make available capacities up to 1200 ft. thereby greatly extending the filming capabilities of the model 16M. The quick change feature derives its advantage from the fact that feed and take-up sprockets are built-in. Eliminated too, is the time normally involved in aligning drive gears of camera and magazine; in the 16M the camera gear is spring loaded and automatically engages itself when magazine is locked into position and camera is switched on. The positive magazine to camera lock is solidly engineered—assurance against accidental opening.

Compact and lightweight in design, the 200 ft. and 400 ft. magazines are of the single compartment, displacement type and accept

darkroom loads on plastic cores. Both magazines also accept 100 ft. and 200 ft. daylight spools, respectively. The 200 ft. and 400 ft. magazines are factory equipped for forward and backward operation and automatically change their internal drive mechanism when the camera is reversed.

The 1200 ft. magazine will prove particularly advantageous for our sports, industrial and military customers. Once completely loaded, mounting on the camera is as fast as the smaller capacity magazines.

(The 1200 ft. magazine is standardized for forward filming only but can be equipped for reverse running as well, on special request at extra charge.)

Arriflex 16-M Camera Head with a) Magazine Drive Gear, b) Magazine opening cover, c) Battery cable with self-locking Cannon plug, d) 200 ft. magazine with loop protector showing magazine drive gears, e) 400 ft. magazine cover side, f) Matte-box (same as for standard Arriflex-16S).

ARRI Universal Fiberglass Blimp; accepts Arriflex 16S or Arriflex 16M camera. Shown with 400 ft magazine top and lightweight matte box

ARRI Universal Fiberglass Blimp shown with conversion kit for zoom lens. Large Blimp doors provide easy accessibility to camera, magazines and lenses.

BUILDING BLOCK CONSTRUCTION. Another significant feature of the Arriflex 16M is its basic concept of building block construction. Not only magazines and lenses, but also matte-box, motors, viewing screens, finder eye-pieces, etc., are easily interchangeable. This permits the camera to be adapted instantly for many specialized applications in industrial, scientific, medical, documentary or television filming. This is all the more significant because, with the exception of the magazines, practically all of the above components are interchangeable between the Arriflex 16S and the Arriflex 16M.

SYNCHRONOUS SOUND FILMING. A 60 cycle signal generator with interlocked automatic slate system are built-in components of the Arriflex 16M. A small accessory oscillator (Cat. No. 339355) can be connected to the camera, permitting the recording of 1000 cycle start marks in recorders which do not have start mark oscillators. Moreover, the oscillator is used to record scene marks on film and tape, the sophisticated substitute for clap-sticks. Thus the 16M is fully equipped for synchronous sound recording with $\frac{1}{4}$ " tape recorders in common use.

The 16M accepts the 8 volt governor controlled DC motor as well as the regular synchronous motor from the 16S, so that with the latter, the conventional double system technique utilizing sprocketed magnetic film recorders is routine operating procedure.

SOUND BLIMP. A light-weight fiberglass blimp for location and sound stage work adds to the versatility of the 16M. A unique manufacturing process results in a blimp weight of only 28 pounds and a noise level of 27 db measured at a distance of 3 feet. The blimp features remote controls for follow-focus and diaphragm setting, a triangular scale bracket shows the calibrations for three lenses mounted on the camera turret. The rectangular front window enables the use of a new 8mm wide angle lens. The electrical system accommodates 8 volt DC and 42 volt AC, developed in the synchronous motor's power supply. An interchangeable top for the 1200 ft. magazine and conversion kits for using various types of zoom lenses are available.

NEW IMPROVED FINDER SYSTEM. The camera door with its sturdy double hinges and precise tolerances made it possible to transfer the finder prism from the interior of the camera to the camera door. Prism and field lens being separated, are now easily accessible for cleaning purposes.

PROVEN FEATURES MAINTAINED. Many well proven features of the Arriflex 16S have been maintained, such as mirror-shutter reflex system, 21 divergent 3-lens turret and film transport mechanism with registration pin movement and extra long film gate. The 16M can film forward or reverse by simply setting the forward-reverse switch on the camera drive motor. The magazine take-up and feed mechanisms will automatically respond (except 1200 ft. magazine).

ELECTRICAL CONNECTIONS. All electrical connections are located in the rear of the camera. The battery cable terminates in a 3-pole, self-locking Cannon plug. A 3-pole outlet wired in parallel to the camera's D.C. circuit provides 8 volt D.C. for auxiliary devices. The 60 cycle signal, previously mentioned, as well as the start and scene marker feature are available at the 5-pole center terminal. The top 4-pole outlet is blank and may be custom wired for special applications.

OTHER FEATURES. The tachometer and footage counter are also located in the rear, clearly arranged for easy viewing by the operating cameraman. The four digit counter records footage and frames simultaneously. A buckle switch automatically stops the camera in the event of a film jam and also at the termination of the roll.

ARRIFLEX CORPORATION OF AMERICA

257 PARK AVENUE SOUTH, NEW YORK, N. Y. 10010

PROGRESS IS A ROAD THRU VICOS

"Seeds of Hope" Are Growing in a Peruvian Valley
to Set an Example in Latin-America and the World

ALONG THE SWEEPING ARCH of the Andes—the towering backbone of the South American continent—live 7 million landless Indians, descendants of once powerful races: the Chibchas, Quechuas, Aymaras, Guaranies. Before Pizarro led his Spanish adventurers to the coast of Peru, these people lived under the rule of the mighty Inca empire.

For them time has stood still for centuries. They live on the slopes and highlands of forbidding mountain ranges (often as high as 15,000 feet) in the timeless isolation of ignorance, ill health and abject poverty . . . bought and sold like oxen with the land. For ages there has been no hope, hardly even the will, for a better future.

An Experiment in Progress

Nothing could be changed—or so they believed—because it was the will of destiny that they should never know freedom, never have enough to eat, never see many of their children live to walk; and those who might survive would be no better than their fathers.

One day ten years ago, on one of these haciendas named Vicos, an American anthropologist from Cornell University began an experiment to see how the primitive Indians would react to modern culture and methods.

As a result of this experiment, the Vicosinos have learned new ways to cultivate their land and increase crop production; they have begun to govern their own community and to educate themselves and their young.

Now Owners of the Hacienda

With help, teaching and encouragement, they now have become proud and responsible owners of the hacienda where they

once worked as slaves only ten years ago.

Last year the Thomas Craven Film Corporation was commissioned by the United States Information Agency to produce a half-hour television program on film telling the story of Vicos: a story of the peoples' aspirations for freedom and dignity, and of their struggle to escape the timeless bondage to the past.

Capturing a Dramatic Change

The task of creating this film was given to Andrew B. Nemes, a director-producer with extensive Latin American film experience.

When Nemes and his crew arrived in this spectacular valley of the Peruvian Andes last November, they found approximately 300 Indian families living in scattered huts at great distance from each other on the land of the 35,000-acre hacienda, working their small plots to use every inch of arable soil on the steep, wind-swept mountainsides.

Knowing that the Vicosinos had responded well to the guidance given by the Cornell-Peru project, Nemes' task was to capture on film a sense of the dramatic change accomplished in the brief 10 years which lifted a group of backward people out of their 14th century existence into a modern era.

Become Part of Vicosenos

Nemes and his crew hauled their cameras up the narrow road which winds from the spectacular Santo River Valley to the old hacienda house and church where now a new school, dispensary and community center face a grassy square from where once these people were ruled by strong-handed overseers.

The small group of film-makers settled in the community, attempting to build a bridge of understanding and communication with the people who speak only Quechua. Slowly they became a part of Vicos—and slowly they began to recognize the subtle signs of the tremendous change the Vicosinos were undergoing. Their attitude, their pride and their accomplishments became the fabric out of which evolved the compelling story of how a backward and helpless people can build themselves a new and better life with modest assistance and hope.

Working without a script, Nemes

Hilario Gonzalez, a leader in the Vicos community, listens to his son as he tells of school experiences when he was sent to become a teacher.

recorded their language, their music, their folk songs, and documented on film how understanding the value of working together has brought strength and status to their community. Now, they elect their leaders and they decide on all matters concerning their work and business. Their children now go to the new school which their fathers have built.

Hope for Countless Millions

This new understanding and knowledge became the seeds of hope not only for the Vicosinos but for millions of downtrodden people who still seek to emerge from the dark ages of misery and ignorance into the 20th century.

The film, entitled *Seeds of Hope*, tells with quiet strength and force how the age-old desire of man

for a better life for himself and his children can be attained with outside help and self-determination, and it also captures the eternal beauty and isolation of the high valleys of the Sierra Blanca in Peru.

Photographed by director Nemes, the film was produced by Thomas Craven, edited by Wanda Ten Pas Rotz, and narrated in English by George C. Scott. The film is scheduled for world-wide distribution by the U.S.I.A.

The Government-TV Industry Committee in charge of selecting entries for all television and film festivals unanimously chose this 28½-minute documentary as the sole half-hour documentary entry from the United States to the Berlin Television Festival this year •

Production crew is led through rocky Andean footpath by Victor Mata, one of the principal characters in this USIA film, "Seeds of Hope."

Andy Nemes shoots Hilario Gonzalez, president of the community council, the workings of the motion picture camera. Young Vicosenos assisted the crew with surprising skill.

Continental Can Company foresters explain tree grafting operations to young Grant Macon, star of the company's film, "The Widening Circle."

PULP PROFITS THE NEW SOUTH

"The Widening Circle" Visits South's Tree Farms Which Provide a \$2 Billion Crop and 200,000 Jobs

THE PULP AND PAPER INDUSTRY of the South, now running at over two billion dollars annually, plays an increasingly important role in the economy of the area. Lands where cotton once was king are now more and more profitably turned to wood farming. In fact, over half the pulp wood in the nation is now grown in the South, and over 200,000 full-time jobs are provided by the industry.

Continental Can Company, with substantial mills in Louisiana, Georgia and Virginia turning out paper board and kraft for such products as milk and "six-pack" cartons, has a big stake in this industry.

Show Long-Range Planning

Its management feels a responsibility to reassure Southerners (1) that the pulp and paper industry intends to participate in the long

Clossay Mill personnel supervisor reviews shooting script with Grant Macon, the boy who stars in film.

Research Director Dr. Keith Max, Paperboard & Kraft Division, with Grant and producer Jack Fenimore.

range development of the Southern economy on a permanent basis; (2) that woodcutting for the industry is not a cut-and-move-on operation but a large and continuing cash crop for Southern property owners; and (3) that the big paper mills are responsible for much growth and prosperity in their communities.

Widening Economic Ripples

To tell this story effectively, Continental Can has brought out a new motion picture, *The Widening Circle*, which likens the ripples of a stone dropped into a pond with the economic ripple of the pulp and paper industry in a community — creating new jobs in auxiliary industries and services to everyone's benefit.

Peter Martin, Manager of Public Relations for Continental Can, in charge of the film project, de-

termined that to do the job properly the film must have much more than a mundane commercial approach.

It should have no "sell" for Continental Can, except as being part of the paper industry. It should be a graphic lesson in basic economics, but also a motion picture with considerable warmth and audience appeal.

A young production company, 33 Productions, Inc., of New York, composed of experienced film makers, was given the assignment, and delegated to do the job with almost complete artistic freedom from a filmic standpoint.

The Widening Circle shows how the paper industry operates in the South. Laboratories develop new ways to grow bigger and better trees in less time through grafting methods and proper harvesting.

Southern land-owners receive free seedlings for continuous reforestation and technical advice on all phases of wood lot management.

Plans for Film Distribution

Distribution of *The Widening Circle* is now in its initial stages. It is planned to sell the film to regional TV stations in the South, as well as to civic, service, school, college and church groups in mill communities and surrounding areas. Each Continental Can mill will have a quantity of prints, and arrangements are also being made for a commercial distributor.

Credits on the film — which was a recent bronze award winner at the International Film and TV Festival of New York — go to Jack Fenimore, as producer-director; Jules Victor Schwerin, writer; Robert Downey, cinematography; and Roland Smith, music.

Holiday Package from Julius Wile

Sales Meetings Feature Bright Look at New Line

SPONSOR: Julius Wile Sons & Co. TITLE: *The Wonderful World of Julius Wile*, 25 min. color, produced by Telic, Inc.

As the holiday season approaches, the liquor industry is busy preparing for its biggest sales opportunity of the year. Conventions have been going on far and wide as new sales strategies and packaging promotions are introduced for the competitive battles to come.

One of the more interesting of the convention programs this year has been that of Julius Wile Sons, importer of an extensive line of quality wines and spirits. The Wile sales meetings have been held in over a hundred localities throughout the 50 states during the past two months. A featured attraction of these meetings has been a new motion picture, *The Wonderful World of Julius Wile*.

Richard L. Blum, Jr., president of Julius Wile, appears in the film during an introductory sequence and discusses the changing customs of the times. It is a poor host, he says, that can now do without a dozen different kinds of wines and spirits in his closet or cellar.

As the American consumer finally emerges from the carry-overs of the prohibition era, whiskey may continue to keep an even pace in popularity, but sales of wines and other spirits are growing in leaps and bounds.

And it is in this area that the Wile company has its greatest strength — with such outstanding imports as Benedictine liqueur,

Wile's 1964 holiday packages are featured in this sales film scene.

Bollinger champagne, Dry Sack sherry and Pimm's Cup among 29 brands currently on the company's import list.

The Wonderful World . . . goes on — with Hugh James as host and narrator — to describe all of the outstanding names in the Wile line. Pictures on the screen are beauty-shots of Christmas wrappings amid holiday displays and background materials of maps, photographs and art with kaleidoscopic transitions.

The film was made as a co-production by Telic with a Wile management team composed of President Blum, Vice President Howard L. Blum, and Advertising Manager Julian Levinson.

Telic's writer-director-producer team of Woody Siegel and Ed Boughton used a combination of live lip-sync action with an economical but effective Photo-Motion technique employing camera movements on still photographs and other materials.

FORUM ON FILM CREATIVITY

Industrial Audio-Visual Executives Were Asked:
"How Do You Define, Apply Creativity in Films?"

THREE TEN members of the Industrial Audio-Visual Association were contacted at the recent annual fall meeting of that organization and asked to help us define the role of creativity in film making for business.

From their widely-ranging experience in audio-visual management and production, we offer a number of interesting viewpoints. Now write your own definition . . . just make sure that you're *creative* when you do. The experts offer these good ideas:

"We musn't confuse activity for creativity. When a worker rises above mediocrity and does an outstanding job, he should be given credit for achievement — but not set up as a 'creator!' On the other hand, when a file clerk or a typist comes up with a new and revolutionary way of labeling the files — this may be true creativity."

Martin Broadwell,
Southern Bell Telephone Co.

"Creativity means many things to many people. Every human being has a measure of creativity in him. There is no great spark or blinding light which releases creativity; it results from hard work. Just as in the scientific circle — namely, securing a specimen, examination of same, drawing hunches or conclusions, re-evaluation, re-examination, etc., eventually results in scientific advance. The same holds true for creative results — work, study, experiment — work, and you create."

Bill Buch,
Lederle Laboratories

"We are concerned with practical creativity — that is, within a framework of budget, time what fresh combination of pictures and words will fan a spark of audience interest into a flame consistent with our objective? Creativity in the motion picture medium shouldn't be limited to an 'arousing' visual idea or a favored combination of words, but to how the **sum of audio plus visual** can far exceed the value of either considered separately. This makes the audience perceive more than a frame-by-frame examination of the print would reveal on a viewer."

Two powerful prods to more creativity: (1) making sure there is a feeling of achievement — reinforce the creative man's conviction that he has added something of significant value; (2) recognize him in a manner that will motivate him. This varies with the individual. Publicity, for example, may be a de-motivator with some people. Membership in IAVA is a powerful stimulant to creativity."

Don Peterson,
Caterpillar Tractor Company

"Spontaneity is our key word. There may be nothing actually new under the sun. Our job is to find something **original** under that distant star. We discourage revision. The spontaneous things are the best of man's creativity."

Al Schlachtmeyer,
Link-Belt Company

"A creative atmosphere is essential if we are to expect our associates to produce effective, productive, creative ideas — but we, as managers, must do the evaluation. Keep the flood gates open so that ideas generated by our people can flow freely."

Bob McCaslin,
Caterpillar Tractor Co.

"Delegation is the **essential**. Interaction is the keystone. There is no individual creation. All is the result of interaction: management to technical writer, engineer to sales, draftsman to artist. Hesitation to revise the spontaneous should be admired. Summing up create the 'atmosphere' for creativity and you will get it . . . from every man on your staff."

Larry Warnock,
Link-Belt Company

"Creativity has a tremendous range. In its highest aspects, it is usually the result of inspired thinking by an individual. As such it is a priceless gift, but to reach a practical level, creativity often calls for activation by an assorted group of talented people to provide a useable adaptation."

Vince Hunter,
Union Pacific Railroad Co.

"Creativity takes all kinds of people. There are the brilliant 10 percent who insist upon doing the job their way — the unusual approach. There are the 50 percent who do a fine job — more conventional — but excellent. And there are the 40 percent who do what is required in a completely conventional manner. **All** are needed."

Ray Bonta,
General Electric Company

"Creativity is really the construction of new concepts from old ideas — that is — seeing new relationships. We don't challenge our people sufficiently; we are satisfied mainly with mediocrity and that is what we get."

Sal Dworkin,
Bell Telephone Labs.

"Creativity cannot exist unless a culture conducive to creativity exists. This atmosphere must permit the individual to feel committed and free to express himself."

Darrell Rathbun,
American Standard Radiator Co.

Dr. Harold Upjohn (2nd from left) at re-enactment of top-level meeting initiating Orinase research program.

Upjohn's Exposition of a Credo: "With Care and Concern"

A 29-Minute Picture Brings Convincing Facts About Pharmaceutical Research and the Image of a Company's Honest Concern for Its Products and Patients

ONLY A MOTION PICTURE such as the recent 29-minute color film, aptly titled, *With Care and Concern*, and presented by the Upjohn Company, a respected leader in the ethical drug industry, could do as much to counter the misconceptions laid down by sensationalized reports and the residue of investigative hearings.

Now currently showing to audiences, both adult and of school age, throughout America, the picture frankly poses five blunt questions and presents convincing answers which leave viewers with a much broadened understanding of modern pharmaceutical research and of the "care and concern" with which the quality maker of drugs and antibiotics as well as the pharmacists, regard their products and the patients they serve.

The film story utilizes a "photoplay" format, synch, with voice-over vignettes. It was created for Upjohn by Parthenon Pictures, Hollywood. Prints are being distributed by Sterling Movies U.S.A. Special foreign language versions

This old-fashioned pharmacy set was readily available; scene in Upjohn's exhibit at Disneyland.

company's name appears among the title credits, a legal requirement for television performance, but the company itself is mentioned by voice only once or twice and then only to differentiate or to place responsibility. Needless to say, *With Care and Concern* is a far cry from the "trip through the laboratory" type of picture.

The story line introduces five typical patients who visit the prescription counter of a modern pharmacy. In the minds of each is one of the film's "critical" questions. The first of these is elderly, well-to-do Mrs. Bailey, who still remembers the drug-store of her youth, the warm, personal relationship with which "old Doc McConnell" watched over his customers.

"But today," she wails, "everything has grown so. It all seems so big and impersonal." And she wonders, looking at the many labels...

"Big companies like these, making so many things, do they really care any more about the people who use them?"

Mrs. Bailey's prescription calls for a new antibiotic, Albamycin. The film turns back in time to see the endless work by which skilled, able medical research teams discover new antibiotics. It relates the "care and concern" which goes into testing and manufacture, providing a body of solid fact to answer that question.

Mr. Bollinger is a customer for an arthritis drug product. Which of the manufacturers' products has been prescribed? And this raises the question, "Isn't all this hot competition between drug manufacturers wasteful? Doesn't needless duplication make my drug cost more?"

The fact is that competition

Spanish version of Upjohn film featured actress Pilar Arcos and her niece in modern pharmacy scene.

tends to bring prices down. But in the case of Medrol Medules, competition brought into being not "another" drug, but one greatly improved over the early Cortisone, with smaller dosage and with the great boon of reduced or eliminated side effects.

The final customer, just before closing time, is young Mrs. Joan Westman with her small daughter. She has leukemia, cancer of the blood, and hasn't long to live. Her question: "So many drugs on those shelves and none for me. *Will the same thing come to Shelley a few years from now? And if it does, will there be something on those shelves for her?*"

The most important question of all *can't be* answered in the film. But the viewer can go into the

research laboratories and see what is being done, what lines are being pursued, particularly the major Upjohn avenue . . . chemotherapy. Some of the findings may have promise and while there have been many dashed hopes (and there will be more) "we need just one success . . . just one." The medical researcher is a man of hope . . . he has to be.

With these frank, detailed and visualized answers to Kefauver-inspired questions and doubts, the film gives the audience honest and "wanted" value. The questions are answered from a broad all-industry point of view, with de-emphasis of Upjohn in that light. The sponsor earns merited dividends, however, through well-photographed scenes of its facilities and people.

Judge Thaddeus V. Adesko, Circuit Court of Cook County, County Division, during filming of "In Your Hands" at Pilot Productions' studio.

How to Operate a Voting Machine

18-Minute Film Helps Assure Proper Ballots in Illinois

Motion pictures helped to show civic and government workers in the state of Illinois the proper operation of voting machines as well as explaining the use of the long special paper ballot used on November 3rd for the "at-large" election of state representatives. An 18-minute film was produced for the Board of Election Commissioners by Pilot Productions, Inc., Evanston-based studio. Judge Thaddeus V. Adesko, Circuit Court of Cook County, County Division, was a key participant in the filming of *In Your Hands*.

The picture was premiered during a "Voting Machine Exposition" at Chicago's Sherman House, where it was viewed by the election board, the Election Laws Commission of Illinois and repre-

sentatives of more than 30 civic organizations interested in the proper conduct of elections.

"How-to-do-it" scenes showed how easy it was to vote either a mixed ticket or to cast a straight party vote. The film also explained who can vote, how to register, the functioning of election judges and the system of poll watchers. Of special interest were scenes showing new printer machines recently installed to replace older types of voting machines. The new units actually print and emboss the total vote count on special tally sheets in a manner impossible to erase or change.

In Your Hands was made available to all interested political and civic organizations in the Chicago area during the recent election. •

Film scene: statue of General Sucre in the Plaza de la Independencia at Quito, Ecuador.

A FILM JOURNEY TO ECUADOR

Documentary Report on YMCA Project Shows U. S. Collegians As They Share Teaching Skills in Quito

PICTURESQUE is the synonym for Ecuador, whose capital at Quito is right on the equator, in a valley surrounded by mountains over three miles high. To this land, sometimes called "the most wonderful diorama in the world," went U. S. producer Byron Friend a few months back to lens a documentary film report for the YMCA, telling the story of 12 young college students from the States who are helping the Ecuadorians learn sports, handicrafts and hygiene.

This new Telecine Film production shows youth groups of the two Americas working in close collaboration. It shows the collegians at work in Chimbacalle, the poorest section of Quito; it relates the warmth of their acceptance by the people, young and old alike. The final version will serve as a documentary report of the project for YMCA showings. But as this producer notes:

"The film will serve as an instrument of out-reach, hopefully designed to encourage other young people to undertake similar gestures of goodwill around the world."

Quito Report opens with stun-

ning pictorial scenes of the capital and its surrounding mountains. It shows the picturesque dress of the Ecuadorians, their llamas in the fields, snow-covered volcanos and relates something of the history of the land and its quest for independence. But the job of capturing these sequences illustrates the problem of production abroad.

"It's a good thing," says Friend, "that we carefully planned our picture, researched the area. There seems to be little or nothing in the way of commercial film equipment, supplies or personnel in the area. We were totally dependent on our own resources. Fortunately customs presented no problem, either in or out of Ecuador. They're a truly friendly people."

Though many Communist slogans are painted on the walls of buildings all over Quito, the ruling junta has done a good job of driving them underground. Exposure proved to be a problem. The clarity of the air at the city's high altitude lets more sun through.

The YMCA picture is another good example of the latitude of the film medium, of its useful role in bringing better understanding, improved relations to the world. •

Young Ecuadorians play outside Quito YMCA.

The Display Center also includes a portion of the Wilding created exhibit for the Ford Merchandising Fair.

IDEA Center for Communicators

A Picture/Text Visit to the Communications Idea Center of Wilding, Inc.
Where Businessmen See All the Audio-Visual Tools and Techniques in Use

RARE AND WONDERFUL to behold is this example of a communications company setting forth the complete range of audio and visual tools and techniques on its own behalf! Wilding, Inc. has formally opened two such demonstration facilities at newly-acquired quarters on 5725 North Broadway in Chicago. The Communications Idea Center (CIC) and an adjacent Display Idea Center (DIC) now enable this national concern to share the latest in projected and staged media with visiting groups of businessmen—and to show them how displays and exhibits are designed to be part of comprehensive communications programs.

The combined centers cover an area of 36,400 square feet and comprise one of the most complete audio-visual demonstration facilities ever created. As Wilding president H. Williams Hammer recently told a group of security analysts who visited the facilities:

"For a company to truly prosper in the competitive marketplace, there must be effective communications throughout the entire organization. And here is where services, such as these centers show, fit into a company's marketing program.

"We provide the media and methods of dispensing information to the people the customer must depend on—the sales representative who must get the product to the wholesaler or distributor, the distributor who must be motivated to accept the product and promote it to his dealer organization, the salesman who must be trained in product knowledge so he can talk intelligently to the dealer, and the dealer who must understand the company's service policy.

"This new Communications Idea Center . . . is the most effective way to show our clients and prospects all the many products and services we can supply. It was, in

fact, the success of our original, smaller CIC which led us to create this larger installation."

The Presentation Room

Within these walls is the spacious "Presentation Room" which comprises a theater area 37-feet

long and 34-feet wide with a matching 29-foot screen. The stage area, for the demonstration of live industrial show ideas, is 15-feet deep and 16-feet high. The stage features a motorized treadmill, scrims, very effective theatrical lighting and scenic drops. For motion picture or still projection, the show can go "wide screen" across a 29-foot matte white projection screen or narrow down to standard screen areas. There is a matching rear-projection screen for the complete 29-foot spread. This area is served by a stereo sound system.

Adjacent to the Presentation Room area is a display of the latest in audio-visual projection equipment and devices for small shows, direct selling and point-of-sale use. There are DuKane "Flip-Top" slidefilm projectors, the Fairchild 8mm sound repeater projector, Technicolor's 8mm "Instant" cartridge equipment and the B&H Auto-Threading 16mm sound projector, to name a few. All are "activated" for personal demonstration of their use.

The broad, glass-paneled sweep of a wall opposite the screen displays one of the most complete

Above: Graphics are illuminated for study. Here, visitors may examine printed media designed to give continuity and cohesiveness to programs.

Display Center: visitors are shown how displays and exhibits can be designed for a comprehensive communications program in this exhibit area.

control booths anywhere. The show can "go" to 35mm color motion pictures, with either standard, wide-screen or CinemaScope apertures—or in the same dimensions via a Philips-Norelco 16mm Xenon arc projector. Two DuKane "Auditorium" model sound slidefilm projectors are side-by-side with Wilding's own (CPE) "Gold Plater" which shows bright, vivid slidefilm images, using the widescreen Triggerstrip and VistaStrip techniques.

There's another Mark IV "Gold

The Stage Area demonstrates both live industrial theater and projected media techniques on this completely-equipped professional stage setup.

The wide screen is ready to show motion pictures or standard, wide-screen slidefilms, with stereo or monaural sound, for front or rear projection.

Plater" for projection of "Duo-Vista" scenes. For 2 x 2 slide projection, the booth has a matching pair of Spindler & Sauppe Selectroslides. A nearby Ampex tape recorder feeds either stereo or monaural sound to the house. Demonstrations of 2 x 2 slides, Triggerstrip and Vistastrip equipment are automatically controlled by programmed tape equipment. Did we overlook any slide projection? Wilding didn't! There's a projector in the booth which handles the larger 3 1/4 x 4-inch color slides.

All stage drapes and screens, house stage lights, PA and room sound systems are controlled from a panel installation in the booth. Trained technicians man the control booth as well as the house areas—with experienced A/V consultants to answer queries.

The Display Idea Center

In the adjoining building, the demonstration tour continues with a visit to the Display Idea Center.

New Idea Area — Control Booth with its 35mm and 16mm arc projectors, automatic control panel and other filmstrip and slide projectors on ledge.

Main Theater Area at the Communications Idea Center, where businessmen can see the full range of A/V tools actually in use on stage or screen.

This extensive display of "program materials" features back-lighted display units with multi-screen projection of color filmstrips; another panel unit displays six two-by-three-foot color transparencies.

In what the company calls, "New Idea Area No. 5," the important function of "Graphics" is given comprehensive, lighted display. The visitor may examine booklets, manuals, and a wide

range of printed media which were designed to give continuity and cohesiveness to various communications programs.

Also within this Display area is a portion of the exhibit which Wilding created and built for the successful Ford Merchandising Fair. It demonstrates how the "message" can be broken down into programmed sequences, with logical disclosure to visitors.

All of these, Wilding notes, are media to be "used to inform, educate and motivate." That's the mission of CIC and DIC, the company believes. The combined Centers have been created to help businessmen get the complete picture of a range of tools and techniques which has been mushrooming in recent years. In that light, the Communications Idea and Display Centers are rendering a great service to all industry, fortifying business for better selling on which the entire American economy depends at home and abroad. •

Another View of the Control Booth: it has stereo and monaural tape recorders, and Wilding-created Vistastrip, Triggerstrip and Duo-Vista projectors.

In the film scene (left): Benson reads his morning mail, and as he goes through four letters that are pompous, sycophantic, grouchy and lavishly overdone, his face is super-imposed with cobwebs, shattered into bits . . . then flowers gradually fill the screen . . .

YOUR LETTER IS YOUR IMAGE

An Insurance Firm's New Picture Aims to Help Improve Business Letters in "Who Wrote That?"

"IN THE BUSINESS WORLD everybody writes and receives letters. But look out! Language is a sword that cuts both ways. With its help we can conquer the unknown. But we can also wound ourselves."

Thus begins the narration of a most useful and entertaining new film just released (through Association Films, Inc.) by Connecticut Mutual Life Insurance Company on the subject of letter-writing. The company has had an internal program to improve letters for a number of years. This film, titled *Who Wrote That?*, is designed to expand the program and make it available to the general public.

Reading the Morning Mail

All the action takes place in a typical business office as Mr. Benson reads some of his morning mail. As he opens the letter on top of the pile, an off-screen, scratchy, droning voice reads the letter out loud. Mr. Benson's face changes from anticipation to boredom and finally disgust. Meanwhile, an animated doodle — a barbed wire line — writes itself across the screen illustrating the frame of mind of any reader get-

ting this kind of a cross, peevish letter.

Number two letter is spoken by a sycophant with a built-in phony chuckle — "Dear Mr. Benson . . . you are the kind of man I want to know, a man of vision and dedication . . ." Cartoon flowers begin appearing on the screen over Mr. Benson's face and a schmaltzy violin sneaks in on the sound track.

On it goes through a real grouchy letter — while a freeze frame of Mr. Benson breaks up into little pieces; and a letter packed with cliché after cliché — as a cobweb writes itself over the screen until Mr. Benson is lost behind it.

Finally . . . a Good Letter!

"Four letters, four total flops. But try the last one, Mr. Benson," the narrator says. "It's your duty. You're human. You can be sold."

Here, at last, is a letter written in a pleasant, conversational tone, no gobbledygook to obscure the message, no cobweb to confuse and annoy, no hearts and flowers. This letter has short words, short sentences, short paragraphs; it gets to the point and stays there.

Mr. Benson reads this one over a second time with pleasure. He thinks that perhaps some of his

Now "Who Wrote That?" asks Benson as he scans still another letter which is loaded with clichés . . .

"Take a letter, please," he begins with all those examples of right and wrong letters etched in mind.

letters are not written the way he would like to receive them. As he re-dictates to his secretary, we come to the only credits in the film.

Mr. Benson, on screen, speaking: "I've got one more letter and then you can go to lunch. The Connecticut Mutual Life Insurance Company, Hartford, Connecticut. Attention: John L. Lobin-

gier Jr. Copy to Ted Lowry. Pelican Motion Pictures.

Dear John . . . I would be very happy to appear in your new motion picture about how to write a letter. Please tell your writer, Howard Enders, to call on me at any time. I'm especially looking forward to meeting your letter consultant, Ellis Gladwin, whose ideas made it all possible. *Sincerely*. •

Scene from another Niles' film for Chicago's "Crusade of Mercy" fund.

Focus on "The Crusade of Mercy"

Actual Case Histories Show Fund Benefits at Work

☆ Dramatic interviews with some of the actual people who have been given help when they needed it by the Crusade of Mercy form the focal point of a 16mm black and white film produced by the Fred A. Niles Communications Centers, Inc., Chicago, New York, Hollywood, for the Crusade.

The film, most of which was shot on location, emphasizes the humanness of the Crusade's work. It also points out how the money donated is budgeted and disseminated by staff members, to get the maximum use out of each dollar.

Format to get these points across is based upon persons, such as secretary, truck driver, business executive, (studio shots) asking typical questions about the benefits of the Crusade and why they should contribute.

Each of the questions is then answered by actual recipients of aid, explaining why they were placed in a position of asking for

aid, and what was done for them. This ranged all the way from a man paralyzed from the waist down, who now, through the Crusade, makes a living as a medical secretary, to a parent of a retarded child.

One interesting sidelight of the film, is that during its scripting, the Anchorage, Alaska, earthquake took place. This was in March, 1964. A brief insert on this was included in the film, not on the aid given by the Red Cross on the site, but how one office (the Chicago office was used) worked day and night trying to get information to relatives and friends about victims of the earthquake.

Cameras and production crew were moved into the actual office where this activity took place, and the entire scene was recreated with the same staff members who did the work.

The film was recently released, and is now being widely used in the solicitation of Crusade funds. •

SHOOTING THE WORLD SERIES

Behind-the-Scenes Notes on the 1964 World Series
Picture Now Being Edited for Release to Millions

MOST WIDELY-SHOWN single sports film of the year is the annual color picture which recreates all the action and thrills of professional baseball's World Series' games. *The 1964 World Series*, now being completed for the second straight year by Jack Lieb Productions of Chicago, is personally supervised by former player-manager Lew Fonseca, who heads the motion picture activity of the combined leagues. It's another cliff-hanger as the Cardinals finally triumph over the Yankees in a rugged seven-game series!

Consider the fact that some 16 million viewers are waiting for this half-hour color picture, that nearly all of them will see it via 16mm sound projectors in thousands of clubs, union halls, etc. as well as at every base of the armed forces in the U. S. and abroad. That's the challenge producer Lieb was well aware of as his crews first awaited the uncertainties of both pennant races. Would it be the Phillies or Cincinnati in the National? Could Baltimore take the resurgent Yanks in the American? And watch those Cardinals move!

The pre-game ceremonies for production people doing the *Series* film lead off with expert counsel from Fonseca. Cameramen were carefully rehearsed on all angles of the play ahead from this veteran's encyclopaedic knowledge of players and managerial strategy. Five cameras were located: one behind first base; another out in center field. Camera three was behind third base in the upper grand-

stand; camera four in the upper stands behind home plate. Camera five was stationed in the same area and set up to shoot only slow motion sequences. An extra camera was also stationed here to film the warm-ups, pre-game ceremonies.

Establishing sequences were already in the can. City back-grounds, crowds entering the parks, shots of notables like Commissioner Ford Frick, National League president Warren Giles and American League prexy, Joe Cronin, were ready to insert. Once the first pitch was thrown at St. Louis there was no "second chance." Any pitch could be a scoring play, vital to the final outcome. There are no re-takes!

The series turned out to go seven games; coverage by five camera crews consumed 36,000 feet of color stock. At the end of each contest, takes were shipped to the laboratory (Calvin) and reports obtained of results. The Series was all even at the end of six games, a perfect situation for film interest. The seventh went to a new champion: St. Louis, amidst wild outbursts from Cardinal fans.

It's at this point, when the gear is packed, crews back home and both sound and picture are ready for the critical job of final editing that each year's film is *made*! Cutting of "hot" action scenes into a tightly-edited production which retells the story of a complete Series is begun under the personal supervision of Fonseca. His years of experience are again helping put together a real baseball classic! •

Armed with filmstrip projector and record player, salesman does his homework with materials from the "Speaking of Selling" audio-visual program.

LEARNING TO SELL AT HOME

New Six-Part Home Study Sales Training Program
Proving a Boon to Sales and Marketing Managers

MOST SALES TRAINING takes place at centralized meetings but there's a growing realization of their expense and time. When it's feasible, astute managers would rather keep men in the field and, still better, utilize the concentration possible in "home study" among men who care enough to want to advance their status and incomes.

Thanks to modern audio-visual techniques which can put actual selling situations into bright, vivid perspective on screens and compound their effectiveness with appropriate recorded sound, there's a growing number of sales managers and marketing men who are turning to such programs as the recently-introduced "At Home" training course which utilizes six sound slidefilms in a series titled *Speaking of Selling*.

The slidefilms present basic principles of professional salesmanship; demonstrate the application of these principles in actual situations. 10 minutes apiece, illustrated with color art, they devote at least half of each program to "how-to-do-it" sequences. The course was prepared by Henning & Cheadle, Inc., Detroit, Mich.

Salesmen who need help in sales

techniques can be given special training through enrollment in this course. Each of the "At Home" sessions includes a study guide and quiz sheet. The quiz is completed by the student and returned to Henning and Cheadle for grading and comments, before being sent to the sales manager. Each study guide includes a "plan-of-action" recommendation to be applied to any product or service.

To encourage such immediate use and practice of the sales principles, each quiz sheet calls for a case history of how the salesman used the techniques. The six audio-visual sessions are delivered to the salesman one at a time. Because there is no time limit on the completion of lessons, "slow learners" set their own pace.

The program covers six areas: a professional attitude, buying motives, handling objections, meeting price resistance, closing the sale, and better use of the salesman's time. More than 20 marketing managers contributed to the preparation of the program. The course is available at nominal cost, charges varying with numbers enrolled. Write: Henning & Cheadle, Inc., 10010 Greenfield Road, Detroit, Michigan 48227 for details.

Below: contents of typical "at home" training session, which brings film, record, Study Guide and the Quiz Sheet with its return envelope.

World Series action: sequence shows Mickey Mantle, Yankee right fielder, catching liner by Cardinal's Dick Groat. He bobbles ball, finally catches it as center fielder Roger Maris (top) backs play.

A visual examination of film also takes place throughout every foot of film during rewinding onto cores or reels.

PROJECTING FOR PERFECTION

Assuring Print Quality in the Lab and on the Road

TAKE A PERFECT \$150 print of a \$30,000 production, run it through a projector that has the wrong size bulb or hasn't been cared for, and you'd be amazed at just how poor it can look," says Mel Stutsman, Inspection Supervisor, Calvin Productions, Inc., Kansas City, Missouri.

When it comes to putting film through projectors, Stutsman qualifies as an authority. In fact, the line-up of Kodak Pageant Sound Projectors (AV 126 TR) in his inspection department just *might* be the busiest to be found anywhere. Calvin produces millions of feet of film each month, with 100 per cent projector inspection of each small order. Long films get a generous projection sampling.

See It As Customers Will

"We feel that the only good way really to examine a motion picture film is to project it," Stutsman declared. "We use visual inspection during rewinding and high speed projection to inspect large quantity print orders. However, for answer prints and other similar types of orders, we use normal projection techniques. If we are to see and hear exactly what is on the film, as we must, we have to project it exactly as our customers will project their prints.

At Calvin, where the projectors

are in use 8 to 16 hours a day, five days a week, cleaning is an almost daily function.

"Lack of cleanliness, generally, is the most common projector problem," Stutsman emphasized. "Dust, lint accumulate frequent-

Lack of cleanliness at film gate is a most common problem.

ly on the film gate, producing the all-too-familiar shaggy appearance around the edges of the image. This must be removed frequently.

"Not so noticeable, but more disastrous for film life is the accumulation of emulsion gelatine on the film pressure shoe in the gate," Stutsman said. "A tiny speck can act like a knife and leave a continuous scratch in the film.

"If a business or institution

Industry invests millions of dollars in valuable color prints . . .

It should also take time, care to assure their perfect showing.

shows movies, some knowledge of film care and cleaning is desirable because it is the film that attracts the dirt. Static electricity resulting from winding or rewinding film attracts dust, lint, and foreign substances to the film. This material accumulates in the projector and can be a real problem unless removed frequently.

What Film Users Overlook . . .

"Most maintenance techniques are well-known, but projector users just don't get around to them as often as is necessary. Some of the things that should be done are frequently overlooked."

"For example: how many people ever think to check whether or not the bulb in a projector is the right size for their own purposes? Each of the 16mm projectors we use came equipped with the usual 750-watt bulb.

But, our projection rooms limit the throw to 10 or 15 feet with a screen image approximately 20 x 30 inches wide in size. So, we put in 500 watt bulbs instead. On the other hand, had we been faced with a larger room and desired a larger screen image, we might have gone to 1000 watt bulbs.

Three Tips for Good Showing

Stutsman believes that the thing to keep in mind when one is working with motion picture film is that proper care of a projector is neither expensive nor time consuming. But, it would be reasonably frequent and particular attention should be paid to the following:

1. "Keep the film gate and aperture clean. Dirt removal is easiest with an ordinary pipe cleaner which is soft enough not to scratch, yet can be bent to reach around corners. For best results, do it after each print is projected.

2. Keep the film itself clean and lubricated. This is done by drawing the film slowly through a soft, lintless cloth moistened with film cleaner and lubricant. There are commercially prepared cloths especially for this purpose, or a good grade of Canton flannel, a short- or medium-pile rayon or nylon plush, or a soft cotton batiste is satisfactory. The cloth is folded and held against the two faces of the film as it comes from the feed-off reel. This gives the cleaner time to dry before the film goes onto the take-up reel. Rewinding equipment is handy for this, if available. If not, cleaning can be done on the projector by setting for the rewind cycle.

3. Determine in some way that

you have the proper size bulb for the intended projection use. Information on this is usually supplied with the projector, also common sense must be used. For larger screen images 750 or 1000 watt bulbs may be used. Once the proper brightness is determined, an incident light meter can be used to check the brightness for any screen size desired and the proper bulb used to attain the desired brightness," he concludes.

* * *

Trucking as Teen-Age Career Goal Told in Goodrich Film

☆ The fourth in a widely-shown series of career guidance and motivational motion pictures for teenage viewing has been released by the B. F. Goodrich Company. *Tommy Looks at Careers — Trucking* is the title of the new 25-minute color film, produced by Atlas Film Corporation and distributed (as are the rest in this series) by Sterling Movies U.S.A.

The picture develops the theme that young men and women can find countless opportunities for careers in science and engineering, sales and accounting, creative channels and a multitude of crafts within the trucking industry. It shows that this growing field offers both college-bound and graduated students their choices of specialties ranging from salesmen, accounts and instrument specialists to traffic and safety engineers, electricians, mechanics, painters and drivers.

"All around us are industries we take for granted," notes P. W. Perdriau, president of the Goodrich Tire Division. "Yet they represent a great potential for worthwhile careers in a society which needs many skills."

"Tommy" learns, in this film, that the trucking industry provides direct employment to more than eight million men and women. Scenes take the viewer into modern truck terminals and reveal the many skilled, highly-trained people, plus the advanced equipment, required for today's motor carriers.

The series includes a film on tire manufacture, a picture on space exploration and a highway safety film (*Tommy Gets the Keys*). These films are available on free loan to schools and other audience groups in full-length; shorter versions are also provided for public service TV showings. Regional offices of Sterling Movies U.S.A. have the prints.

Inspection supervisor Mel Stutsman with three of Kodak AV 126 TR Projectors used to inspect films at Calvin plant.

No. California Panelists Discuss "What Makes a Film Valuable?"

The Northern California Chapter heard a panel discussion on "What Makes a Film Valuable to Industry?" at its meeting of Friday, November 20th, held at the International Inn in South San Francisco.

Joining national IFPA president Jim Wasson who appeared as a special guest panelist were W. Phil Herriott, director of education and training for United Air Lines, Chicago; Jim Allen, Batten, Barton, Durstine & Osborn, who gave the ad agency's viewpoint; Dr. Jerrold Kemp coordinator of audiovisual production at San Jose College; John Corty, San Francisco film producer; and Al McNay, Standard Oil of California.

Members also reviewed award-winning films out of recent Columbus, Los Angeles and the San Francisco International Film Festival.

New Affiliations and Chairmen Named for West Coast Chapters

There have been a goodly number of staff changes and organizational moves during the past month. Robert M. Duff, our conference vice-president, is now at the Jet Propulsion Lab and Ray Ussery has replaced Henry Martin as chairman of the Southern California Chapter.

Ira Thatcher, United Air Lines, is the new chairman of the Northern California Chapter.

We also note that Jim Swift, formerly of Hughes Aircraft Company, has replaced Jack Smith as program chairman for the Southern California Chapter. Jack has left Hughes and moved to the Air Force Motion Picture Unit at Wright-Patterson Air Base in Dayton, Ohio.

Lookout Mountain Photo Men Transferring to Norton AFB

Among the 95 actions taken recently by Defense Secretary McNamara was his order transferring the photographic mission at Lookout Mountain Air Force Station, Los Angeles, to the Norton Air Force Base. Several of our IFPA members will be affected by the transfer of these facilities. They are attached to the 1352nd Photo Squadron, Air Photographic & Charting Service. This group won an IFPA Cindy Award in '64 for their outstanding training film, *Mountain Survival*.

IFPA JOURNAL

INDUSTRY FILM PRODUCERS ASSOCIATION, INC.

NARRATION

Spine of the Documentary Film

by Dr. Harald O. Dyrenforth

ANYONE WHO HAS TAUGHT television and radio broadcasting, as the present writer has, should be amazed at the indifference with which the leading textbooks in the field treat the subject of narration. Many of them do not mention the word "narration" at all, or dismiss it with a casual line. I am sure that textbooks of film-making, primarily concerned with the visual aspects of the art, are just as guilty, or more so, of this sin of omission.

And yet, narration *should* be of tremendous importance to directors and producers of documentary films: it is the skeleton holding up the entire body of an instructional or factual show, or the spine — whichever you may wish to call it.

What is narration? It is exactly what the Latin word "narrare" denotes: "telling a story." In an old radio textbook, Rudolf Arnheim gives a good operational definition:

"That the most natural procedure is to speak not only before people but also to them, arises historically from the fact that Greek Drama . . . sprang from the narrating chorus and its soloists, that it is not the dramatic action . . . that represents the original form, but rather the narrator . . ."

Therefore the performer himself should be recognizable as a human being addressing human beings.*

And Crews remarked:

*"The narrated transition becomes more than a mere interruption to change a scene. It is really a continuation of the scene in narrative form, which may strengthen the over-all structure of the play rather than weaken it."***

In many cases, narration is as much acting as story-telling, and it is within the power of the actor-narrator to lift his narration to just slightly below the emotion-

al pitch of the dramatic scenes surrounding it.

A perfect example of this type of narration is the one in Thornton Wilder's *Our Town*. The narrator takes no part in the action; he is merely an observer and commentator. But what an observer! He is anything but impersonal or unconcerned; he knows and loves every nook and cranny in that sleepy New England town of Grover's Corners; he is the personal friend of every man, woman and child in it. He lives and loves and hopes and dies with them. Similar narrations are those in *The Glass Menagerie* and *Tea-house of the August Moon*.

Let me be blunt about it: *Never, at any time, has narration anything to do with announcing!* "The announcer," wrote Arnheim, "is nothing but a voice. He exists . . . not beyond but only in the loud-speaker." Therefore announcing is not an art, but only an instrument, a device, and the announcer is not an artist, but at best, a craftsman.

The narrator, on the other hand, is, or should be, an artist, creating and projecting a definite personality; ergo, the further he keeps away from announcing, the better he is bound to be.

Because narration, unlike announcing, should be a *highly individualized performance*, the greatest mistake an aspiring narrator can make is to strive for an over-"orotund", booming voice. There seems to be a craving among the bulk of American microphone speakers for over-resonant Superman voices.

Except for varying degrees of dullness, they sound amazingly alike: one big low "sexy" he-man boom. Perhaps this is the vocal

Narration and the Documentary Film:

(CONT'D. FROM PREVIOUS PAGE)
collateral to a peculiarly American phenomenon: the He-Man Complex.*

It does not seem to occur to those who desperately strive for a standard, "beautiful" he-man microphone voice at the expense of all individuality that some of the greatest "leading men" in history, notably Napoleon, Frederick the Great, Lincoln (as far as we know), Roosevelt or Churchill had to struggle along with voices that were too high, hoarse, rasping, thin or nasal — and still did quite well for themselves.

In the theater the classic example is the great Sir Henry Irving or, to mention a very successful living actor Marlon Brando. A great deal of the charm and the spice in art is derived from irregularity, even ugliness; perfect beauty, symmetry and regularity can, and do, become incredibly dull!

Nor do I have any patience with directors whose comments, when casting for a narrator, run like this: "Oh, he's out, he has a rasp in his voice . . . Too high-pitched, no good . . . Southern accent, can't use him . . ." Hardly ever does one hear questions raised such as: "Does he read with intelligence and feeling? Does he catch the mood of the script?"

The comparison with the stage is rather illuminating: When filling a leading or featured part, there are often two choices: either to cast some one who "looks the part" but cannot do justice to the acting, or someone who may be too young or too old, too short or too tall, but who can give a great performance. The effect of externals is a very fleeting one. With a good actor who does not look the part but plays it superbly, we will forget the unsatisfactory looks after the first five minutes, and we will no longer be aware

of them as we enjoy his performance.

The same, only more so, holds true for narration. "Looks" correspond here to voice quality. The beautiful microphone voice, if it does not express anything, will bore us in even shorter time than mere looks in the theater. But a good narrator will hold us spellbound, even if his voice should be a few tones higher than is deemed proper for a "he-man voice," or if he should have a regional accent — once the first slight shock at his unusual voice or speech has worn off.

It would be gratifying if I could name a whole string of such "unorthodox" narrators — unfortunately, I cannot think of any but Cecil B. DeMille, Art Gilmore and Olan Soule, for the simple reason that the "unorthodox" narrator is seldom given a chance to be heard.

These pages are not likely to be read by students of broadcasting or aspiring narrator talent. But for the benefit of the directors and producers of documentary films casting for narrators, I shall attempt to sum up my ideas:

1. A narrator should concentrate, first of all, on the *meaning* of his text, second, on the *meaning*, and third and last, on the *meaning*. To quote Wayland M. Parrish:²

"We must do in reading what we do in conversation. We must have the same mental activity in the one as in the other. As our minds create the thought we speak in conversing, so they must recreate the thought we speak in reading. We must have a vivid, intense realization of the meaning of what we read while we are reading it. With all our mental force we must bear down on the thought at the moment of utterance."

And one of the causes of boredom and unreality in reading is too much voice-consciousness, listening to oneself.

2. The narrator should be familiar with the subject matter of his narration. The microphone is a very fine barometer and betrays at once to a sensitive ear whether the speaker knows or does not know what he is talking about, whether he believes or does not believe in what he is saying. At

²Wayland Maxfield Parrish, *Reading Aloud* (N. Y.: Ronald Press)

the risk of being ridiculed and accused of out-Stanislavskying Stanislavski, I suggest that a person who has never skied in his life should not be called upon to narrate a ski picture, nor should a totally unmusical man narrate the life of Beethoven. Ignorance or insincerity will often show!

3. The narrator must have a genuine urge to communicate the thought behind the words. Eagerness to have this thought under-

Notes About the Author

* An actor for 29 years in all media, Dr. Dyrenforth has also taught drama and speech as a college professor. Our editorial v.p. is presently a writer-director in the TV and Motion Picture Presentations Dept., at North American Aviation, Downey, Calif. He is under contract to 20th Century Fox, appearing in the film *Moriturus*.

stood and appreciated will, as Parrish says, bring about a "spontaneous brightening of the pattern of expression."

4. The narrator should have a mental or emotional attitude toward his material. There is not, or should not be, such a thing as a completely impersonal narration; if it is impersonal, it is no longer narration and sinks to the level of dull announcing, in which case the narrator is nothing more than the drab property man in a Chinese play who goes perfunctorily about his business but has no part in the play itself.

Narration, as we have stated before, is an art, and art can never be completely impersonal, or else it ceases to be art. Even the purely factual, informative narration requires an attitude on the part of the narrator. It must be something more than mere blank repetition of words.

5. On the other hand, in a factual narration this personalizing of the narration must not go too far. The narrator "should not be an exhibitionist, but a conveyor of the truth, the real meaning of what he reads."* Under the heading of exhibitionism would also fall vocal over-consciousness and the vocal acrobatics and mannerisms of certain well-known news commentators.

6. The narrator must not speak before people, but only to them. He must rid himself of the idi-

*Lionel Crocker and Louise M. Eich, *Oral Reading* (N. Y.: Prentice-Hall)

otic idea that he is orating to an audience of thousands or millions and tell his story to one, two or three people in a room.

7. The narrator should fit his style into the general pattern of the script. Too many narrators plough through all scripts in one and the same style, like an Army tank through a flower garden.

8. The narrator should not be too glib and authoritative. He should not play the teacher too much — no audience, whether adult or younger, likes to be put on a hard school bench. He should not be a prig talking down to his audience and letting them feel that he knows so much more than they do.

Let's say it once more in conclusion: The announcer is the impersonal voice; the narrator is the story teller and, as such, is an interpretive artist quite as much as is the actor. I hope these remarks will help those who hire and direct narrators to a better understanding of the true functions and aims of narration.

Navy Technicians Get Special Training on Optical Printer

Research Products, Inc. of Hollywood has announced delivery of a new optical printer to the U.S. Navy Aerospace Recovery Facility at El Centro, California. Special training on the printer was given at the company's plant to Mrs. Sally Quijada and Navy photographer first class Jim Portwood.

The new equipment embodies several innovations not standard on optical printers, thus requiring the special training program. Research Products' president Harold A. Scheib notes:

"No other manufacturer of optical printers is in the position to offer this follow-up service. Since our associate company, Cinema Research Corp., is actually in the business of making optical effects we are able to test the equipment under actual operating conditions."

Holiday Greetings to All!

☆ And here's hoping there are a few mss. in our stocking for future issues of the JOURNAL! A happy holiday to you from IFPA!

*The very word "he-man" is highly revealing. I have never encountered it in any foreign language of my acquaintance. Geoffrey Gorer in *The American Dream* (W. W. Norton & Co., N.Y. 1948) wrote: "The lives of most Americans are bounded by the constant necessity to prove to their fellows that they are not sissies, not homosexuals . . ." There may be some relationship between the "he-man-voice" and the wildly exaggerated physical brutality of American TV and motion pictures with their endless succession of sluggings, shootings and killings.

This is the high-fidelity public address system that shows movies, too

Kodak has built a truly high-fidelity, transistorized sound system into this KODAK PAGEANT 16mm Sound Projector, Model AV-126-TR. And we've made it powerful enough to drive extra speakers so that you may use a microphone (optional), add matched speakers (optional) if need be, and have yourself a combination sound movie projector and public-address system of superb quality.

With it, you can speak any essential words you might want to say to prepare an audience before a movie, and everyone hears what you say. Or you can read narration into the microphone to explain silent films or augment sound movies. Explanations or question-answer periods after a movie become much more interesting when you have this sort of sound system at your disposal.

You should never have to repair this sound system because Kodak eliminated items that are likely to break down, wear out, or burn out. We use transistors instead of vacuum tubes.

We use an exciter lamp that's rated for the life of the projector.

To get the best quality of the sound from all films, you can *focus* the light from the exciter lamp on the film's sound track. We give you a fidelity-control lever to adjust this focus, and we're the only ones who do. We pick up sound from the sound track with a solar cell instead of a photocell, and this gives you sound that doesn't have electrical noises mixed in with it.

We give you a hefty 11 x 6-inch oval speaker that can take the full 12-watt output from the amplifier without distortion. You can even hear it clearly with the volume turned down to a whisper. We put the speaker at the end of a 40-foot cord so you can place it wherever it suits your needs.

The speaker and the amplifier have been matched to each other for a combination of maximum power and clarity. This means that whatever the movie has to say, the audience hears—clearly, easily, completely.

Not only is your audience satisfied, but the operator is too. There's nothing whatever to embarrass or harass him.

He gets instant sound when he presses one button. He gets instant pictures when he moves one lever. He doesn't have to be a mechanic to set up for the movie. He doesn't have to be a weight-lifter to move it around.

If you would like to read about this projector in complete detail—or wish to see it demonstrated—please fill out the coupon and send it back to us at the address below. No obligation, of course.

EASTMAN KODAK COMPANY Dept. 8-V, Rochester, N. Y. 14650

Tele-Sell Has Tape Sound and 8mm "Instant" in Single Unit

A new Tele-Sell sound unit which combines with the Technicolor "Instant" 8mm Movie Projector has been announced by Audio-Sell, Inc., Ann Arbor, Michigan. The maker notes that the combination unit is the lowest-cost synchronized 8mm sound/film system available as a cartridge-load projector.

Tele-Sell unit uses standard audiotape recorded on any single-track tape recorder, loaded into the Fidelipac cartridge. Pro-

Tele-Sell combines tape and 8mm films in this single unit.

jector uses standard 8mm film loaded into Technicolor's Magi-cartridge when film is processed. Both cartridges snap into units for instant loading, eliminating threading and rewinding and both film and tape rewind continuously during presentation.

The tape player features a built-in speaker; is fully transistorized for instant sound reproduction. A single switch activates both film and sound. The combined package unit, less cartridges, lists at \$249.50. Write New Products Desk, BUSINESS SCREEN, 7064 Sheridan Rd., Chicago, Ill. 60626 for further details.

HPI's New "Groupshow Mini" a Wafer-Thin Desktop Screen

A miniaturized folding rear projection screen that is no bigger, no thicker than an average notebook, has been introduced by Hudson Photographic Industries,

HPI's "Groupshow Mini" screen folds into small notebook-size package . . .

a-v equipment trade fair

NEW PRODUCTS & ACCESSORIES FOR PRODUCTION AND PROJECTION

Inc., Irvington-on-Hudson, N.Y.

The screen, called the Groupshow Mini, will fit into the thinnest briefcase or portfolio along with notes and papers now carried. In use, it is merely opened like a notebook and aligned with any projector on any table or desk top. There is no need for room-darkening, audience movement or special tables. Salesmen will find it especially useful in the field.

The Groupshow Mini features a black HPI screen and a built-in folding hood which eliminates room light washout of the image quality. The screen is said to be grainless, and will not introduce

any line pattern or decrease definition no matter how closely the images are examined. It can provide images viewable by audiences from one to six despite its compact screen size — only eight by eight inches.

The square format enables it to operate with any projector, motion picture, slide, filmstrip, microfilm and microscope projection devices. A built-in thin, flat mirror corrects the image reversal, normally found in rear projection.

Price of the Groupshow Mini is \$25, packed in a portfolio carrying case, through HPI Industrial AV dealers.

Conversion Top for Universal Blimp Houses the Arri 16M

☆ A conversion top for the Arri Universal Fibre Glass Blimp, designed to accommodate the Arriflex 16M camera with 1200 ft. magazine, has been announced by the Arriflex Corporation of America.

Arri Fibre Glass Blimp with a 1200-ft. top and the lightweight matte-box.

The blimp accepts the Arri 16S and M models with their 400 ft. magazines. Divisible hinges allow easy removal of the 400 ft. top and replacement against the larger 1200 ft. size.

With this new addition, versatility of the Universal Fibre Glass Blimp is further extended, allowing the use of the 16M 1200 ft. magazine under critical noise level requirements in production. The 1200 ft. top lists under order code #321055 at \$325 and is available from franchised Arriflex dealers or write Arriflex Corp. of America, 257 Park Ave. South, New York City, N. Y. 10010.

* * *

Remote Radio Controls for Camera Motors, Strobe Units

☆ A wireless radio transmitter and receiver for motorized cameras and strobe/flash units called Remo-Rad, has been developed by Technical Photomation Instruments.

The Remo-Rad offers wireless control up to three miles, making it useful in situations where cords can't be used. It will operate the motor of the Nikon F36 or F250, and or strobe flash units where shutter speeds of 1/500 sec. can be used. Five separate channels allow five photographers to work simultaneously. One transmitter can work any number of receivers. A selective superheterodyne silicon transistorized circuit allows freedom from all normal types of interference.

Transmitter is the size of a 35mm camera; receiver is the size of a pack of cigarettes. Transmitter, receiver, chargeable batteries and charger are supplied in a Haliburton case. Remo-Rad Radio (CONTINUED ON PAGE 82)

SCIENTIFIC FILM PROCESSING

Colburn Chemists and Technicians keep a constant check on all of the steps that influence processing quality.

Densitometers, Sensitometers, Control Strips, Charts and Graphs provide objective data for critical control.

You may never see these Scientific Controls but you will see the results each time you project a Colburn Processed Print.

COMPLETE LABORATORY SERVICE FOR 16MM / EDITING / RECORDING / WORK PRINTING / 8MM & 16MM RELEASE PRINTING / TITLING / 35MM SLIDE & FILMSTRIP SERVICE

AURICON 16mm Sound-On-Film for Professional Results!

ALL AURICON EQUIPMENT IS SOLD WITH A 30 DAY MONEY-BACK GUARANTEE.

"CINE-VOICE II" 16mm Optical Sound-On-Film Camera.
★ 100 ft. film capacity for 2¾ minutes of recording; 6-Volt DC Converter or 115-Volt AC operation. ★ \$967.00 (and up).

"AURICON PRO-600" 16mm Optical Sound-On-Film Camera.
★ 600 ft. film capacity for 16½ minutes of recording. ★ \$1871.00 (and up) with 30 day money-back guarantee.

"SUPER 1200" 16mm Optical Sound-On-Film Camera.
★ 1200 ft. film capacity for 33 minutes of recording. ★ \$5667.00 (and up) complete for "High-Fidelity" Talking Pictures.

"PRO-600 SPECIAL" 16mm Light-Weight Camera.
★ 400 ft. film capacity for 11 minutes of recording. ★ \$1,295.00 (and up).

PORTABLE POWER SUPPLY UNIT — Model PS-21... Silent in operation, furnishes 115-Volt AC power to drive "Single System" or "Double System" Auricon Equipment from 12 Volt Storage Battery, for remote "location" filming. ★ \$269.50

FILMAGNETIC — Finger points to Magnetic pre-stripe on unexposed film for recording lip-synchronized magnetic sound with your picture. Can be used with all Auricon Cameras. ★ \$960.00 (and up).

TRIPOD — Models FT-10 and FT-10S12... Pan-Tilt Head Professional Tripod for velvet-smooth action. Perfectly counter-balanced to prevent Camera "dumping." ★ \$406.25 (and up).

★ Auricon Equipment is sold with a 30-day Money Back Guarantee. You must be satisfied

Strictly for Profit CHOOSE AURICON

If it's profit you're after in the production of 16 mm Sound-On Film Talking Pictures, Auricon Cameras provide ideal working tools for shooting profitable Television Newsreels, film commercials, inserts, and local candid-camera programming. Now you can get Lip-Synchronized Optical or Magnetic Sound WITH your picture using Auricon 16 mm Sound-On-Film Cameras. Precision designed and built to "take it."

MANUFACTURERS OF PROFESSIONAL 16MM CAMERAS SINCE 1931

(CONTINUED FROM PAGE 80)

Controls are marketed nationally by Ponder & Best, Inc., 814 N. Cole Ave., Hollywood, Calif. 90038, from whom further details are available.

Dial-A-Slide Random Access System Uses Kodak Carousel

Dial-A-Slide, a new slide projection system with an automatic, random selection feature, has been introduced by Decision Systems, Inc. The device employs the Kodak Carousel slide projector adding

The Random-Access "Dial-A-Slide"

a control unit which permits instantaneous choice of any slide in the drum by remote operation.

Designed for industrial use, Dial-A-Slide is priced at \$590 for the standard dial-selector version; at \$690 with push-button selection (illustrated). The projectionist can select any of the 80 slides housed in the Carousel drum in any sequence permitting instant changes in presentation after a program has been set up. Repeat of a view already shown is also possible without repetition of the entire slide cycle.

Dial-A-Slide projects 2" x 2" slides at an average selection time of four seconds; has a 5-inch, f/3.5 lens, 500-watt DFW blower-cooled lamp. Weight is 25 pounds. Write the New Products Desk, BUSINESS SCREEN, for complete literature and nearest dealer source.

RCA Audio-Visual Offers New Professional Audio System

A transistorized new professional audio system with "broadcast quality" for tape recording and playback of music has been introduced by RCA Audio-Visual Products.

The system is available in monaural and stereo models, is priced at approximately \$4,000 for stereo. Components include the RT-21B tape recorder, BA-34B amplifier and the LC-1B loud speaker and speaker housing. Write A. J. Platt, A-V Products Manager, Radio Corp. of America, 30 Rockefeller Plaza, New York, N. Y. 10020 for complete details, availabilities.

a-v equipment trade fair

Eclair Announces Techniscope Adaptation of 16/35 Camerette

A new model of the 16/35 Camerette with provision for Techniscope production has been announced by the Eclair Corporation of America. Existing Camerettes can also be Techniscope without sacrificing 16mm and 35mm capabilities.

The Camerette CM-3 "T" is instantly convertible back and forth from normal four perforation pull-down to Techniscope two perforation pull-down, on the spot, without tools. Slide a cam into the camera body (no disassembly is required); then slide appropriate mattes into the aperture and viewing system and shift a gear in the magazines.

All traditional features are retained: instant-change magazines,

fully rotating eyepiece, divergent turret, variable shutter, Cinemascope framing and convertible 16mm or 35mm filming with the same camera. Further details are available from Harold Dreyfus, Eclair Corporation of America, 8078 Woodrow Wilson Drive, Los Angeles 48, California.

ColorTran's New "Soft-Lite" Features Quartz-Iodine Lamp

A new quartz-iodine light, said to produce shadowless "sky-light" illumination for fill, key and general lighting has been announced by ColorTran Industries.

The new "Soft-Lite" uses quartz-iodine lamps, operating directly from 120 volts AC or DC. A new reflector design principle directs the rays from the lamp.

Soun-Talk Cabinet houses the 8mm "Instant" and Tape Playback Unit.

"Soun-Talk" Combines Instant Projector With Magnetic Sound

Engineers at the Sales Engineering and Training Company, St. Louis, Mo., have combined a Technicolor 8mm Instant Cartridge Projector with a new device called "Soun-Talk" to produce a new sight/sound projector which resembles a television set.

SETCO's new unit employs a magnetic-tape playback unit. Interconnecting circuitry and controls insure synchronous operation. All components are housed in a compact walnut cabinet, 18" high x 15½" wide and 19½" deep; the picture is projected on a 10" x 14" rear-projection screen. Picture limitation is 4½-minutes (Technicolor cartridge). Other features include a simple restarting panel, hinged cartridge access covers and individual operation of picture or sound by a selector switch.

Write our New Products Desk, 7064 Sheridan Road, for further details.

This photograph was made in an undarkened room. Notice the brilliant clarity of the film being shown.

AV rear projection cabinets immediately improve your audio-visual program

A typical owner reports that AV rear projection cabinets gave his audio-visual program new vitality and effectiveness. It's because this new teaching aid makes using films so much simpler and more economical.

Users frequently find that they can afford more and better films when they must bear no longer the expense of fitting out darkened visual aids rooms. Directors of audio-visual programs notice that teachers are more willing to schedule films when they can use this compact, easily managed projection equipment.

The AV cabinet is completely self-contained with your projector installed and a big speaker built in. It goes into action quickly, and, just as quickly, stores away. Since it operates anywhere, instructors are able to preview films well in advance and at their convenience.

"Custom-made" quality
for reliable performance
The AV rear projection cabinet

gives you a distortion-free, 22" x 28" picture on a new Polacoat non-glare screen. Cabinet accommodates most projectors. Exclusive Buhl built-in lens (optional) provides full-screen presentation from projectors with two-inch lenses and larger, including slide and film-strip projectors. Cabinet rolls easily from room to room on 5-inch casters.

Risers available to accommodate Bell & Howell projectors. All modifications made at the factory prior to delivery.

Send for free folder containing complete information and specifications. Order direct from factory or your AV supplier.

Two Pre-Striped B&W 16mm Films Introduced by Kodak

Two 16mm black-and-white reversal motion picture films, pre-striped for high-quality magnetic sound recording either simultaneously with filming or after processing have been announced by Eastman Kodak. They are:

Kodak Tri-X Reversal Film, a high-speed camera film for use under low-light conditions but having a minimum of granularity.

Kodak Plus-X Reversal Film, a medium-speed camera film with especially low granularity. Both films are available in standard lengths through Kodak dealers. The two films were designed for use in 16mm cameras equipped for magnetic sound recording but also can be used in conventional non-sound cameras.

For data on these products write to New Products Desk of this magazine.

Special Screen Design Adds to IBM's Widescreen Showing

☆ The trend to wide-screen visual presentations set up a noteworthy example for business users at the recent (October) IBM showing at the Business Equipment Manufacturers convention in Los Angeles' Sports Arena. IBM displayed new equipment on an unusual three-panel screen made into one seamless 9-foot by 36-foot projection screen. Three 3000-watt slide projectors were used, each developing a 9 x 12-foot image.

To minimize separation of related, adjacent images and yet provide enough masking to overcome the effects of the inevitable slight misalignment of the adjoining images, the Stewart Filmscreen Corp. designed an integral matte-black stripe into their white matte seamless screen called "Luxmatte."

The mounting was a lightweight aluminum frame, with special perimeter "shadow-box" masking, also made by Stewart. These were designed so that the two side images were at 15-degrees to the central picture, the whole unit being suspended on cables nine feet above the floor.

WHERE'S THE PICTURE?

Do you have problems with slide projectors? Slides are effective sales tools when you know how to use them and have the right equipment. Get this 28 page

AUDIO-VISUAL SLIDE PROJECTION GUIDE
(Price only \$1 per copy)

and learn more about this important subject.

When you need more than a "slide show" use the **SELECTROSLIDE** for your presentations — it's powerful AND professional. We'll mail you a condensed catalog sheet on six of our most popular models.

Write today.

6 WAYS TO IMPROVE... SALE ABILITY AND PERFORMANCE FOR IMMEDIATE RESULTS

This Program on Professional Salesmanship is ready to use in the way best suited for your sales force.

1. Let's Be Professional About It
2. What Makes People Buy?
3. Don't Let Objections Block The Sale
4. Price Is Part Of Every Sale
5. Close The Sale But . . .
6. Get More Selling Seconds

• For Sales Meetings

Meeting Leader's Guides suggest introductory comments, audience participation, how to apply to your business, and a Plan-Of-Action for immediate results.

• For "At-Home" Improvement

Study guides, quiz sheets and use of projector enable selected salesmen to improve themselves at-home, at their own pace, on their own time.

ANOTHER COMPLETE COLOR PROCESSOR by TREISE!

...designed, built, and installed for **WILDING!**

Treise has designed, built, and installed continuous laboratory processors and provided quality accessories for many of the finest film studios and laboratories in the country. Included are such outstanding names as Metro-Goldwyn-Mayer Studios, Capitol Film Labs of Washington, D. C., Purdue University, Pathe, Movielab of New York, University Microfilms, etc. To this select list of Treise customers is now added the name of Wilding Inc., one of the nation's leading producers of industrial and commercial films!

The combination 16/35 mm laboratory processor built for Wilding (shown above) is designed to handle all types of Eastman Negative-Positive Color Films. It will process

ess positive film up to 60 f.p.m. and negative film up to 50 f.p.m. The processor is equipped with sound track applicator and waxer and features the finest quality components, such as temperature control by Taylor Fulscope, flow meters by Fischer-Porter, etc.

Photo shows a portion of the circulation system installed by Treise on Wilding Project.

PROJECTING A WINNER:

(CONTINUED FROM THE PRECEDING PAGE 30)

campaign. The significance of these 75,000 viewers, who were contacted personally, right in their own neighborhoods, is even more startling when compared with the actual voting statistics. The total number of votes cast for both candidates for Congress was 186,105, which means that the film was seen by some 40% of the voting age population, many of whom could not possibly have been contacted in any other manner.

Campaigned for 40 Days and 40 Nights!

"You might say that since we knew the mountain would never come to Mohammed, we took Mohammed to the mountain," said Mr. Moskowitz. "In fact," he continued, "The whole campaign was rather biblical. We were out with the film for forty days and forty nights, and everybody said it would take a miracle to win!"

The second major problem was the structure of the film. Attracting the audience, that is, "reaching the market", would be a hollow

Congressman Dow (ctr) was candidate Dow when he discussed script problem with writer Stanford Sobel (left); director Sidney Milstein.

achievement unless the film presented arguments convincing enough for Republicans and Independents to split their ballots in favor of Mr. Dow.

30-Second Look Delivered the Message

To begin with, it was obvious that few busy shoppers would stand still for the entire seven minutes, so the film had to be structured in such a way that the viewer would get the message even if he saw as little as thirty seconds of the film. Furthermore there was no way to predict at which point a passer-by might happen to stop to watch or listen. Therefore the film was broken down in three major sequences, one devoted to Mr. Dow's position

Screen at rear of campaign sound truck showed seven-minute motion picture, "Meet John Dow," which was projected from inside the wagon.

on the issues, one devoted to the personality of the candidate, and one devoted to Mr. Dow's special qualifications to cope with the special problems of the four counties.

Since there was no "introductory" sequence, the main title, "Meet John Dow" was buried in the picture, and since there was no end title, the final scene in the film was a repeat of the opening scene. The three sequences were then developed in the following manner for the reasons indicated:

Political Unknown vs. a Famed Figure

Mr. Dow was almost totally unknown outside of his immediate neighborhood, whereas Mrs. St. George was a nationally famous figure, parliamentarian of the Republican National Convention, and ranking Republican member of many major committees. So in one section of the film Mr. Dow introduces himself and his family and explains the philosophical motivations underlying his positions on the various issues.

The tone of the film was set by the title: *Meet John Dow*, and no attempt was made to glamorize his appearance, his patterns of speech, his normal gestures, or his "acting" ability.

Dow Was Perfectly Cast for the Role

As Sidney Milstein, director of the picture, pointed out: "Mr. Dow was perfect as he is. The crew kept remarking what good casting he was as a Congressman. It was not the director's job to project a false or artificial image, but simply to overcome John's nervousness (CONTINUED ON THE FOLLOWING PAGE 113)

WRS, Pittsburgh Lab, Installs B & H Color Additive Printer

☆ Purchase and installation of a new Bell & Howell Model C color additive printer has opened a new avenue of client service for the WRS Motion Picture Laboratory, Pittsburgh, Pa. It is only one of 12 film centers in the U. S. with this equipment. According to WRS general manager F. Jack Napor:

"The Model C incorporates the finest optics engineering into a continuous film printer; enables us to offer our local and national clients added refinements in color printing." Among the features: use of up to six different fading lengths (16-24-32-48-64-96) within the same A&B rolls; the Model C "zero cuts"; it provides 50 light values in finer gradations in comparison to generally used 21 light values. It also provides scene-to-scene color correction, in scenes as short as five seconds.

WRS printing capacity is expanded with a capability of 1,900 foot rolls as compared to 1,200 feet. The Model C also eliminates notching. All timing, color correction and effects changes are accomplished by metallic cue daps or timing strips rather than edge notching.

MusiCues Now Exclusive U. S. Source for Chappell Library

MusiCues, Inc., 117 West 46th St., New York, has been appointed sole United States distributor of the Chappell Background Music Library. It succeeds Ben Selvin Enterprises in this capacity, and will serve all of Latin America, as well, in the issuance of licenses and distribution of Chappell records.

The firm has also announced an expansion in the staff of music selectors and editors to serve film and TV producers, as well as educational institutions.

MusiCues' sales staff is directed by Edmund Mitchell, and Mr. Selvin remains chief consultant.

Inter-American Films Announce a New Studio in Puerto Rico

☆ A new motion picture company which will produce and distribute film commercials and documentaries for travel and industry has been organized in San Juan, Puerto Rico. Inter-American Films, Inc., has been set up by producer-director Frank Marrero.

Studios are located at 646 Fernandez Juncos Ave., Miramar, P. R. Marrero was formerly with Delta Films of San Juan.

Professional Custom Leader from Photographic Specialties

☆ Photographic Specialties has announced the availability of professional, custom-printed leader for the producer and laboratory. This 16mm leader comes in 2,000-foot rolls, with imprints matching customers' normal leader-lengths and the printing spaced at 2, 3, 4, 5, or 6-foot intervals.

The imprint itself can be either type-set or photographed from artwork. Maximum imprint length is 10 inches. Information may include such information as name and address of producer or laboratory, "Head", "Tail", "Print No." and similar useful designations. Ink colors offered are red, blue, green or black. Stock used is standard quality lightstruck. Subject to some variation for quantity, price is about \$13.50 per thousand feet.

Further details are available from Photographic Specialties, 5170 Hollywood Blvd., Hollywood, Calif. 90027.

* * *

Color Film Corp. in Larger Quarters at Mamaronock, N. Y.

Color Film Corporation, Mamaronock, N.Y., has moved to larger, more modern quarters at 500 Halstead Ave., one block from its present location. The move will be completed within the next four weeks, and has been planned to maintain production without interruption.

Established in 1950, Color Film has been a pioneer in the printing and processing of Eastman Color Negative solely for filmstrip use. The firm still specializes in this field although it has diversified to include quantity slide reproduction and the daily printing and processing of Kodak 6008 Internegative.

The 10-year old building, which has been purchased by Color Film from the American Avitron Corp., provides 6,000 square feet of space that is "ideally suited to our needs," according to President Richard N. Jayson. The fully air-conditioned lab and offices are on one level and room for further expansion has been provided for on the property.

PROJECTING A WINNER:

(CONTINUED FROM THE PRECEDING PAGE 110)

before the camera so as to present the truest possible picture of the man as he really is."

Since the total district comprises so many diverse areas, Mr. Dow's position on the issues was established by a series of brief interviews with commuters, dairy farmers, factory workers, businessmen, and suburban mothers. Each viewer thus found some area of identification, some person had a concern something like his own.

The third sequence used a professional narrator, who told of Mr. Dow's qualifications for the position.

The Candidate Was a Rugged Competitor

No campaign is ever won by a single device such as a film. Mr. Dow had many things going for him, all of which are essential to winning a campaign. He himself is an indefatigable worker and conducted a hard-hitting, full-time campaign, traveling thousands of miles, shaking thousands of hands, making hundreds of speeches.

He also inspired a crew of some 50 volunteer workers who did everything from licking stamps and folding papers to operating the projector outdoors on cold October nights. He was, of course, aided enormously by the 113J landslide, but so were the unsuccessful Democratic candidates in the district who were not elected on November 3rd. Mr. Dow, for example, even received more votes in the 27th District than Senator-elect Robert F. Kennedy, who ran behind both John Dow and Senator Keating in the District, although Robert Kennedy was of course elected in New York State at large.

Largest Plurality Where Film Was Used

One final statistic has some significance for film people. Since Mr. Dow was given no chance of being elected by the political experts, it was extremely difficult to raise campaign funds. The original plan was to equip via station wagons with projection units, and this proved impossible because of a shortage of money. As a result, it was possible to borrow only one wagon, which was itself a contribution.

This one projection unit was concentrated in the smallest and most populous of the four counties in the Congressional District, Rockland County, which is also the smallest county in New York State. And it was in this one county that John G. Dow rolled up a plurality of 10,608 votes. His winning margin in the district as a whole was 6,003 votes.

It isn't difficult to understand why Congressman-elect John G. Dow of New York's Twenty-seventh Congressional District is a firm believer in the effectiveness of motion pictures.

"Time Machine" That Stretches Sound a Helpful New Tool in Film Production

A machine that squeezes and stretches sound and time like an elastic band was demonstrated in New York last month. For use in film where it is sometimes necessary to hurry up or slow down sound to make it fit the picture, a "Time Machine" has been in-

SOUND RECORDING

for

16 & 35mm Motion Pictures

A new concept in sound recording service—RPL specializes in producing for you the most professional sound tracks—**music scoring, sound effects, and voices**—with imagination, creativity and superior technical quality.

Because RPL exclusively specializes in sound—you have an organization and facilities completely oriented to this service.

Just send your script and work print to RPL and you will receive back a truly professional sound-mix for your film—at surprisingly low cost, too.

Get the full story of what RPL can do for your next motion picture.

THE TIME MACHINE:

troduced by filmmakers' Leacock & Pennebaker New York, as a service of their sound studio.

The invention of a German engineer, Dr. Anton Springer, the time machine is able at the turn of a knob to make an orchestra play faster or slower without changing its pitch. For a distraught film maker who for various reasons has a sound track that doesn't fit his picture (that is out of syne), here is a way that the track can be squeezed together or stretched out without changing the pitch or quality of the sound.

Affects Pitch Without Changing the Tempo

The machine is also conversely able to increase or decrease the pitch of sound without in any way affecting its tempo. Thus, an orchestra which was playing in C might obligingly be changed to B flat or C above C simply by turning a knob.

Richard Leacock and D. A. Pennebaker, who are well known pioneers in the field of candid documentary motion pictures, see this development as a breakthrough for cinema verite film makers.

Can Put Any Kind of Track into "Sync"

Pennebaker notes: "Wherever small light cameras and recorders are used there is always the spector of the tracks not being in 'sync' with the picture, particularly with wind-up camera, or cameras without professional synchronous motors. Now we can take any track, it doesn't matter whether it's music or a half-hour speech shot with Brownies, and make it come out in perfect syne, and keep everything the same pitch. . . that is, the music or the voice will not be in anyway changed."

It is also possible, says Dr. Springer, to double the speed of radio announcers or newscasters and get up to 30 per cent more information in the same time segment with little apparent increase in speed of delivery. You might even get a one-minute commercial in 30 seconds.

Used to Save \$100,000 Television Film

"We're mainly interested in its film use," said Richard Leacock. "We've just saved a hundred thousand dollar television film by resolving (that's what the new process is called) nearly 30,000 feet of sound track. The cameras were all running slow for some reason, and if the track had simply been recorded slower to match the picture all of the voices would have sounded like chipmunks when it was played back at normal projector speed. Like a 33 rpm record played at 78 rpm. At any rate by using the Time Machine we were able to make everything come out as though nothing had gone wrong with the film."

FESTIVAL REPORT FROM LONDON

(CONTINUED FROM THE PRECEDING PAGE 39)

auw, Technical Film Centre, The Hague, Neth-
erlands, who spoke eloquently on a subject with
which they have had long experience.

As one of the American visitors to the Festi-
val reported to BUSINESS SCREEN: "the social
affairs arranged by the Festival Committee
were elegant—thoroughly enjoyed all of them."
This comment from U. S. producer Avalon
Daggett amply covers the reception held at the
historic Drapers' Hall on Monday evening,
November 2nd (sponsored by the Federation
of British Industries and the British Employers'
Confederation whose president, J. M. Laing,
Esq. was joined by Mrs. Laing in welcoming
delegates). The British Government outdid it-
self in another reception for the delegates at the
Banqueting Hall in Whitehall. The final social
event of the week was, of course, the superbly-
organized Festival banquet and ball.

Other American notables at London that
week included Henry Strauss, President of
Henry Strauss & Co., of New York, who scored
prize honors at last year's festival in Madrid.
The Strauss' film, *Man the Manager*, was out-
voted by the Swedish winner in its relevant
category (F). But festival delegates failed to
share the jurors' enthusiasm in this single case.

Carl Lenz, President of Modern Talking Pic-
ture Service, Inc., New York, was another
delegate from the U. S. who reacted with
enthusiasm to the program in London. He re-
ported to BUSINESS SCREEN:

"The Festival was organized by the British
Industrial Film Association. Let me emphasize
the word "organized" as this was done to near
perfection. One fact kept re-establishing itself
in my mind through the five-day program: an
industrial film festival is really a big, big event
and is recognized as such in Europe. And not
only by people in the film business . . . but by
businessmen in general. Some of the top-
drawer names in British industry and financial
circles were in daily attendance.

"The Committee's preparation for this Fes-
tival was most extensive. Imagine a program
and handbook of 215 pages, with everything
printed in three languages . . . English, French
and German. Before the Festival got underway,
there were reams of publicity used by news-
papers and magazines in England and on the
Continent, including a most comprehensive
supplement in the LONDON TIMES of eight full
pages on, 'Industrial Communications Today.'"

Niles' Swing Sweep Lens a New Development for Films

A new Swing Sweep Focus Lens which can "sweep" its focus along any given plane without camera movement and draw the viewer's attention to two or more side-by-side objects has been developed by the Fred A. Niles Communications Centers, Inc.

The new lens has been refined for use in all types of production. It was developed under the direction of Niles' vice-president Lionel Grover (in Hollywood), working

Swing sweep lens has "sharp" focus on the cigarette pack —

then picks up the burning cigarette on the edge of the tray.

jointly with a staff member of the California Institute of Technology.

"With the Swing Sweep lens," Grover explains, "we can do a 20-second spot, for example, sweeping the focus from subject to subject, with one setup and a static camera. The sweep of focus provides the movement on the screen as it literally captures the viewer's attention."

"Under the control of the cameraman, the focus can be swept from side-to-side, up and down or diagonally. The lens can focus on one object in a given area, while diffusing others along the same horizontal plane. The focus can then be moved to another object on that same plane, while the first object becomes diffused, and so on."

The lens fits all Arriflex cameras so that crews can shoot in either 35mm or 16mm at a moment's notice. A film has been completed which shows the various effects achieved with the special lens and is being shown to ad agencies in New York and Hollywood.

A review of the lens will be featured in the next issue.

Useful Free Literature Available on Your Letterhead Request

General Films' "Rewind" is "Must" for the Film Sponsor

If you're not already on the list, ask to receive **REWIND**, the newsletter of General Film Laboratories, Inc. This excellent letter recently featured a color-charted "Motion Picture Business Report" showing the increase in business and educational film use as well as theater attendance charts and a chart of the number of U. S. theaters in operation. Free on letterhead request to film users from General Film Laboratories, 1546 North Argyle, Hollywood, California 90028. Mention this **BUSINESS SCREEN** item.

Guidance on PR Films for TV in Modern TV's "Cue Sheet"

Business film users, especially those interested in public service activity in television and station program directors, are talking about **CUE SHEET**, published by Modern TV, a division of Modern Talking Picture Service, Inc., 3 East 54th St., New York, N. Y. 10022. If you're concerned with public relations' film developments, it's free on letterhead request from the above source.

"Free Film News" Lists Many Titles Available for Showing

Need good films for plant or community showings? Write for the Adult Edition of **FREE FILM NEWS**, issued by Sterling Movies U.S.A. Available on letterhead request from this national distributor of sponsored motion pictures. Write to 43 W. 61st St., New York City, N. Y. 10023.

"Viewer Participation" Ideas in New Roundtable Monograph

The third in a series of research monographs distributed by Roundtable Films is titled "Obtaining Viewer Participation" and it cites graphic evidence supporting the value of getting people involved during the presentation of training films.

The study was prepared by Dr. William H. Allen, director of cinema research at the University of California. It discusses the types of participation which are most valuable and advises training directors how to achieve the best results.

Previous reports covered "Introducing a Film" and "Conduct-

ing a Film Discussion." Any one or all three may be obtained on letterhead request; specify Research Report BS, Roundtable Films, Inc., 275 S. Beverly Drive, Beverly Hills, Calif. 90212.

Association Films Lists Over 1,700 Titles in New Catalog

A 72-page catalog of more than 1,700 free-loan and rental films, available to clubs, churches, industries and other community organizations, has been issued by Association Films, Inc. The catalog, largest in the company's 53 years, offers motion pictures on travel, sports, current events, entertainment, safety, religion, history, and many other subjects.

Sponsored films, which comprise half the company's catalog, have been shown more than a million times in communities across the country during the past 12 months.

Association Instructional Materials, sales and rental division of Association Films, lists several hundred films available for one-day or weekly use, outright purchase and long-term lease.

Copies of **Free Loan Films, Sales and Rental Subjects** may be obtained by writing the Catalog Department, Association Films, Inc., 347 Madison Ave., New York 10017.

"Free Film News" Contains Many Titles for Free Loan

If you're using (or should use) motion pictures within your company or association for management development, supervisory training and employee communications, write for the latest issue of "BNA Films" which describes in detail ten sound films available from this source. Available on letterhead request from the Bureau of National Affairs, Inc., 1231 24th St., Washington, D.C. 20037. Mention **BUSINESS SCREEN**.

Properties of Magnetic Tape Described in Reeves' Booklet

Users of magnetic tape should write for a new six-page brochure, RS-64-18, which describes the electromagnetic and physical properties of tapes as well as complete specifications for Reeves Mylar and cellulose acetate tapes for sound recording. Free on letter-

head request from Reeves Soundcraft, Great Pasture Road, Danbury, Conn. Specify brochure RS-64-18 when writing. Mention **BUSINESS SCREEN**.

Useful New Lab-TV Brochure for Guidance of Service Buyer

Lab-TV, New York City, known as "the lab for reversal film," has announced a new 12-page brochure which contains prices and services available from this source, including 16mm b&w and color reversal processing, A & B printing, release printing, etc.

The well-printed booklet illustrates and describes equipment in operation and contains a rating chart as well as instructions on how to properly prepare film for the lab. Useful and readily available on letterhead request, free, from Lab-TV, 723 Seventh Avenue, New York, N. Y. 10019. Mention **BUSINESS SCREEN**.

Film Effects' Ideas, Footage Ruler Available from Mercer

Two items are of special interest to business film production personnel. The wide range of special effects services available from Hollywood-based Ray Mercer & Co., are described in a very readable little booklet titled "What We Do on Film" and contents range from "Ideas" to an excellent miniaturized chart of all special effects, visualized and numbered.

Mercer also offers a two-foot aluminum ruler for measuring 16 35mm footage and film effects' measurement. It is useful for advance checking of sound, fits between rewinds. Rule sells for \$4.50. The booklet is free on letterhead request. For either item address: Ray Mercer & Co., 4241 Normal Ave., Hollywood, California 90029.

New Birns & Sawyer Catalog

A new 64-page Rental Catalog (#4) is available on letterhead request from Birns & Sawyer Cine Equipment Co., 6424 Santa Monica, Hollywood, Calif. 90038. It describes many lines of professional motion picture and still photographic equipment available for rental.

Eastern Effects, Inc. Acquires the K & W Film Service Corp.

Slidefilms

another Business Communications product from Wilding

How to get the most for your slidefilm dollar

Do you buy complete slidefilms? Do you produce slidefilms yourself, and buy certain elements outside? Whether you buy all or just parts of slidefilms, you'll find that Wilding can give you the most for your slidefilm dollar.

Prizewinners—We've been making slidefilms for over 30 years for companies like Ford, General Electric, Goodyear; for religious organizations like the Adult Catechetical Teaching Aids Foundation; for social welfare organizations such as the National Urban League. Our latest slidefilm for the Urban League won a 1964 "Chris" award.

Innovators—Wilding developed and pioneered the use of widescreen slidefilms. We designed 35mm horizontal projectors such as VistaSell and the Goldplaters, Mark I, II and III. And we developed many other techniques, such as VistaStrip, TriggerStrip and Hi-Lumen projection, that have

helped many deliver more effective A/V presentations.

Speed and Control—Wilding writers, artists, photographers, animating equipment and lab facilities are all under one roof. Complete control assures consistent quality. It also means we can produce a slidefilm as fast as you need it!

Competitive Prices—Part or Parcel—We'd like to produce your slidefilms in their entirety. If, however, you make your own, and buy some of the elements, you can borrow our production facilities! We have long experience in working with client-supplied material. You'll find our prices very competitive for filmstrip animation, slide production, photography, art, recording and processing.

Contact Wilding—For more information about Wilding slidefilms or production services, write Advertising Department, Wilding Inc., 1345 Argyle Street, Chicago, Illinois—60640.

ANA Study of Business Films to be Released on January 29

☆ A new report on 209 films, including specifications, audiences targeted and audiences reached, distribution methods, and project costs, will be released at a luncheon at the Biltmore Hotel, New York, Wednesday, January 27, by the Association of National Advertisers.

The report, *Advertiser Practices in the Production and Distribution of Business Films*, has been in preparation for the past year by the Audio-Visual Committee of the ANA. It will be summarized at the luncheon by William J. Connelley, Manager of Advertising, Union Carbide Plastics Company. A question-and-answer session will follow his presentation.

Cost of the luncheon and seminar, which will last from 11 AM to 2 PM, is \$12.50, including a copy of the published report. •

* * *

TV Commercials Festival to Close Entry List February 1

☆ The entry deadline for the 1965 American TV Commercials Festival will be February 1st. All U. S. and Canadian commercials that were telecast for the first time during 1964 are eligible for the competition, which is open to advertisers, their agencies, production companies and television stations.

Walter Weir, Chairman of the Executive Committee of West, Weir and Bartel Advertising Agency, heads the 1965 Council of Judges which will meet as seven regional groups to appraise an expected 1300 or more entries according to their product classification.

The awards luncheon is scheduled for Friday, April 9th, in the Grand Ballroom of the Waldorf-Astoria Hotel, New York. An evening screening of the winners will follow two weeks later in the theatre of the Better Living Center at the 1965 New York World's Fair. Regional festivals are planned for Boston, Atlanta, Chicago, Dallas, Los Angeles and Toronto during April and May.

Entry forms are available from the Festival office at 40 West 49th Street, New York. •

* * *

Reeves Industries, Ltd. to Extend Reevesound Services

☆ The formation of a new company, Reeves Industries (Canada) Ltd., will extend into that country

and to export markets abroad, the technical services and manufacturing operations of the Reevesound Company, Inc., wholly-owned subsidiary of U.S.-based Reeves Industries, Inc. Boyce Nemec, president of Reevesound, is also chief executive officer of the new firm, guiding this new program.

From headquarters in Montreal, the Canadian company will specialize in the development of motion picture technical systems, also providing consulting, design, manufacture and operational services for making and presenting communications via the screen media. The concern, according to Nemec, is a "natural evolution of Reevesound's long association with the Canadian film and television industries."

Reevesound has been a major supplier of professional sound recording systems to the Canadian Broadcasting Company, to independent Canadian broadcasters and to Canadian film makers. In the latter connection, Reevesound executives recently recounted the company's New York World's Fair experiences at a National Film Board of Canada-sponsored symposium in Montreal for Canadian groups involved in EXPO '67. Canada's International Exposition scheduled to open in April, 1967. •

Six Films from Reid H. Ray in 1965 John Deere Day Show

☆ Through the years, one of the outstanding dealer-oriented nationwide film programs has been the well-attended John Deere Day, sponsored by Deere & Company, agricultural implement manufacturer with headquarters at Moline, Illinois.

In January, the 1965 John Deere Day Shows began moving to branch houses of that company. This audio-visual activity is supervised by Glenn Rohrbach, veteran film man at Deere. And for the 28th year, Reid H. Ray Film Industries of St. Paul, Minn. participated in the production of films for this annual program.

This year's program of sales films produced by Ray included such titles as *Time, How Big is a 45-Horsepower Tractor?*, *What's New for 1965*, *Shoulder High by the 4th of July*, *Situation Well in Hand*, and *1010 Country*. These films were released in both 35mm and 16mm Eastmancolor, with prints processed by Moviela and General Film. About 80 prints of each subject were distributed. •

Unity

...responsibility can be shared, but not dispersed.

With us, the producer-director is the head of a creative team which sticks with a film assignment from original concept to final prints.

One good example: "Amandu's Dream House" for Edison Electric Institute.

Closed-Circuit TV Network at Int'l Home Furnishings Show

☆ A closed-circuit television system, the first to be used as a communication aid in the home furnishings industry, served to speed the flow of market news, messages, and buyer reactions at the International Home Furnishings Market, which opened in Chicago on January 3.

The system, installed in the Merchandise Mart by Sterling Movies U.S.A., was underwritten as a public service by the DuPont Company. Programming was seen on a network of 40 sets positioned in heavy traffic areas such as elevator lobbies, hallway intersections, checkrooms and lounges.

Broadcasts, prepared by Sterling television professionals, spanned the full eight-hour market day. They were based on a combination of live, taped, and filmed material programmed from a special Merchandise Mart studio. Features were programmed on an industry-wide basis.

Programming covered all aspects of the industry including carpets, furniture, decorative fabrics, accessories and lighting. News was presented every hour on the hour, using a teletype hook-up to New York.

In some cases key events at the market were taped as a review for viewers who were not able to attend. Interviews with industry leaders in the fields of retailing, design, and manufacturing brought out the color of industry opinion. Fashion round-ups were presented new every day, compiled by a group of top industry writers. •

Pinkerton is U. S. Liaison for Int'l Ad Film Festival

☆ Jane Pinkerton Associates, New York City, has been appointed U. S. representative for the International Advertising Film Festival, London-based organization which sponsors the annual worldwide advertising and television film competition.

The announcement was made by Peter Taylor, director general of the Screen Advertising World Association, sponsor of the annual event. The Pinkerton organization will serve both as U. S. headquarters for the 1965 festival and as its public relations counsel. The show will be held in Cannes, France this year. •

Office of Communications Set Up by Lutherans in Illinois

☆ The Illinois Synod of the Lutheran Church in America has established a newly-created "Office of Communications" to serve its School of Theology at Chicago and three divisions which form Lutheran Social Service of Illinois: the Division of Family and Child Care, Division of Care of the Aged and the Division of Pastoral Care.

Announcement of the new office was made by Dr. Robert J. Marshall, president of the Synod.

WARREN D. NELSON heads Lutheran Office of Communications

He has appointed Warren D. Nelson, former member of the production staff at Wilding, Inc., as communications director. For the past two months, Nelson has been setting up the new activity. It became fully operational on January 2nd with the inclusion of Augustana Hospital and the Illinois Synod.

Nelson will be responsible for publicity and promotional materials as well as the development of audio-visual materials. He will also function as the managing editor of the ILLINOIS LUTHERAN, published for the 85,000 members of that denomination within the Illinois Synod. •

1. Now, gentlemen! Let's get to it
Business is fine, but it's been brought to
my attention that there is a lack of recognition
of Tri Art as the name of Du Art's color lab,
and I propose to do something about it!

2 I'm going to change the name of Tri Art! It will
confuse the hell out of anybody who tries
to appease us by learning that name tomorrow.
They'll wake up and start screaming Tri Art!...
And we won't be there.

3. Now, I want you to come up with a brand new
name for our color operations that will convey our
new image. It's got to reflect the vitality of our
young management and the soundness of our 40
years of experience. The new name must make
clear that we have made a tremendous investment
in new equipment in the last 10 years.

4. You're not getting the idea! It must have wham-o!
Why with our new editing rooms for our customers
our new fiber optics color printing, our tightened
inspection and absolute quality control, we can
beat anybody for service, quality and facilities!
Let's try some more!

5. I've got it! I just thought of it! Just the name to
say everything! It reeks of speed, our fantastic
equipment, personalized, sensational service,
and dynamic follow-up combined with the knowledge
based on our unsurpassed 40 years of
experience! Brace yourselves... Here it comes!
"Du Art Color Corporation."

6. How's that for a fresh approach?

Films "Primary Sales Tools" for Cahners' Magazine Group

Increasing use of audiovisuals to promote printed media in 1965 is one of the "growth" areas where films have been making noteworthy progress. For the past two years, for example, color motion pictures have been the primary sales tool used to sell national advertising space in the three magazines of the Cahners Publishing Co., Inc.

Watt Pye, director of sales promotion for the Denver division of Cahners, recently told members of

Cahners' exec. Watt Pye

the Colorado chapter of the Association of Industrial Advertisers that he had written and directed these sales-tool films at an average rate of three new films each year. They are produced in Denver under his supervision.

In a similar film-and-slide presentation before the Albany, N. Y. AIA chapter in January, Pye described these films as "uniquely different from other films in impact and amount of information communicated." They have applied in space sales for Cahners' DESIGN NEWS, EDN (Electrical Design News) and ELECTRIC LIGHT & POWER.

Sales promotion chief at Cahners for the past seven years, Pye was previously in the advertising and sales promotion department of General Electric in Ft. Wayne, Ind. and Schenectady, N. Y. He

is a former newsman, a graduate of Notre Dame and a member of both the Advertising Club of Denver and the Colorado Chapter of AIA, to whom he spoke.

Syracuse Presents a Lecture Series at Newhouse Center

A series of lectures on the cinema as an art form has been given at the Newhouse Communications Center (for instructional communications) at Syracuse University in New York. The first of the Newhouse lecturers on cinema techniques was Mel London, producer for Wilding, Inc., who presented his paper in December.

London's most recent release, *The World Next Door*, pictured sports around the world for its sponsor, the Pepsi-Cola Company. It was filmed on location in 15 lands abroad. He was also executive producer of an award-winning series for Alitalia Airlines.

"Careers in Engineering" Is Theme of New GE Sound Film

A new program of General Electric Educational Films has now made available to the nation's high schools a 14½-minute 16mm color film titled *Careers in Engineering*, which may be purchased outright.

The new sound film provides background on the engineering profession with emphasis on four major disciplines: mechanical, electrical, chemical and civil engineering. *Careers* also touches on the inter-relationships between the principal facets of engineering and highlights some of the challenges which face tomorrow's engineers.

To aid students in working careers in this field, the film notes the personal qualifications as well as school courses required to prepare for higher education in engineering schools. It is being made available at \$120 per print. Requests for preview or orders may be sent to General Electric Educational Films, 60 Washington Ave., Schenectady, N. Y. 12305.

HOW TO IMPROVE COMMUNICATION

American Management Association Hosts Three-Day Orientation Seminar on "Effective Business Films"

HOW TO COMMUNICATE with audiences more effectively, more selectively and at lower cost is the announced theme of a comprehensive orientation seminar on "Effective Business Films" which opens on February 1st at the headquarters of the American Management Association in New York City. It concludes on Feb. 3. Co-chairmen of the AMA Seminar are Gordon H. Tubbs, Eastman Kodak Company and John E. Duncan, manager, audio-visual programs, Industrial Sales Division of the General Electric Company. Emphasis will be given to co-ordinating films with other communications' media: advertising, house organs, press releases, etc. There will be an in-depth study of single and multi-purpose films — and of techniques used to make one film serve a variety of purposes.

Role of Audio-Visual Dept.

The place of the audio-visual department within companies and the matter of procurement and production are among other topics to be covered. Finally, the advance program notes, budgeting and cost control and the question of measuring results will be discussed.

Guest speakers include Edward J. Wegman, president, Holland-Wegman Productions, Inc., Buffalo; William J. Connelly, manager of advertising for the Plastics Division, Union Carbide Corp., New York City; Sidney Shulins, staff executive, Association of National Advertisers, Inc., New York City; Willis H. Pratt, film manager, American Telephone & Telegraph Co., New York City; N. Don Maccon, executive consultant, A-V Corp., Houston, Texas; John Flory, advisor on non-theatrical films, Eastman Kodak Co., Rochester, N. Y.; and W. G. Wilson II, Charisma Group, New York City.

Reviewing the ANA Study

A special feature of this seminar will be the presentation of advance information from the newly-completed ANA study, "Advertiser Practices in the Production and Distribution of Business Films" (see page four).

Members of the American Management Association may attend the three-day meeting at a cost of \$150; non-members are charged \$175.00. For registration details write, wire or phone AMA headquarters, 135 W. 50th St., New

York City 10020; phone 556-8171, area code 212.

Movielab Reports an Increase of 16% in Sales for the Year

Movielab, Inc. (ASE) has reported that its sales volume for the fiscal year ending January 2, 1965 would exceed \$8 million, or approximately 16% more than last year's total sales of \$6,887,000.

Saul Jeffee, president, said that the company had expanded its facilities, adding new high-speed processing equipment in 1964 which will enable the company to handle double its present volume of business in the new year. Movielab's annual sales have grown at an average compound rate of 13% and net income at a rate of 21% during the past six years.

"Prospects Before Us" Helps Build Newspapers' Ad Lineage

The 20-minute film, *Prospects Before Us*, is currently showing advertising space buyers the facts on research covering 1,000 daily newspapers in the U. S. and Canada. Sponsored by the Bureau of Advertising of the American Newspaper Publishers Association, the film uses split-image techniques as it updates new findings about the pulling power of daily newspaper advertising pages.

SALESMAN MOTIVATION and SALES TRAINING

THE PARTHENON METHOD

Make him identify
Make him want to — Show him how
Leave him steamed up.

"THE HARDESTY CASE"

Do your salesmen concentrate on a few pet items and neglect the full line? *The Hardesty Case* is a kidding-on-the-square comedy designed to persuade Ford car salesmen that they should — and can — put some sales effort on the light and medium truck lines... and along the way it reviews some key sales-work fundamentals.

"HEAVY GOING"

Do your salesmen tend to sell a "performance" product on a price basis? *Heavy Going* persuades Ford heavy truck salesmen to earn their deals—to dig up all the facts and organize them into a solid proposal that will prove to the customer he'll make a profit if he buys.

"FILE ON HENRY ROYALL"

Did some of your men join the company expecting to make their careers "inside"—and now they're expected to go outside and sell? *The File on Henry Royall* was made to persuade the 800 Bank of America branch managers that selling is necessary today — that they can do it — and here's how.

Spliced!

I WAS MOST IMPRESSED with the volume of film-making in Russia and the many aspects which are so different from the industry in North America.

Training Films Also Shot in 35mm

There is a huge captive audience which fills 100,000 theatres, including some 6,000 with wide screens and 50 with 70mm.

There are seven large feature studios and 13 smaller ones (one in each province) in addition to many studios specializing in science or documentary or medical or educational production. All films, even simple training or classroom or TV pictures, are shot in 35mm. There seems to be no 16mm production equipment, although they hope to have a 16mm industry one day. On the other hand, about a fifth of their theatres are 16mm and the studios make their own reduction prints.

I went through the largest studio — Mosfilm — on the outskirts of Moscow. It's huge. Four thousand employees, thirteen stages, its own laboratories. There are 150 editors in fifty editing rooms and their own preview theatre — with 1,000 seats! They turn out 40-50 features annually, about a quarter of the country's output.

Lensfilm Studios in Leningrad has a staff of 2,000, with five stages and an annual output of 15 features, plus some TV work. When I was there they were building another couple of stages to increase their production.

"Showed Me Everything I Wanted to See"

The Russians showed me everything I wanted to see. Nothing was held back. I in-

Journey to Russia

by Graeme Fraser

Vice-President, Crawley Films, Ltd.

Mr. Fraser was recently invited to visit Russia as the guest of the Film Makers Association of the U.S.S.R. and BUSINESS SCREEN asked him to record some of his impressions of the journey.

interviewed directors and actors and engineers, screened several new features, attended a premiere, toured the studios. They are eager to establish more contact with the West and their hospitality, as an official guest of the State, was almost overpowering.

You have to keep reminding yourself that every store, every apartment house, every industry, every theatre and every film studio belongs to the State. This can lead to some interesting situations.

Latest Features Available for TV Use

For instance a TV official (Moscow has four channels—two general, one educational and one experimental) told me they can obtain without fee any theatrical feature from any studio. Thinking of the protracted negotiations between networks and studios here, I said, "Suppose you wanted a new film even before it went into the theatres?" He said, "No problem, we just ask for it." I said, "Wouldn't that cut down the box office?" He said, "So what — the studios and TV stations both belong to the State!"

Another surprise I had was to find how

really competitive are the Russians. They compete in athletics, in world trade, for the opportunity to receive an education as a professional, for a better job, a more interesting assignment. A director or a cameraman can receive a bonus for a quality film, (as judged by the critics, not by the box office) a bonus which is in excess of his basic salary. But there seems to be no bonus for coming in under budget!

I feel that the feature industry suffers somewhat from lack of contact with the rest of the world. In addition there is the problem of the very round-about and remote connection between the film makers and the box office. In America, producers make the pictures the film bankers think the public will wish to see.

Nevertheless, Mosfilm has turned out features like *Hamlet*, *The Cranes Are Flying*, *Balad of The Soldier*, *Ivan The Terrible*, *The Circus*, *Othello* and *The Clear Sky*.

Documentaries "Vital," Closer to People

Russian documentary pictures are very good indeed. They are vital because they get closer to people in their environment than do many documentary producers here. Here we train a cameraman in mountain climbing or athletics so he can cover such events. There they take a mountain climber or an athlete, put him through an intensive course in cinematography and make him into a specialist cameraman for pictures about mountain climbing or athletics.

I found special studios, with stages and complete facilities, at the huge University of (CONTINUED ON THE FOLLOWING PAGE 14)

of Business and Television Films
in The United States and Abroad*

JOURNEY TO RUSSIA:

(CONTINUED FROM THE PRECEDING PAGE 12)
Moscow, the Academy of Science and at the Academy of Medicine.

Apart from its sheer size, my biggest surprise in connection with the Russian film industry was to find that 80% of their thousands of film makers are graduates of the big, 45-year-old All Union State Institute of Cinematography in Moscow. This is the way you break into the industry—become accepted for one of the four to six-year courses there. It is planned that one day a flat 100% of the film makers will be graduates of this one Institute.

2,300 Are Studying to Be Film Makers

When I went through it, there were 1500 day students, plus 100 evening students, 600 correspondence students (mostly in script writing) and 100 foreign students from Africa, China, South America, etc.

The Institute has four large stages and a permanent staff augmented by a great number of visiting lecturers from Mosfilm.

Their largest faculty is that of Direction, which is divided again into Theatrical, Documentary, Scientific, Animation, Education and Television Films. Then there are the faculties of Script, Acting, Camera, Design, Art Historians of the Cinema and Critics, Economy and Organization of Production. In essence, the thesis of a student is to complete his part of a successful motion picture.

The Institutë has a library of 200,000 volumes and a special research centre which issues considerable literature relating to motion pictures.

Leningrad Institute for Film Engineers

Film engineers are trained in Leningrad at the Special Institute of Engineers for Sound Cinema. It's a five year course and there are presently some 200 students.

I found the pace of production rather leisurely by our standards. The director is the key man. "We trust our creative people." They have no producers as we understand the function here. It was explained to me that the Producer is the State.

I met men in their twenties who were being entrusted with the direction of a major feature, for whenever an outstanding talent is found, be it in music, dancing, athletics, medicine or film making, that talent is encouraged and subsidized by the State.

A Longing for Wider Creative Contacts

Among film makers I felt a real longing for wider creative contacts with the other film centres of the world. The industry there is very self-sufficient — Mosfilm for instance manufactures its own make-up and its own filters — but they take full advantage of any opportunities for contact with the West. I spoke to an audience of 1000 film-makers and gave a talk on Moscow TV and in each case screened a Crawley film.

I was greatly impressed with the Russian people. They are warm-hearted and responsive and out-going. They made a real effort to make me feel at home all the time. The day I arrived they took a language teacher from her classes at the University of Moscow

and assigned her to me as guide and interpreter for my whole stay.

Most people visit Russia as part of a delegation or an organized tour. I went alone, and was thus able to cover a great deal of ground.

We have invited them to return the visit and we hope to have a party of Russian filmmakers tour Canadian studios next year. I am confident that such exchanges of films and film makers can play a part in developing constructive communications between North Americans and the Russians and bring closer the aim of "Peace in our time, O Lord". •

* * *

New Rules for 12th International Ad Film Festival to be Held in Cannes, June 21-26

✽ The 12th International Advertising Film Festival, sponsored by the Screen Advertising World Association, is entirely devoted to cinema playlets and television commercials used throughout the globe. It will be held at Cannes, France, from June 21st to 26th.

At its recent meeting in Paris, the executive council of the host group made several changes in this year's regulations and rates. Film entries are now to cost 25 British pounds per single subject; 50 British pounds per series of two films, inclusive of customs and handling charges incurred by the local agent. A number of other changes affected both cinema and television entries:

For theater ad playlets, the minimum length has previously been restricted to 13 metres (30 seconds). A new category has been introduced for films of all techniques (except CinemaScope) and the minimum length of existing categories for live action films, cartoon animation, etc. will commence at 10 metres. The category for films using puppets and marionettes has been merged with animated objects. A new category for "mixed techniques" was created for films using more than one technique, providing for subjects up to 25 metres and over 25 metres.

In the television category, live action subjects are being extended from three to four types and, as in the case of theater playlets, films using mixed techniques will have two categories of the varying lengths noted.

The maximum entry per competitor is: theater ad playlets, nine single films and one series of two films for not more than 11 subjects. Television commercial entrants may submit not more than six single films and one series of two films for a total of not more than eight subjects.

The maximum length for any film in either group will be 110 metres (four minutes). Competitors should also note that (1) not more than one film advertising the same product or service and using the same production technique can be accepted from any one competitor from any one country, and (2) films cannot be entered without having prior permission from the advertiser and/or the advertising agency. Non-compliance will result in disqualification of the entry.

"Trailers" of cinema feature films and advertising or documentary films made for charitable causes will not be accepted for entry. •

Murray Hards

TO THE UNSUNG HEROES OF OUR FILMSTRIP DEPARTMENT

AT CFI, OUR EXPERTS HELP YOU find many short cuts to great filmstrips. Working with you in the inception stage, they help you get the most from your material—often saving you time and money. And with our special facilities, we'll furnish the parts you might be missing. *A flower background?* *A line of hand lettering?* *Type set on cells for superimposure?* Can do. Our art talent will design and execute original frames for you, or we'll copy your flat art up to 24" x 32" (32 field). *Different size transparencies?* We shoot directly from 35 mm through 8 x 10, with no intermediate reduction to cause loss of color or detail. *Product to be photographed?* We'll shoot it into your filmstrip against a colorful background. And with all this service, at CFI you always get faithful color rendition with minimum contrast gain and frame to frame color correction to insure over all balance. And our unique continuous loop printing equipment insure absolutely uniform filmstrip prints from start to finish—free negatives. *How long?* Well, normal delivery is one week. On super rush jobs, we'll work with you to a tighter deadline. *Need advice?* Let's discuss your problem. Call Lou Livingston at HO 2-0881. Your filmstrip benefits from the superior facilities and techniques that have been developed to meet the high standards of the motion picture industry.

GOALS FOR 1965

Audiovisuals in the Great Society

IF AMERICANS ARE TO ACHIEVE the "Great Society," which President Johnson has so eloquently outlined as our attainable objective, a country of 194 million people should be inspired and informed about the aims and objectives of this "war on poverty." It is essential that we, all of us, know where we stand, what the figures represent in the nation's balance sheet of human equations.

The President has placed "Education" as a primary goal and the Congress has already appropriated billions to implement formal instruction. An expanded National Defense Education Act has been joined by the Vocational Education Act. The Economic Opportunity Act provides sinew for the "War on Poverty" program. The Library Services Act has been passed to overcome the lack of adequate library facilities for more than 50% of all Americans. There is an Academic Facilities Act for more schools.

President Requested Added Funds for Education

10 years ago the budget of the United States Office of Education was scarcely \$100 million; in this fiscal year it has \$1.4 billion at its disposal. Congress may vote more funds.

The goal of education is not alone a matter of providing formal schooling for the very young; the nation's '65 educational objectives include the *adult level* where three million of the four million Americans who are "chronically unemployed" are also "functionally illiterates." But only 90,000 adults are currently receiving formal literacy instruction. That is about three times as many as were being taught to read and write four years ago. But the goal is clear: nearly three million must be enrolled.

\$100 Million for "Attack on Illiteracy"

For the "attack on illiteracy" program, the USOE, the Department of Labor and the Office of Economic Opportunity together have \$100 million to work with during the current fiscal year, ending June 30, 1965. The objective is to combine instruction in reading and writing with job training.

To implement the figures on illiteracy: the 1960 census showed that more than 22 million Americans over 25 were illiterates for "all practical purposes." Going farther: this nation has 8.3 million persons over 25 with fewer than five years of formal instruction. More than 51% of adult Americans have never been graduated from high school.

Small wonder that a recent survey disclosed that 28% of our adult population doesn't even know there is a war going on in South Vietnam!

40% of U. S. Population is Under Age 20

The figures on education aren't complete, as yet. Federal, state and local appropriations are also providing for the schooling of that 40% of the total U. S. population which is under 20 years of age. *We're bulging with teen-agers*, for example, as a result of the abnormally high birth rate after World War II. A college enrollment of only 2½ million in 1950 is now well over five million, will exceed eight million by

"Think of our world as it looks from that rocket heading toward Mars. It is like a child's globe, hanging in space, the continents stuck to its side like colored maps. We are all fellow passengers on a dot of earth. And each of us, in the span of time, has only a moment among his companions."

—from President Lyndon B. Johnson's Inaugural Address, January 20, 1965

1975. Already critical short of teachers, the nation must recruit men and women for this profession *at all levels*. This is another of the "human equations" that can help America to maintain a higher margin of excellence.

Thus, greatly-expanded programs of *education* are the nation's number one goal for the year. It is imperative to define the word "education" in the broad sense: it encompasses *training* in skills, teaching of illiterates in both basic reading and writing *and job skills*, preparation of teenagers for the *jobs* they must have, emphasis in the college curriculum on the "whole man" but also upon *science and technologies* which need their advanced skills. And for all of these tasks, audiovisuals must play an increasingly important role.

This Is a Challenge to the Film Medium

Both *producers and sponsors* of all kinds of audiovisuals must be aware of the opportunity for films to implement career guidance, to motivate interest in tomorrow's skills, to visualize material for those who cannot read and write but who can absorb well-produced pictures. Films are already available in many areas of modern skills and services; those which do not exist must be *created* from the vast experience of an audiovisual production industry which has served the military in related ways and has decades of experience within industry.

A key problem exists: cataloging of these *available* audiovisual resources has been poorly done. An effort in this direction, underwritten with government funds, resulted in a set of hard-bound volumes covering a multitude of "aids" but, from a practical standpoint, useless to the men and women specifically interested in motion pictures and filmstrips (both sound and silent) which are readily available from industry, in audiovisual libraries of schools (CONTINUED ON THE FOLLOWING PAGE 51)

Autoload®

Specialist, Autoload and Filmosound are registered trademarks of Bell & Howell

The light trace shows what you have to do to thread old-fashioned 16mm sound projectors.

With Autoload,® here's all you do!

The bottom picture shows you how easy it is to thread a 16mm sound projector today...if it's Autoload.® With new Autoload you simply insert 16mm sound film in a slot and pick it up when it comes out the other end, threaded *completely, automatically*. Even around the soundhead, where things get tricky.

But Autoload does more. It stops on a single picture for discussion, reverses back to a scene fast, throws a brilliant picture in lighted rooms, sets up in seconds.

Ask to see the Bell & Howell Specialist Autoload Filmosound, the largest selling 16mm sound projector anywhere.

THE EDITORIAL VIEWPOINT

THE NEW YEAR MOVES SWIFTLY ALONG, sped on its way by the inaugural ceremonies in Washington, D. C. and saddened by the loss of the man of this century: Sir Winston Churchill. The notable events of the past year are reviewed in other pages of this issue, highlighting those awards and progress in the technology of film production and projection which were most significant. To this review of 1964's events, we have added the formidable statistics (in terms of human equations) which provide substance for the audio-visual Goals for 1965.

A second year of the New York World's Fair impends. The spirited showmanship which attracts millions of visitors must be regenerated; the 1965 Fair needs to worry less about raising admission prices and to begin at once with arrangements for more light-hearted entertainment and to provide fresh exhibit ideas where obvious shortcomings existed in '64. It was a powerful stimulant to tourism in the East last year and it can be even better. But *showmanship* and *showmen* must bring excitement and enthusiasm to the Fairgrounds.

* * *

Some Important Dates on the 1965 Calendar of Events Ahead for Audiovisual Managers

☆ The 1965 calendar of important meetings of special interest to audiovisual managers in business and industry has another Calvin Motion Picture Workshop opening in Kansas City, Mo. on February 8th (the 19th Annual); two meetings in May are on the same dates, as the Industrial Audio-Visual Association holds its annual meeting on May 3rd to 6th at the Ambassador Hotel in Chicago while the American Society for Training and Development meets from May 3rd to 7th in Cleveland, Ohio.

But before those events take place, the 97th Technical Conference and Exhibit of the Society of Motion Picture & Television Engineers will be held at the Ambassador Hotel in Los Angeles (March 29th through April 2nd).

In March also, the Greater Detroit Chapter of the American Society for Training and Development will hold its 22nd Annual Institute program, billed as a "Tune-Up for Training — Review and Preview Time." Members and guests will meet on Thursday, March 11, at the Lawrence Institute of Technology in nearby Southfield, Michigan.

Finally, the 1965 American Film Festival takes place on April 21-24 at the Biltmore Hotel in New York City. Sponsored by the Educational Film Library Association, entry lists were closed on January 20th.

ARRIFLEX at work — ONE OF A SERIES *

Photograph by Hella Hammid

Francis Thompson and Alexander Hammid Shooting "To Be Alive"

ARRIFLEX® filmed Johnson's Wax World's Fair cinematic masterpiece "TO BE ALIVE"

Inside the Johnson's Wax "Golden Rondelle" at the World's Fair, is 17½ minutes of sheer delight... the extraordinary 3-projector, 3-screen color film, "To Be Alive,"... so sensitively and imaginatively produced by documentarians Francis Thompson and Alexander Hammid. Among Fair visitors, film critics and publications like Time Magazine, the opinion is unanimous... there's nothing better to be seen at the Fair!

Typical of the accolades given "To Be Alive" was Columnist Archie Winston's full column commendation in the New York Post, lauding the film as "a completely integrated work of art... a film masterpiece."

"The world of design, moving towards abstraction, is here," he wrote. "The world of personal intimate portrait is here. The photography is grand enough to make a melodrama out of the passage of a centipede, human enough to translate a boy's roller derby into a thrilling road race, or to understand the contemplative beauty of Walden's pond. From universe to frog, from stick-beating Africane to dancing American teenagers, to the world viewed in prism colors... it's all here, spilling over with

the life, emotion and happiness of existence."

"To Be Alive" encompassed 18 months of shooting in Europe, Africa and the United States. But long before the film makers set out on their cinematic safari, basic problems of the triple camera set-up had to be solved. It was Mr. Hammid who designed the camera rig with the three Arriflex 35's mounted on a single pedestal. Each camera is driven by a standard Arri constant-speed motor.

Selection of equipment was an important factor. "We expected to travel a great deal for the production of our three-screen film," Producer Francis Thompson explained, "and to work in remote areas where the triple camera would have to be carried considerable distances and set up rapidly for unexpected opportunities. Our camera system had to be light, compact, rugged and reliable even in adverse climates because the precision matching of the three cameras prevented us from interchanging any one of them with a spare. Moreover," he added, "We wanted a camera with which cameramen the world over were familiar. We chose Arriflex."

POSITIVELY outstanding 16 and 35mm B&W NEGATIVE film...

New Ansco Versapan® NEGATIVE Film!

The better the negative the better the positive. It's that simple. And there's no better premium-type medium speed black & white negative film than new Ansco Versapan®.

Soft gradation, very fine grain, high resolution... everything that makes a better negative has been built into this exceptional film. It's the way to give all your black & white motion pictures that unmistakable look of quality.

What's more, since we've built these qualities right into Ansco Versapan you can forget having to depend on special or forced processing to produce superior results. You get them naturally.

And with its medium-speed of 80 Daylight and 64 Tungsten, new Ansco Versapan is ideal under a great variety of lighting conditions.

Before you shoot your next black & white assignment, try a test roll of new Ansco Versapan and see the difference quality makes. It's available in all standard 16mm (Type 2531) and 35mm (Type 5531) rolls. Dept. CC12.

SCREENING THE NEW TECHNOLOGY

Bi-Monthly "March of Materials" Newsreel to Show to 30,000 Members of American Society for Metals

THE AMERICAN SOCIETY FOR METALS serves some 30,000 members within more than 100 chapters in the United States and Canada. Founded in 1913 for the "exchange of knowledge of the arts and sciences relating to metals," that objective remains the moving force of the organization. It is directed from headquarters at Metals Park, Ohio.

Turning to audiovisuals to give new meaning to this "exchange of metals knowledge," the Society has announced plans for a bi-monthly 15-minute 16mm sound newsreel for showing in all chapters. These local groups will, in fact, also perform a secondary "distributive" function. They will offer prints to industry, TV stations and other technical organizations within their immediate areas. A conservative estimate of total viewing audience notes that some 50,000 metalworking executives should see each issue of the newsreel.

Covers the Major Newsfronts

Subjects to be covered in this *March of Materials Technology*, as the newsreel is titled, are planned to cover all the major newsfronts of metalworking: materials, heat treatment, welding and joining, cleaning and finishing, testing and inspection, production of metals, forming and cutting, shapes, castings, forgings, and other components. With the distinction between metals and other materials growing slimmer each day, new developments in ceramics, plastics and other metal-like materials will also be reported.

Participation in the bi-monthly reel is open to every company, research laboratory, university or

branch of government with a significant new development to report (and which has not already received full exposure among metalworking executives and specialists). There is no charge for participation. The Society will pay all processing and distribution costs out of its own annual educational budget. Participants must, however, supply their stories on film and meet production costs if footage does not already exist.

Buffalo Studio to Coordinate

Co-ordinating production of the newsreels for the ASM is Academy-McLarty Productions, 20-28 Mesmer St., Buffalo, New York 14220. Academy president Franz E. Hartmann stresses the fact that "the participant may select any producer he chooses to prepare new footage for him. There is absolutely no attempt to coerce participants into using Academy-McLarty or any other 'favored source' for production."

Material already on film should be submitted directly to this production company, c/o *March of Materials Technology* service. Footage should be 16mm b&w or color original, accompanied by a 16mm b&w, edge-numbered work print. (If absolutely necessary, a 16mm optical master reading as camera original will be accepted in lieu of original footage.) Fine editing or a finished script is not essential but a "shot log" and sufficient notes and research material should accompany each story so that an accurate narrative can be written.

Unacceptable material will be returned but once footage is accepted. (CONCLUDED ON PAGE 24)

This opening title frame will be featured on all the ASM newsfilms.

RCA OPTICAL FILM RECORDING SYSTEMS FEATURE QUALITY AND VERSATILITY

♦ OPTICAL FILM RECORDING SYSTEM

RCA's PM-80 is a complete optical sound recording channel with a fully transistorized plug-in module amplifier system, filters, control facilities and a high quality film recording mechanism using the RCA Variable Area Recording System. The PM-80 features: negative and direct positive recording; factory pre-assembly and adjustment; compact, rugged construction; and easy installation.

OPTICAL FILM RECORDER ♦

RCA's PR-32 for 16mm or PR-33 for 35mm is designed to work as an integral part of the PM-80 system. The recorder provides high quality recordings of either double-bilateral negative or direct positive variable area sound tracks. The PR-32 and PR-33 feature tight loop film drive, constant speed, low flutter, reversible operation, and positive film take-up.

RCA is in first place all the way with a wide range of quality film recording equipment. Want to know more? Write: Dept. 806, RCA Broadcast & Communications Products Division, 2700 W. Olive Avenue, Burbank, California; or 36 West 49th Street, New York, New York.

FOCUS ON THE GREAT PAINTINGS

HOW TO DERIVE PLEASURE and meaning from the world's great paintings is the subject of *The Magic Mirror*, an educational film produced by Hallmark Cards, Inc., for distribution to schools, libraries, museums and similar institutions.

The new color film, subtitled "a photographic study of the great paintings," runs 27½ minutes and is essentially a pictorial essay that seeks to instruct the viewer on how he may appreciate more fully the canvases of the great masters. It will be distributed through Association Films, Inc.

David L. Strout, former dean of the Rhode Island School of Design and now director of the Hallmark Gallery, New York, filmed *The Magic Mirror* employing the technique of moving cameras over the surface of paintings, exploring and enlarging the significant details.

Beginning with the earliest cave drawings, the film traces man's interpretation of his world through the paintings he has created, analyzing in turn the artist's view of nature, his use of paint itself, and the extent to which he reveals himself. The title, *The Magic Mirror*, is derived from a painter's frequent use of mirrors and the efforts to mirror his age in his art.

In making the film Mr. Strout employed the paintings of more than 40 of the world's great artists,

including Michelangelo, Brueghel, Velazquez, El Greco, Gauguin and Matisse. However, the film refrains from identifying any of them, in order to encourage the viewer to concentrate on the works themselves rather than the names of their creators.

The Magic Mirror was one of 15 films selected by the National Association of Manufacturers to represent American industry at the International Film Festival in London in November. It was also selected for a Golden Eagle award last month by the Council on International Non-Theatrical Events.

"Sound of Service" Film Aids Denver's United Fund Appeal

☆ Joining the growing list of civic community fund-raising films was the recent Denver, Colorado production, *Sound of Service*, a 10-minute color motion picture created by Marshall L. Faber Productions of that city for the recent Mile High United Fund campaign.

The film contains word-less sequences filmed in 30 of the 114 agencies served by the Fund. It introduces scenes from such representative services as community nurseries, the cerebral palsy center,

Scout's interest in his mother's campaign kit launches Fund film.

a home for the mentally retarded, sheltered workshops, missions, a hearing aid society, the Red Cross, visiting nurses, YWCA's, orphanages and hospitals, with every natural sound being recorded.

The film, which received a Chris award at the Columbus Film Festival last fall, is knit together by a sequence showing a Boy Scout's interest in his mother's Fund volunteer kit. Webb Yarrington, p. r. director for the Fund, conceived the idea for the narrative-less picture. Marshall Faber directed and lensed the film.

IAVA'S 1965 WESTERN WORKSHOP

Industrial A-V Executives Technological Workshop
Features New Tools & Techniques for Business Use

MEMBERS OF THE Industrial Audio-Visual Association held their 1965 Technological Workshop meeting at the Hollywood-Roosevelt Hotel, Hollywood, California on January 25-28. Chairman for the program was the organization's first vice-president, Roy Vanderford. The West Coast gathering was IAVA's first in several years and enabled members of the professional a-v managers' group from within industry to update data on recent technical advances and facilities in that area.

There was heavy emphasis on tools and techniques now available for improved audiovisual presentation. Ray Grant, Eastman Kodak Company, described that company's new 7387 color printing stock; J. P. Carson, Eclair Corporation of America, demonstrated the new Eclair reflex camera; and Ronald Cogswell, Ryder Sound Services, displayed the Nagra tape recorder. Edmund DiGuilio, Mitchell Camera Corp., showed that company's prototype 35mm camera for simultaneous TV monitoring and videotape recording.

Visit Technicolor Lab MGM

A demonstration of imbibition color printing, the Techniscope process and 8mm advances was presented by Donald Smith, Technicolor Corporation and technique demonstrations were arranged at Metro-Goldwyn-Mayer Studios by plant manager Tom Curtis. At MGM, Buddy Gillespie talked on special effects; Frank Milton on sound recording; Ray Johnson, on camera techniques.

At the opening sessions, Jerry Fairbanks, president, Jerry Fairbanks Productions, talked on "Hollywood Crafts Take New Look at Non-Theatrical Film Field." The Western evening banquet program on Wednesday evening, January 27th, was highlighted by the appearance of James Wong Howe, ASC, a pioneer in entertainment film camera work.

Talks on Character Animation

On the visit to the busy Hanna-Barbera Studios, IAVA members and special guests heard vice-president Ross Sutherland describe "How Character Animation is Developed to Communicate Ideas Effectively." Charles (Cap) Palmer discussed "How to Work With Your Script Writer" in his Parthenon Pictures' studio.

The program continued on

Thursday, January 28th, with a business meeting presided over by IAVA president Bob McCaslin, Caterpillar Tractor Co., and included a special presentation on closed-circuit television as a management communications tool, given by Ernest Frankel of North American Aviation.

Concluding program feature was a visit to Disneyland where IAVAs saw a demonstration of Circarama in the Bell System exhibit and a demonstration of Audio Animatronics. The hosts for the Disneyland visit were Jack Sayers and Norman Fagrell of the operating company.

The Smithsonian Launches '65 Series of Weekly Film Shows

The Smithsonian Institution is providing a new center for audio-visualized education in the nation's capital. The renowned Washington buildings now include regularly-scheduled free film showings every Wednesday evening in the new Museum of History and Technology. The 1965 program began on January 13th and continues through May 26th.

Film programs on alternate weeks will deal with the general subjects of sciences and the humanities, each of which will be introduced by specialists in these respective fields. No program was offered on Inauguration Day, Wednesday, January 20th.

First Show on January 13th

The Science program began on January 13th with a showing of the Smithsonian's new film, *The Leaf Thieves*, a 30-minute picture which takes viewers behind the scenes of the Museum of National History to observe scientists, scholars and artists as they carry out extensive preparations for the installation of a new museum exhibit on botany. William M. Harlow's film, *How Pine Trees Reproduce*, was also shown. Both films were introduced by Dr. Richard S. Cowan, assistant director of the Museum and a featured player in the *Leaf Thieves*.

The second program on January 27th will also be botanically-oriented. *Plant Traps—Insect Catchers in the Bog Jungle* is the film feature, together with *Algae—Simple Plants*. Dr. William L. Stern, acting chairman of the Museum's Department of Botany will present these pictures.

These Pictures to be Shown

Future programs will include such motion pictures as Ralph Buchsbaum's *Echinoderms—Sea Stars and Their Relatives* and the Geological Survey's *Eruption of Kilouewa*, John Marshall's *The Hunter's* and Robert Flaherty's *Nanook of the North*.

Other regional museums and civic organizations who might well emulate this program can obtain complete program details from the Smithsonian Museum Service, TV Studio, Smithsonian Institution, Washington, D. C. 20560.

COPY ME (In 10 seconds)

It won't prove (as they say in the ads) that you have talent. It will prove that you own a Polaroid MP-3 Industrial View Camera. With it anyone can copy most anything in a mere 10 seconds.

And you copy it in any number of ways: on a Polaroid Land print in black and white or color that can be reproduced, mailed, or saved; on 2 kinds of Polaroid transparency films that can be projected; on a Polaroid 4x5 positive and negative that can be enlarged or printed in multiple copies.

You can make copies in "line" and copies in continuous tone.

You can even make your copy a screened print ready for engraving by inserting the new Polaroid Optical Screen attachment.

And you can do more than just make copies of artwork. You can photograph the objects themselves.

If it's a large object (or a chart, graph or blueprint) swivel the head of the camera around 90 degrees and shoot the object where it stands. If it's a small object, just place it under the lens. If the object is really small, you can make a macrophoto. Because there are 5 interchangeable lens and shutter combinations, you can even make photomicrographs with the MP-3. And all it takes is 10 seconds.

Most of these jobs can also be done in color. That takes 60 seconds.

And you can do these jobs on Polaroid Land roll film, pack film or 4x5 sheet film. The MP-3 uses 3 interchangeable Land camera backs. And if you're using conventional films, there is an assortment of conventional backs that fit the MP-3, too.

Is there any end to what the MP-3 can do?
No.

Polaroid MP-3 Industrial View Camera

(CONTINUED FROM PAGE 26) relations department where he wrote, directed and edited all Bell System films until 1943.

During the World War II years, Roy served as a Commander, USNR, in Washington and was executive producer of motion pictures for the New Weapons' Committee of the Joint Chiefs of Staff. His duties included a post as officer-in-charge of the War Map Room and Presentation facilities in the JCS building.

Returning to the public relations' staff at AT&T in 1946, he resumed his duties as film production and distribution manager. The company's film program was budgeted for an average of 20 films a year, using producers throughout the U. S. He is an active member of the SMPTE, the National Visual Presentation Association and, currently, the first v.p. of IAVA.

Raymond Lee to Direct Sales for the Hollywood Animators

Raymond E. Lee is the new director of sales for Hollywood Animators, producers of business-sponsored motion pictures. Lee, who was formerly with Wilding, Inc., has considerable success in the business books field.

Ross Sutherland Sales V. P. for Hanna-Barbera Industrials

The appointment of Ross M. Sutherland as vice-president in charge of sales in the Industrial Film Division of Hanna-Barbera Productions, Hollywood, has been

Ross M. Sutherland joins Hanna-Barbera Productions

announced by William Hanna and Joseph Barbera, heads of the studio.

Prior to joining the company, Sutherland was executive vice-president and treasurer of John Sutherland Productions. He has had a long career in the planning, production and sales of business and industrial films.

Baltimore & Ohio RR, Pan Am to Present Movies Enroute

Emphasizing the portability of motion picture presentation, whether by film projection or via taped television, were two important announcements of the month:

The Baltimore & Ohio Railroad is emulating recent airline adoption of film showings with its own deluxe entertainment film programs "en route" to Washington, D. C.

In early spring, Pan American Airways will inaugurate an airborne entertainment program featuring first-run motion pictures, filmed television shows, musical selections and special features. In confirming the announcement that Pan Am will use Sony video tape equipment, senior vice-president Willis G. Lipscomb (for traffic and sales) noted:

"This 'Theater in the Air' is the most complete airborne passenger entertainment program yet designed and it will be available without charge to passengers in both first class and economy sections."

Pan Am was the first airline to show motion pictures aloft, testing in-flight entertainment aboard a Clipper between Miami and Havana in 1929. The airline also showed films on transatlantic

flights during a 1946 trial period.

Meanwhile, TWA was making promotional "hay" with its still-exclusive presentation of wide-screen color films, made possible because this airline uses motion picture projection equipment, designed by Reevesound for In-flight Motion Pictures, which furnishes the setup and films for TWA.

Directory Lists 15,000 Free Films Available to Canadians

The growth of the factual film medium throughout the world is emphasized in the release of a new 32-page "Directory of Sources of Free 16mm Sponsored Films in Canada," which lists over 15,000 motion pictures available free in that country. The directory is issued by Crawley Films Limited and is of interest primarily to Canadian borrowers.

The booklet lists 426 sources from which these titles are available. Over half of the films are in color; many have French sound tracks. There are sources in every province and they include companies, trade groups, embassies, welfare and civic organizations as well as provincial and federal government departments. Listed films are available in Canada.

FREE FILM PROVIDED TO PRODUCERS FOR AUTHENTIC AIRLINE SEQUENCES

ACHIEVEMENT·64

...in Awards • Technology • Audiences

THIS WAS THE YEAR of the New York World's Fair, first edition, and of solid progress in nationwide use of the sponsored film medium by companies with planned programs, effective distribution. Sponsors like the Bell System, American Airlines, Ford, General Motors, Humble Oil & Refining Co. (see page 36), IBM, and American Oil, were counting up solid audience records, representing appreciative public audiences for continuing film operations.

It was a year of tribute to Johnson's Wax for its splendid World's Fair exhibit feature, *To Be Alive!* And a year of honors to other outstanding pictures cited by such groups as the National Committee on Films for Safety, the National Association of Manufacturer's Institute on Industrial Relations, and the Society for the Advancement of Management.

A Leader to Be Remembered

The year was saddened by the death of Modern Talking Picture Service' founder, Frank Arlinghaus. His post was filled by the election of Carl Lenz to the presidency of Modern but his place in the pattern of the industry's growing years will never be taken.

The gladness of *To Be Alive!* was overshadowed by the greatest picture of the year, *Mekong, the Story of a River*, produced by Shell International. Not shown in the U. S., this documentary epic of co-operative effort among the nations in Southeast Asia was vital because of the importance of understanding that the success of the Mekong Project will feed millions who may otherwise face famine. Food is the key to war in that area.

Advancing the Film Medium

It was also a year of cooperative effort to advance understanding of the film medium. The Film Producers Association of New York joined with the Association of Na-

tional Advertisers in a useful workshop on "How Effective Use and Distribution of Sponsored Films Can Help Achieve Your Marketing Goals." New leaders were also emerging for important industry groups: George Tompkins became president of the FPA; Dudley Spruill headed the Association of Cinema Laboratories, Inc. and Reid H. Ray was president of the Society of Motion Picture & Television Engineers, to name a few.

The technology of the medium was on a plateau, especially while users awaited standards for 8mm sound films. But the highly-portable, inexpensive Technicolor 8mm "Instant" silent cartridge machine went into use among more than 1,000 companies and into many schools where "single-concept" films were finding favor.

Films Helped Win Elections

During the nationwide election campaigns, films proved effective in helping to elect such men as Congressman John Dow (New York's 27th District) and New Jersey Senator Harrison A. Williams. Film was also helping investors and the public at large understand the mechanics of the stock market through films of the New York Stock Exchange, now widely shown to such groups.

But this was also a year of chagrin to U. S. producers and sponsors who failed to take a single award at that heralded 5th Inter-

national Industrial Film Festival in London last fall. 133 motion pictures from 22 countries competed but at the close it was "all-honors" to Europe. Films from Britain won six awards and the Grand Prix; France took second honors with four awards; Sweden, Germany and the Netherlands were also among the winners. The continent

was at least represented when two awards went to films of the National Film Board of Canada.

It was "turn-about" in November when the Committee on International Non-Theatrical Events (CINE) held its annual "Exhibition of Films of Merit" and bestowed international trophies and diplomas on a good many U. S. films which were shown at other overseas film festivals during '64.

Setting an example in using its

own tools to sell the medium, Wilding, Inc. opened the industry's first "Idea Center for Communicators" in new quarters near its Chicago headquarters and studios. Was it a "sign of the times" when the Bell System's Picturephone went into action for transmission of films during the closing months of the year? The first use was experimental but the possibilities of a new way of clearing films for client-producer release was here.

Open A New "Skypot Cinema"

Another "new way" of reaching audiences for sponsored films was the inauguration of a first "Skypot Cinema" which Modern Talking Picture Service opened in the Cincinnati Airport during the fall.

Yes, this was the year . . . of a milestone when the National Audio-Visual Association, representing the nation's audiovisual dealers, held its big 25th Anniversary Convention and Trade Show at Chicago's Hotel Sherman. Members of the Industrial Audio-Visual Association took "Creativity" as the keynote of their annual fall meeting at the cloistered Tarrytown House, in Tarrytown, N. Y. The Eastman Kodak Company set a precedent with its "full house" audience of audiovisual leaders who heard renowned spokesmen for "communications" in the "Frames of Mind" presentation at the Department of Audio-Visual Instruction's (NEA) annual meeting in Rochester, New York on April 23rd. Dr. Frank Baxter, Irwin Moon of the Moody Institute of Science, French filmmaker Jacques Letellier and Saul Bass were among the speakers to the capacity audience of 2,000. •

"To Be Alive!" was a three-screen "hit" at the New York World's Fair. This Johnson's Wax exhibit feature, produced by Francis Thompson, was acclaimed by critics everywhere and played to capacity audiences. Non-commercial in content, it earned much good-will for the Fair sponsor.

This drive-in theater audience is seeing a color travelogue on France as part of regular entertainment program. Sponsored short subjects gained even wider acceptance on television and in theaters during the year.

"The Give and Take," sponsored by Volkswagen of America, shows value of trade between countries. Films can help improve understanding of lands abroad; foreign-language versions can also help to stimulate product sales.

"Bounty Without Boundaries" was sponsored by the U. S. Department of Agriculture (70mm widescreen) to help remind Europeans at large trade fairs of the value of two way trade. It was produced by Fred A. Niles.

Award-Winning Films of the Year

THIS "CONSENSUS" LISTING of 1964 award-winning motion pictures and slidefilms covers most of the nation's recognized awards programs. Included are such events as the National Safety Film Contest, held under the auspices of the National Committee of Films for Safety; the "merit" winners selected by a special jury of industrial relations experts for presentation at the National Association of Manufacturer's Institute on Industrial Relations; and the selections of a new competition held by the Society for the Advancement of Management in New York last fall.

The American Film Festival winners were cited with "blue ribbons" given by the Educational Film Library Association. At the "Day of Visuals", members of the National Visual Presentation Association picked their winners. A privately-promoted "4th International Film & TV Festival of New York" is represented in these columns with the silver and bronze awards.

The U. S. selections for the 5th International Industrial Film Festival at London are noted as are

the other business-sponsored and relevant winners of "Golden Eagles" given by CINE. Columbus continues to set a high standard among community awards programs and both its top-award "Chris" statuettes and its certificates are noted among this "consensus" list of 1964 award winners. Significantly, however, one of the best U. S. films of them all, *To Be Alive!*, isn't listed. Its sponsor was well satisfied to play to the largest audiences at the New York World's Fair.

The Editors of BUSINESS SCREEN have grouped these award-winners in the special categories for which they were primarily created, i.e. as films for General Education, Employee Training, Industrial Relations, Management, Safety, etc.

Our previous issue has already covered the winners at London. But this one does include another U.S. function: the Industry Film Producers' annual "Cindy" awards to pictures of special interest to these filmmakers. Let the list speak for itself and with apologies to any we may have inadvertently omitted, here are the winners:

Employee Training & Technical Information Films

"Automation in Design"

IBM Development Laboratories
2nd Prize: Soc. for Advc. Management

"Forged Hardened Steel Rolls"

Bethlehem Steel Company
Produced by Audio Productions, Inc.
U.S. Entry: Int'l Ind. Film Festival

"A Guy Named Joe"

The Grolier Society, Inc.
Prod: Kim & Gifford Industrials
Bronze Award: Int'l Festival of N. Y.

"Heavy Going"

The Ford Motor Company
Produced by Parthenon Pictures
1st Award: Nat'l. Visual Pres. Assn.

"In U. S. Hands"

Pan American World Airways
Produced by Vision Associates
Golden Eagle Award of CINE

"It's Up to You"

Walker Marketing: Sponsor
Produced by Video Films, Inc.
3rd Award: Nat'l Visual Pres. Assn.

"The Giant Step"

Lockheed-Georgia Company
Blue Ribbon: American Film Festival

"Let's Face It, Melissa"

The Coca-Cola Company
Prod: The Jam Handy Organization
3rd Award: Nat'l Visual Pres. Assn.
Columbus "Chris" Certificate

"The Master Metal"

Cosmo PR Corporation: Sponsor
Blue Ribbon: American Film Festival

"Metal Bandsawing Tips, Techniques"

Simonds Saw & Steel Company
Producer: Bay State Film Productions
U. S. Entry: Int'l Ind. Film Festival

"Mountain Survival"

Air Photographic & Charting Service
1365th Photo Squadron
IFPA "Runner Up" Plaque Award

"NAA Presents SST"

North American Aviation, Los Angeles
IFPA "Runner Up" Plaque Award

"The Salesman Isn't Dead — He's Different"

IBM and Fortune Films
Produced by Dynamic Films, Inc.
Merit Award: Nat'l Visual Pres. Assn.

"The Story of Syncom II"

Hughes Aircraft Company
IFPA First: "Cindy Award"

"Take an Extra Step"

The Sun Oil Company
Produced by Turteltaub & Moss, Inc.
1st Award: Nat'l Visual Pres. Assn.

"The Three Bosses"

Texaco, Incorporated
Produced by Skyline Films, Inc.
Silver: Int'l Film Festival of N. Y.
Golden Eagle Award of CINE

Award-Winning Films of the Year

FILMS FOR TRAINING:

"This is Dial-Comm"

The General Electric Company
Blue Ribbon: American Film Festival

"Time"

The Sun Oil Company
Produced by Turtletaub & Moss, Inc.
2nd Award: Nat'l. Visual Pres. Assn.

SOUND SLIDEFILMS

"Achievement in Management"

AC Spark Plug Div. General Motors
Produced by Close & Patenaude
3rd Award: Nat'l. Visual Pres. Assn.

"By Venus Possessed"

Metropolitan Life Insurance Co.
2nd Award: Nat'l. Visual Pres. Assn.

"The Future Lies in the Balance"

The Bank of America
Produced by Film Fair
Bronze Award: Int'l Festival of N. Y.

"Different Phases of Insurance"

Metropolitan Life Insurance Co.
Grand Award: Int'l Festival of N. Y.

"Patterns and Perception"

Merck, Sharp & Dohme International
Produced by Sales Graphics
1st Award: Nat'l Visual Pres. Assn.

"Pop Top Holiday"

Jos. Schlitz Brewing Company
Produced by "Contact!"
Merit Award: Nat'l Visual Pres. Assn.
Columbus "Chris" Certificate

"10 Biggest Mistakes Salesmen Make"

George N. Kahn Company
Produced by Henry Gregg Associates
1st Award: Nat'l Visual Pres. Assn.

"You're the Doctor"

Mobil Oil Company
Produced by Pan Media, Inc.
2nd Award: Nat'l Visual Pres. Assn.

Pictures for General Education and Classroom Use

"Careers in Chemistry"

Ailred Chemical Corporation
Produced by F. P. S. Productions
Bronze Award: Int'l Festival of N. Y.

"The City and the Future"

(Lewis Mumford on the City)
National Film Board of Canada
Blue Ribbon: American Film Festival
Columbus "Chris" Statuette

"A Dentist in the Classroom"

American Dental Association
Producer: Gil Altschul Productions
Golden Eagle Award of CINE

"Fish, Moon and Tides"

Academy Films
Diploma: Athens Science Film Cong.
Golden Eagle Award of CINE

"Heritage of Splendor"

Alfred Higgins Productions
Blue Ribbon: American Film Festival

"How to Look at a City"

National Educational Television
Produced by George Stoney Assoc.
Blue Ribbon: American Film Festival

"The Information Explosion"

IBM Grant. Montclair State College
Produced by Vision Associates
3rd Award: Nat'l Visual Pres. Assn.
Columbus "Chris" Certificate

"The Magic Mirror"

Hallmark Cards, Inc.
Produced by David L. Strout
U. S. Entry: Int'l Ind. Film Festival

"Over and Under the Sea"

Chesapeake Bay Bridge, Tunnel Comm.
Produced by Robert Kline & Co.
1st Award: Nat'l Visual Pres. Assn.

"The Restless Sea"

The Bell Systems Companies
Produced by Walt Disney Productions
Golden Eagle Award of CINE
Columbus "Chris" Certificate

"Rice"

The Rockefeller Foundation
Produced by Willard Van Dyke
Blue Ribbon: American Film Festival
Bronze Award: Int'l Festival of N. Y.
Golden Eagle Award of CINE

"River"

Pyramid Film Producers
Golden Eagle Award of CINE
Columbus "Chris" Certificate

"Still Waters"

Produced by Elgin Ciampi
Golden Eagle Award of CINE
Diploma: Edinburgh Film Festival

"To Build a Schoolhouse"

Educational Facilities, Inc.
Produced by Pelican Motion Pictures
3rd Award: Nat'l Visual Pres. Assn.
Columbus "Chris" Certificate

FILMS FOR SAFETY, MARKETING AND RESEARCH

Traffic accident prevention was one of the nation's most urgent goals. To remind its own people and the public of the value of seat belts as accident preventatives, the Bell System showed "Before It's Too Late." It was produced by Audio Productions, Inc. and starred Dick Van Dyke.

Music dealers throughout the land responded when H. & A. Schmer, Inc. offered prints of "Adventures in Sharps & Flats" which was produced by Reid H. Ray Film Industries. Film demonstrated tie-in values for film promotion as more than 600 color prints went into circulation.

"The Search" typifies how industry can use the film medium to dramatize the values of industrial research. This Youngstown Sheet & Tube film was produced by Cinecraft-Continental Productions. One of year's best, it shows how modern steel-making has been improved by science.

Award-Winning Films of the Year

TEACHING SLIDEFILMS:

"Charm by Choice"
National Urban League, Inc.
Produced by Wilding, Inc.
Blue Ribbon: American Film Festival
Columbus "Chris" Statuette

"Children of Pioneer Times"
McGraw Hill Text Films
Produced by Centron Corporation
Blue Ribbon: American Film Festival

"Oliver, Willie & Peter"
The Dow Chemical Company
2nd Award: Nat'l Visual Pres. Assn.

SOME HIGHLIGHTS OF EXHIBITS AT THE NEW YORK WORLD'S FAIR

The duPont Pavilion at the New York World's Fair brought viewers an "interplay" of live performers on stage with filmed sequences, to add dimension to presentation. Stage and screen were well synchronized.

"The Searching Eye" was a 70mm film feature in the Kodak Pavilion at the New York Fair. It presented a multi-image look at art of seeing.

Below: the Nile's production of "From Every Horizon" was shown in the circular theater beneath the New York Port Authority's Fair heliport.

Above and right: pictures went aloft on leading air lines during the year as both video tape and film showings of entertainment fare were presented to travelers. At year's end, one railroad also joined up when the Baltimore and Ohio installed show equipment.

Public Relations Pictures Sharing 1964 Awards

"Brampton Builds a Car"

The 25th Anniversary Convention of the National Audio-Visual Association in Chicago was one of the highlights of the year. Audio-visual dealer members of this organization saw a multi-screen presentation of "The Thrifty Flirties to the Soaring Sixties" and heard a keynote talk on "freedom" by W. A. Patterson, board chairman of United Air Lines.

The Film Producers Association of New York joined with the Association of National Advertisers on April 11 to hold a one-day workshop on "How Effective Use and Distribution of Sponsored Films Can Help Achieve Your Marketing Goals." Among the hosts and speakers pictured above are (l to r): Walter Lowendahl, Dynamic Films, Inc.; Lowell McElroy, ANA executive; Don White, National Audio-Visual Association; Herb Ahlgren, ANA staff member; and Carl Lenz, president of Modern Talking Picture Service, Inc., who participated in panel discussion on distribution. Leading PR men from industry who appeared on the program included Ben Williams, Pittsburgh Plate Glass Co.; Arthur Railton, Volkswagen of America; and W. H. Pratt, Jr., film manager of A. T. & T.

The Industry Film Producers Association held its 5th National Conference and annual "Cindy" awards presentation at the Disneyland Hotel.

Above: a scene from "Fabulous Florida." It shows beaches, the cities, groves and gardens within its colorful 30 minutes of viewing pleasure . . .

At left: in color, the handicraft of "The Pirogue Maker" of Louisiana's bayou country is re-captured in this award-winning film.

At right: "The Land of the Maharajahs" is brought to audiences with a lavish parade of the color of old India, replete with a tiger hunt . . .

Below: "Rendezvous in the Reef" visits the underwater world of the barracuda, the shark and the savage moray eel beneath the waters off Bahama.

All-American Sponsor

Widely-Shown Pictures of Travel, People and Oil
Are Winning Friends and Making Sales for Humble

BUILDING CUSTOMER GOODWILL and helping to attract new patronage to its service stations are a collection of fascinating color motion pictures which comprise the nationwide public-service film library of the Humble Oil & Refining Company.

Early returns on the distribution success of the 36 films offered by Humble show that there were 108,254 bookings to over 10,500,000 viewers, exclusive of television use. These figures were still awaiting reports for the final six weeks or so of the past year. And they don't reflect the enthusiastic response which the company has received from appreciative viewing groups throughout the land. An important public relations "plus" is also being achieved at premiers of new films which join the Humble library each year.

A Debut Before the Governor

For example, *The Land Called New Jersey* appropriately made its debut in that state's capital last January with New Jersey Governor Richard J. Hughes, members of his cabinet, state senators and members of the state's Tercentenary Commission in attendance. Humble's tribute to that anniversary occasion was so authoritatively done (by John Bransby) that it has just received (1965) an "Award of Merit" from the American Association for State and Local History.

On the occasion of the 100,000th booking of a Humble film last year, the Northridge Fire Association, of Dayton, Ohio, received a generous allotment of Humble gasoline to operate its community ambulance. This volunteer citizen group had booked the company's film *Turn the Wheel West* for an evening's entertainment for more than 100 volunteer firemen and their families.

Turning Viewers Into Buyers

It was typical of the public relations' awareness that guides the entire Humble film library operation. But even more typical is Humble's insistence that this program be continually scrutinized for the basic values inherent in the production, handling and showing of the many thousands of color prints involved (approximately

4,500 currently are in the field). The depth of that scrutiny is epitomized in a study undertaken to help evaluate the film program.

This recent study, covering interviews with nearly 2,000 adult motorists in six major markets, included the showing of Humble films under controlled conditions. More than 68 per cent recalled the company as the sponsor a week after seeing a film. 17 per cent more people who saw a film with Humble credits identified the company as selling gasoline than those viewing the same film without credits. Using the same "credit v.s. no credit title" comparison, 28 per cent more people believed Humble to be "a really good oil company."

New Additions to the Library

The new films which launch the 1965 program year for the Humble Film Library typify the character of the 36 pictures currently available.

One of these recent additions to the library is *The Magic of Mexico*, which is already helping to promote travel to our No. 1 Latin-American neighbor among thousands of viewers in all parts of the United States. The 30-minute color picture shows Mexico as a land of great beauty and interesting contrasts — from modern Mexico City to ancient pyramids — from snow-capped mountains to tropical beaches. It was produced for the company by Shuler Film Productions, a Texas firm.

Visual Tribute to San Francisco

Still more current is a January, 1965 release titled *The Wonderful World of San Francisco*, the award-winning Vista Production for the San Francisco Visitors Bureau. And complementing these additions to the 17 other titles which make up the "Travel Film" segment of Humble's library are 13 other motion pictures "About People and Places."

The latest film to join this group is appropriately about the cars themselves. The title: *Gentlemen: Start Your Engines*. It was produced by Keitz and Herndon, of Dallas. Currently in production (with the cooperation of the United States Department of the Interior) is a potentially important conservation picture, *Wild Rivers*. This 1965 production will help

promote preservation of the recreational use of our nation's streams and rivers.

There is a third segment of the library which deals with the product itself: oil. Such films as *Energetically Yours*, *Refinery at Work*, *Flowing Solids* and *Rubber From Oil* contribute scientific and technical knowledge of special value to Humble's school viewers and among technical groups.

Thus, the Humble Film Library covers three general categories — travel, people and places, and oil. But they all have one thing in common. The films are from 13 minutes to 30 minutes in length, are all in color and they're widely available with sufficient prints to minimize delays in meeting requested dates.

The Humble Film Library is

will, both short and long range, to Humble.

Humble's films are also shown by many television stations across the nation. In some cases, individual films are shown, and some stations schedule an entire series of state travel films. Shorter films are sometimes used as "fill-ins" after a sports event and before the next scheduled program. But in all cases, the Humble credit titles are shown. This past year there were about 1,000 such showings to an estimated additional audience of 50 millions.

Library Reviewed After Merger

The company first began to realize the scope of its present film program when several domestic oil companies affiliated with the Standard Oil Company (New Jersey) were merged under the

"The Land Called New Jersey" brings to the screen an authentic reenactment of that state's colonial history and progressive present. This Humble film has received an "Award of Merit" for accuracy.

maintained under that name by Modern Talking Picture Service, Inc., which maintains these libraries in 23 cities of the company's marketing areas. Humble films are widely publicized by Modern to individuals in charge of programs and of curriculum planning. Brochures are also available through local company offices and Humble Touring Service facilities. Service station dealers are encouraged to arrange bookings in their communities. They are also encouraged to participate at such local showings so they benefit from the personal association.

Goodwill: Long and Short Range

Current showings are about two-thirds to adult audiences and one-third among high school-age groups. This balance is felt to be ideal in achieving maximum good-

Humble name in 1960-61. When Humble began pulling its film collection together, it became apparent that the investment was sizeable. Central control and management was needed to make the most of that investment.

Thus began the task of weeding out "overlapping" films and titles judged to be outdated. The library was culled to about 38 titles, of which two have recently also been withdrawn and two others added as of January 1.

These Were the Films of 1963

The 1963 releases which joined the library were an oil picture: *The Human Element* and a travel film: *Highroad to Yosemite*. Many of the nation's most historic cities and regions have been similarly covered, as a brief scanning of the Humble travel films soon discloses.

Scene from "The Wonderful World of San Francisco" which joined the Humble film library in January.

The important regions, from *New England Calling* to the national parks of the Far West (*Turn the Wheel West*) are represented, together with such "state" films as *All Around Arkansas*, *Fabulous Florida*, *This Is Louisiana*, *Maryland*, *Meet North Carolina*, *New York*, *Pennsylvania*, *South Carolina*, *Tennessee Holiday*, *Historic Virginia*, and *A Date With West Virginia*. *The Land Called New Jersey* has already been mentioned in this group and a remake of the *Virginia* film is contemplated.

The "People and Places" titles cover wider horizons. There is *Legend of the Raven* which visualizes an Eskimo legend; *The Pirogue Maker*, cited at six major film festivals, visits the "Cajun" bayous of Louisiana. India is pictured in two titles: *Land of the Maharajahs* and *Strange Gods of India*, which are perennial audience favorites. *Beyond the Valley* takes viewers to Puerto Rico and *Island Oddities* tours the Bahamas. *Rendezvous in the Reef* delves into the

underwater world of the barracuda, shark and the savage moray eel in the clear-blue waters of the Bahama Reefs. *The Seasons* explores their changing patterns, as recorded by an artist's camera in a remote and deserted lake region of Canada. This film has specially recorded background music and no narrative as it visualizes the effects of the changing seasons on animal and plant life.

Driver Education on the Screen

Mindful of its product interests, the Humble library has also recently combined driver education films into a single offering. This includes the films, *You and Your Driving* and *What Makes It Go?* The latter picture shows (via animation) the function and principles by which an automobile engine runs.

The vastly-popular "public" film library is an important part of the company's total film operation but this Houston-based concern is also mindful of the value of the film medium for internal communications, in addition to producing and

The 100,000th audience which saw a Humble motion picture last year included these members of Northridge (Ohio) Volunteer Fire Association. The group was cited after viewing film, "Turn the Wheel West."

The Humble Film Program: sponsoring some noteworthy "special interest" pictures.

Included in the over-all program are films calculated to create sales enthusiasm among service station dealers and driveway attendants; films giving employees direct "state-of-the-company" information; and such films as the recent 30-minute *Landmark*, which pictures the company's 44-floor office tower, Houston's highest building.

Southwest Football Highlights

Ardent football fans throughout the Southwest are appreciative viewers of its annual color films, *Highlights of Southwest Conference Football*. Two-men camera crews are sent to every Southwest Conference football game each fall. From nearly 50,000 feet of color film which they lens during the season, the company then turns out each new annual *Highlights* reel.

While strictly non-commercial in content, *Highlights* has become a

"top attraction" at Humble marketing meetings held throughout the Southwest, generating enthusiasm among station managers and driveway attendants for the fall sales season. Advertising, promotion tie-ins and contests are geared to the football theme. 1964 marked the 15th season in which the *Highlights* film has helped make Humble a major petroleum marketer in the Southwest.

Paint Division Turns to 8mm

And there's a beginning being made in the field of 8mm. A Humble paint-marketing division has a new 8mm color film (shown on cartridge-loaded projectors). This is the first of a "how-to-use-it" series describing procedure for mixing and spreading paints. These are shown at a job site, in an office or wherever a sales representative meets a prospect.

The company's entire film operation has set a high standard in the effective procurement, production and utilization of the film medium.

16mm Color Pictures in the Humble Film Library

This listing of films in the Humble Film Libraries maintained by Modern in 24 nationwide cities will be helpful to readers who wish to borrow these free-loan color pictures for showing in plants or communities.

Write Modern Talking Picture Service, Inc., 3 East 54th St., New York City, N. Y. 10022 for the address of the Humble library nearest you.

FILM HELPS RE-ELECT A SENATOR

Statewide Use of a 10-Minute Film on His Record Helped Return Harrison A. Williams to the Senate

NEW JERSEY'S BRILLIANT young Senator Harrison A. Williams faced a rugged campaign for reelection last fall. This 44-year old Democrat went to the electorate of his state with an impressive record in the 88th Congress, where he was the chief sponsor, or floor manager, of much major legislation. The task

Senator Harrison A. Williams

of the 1964 campaign was to carry that record to New Jersey voters, especially into growing suburban areas and throughout such key counties as Bergen, Passaic, Morris, Middlesex, Union, Monmouth and Camden.

\$3,000 for Film & Equipment

The Senator's campaign staff turned to audiovisuals to help get the facts, clearly and vividly, to the voters. And for a total budget of less than \$3,000, they set an exam-

ple for campaigns of both parties in the years to come.

A 10-minute sound film was produced and 15 CV-4 Movie-Mite self-contained 16mm rear-screen sound projectors were leased for the campaign. Footage from the film proved useful for television spots, as a further gain. Audiences who were reached by volunteer workers proved so receptive that the Kennedy organization in New York state quickly emulated the audio visual program, ordered 33 machines to help promote the successful Senatorial campaign of Bob Kennedy.

Shown Daily All Over State

Between 1,000 and 1,500 persons saw the Harrison fact-film every day. Workers found the pictures successful at smaller group showings and even more effective on occasions when the film was projected in a darkened room with maximum concentration on the screen. Bergen, Middlesex and Union counties were the most effectively covered in this audiovisual effort, frequently drawing upon a reserve supply of Movie-Mite machines at Newark and Trenton headquarters.

Showings were primarily aimed to reach suburban dwellers, considered to be "key" voters in the recent campaign but nearly every type of ethnic, social and religious organization was also reached by the volunteers. They found little difficulty in operation of the projectors. And they were immensely gratified to hear detailed discussion of the Senator's record. •

Jersey voters were shown a 10-minute film on Senator Williams' record, projected on 16mm Movie-Mite equipment as shown below.

SAFER DRIVING FOR TEEN-AGERS

Goodyear Gives Young Drivers Some Important Facts on Handling Cars in 27-Minute Film "Footprints 4"

CONTINUING THE FIGHT for safe driving, which is good public policy as well as good economics for the industries involved, are numerous 16mm sound motion pictures aimed at youth and adult viewers. The educational task begins in the nation's schools and driver education classes have done important work in getting young drivers off to a safe start along the streets and highways.

Joining the educational crusade this month is another new educational motion picture from a perennial sponsor, the Goodyear Tire & Rubber Company. This sponsor has just released a 27-minute sound film titled, *Footprints 4*, which explains how the automobile is controlled through four relatively small but vitally important control surfaces — the five by six and one-half inch points where each tire touches the road.

Reflexes Aren't That Good

An interesting visual demonstration helps to prove that the teenager's reflexes are not as fast as he might think and that he definitely doesn't have the split-second reaction he gets credit for having.

Footprints 4 also gives useful tips on how to maintain tires to

keep them in safe driving condition and to give longer, useful life. The film explains how this sponsor maintains a continuing program of tire research and testing in the interest of safety. It shows how new tires are designed to provide more contact with the roads on which they travel so many millions of miles each year.

A Public Service Release

The picture was produced for public-service release by Goodyear by Pilot Productions, Inc., Evanston, Illinois. Classroom scenes were filmed in the producer's Evanston studios. It is now available for free loan to all schools. •

Safe Driving Spots Created for Theater, TV Showings

☆ Highlighting the need for safe driving in school and play areas is the objective of a new series of 20-second spots, endorsed by the National Safety Council and being produced by Filmack Studios, of Chicago.

The films will be released in 35 and 16mm as public service announcements for both theatrical and television use. They point up a big problem in child safety in these hazardous areas. •

Helping 3,000 Salesmen "Hop on Melrose Bandwagon"

Sales meetings of Melrose Distillers Corp. last fall featured a 38-minute color film, *Hop on the Melrose Distillers Bandwagon*, to liven up the proceedings and provide good background sales information for the big holiday selling season ahead.

Three thousand salesmen across the country took part in the day's promotion, which involved an election atmosphere, campaign posters around the room, candidate's buttons, and the like.

The film, also cast in an election framework, urged salesmen to "Vote for Old Dant," or James E. Pepper, or other top candidates

amongst the company's leading brands.

The Fotomation technique of Al Stahl was used to bring action and life to the static materials—simple drawings, posters, slides, etc. — gathered together for the film.

For the company, a team composed of President William Devereaux, Sales Development Manager Samuel I Cohen, and Advertising Director "Reliable" Sandy Rose, supervised production and took part in the film. For the producer, Animated Productions, New York, Bud Scheesley did the art, Harold Johnson the music, and Andre Baruch the narration. •

Teen-agers took leading roles in this classroom scene from "Footprints 4" as this new Goodyear film was being completed at Pilot Productions' Studio.

DESIGNING LOOK AT INTERIORS

Created for Sales Use, "Many Moods of Fieldcrest"
Wins Home Maker Audiences With Appealing Content

A FILM-MAKER'S ADAGE—a film that satisfies its target audience will appeal to a wider audience—is illustrated in the recently released film, *The Many Moods of Fieldcrest*. It was originally produced for Fieldcrest Mills, Inc. to instruct sales personnel in department stores.

"We tried to tailor make the film to the merchandising appeals of Fieldcrest—through moods," said George Pitt of Spectrum Associates, who directed the film.

Fantasy of Her Three Lives

On a rainy winter afternoon, two young people stroll in New York's Central Park. "The girl is engaged to this guy, and very much in love," said Mr. Pitt. "They visit

bedroom to bath." She asks, "Can you stand some drama in your personal life?"

The Serene mood," Mr. Pitt explained, "is suburban, on a Sunday morning."

Serenity for Suburbanites

The narrator emphasizes the "forest and sky colors," as the young wife brings her husband breakfast in bed. The narrator suggests, "If you're aching to escape from the hurly-burly, plan your escape. Scheme yourself a room with Fieldcrest fashions in the Serene mood."

"The first time I saw the film, I thought it didn't mention the product enough," said Karen Dudley, who joined Fieldcrest as fashion

This scene from the new Fieldcrest picture seems to say "scheme yourself in a room with a serene mood . . ." This colorful film offers many striking ideas for room design.

a department store and she fantasizes three different lives—Romantic, Dramatic, and Serene. In the Romantic, we wanted to create a very soft, flowery feeling. The two are just about to be married."

The couple pantomime throughout the film, and the woman narrator addresses the audience. She suggests, "One third of your living is in bedroom and bath." She mentions, "Roses by the roomful . . . to make you feel frail-and-beautiful. To make him feel male. And masterful."

Of the Dramatic mood, Mr. Pitt said, "The two have been married a while and they're manifesting their independence. He's writing and she's painting."

Here's "Drama" in Design

The narrator calls attention to the colors and patterns that make the "tempo, exciting; the scene, dynamic" in this modern apartment with the "coordinated theme from

promotion director after the filming.

"But," she continued, "the product is mentioned in the most subtle way. This is obviously too good a film to limit to a small audience of store personnel. We've had requests from television and we're thinking about it. We plan to make the picture available to women's groups and girls who are about to be married. We've even had a loan request from a national men's organization. We're distributing the film to colleges, and I want to add high schools."

How to Obtain This Picture

Guidance counselors should find *The Many Moods of Fieldcrest* invaluable in inspiring students who want to become interior designers.

The Many Moods of Fieldcrest is available on free loan from Sterling-Movies U.S.A., Inc., 43 West 61st Street, New York, N. Y. 10023.

Therapeutic and swimming pools adjoin the Abbey—each requires different water temperatures.

RUUD KEEPS THEM IN HOT WATER

A Color Motion Picture for Industry-Wide Showing
Salutes the 75th Anniversary of Ruud's Invention

THE 75TH ANNIVERSARY of the invention of the water heater by Edwin J. Ruud keynotes a new 20-minute color motion picture created for the Ruud Manufacturing Company, of Chicago, by Fred A. Niles Communications Centers, Inc. The film follows the growth of this concern through the years to its present leading position among makers of domestic and commercial water heaters.

Emphasis is placed on the advantages of point-of-use commercial water heating, especially as applied in hotels, motels, lodges and clubs. The point-of-use installation, the film shows, provides for several smaller commercial heaters at strategic locations, rather than one large central installation. Such installations are reducing operating costs and providing unequalled flexibility.

Cites Example of the Abbey

Chosen to show how the point-of-use concept can meet the unusual requirements of today's lodging establishments is one installation at the Abbey, a \$4 million resort-motel at Fontana, Wisconsin, adjoining Lake Geneva.

With two swimming pools, a therapeutic pool, three kitchens

with heavy-duty dishwashing machines and five buildings for housing guests, this large complex posed a multitude of water heating problems. For example, five different temperatures of hot water were required. Swimming pools use 80-degree water; the therapeutic pool requires 100-degree temperatures; general utility areas use 140-degree water; guest room baths have 160-degree water; and the heavy-duty dishwashers must have up to 180-degree hot water available at all hours.

Shown at Industry Meetings

Requirements such as these would prove virtually impossible for a single central system. How Ruud equipment answered the problem is clearly shown in the picture. The film is being made available for showing at plumbing association meetings and related industry functions. A prime use is among potential installers of equipment. Such groups and individuals may secure a free loan print on letterhead request only from Loran Nordgren, national advertising and promotion manager, Ruud Manufacturing Company, 7600 S. Kedzie Avenue, Chicago, Illinois 60652.

Show Art of Fine Engraving in Association's New Slidefilm

The precise art of fine engraving is the subject of an 18-minute sound slidefilm now being shown by members of the Engraved Stationery Manufacturers Association,

via its national headquarters in Washington, D. C.

Slidefilm scenes follow the art of the engraver from cave man drawings to today's modern commercial engraving plants, showing both original and reproduction work to business users. The subject has value in high school career guidance on this specialized field.

Written and produced by Visual Methods, Inc., Cleveland, Ohio, the filmstrip and accompanying 12-inch record will be offered to a-v departments in schools as well as being used by members.

Skilled hands to create a fine copper engraving.

THE MYSTERIOUS NOTATION "MOS" in movie shot-lists is the heritage of a German craftsman who came to Hollywood back with the first microphone. It means, in all seriousness, "mitout sound." And it may well be that the factual film medium is entering an era, and a most promising one, of MOS films. Silence may be golden again.

While I've produced my share of P. R. operas and image epics, my personal leaning has always been toward work-pants pictures—worker training, person-to-person sales aids, the classroom teaching of abstracts and principles; films that do specific needed jobs and show tangible results.

The "Blocks" to Wider Use

For many such jobs film is the ideal medium. But paradoxically, it is also the least used. Why? Partly because of a universal non-comprehension of what the medium can do. But even with the most enlightened film-sponsors we have always had two supposedly built-in limitations—high print costs and low projector availability.

How much distribution would textbooks get if they had to be individually typewritten, and then read via an optical scanner? When a film user has to pay \$1-200 for his prints, and \$5-700 for his projectors, no wonder our medium is, after all these years, still only scratching the surface of its obvious potential.

5 Million 8mm Projectors

Others were probably ahead of us, but it was about seven years ago that my own company started working on the trail of what could be an answer, an answer so obvious as to be embarrassing. What type of projector has five million units distributed around the country so broadly that just about anybody has quick access to one; a projector that costs little, is easy to operate—and whose prints can be made in quantity so cheaply as to be disposable; sent out like brochures, to be retained by the user rather than borrowed and returned? The 8 millimeter home-movie projector.

And now, for business and school use, help has come in the form of Technicolor's 8mm cartridge-load projector which adds the quality of foolproof simplicity—and, with simple rear-projection gadgets, provides "instant" movies without darkening the office, shop or schoolroom.

Of course, the universal first reaction to this is "But you don't

VIEWPOINT

"SILENT(S)" CAN BE GOLDEN

Is the 8mm Silent Motion Picture the "Paperback" Which Can Unlock Wider Use of Films by Industry?

by Charles (Cap) Palmer*

have sound." It's a natural reaction, like looking at the first jet airplane and missing the propeller. But once our minds have made that big jump over the fence of what we've always been used to—*silence can be golden.*

Material Must be Visual!

Of course our MOS subject material must be naturally visual. Obviously we'll always need sound for subjects where emotion is involved, for language teaching, training in humal relations, subjects involving philosophies and so on. Silence can be golden, but not omni-applicable.

But let your mind roll over the host of subjects to which silent-film instruction is natural. My own company has just released a package of four-minute films on Driver Education, and we're in work on First Aid, Office Safety, and Shop Safety; all are naturally visual subjects.

Catalogs of Industry Lines

Take any of the manual skills... and take Physics, many aspects of the new Math. How better can a dealer hand-carry a "demonstration" of a heavy piece of farm machinery out into the country to his prospects? Or a garment salesman show a "visual catalogue" of his new line? How about instruction

reels packed with do-it-yourself kits?

And so on and so on—and mostly in areas which have up until now been closed to the film medium by high print costs and low projector availability.

Mitout sound, needless to say, does not mean mitout words. The silent picture uses lettered captions whenever necessary, along with dotted lines and arrows to replace verbal "pointing." And these lettered captions have two instructional plusses going for them—by superimposure over a scene, the words become visually related to the action... and by inescapable limitations of space, the writer is compelled to simplify his gabby thoughts into distilled-essence fundamentals.

Need Not Be a Compromise

Is silence a compromise? Is the silent film simply a sound picture with the narration reduced to captions? If so—and inevitably we'll see some quick-buck silent adaptations of sound films; also films made by men who will still form up their ideas in words and then transpose them to images—in those cases there will be compromise. But with the true silent film,

*Executive Producer, Parthenon Pictures, Hollywood.

when the picture is conceived for silent projection, when its continuity is developed in its succession of images, then silence becomes, not merely the negative absence of sound, but a positive teaching advantage.

Here are seven key reasons why *Silence Can Be Golden.*

First, people remember more of what they see than what they hear. So the all-visual picture, with its few necessary words distilled into short visual captions, can expect better retention.

Value of the Single-Concept

People understand single-channel communications better than multiple. Unless a spoken narration is done with rare expertness, the viewer auditor must split his tune-in between eye and ear, whereas the silent picture has single-channel impact on the viewer's mind and memory.

Paradoxically, the silent picture can put across more content in a given film footage; if only because if a film has a sound track, it must use it. (In a sound film, defining "the Camshaft" needs perhaps 50 words—in the silent film, a one-word labelled arrow.)

The silent form compels the writer to triple-think his subject until he distills it down to its significant essence.

The "Language" of Pictures

Pictures put across their points to many people who cannot respond as well to verbal communications; whether for educational limitations, lack of mental quickness, language unfamiliarity, or whatever. The silent picture approaches a universal language.

The silent picture permits, even encourages, each local teacher or meeting leader to point up the film's general images in terms of local significance or need, in his own voice and at his own pace, and with his own particular audience in mind.

Busy Places Often Noisy

And finally, forgive the earthy practicality, often the best places to get films seen by the most needful target audiences are noisy—in a plant locker room, at the head of a cafeteria line, on a truck tailgate out in the garage, in a busy store—and here, of course, the total-visual film is uniquely effective.

From some of the comments above, you may get the feeling that a genuine silent picture is tough to write. Correction—"write." True, it is tough, very tough indeed.

As an indication, even though

Films meet viewers while they wait: here, applicants waiting for their license renewal in a state highway department office are seeing a four-minute Data Films' safety message as they stand in line. This technique could be used at check-out counters, airline and rail ticket counters, etc. In fact, show anywhere people can forget boredom, absorb a good message.

Warner Chilcott Laboratories is sending silent films on all new products far afield as company representatives carry lightweight projectors into physicians' offices, clinics and other who prescribe pharmaceuticals.

SILENT(S) ARE GOLDEN:

(CONTINUED FROM PAGE 41) our company has always edited its sound pictures into reasonably intelligible silent versions before writing narration, on the silent *Driver Education* series our "script" costs ran double our estimates.

But after the blood and sweat comes an extraordinary satisfaction which makes all the efforts (except perhaps to the bookkeeper) worthwhile. Actually, there is a very simple fundamental recipe for "writing" the truly silent picture — *think with your eyes*.

A picture is worth a thousand words.

The right picture.

Two Series of Single-Concept 8mm Films for Primary Grades

Two new series of short single-concept 8mm films for use in the primary grades of schools has been announced by Animated Productions, Inc., New York. The films, which are four minutes in length,

Simple artwork helps young learners begin to draw and paint . . .

and specifically designed to be shown on the Technicolor 8mm cartridge projector, are "open-end" — that is, they are available for industrial sponsorship, either nationally, or locally—in school showings, or—in a 16mm version—on children's TV programs.

Basic Instructional Sequences

The first series, called *Easy Do Fotomation Films*, are primarily instructional movies, showing in step-by-step procedures, little lessons on drawing, paper folding and cutting, animation and lettering. Al Stahl, president of Animated, and formerly a well-known newspaper cartoonist, already has 43 of these films either completed or on the drawing boards.

A second series is called *Thinking Cap Fotomation Films*, and consists of subjects that require the child to observe, reason, and come to a conclusion on the visual material presented. For example, in this group are optical illusions, puzzle pictures, mathematical problems, simple logic, as well as games.

Technique Ideal for the Medium

Fotomation is an ideal technique for use in the single-concept film. It is a special kind of animation combining live action photography with stop-motion. Live action shots of hands dissolve or pop in and out to pinpoint salient sequences in the script. Then the magic of stop-motion condenses movements to tell the story faster.

Both series of films will be listed in Technicolor Corporation's widely used source directory for "Educational Single-Concept Films." •

THE CHURCH IN LATIN-AMERICA

30 Sound Filmstrips of St. John's Catechism Help Carry Christian Revolution to Youth of Americas

167 MILLION PEOPLE who live in 21 nations of Latin-America are predominantly of the Catholic faith. But, as Archbishop Dom Helder Camara of Recife, Brazil (the vice-president of the Ecumenical Council of Latin American Bishops) has said:

"The problems facing the Church in Latin America must have priority over all others. It is indispensable for the sake of all Christianity. A continent that is Catholic in name must be made Catholic in fact. There is grave danger that the people of Latin America may cease to be Catholic or even Christian."

A Grave Shortage of Priests

A foremost problem is the lack of priests. Of the 484 million Catholics in the world, about 167 million live in Latin America, or about 34 per cent of the total number. Yet, of the 379,000 priests in the world, Latin America has only 35,000, or about 9.5 per cent. About half of these Latin American priests are teachers, chaplains or office workers.

Economic conditions are nearly as bad. The president of the Council of Latin American Bishops has a salary of \$40 a month. His diocese has annual expenses totaling \$27,500. The annual income of his diocese is \$13,750. Joined to the poverty of the Church is the appalling social and economic blight of the people. Millions exist on annual incomes of less than \$100 in countries such as Paraguay, Haiti and Bolivia. As production lags behind population growth, the problem will get worse. Finally, in Latin America, there are 70 million illiterate persons, or 40 per cent of the population over 15 years of age.

Religion of Less Significance

There was a time when it seemed that all of the institutions of Latin American society, families, schools and authority in general, reinforced the doctrine of the parish priest. Today, this is no longer true. Religious rites have lost much of their significance and vast numbers of Catholics are ignorant of their Faith.

Today, in the new Latin America, a pluralistic society has evolved. There are different values emanating from secularism and communism. Today, institutions in society are often in competition with one another and opposed to the ideas communicated by the Church.

Against this background, the Christian Revolution is now underway with a series of pastoral plans in various parts of Latin America cutting across traditional diocesan and parish boundaries. These plans assign priests and Sisters where they can best serve to alleviate the greatest needs. Lay participation has also now made possible widespread catechetical projects, many using audiovisual materials. As an example of this, a new office for catechetical aid was established in the Latin America Bureau which is an officially constituted department of the National Catholic Welfare Conference. This Bureau gives assistance to priests, Brothers and Sisters from the United States who are working in Latin America. It is spearheading a drive to send 5,000 of these workers to Latin America during the 1960's.

The purpose of the office for catechetical aid, which is under the direction of Rev. Michael Mullen, C.M. of St. John's University, New York, is to enlist the aid of American Catholics for the removal of religious illiteracy, especially among the 48 million children in the rural areas of Latin America. The Bishops of Latin America are now organizing a corps of 100,000 lay catechists in their countries, helping to replace the same number of non-available priests.

30 Subjects in Audiovisuals

Two types of materials are being used for training: audiovisuals and catechetical manuals. In the centers where the teachers will be trained, sound filmstrips will carry *The St. John's Catechism* in 30 ten-minute units. This audiovisual Catechism is already in use in three-fourths of the U.S. parishes. When a set of these filmstrips was presented to the late Pope John, His Holiness asked that they be developed for use in Latin America where the need is so very great.

Battery-operated projectors, of the type designed by Viewlex, Inc. for use by the Peace Corps in areas where electrical power is not readily available, accompany the audio visuals to Latin America. Funds contributed by lay Catholics throughout the U. S., sparked by RELAY teams, are helping to finance the services of Latin America catechists, the filmed materials and publications. It is a project which enlists the efforts of the laity in both of the Americas. •

These Filmstrips Help Us Teach the Meaning of the Sacraments

by the Reverend William J. Cogan*

THE ACTA FOUNDATION was formally chartered by the State of Illinois as a not-for-profit corporation in 1957. To me this was the realization of a dream. There are many stories the official state charter does not tell as it placidly hangs on the wall at ACTA's newly purchased building at 1424 West Irving Park Road in Chicago.

The story began in 1944 when I was a newly-ordained priest assigned to a "slum parish" on Chicago's southside. Being young and eager, I was immediately thrown into the despairing world of the poor, the hungry, the uneducated, the sick, the depraved, and the brow-beaten minority groups.

A Problem of Understanding

Among other things, I took a great interest in trying to convert these people to the Roman Catholic Church. I was successful in this area but found that the people receiving instructions had difficulty in understanding words and descriptions in the catechisms.

Therefore I began writing a catechism that the uneducated could read and understand. The book was written in a question-answer form using basic vocabulary. I created a "better mousetrap" and entitled the book *A CATECHISM FOR ADULTS*.

No one would publish it however, so I raised a few dollars with the aid of several priest friends and published it myself. To date the book has sold over two million copies.

Visuals Are Teaching Tools

My second project was inspired by the realization of the value which audiovisuals have for teaching. I knew that using filmstrips for instruction would help the inquirers to better understand and remember what was presented to them.

We wanted to produce a set of twelve (12) silent instructional filmstrips on the Sacraments that the priest could use, not as a crutch, but as a tool for more effective teaching. Once again I wanted to simplify the teaching of religion.

Early Errors of Our Ways

We began by renting a store front and constructing our own little studio. We started taking our

own pictures but soon discovered that not only was the quality poor, but taking our own pictures was too time consuming. I closed up shop and headed for the Wilding studios in Chicago.

Wilding agreed to do the filmstrips, but after production had begun we decided to go to another studio for financial reasons. The other studio said they could save us money but they failed to

A production scene from the ACTA series features Bernard Miller, who portrayed the role of Christ. Utmost care in detail was given to all subjects in this program for the Adult Catechetical Teaching Aids Foundation.

say that the quality would not be as good as Wilding's. After profiting by our mistake we returned to Wilding. They finished our color strips and the marriage has been secure and bountiful ever since.

The Best in Talent, Detail

I am extremely proud of our professional filmstrips — and rightly so. Nothing but the finest talent available was used. Every picture is in color and complete to the most minute detail, with careful attention given to costuming, stage sets, make-up and technical accuracy.

Besides the director and the cameraman, a corp of technicians, outstanding in the field were used to produce the films — scriptwriters, set designers, make-up artists, costumes and electricians.

*The Reverend Cogan is the founder of the ACTA Foundation in Chicago.

His Holiness, Pope Paul VI, received the ACTA filmstrip series from Rev. Cogan at a special audience in the Vatican. Accompanying him (at right): Wilding producer Robert J. Rockwell, Rev. William Kriegsmann.

More than 500 people were in the cast for these films. The television-conditioned person today is used to seeing excellent visuals and I had that person in mind.

The response to the filmstrips has been terrific. Approximately 1,000 sets are being used throughout the world — even behind the Iron Curtain. The strips are presented primarily with the table top projector but are also frequently projected on wall screens for showing to larger groups.

A Look at the Road Ahead

The ACTA Foundation is forever growing and producing new audiovisual presentations. We have just finished a film covering a day in Cardinal Meyer's life. We have also produced and directed three (3) record albums of religious conferences for the Sisters. We are always trying to create that "better mousetrap."

Filmstrips in the ACTA series are most frequently used for instructing small groups. In the scene below (a re-enactment) a priest is showing the strip on "The Sacrament of Matrimony" to an engaged couple who view the scenes on a table-top projector within the confines of his office.

Extreme low-level aerial scenes are featured in "The Pathfinders." To capture these exciting shots, cameraman Bill Hines was tied in special rig outside the exploration plane as it swooped over Surinam lowlands.

AIR SEARCH FOR VITAL METALS

New Technology of Aerial Exploration at Work in Surinam Can Help Other Newly-Developing Nations

The Pathfinders, a recent motion picture sponsored by Litton Industries, Aero Service Division, documents the daring efforts of American and Canadian private enterprise to raise the living standards of a newly-developing nation, Surinam, in South America, through the new technology of aerial exploration.

The title of the film derives from the fact that its aerial exploration crew were bombing-pathfinders in World War II. The film demonstrates that they are also pathfinders in the peacetime quest for the raw materials vital to Surinam's economic survival.

An Answer to New Nations

The picture was designed to document what aerial exploration has done and hopes to do for Surinam, and thus, without any direct sales message, to convince other newly-developing nations, especially those in Africa and Asia, that Aero Service's aerial exploration technology could — as in Surinam — significantly improve their economic future.

During production of the film the cameraman, William Hines, was tied onto the outside of the airplane. The plane, which carries a half million dollars worth of electronic exploration devices, flies at an altitude of 200 feet or less in order to probe electronically the thick South American rain forest over which it flies. But in Surinam, many of the trees are 200 feet high, or more. Aerial exploration is thus one of the world's most dangerous peacetime occupations. Yet, despite its dangers, it has already discovered a multi-million

ton deposit of aluminum ore in Surinam.

They Are the "Pathfinders"

The film emphasizes that the people of Surinam, formerly Dutch Guiana, are also pathfinders, not only in their sponsorship of the world's greatest effort to unlock the buried treasures of the earth from the air, but also in their demonstration, within their tiny tropical lowlands, that all the races of man can live together in harmony.

The intended audience for *The Pathfinders* consists of governmental, industrial and financial officials charged with the responsibilities of resources development, especially in the new nations of the world, and in the United Nations.

35 and 16mm Color Prints

The Pathfinders, 27 min., color, available in both 35mm and 16mm, was produced by Mascott Productions, Sherman Oaks, Calif., written and produced by Laurence E. Mascott and directed by William Rutter.

Cancer Society's New Film

Asks "Is Smoking Worth It?"

Hitting hard at potential young smokers with basic facts on the grave diseases risked by those who take up this habit is a new color film, *Is Smoking Worth It?*, now being made available from local units of the American Cancer Society for free loan to schools and youth groups.

Teachers are being urged to show junior and high school students how social and psychological

pressures induce them to smoke. The film was designed to help teen-agers decide for themselves that the answer is, "No." A recent *NEW YORK TIMES* article surveyed the student body of Morris High School in that city after they had seen the picture. The tabulation indicated that about 75% smoked and that almost half of these were planning to cut down their smoking as a result of seeing the film.

The film opens with a candid discussion by four teenagers about the typical reasons some of them smoke, while others do not. The evidence linking cigarette smoking

with lung cancer and coronary heart disease is then visualized step-by-step. Cigarette smoke's effect on the lungs is demonstrated through chemical analysis of cigarette tar, animal experiments and (through animation) the development of cancer inside the human lung.

A chest surgeon points out that lung cancer is fatal 19 out of 20 times.

Arrangements for school or youth group showings of *Is Smoking Worth It?* can be made through local units of the American Cancer Society throughout the U. S. •

How to Rebuild Heavy-Duty Engines

STRESSING THE IMPORTANCE of skilled workmanship, proper procedures and up-to-date equipment in the rebuilding of heavy-duty engines is a new 25-minute color motion picture, *Power of Performance* was released in January by the Gould Engine Parts Division, Gould-National Batteries.

According to J. O. Lutz, vice-president and general manager of the division, "this new film presents a step-by-step review of basic overhaul techniques from 'unbuttoning to break-in.'" The picture will be shown to mechanics responsible for maintenance and performance of heavy equipment engines. One of its objectives is to show at what point an engine should be sent to a well-equipped rebuilding shop.

Gould's new film will also show these men how to check for various types of wear and damage on such equipment; will show how to perform their own repair jobs.

Location footage was shot in engine rebuilding shops. These scenes pick up the arrival of an engine and follow through with the key steps, such as degreasing, unbuttoning, crankshaft welding and regrinding, wet and dry sleeve installation and reassembly. The value of proper "break-in" procedures on rebuilt engines is stressed.

Power of Performance was produced for Gould Engine Parts in the Philadelphia studio of the Calvin-DeFrenes Corp., under the direction of Aitkin-Kynett Co., Inc., the company's advertising agency. It will be available on free loan to fleet and equipment operators, engine parts jobbers and distributors, and to garages and engine rebuilding firms.

Loan arrangements by these eligible borrowers can be made via Gould Engine Parts Division, Gould-National Batteries, Inc., First National Bank Bldg., St. Paul, Minn. •

Gould Engine Parts' new film "Power of Performance" includes this sequence filmed on location at Connecticut Bearings, Inc. in New Haven. The man in the white shirt (right, rear above) is F. C. (Chuck) Bradley, Jr., president of Connecticut Bearings and former head of the Automotive Rebuilders Association. He served as technical consultant on the film.

Industry Film Prods. Assn.
P. O. Box 564, Hollywood,
California

THE FULL RANGE of film utilization — from training and education to sales, advertising and public relations — was covered by an "all-star" panel of experts in these fields at the recent late fall meeting of IFPA's Northern California Chapter. The meeting was held at the International Inn in San Francisco.

Panelists included James Allen, film producer for Batten, Barton, Durstine & Osborn, representing the ad agency's viewpoint; W. Phil Herriott, director of education and training for United Air Lines; Dr. Jerrold Kemp, co-ordinator of production services, Audio-Visual Center, San Jose State College; John Korty, San Francisco film producer; and Al McNay, supervi-

EXPERTS LOOK AT AUDIOVISUALS

Members of Northern California Chapter Hear Five
Panelists Discuss Their Approach to Filmed Media

order to communicate the message; therefore, even if the film cannot be entertaining, it must be at least enjoyable or interesting.

Following the panel discussion, special guests from IFPA's national organization addressed the

bus and San Francisco International film festivals were shown. Titles included were: *Explosive Safety in Handling Practice Bombs*, produced by Lookout Mountain (USAF); *Breaking the Habit*, produced for the American Cancer Society by John Korty; and *The Home-Made Car*, sponsored by British Petroleum Ltd.

These films represented examples of imaginative, quality filmmaking which serves the best interests of all film sponsors and producers.

Comments from the Panel

Here are some of the pertinent comments by panelists at the session:

• HERRIOTT: A film with a message is only of value if it *changes people*. A training film must return at least \$1.05 for every \$1.00 invested. In a United Airlines training film, the cost of the "audience" amounts to \$4 to \$6 per hour for the salaries of everyone in the audience, so the film must produce tangible, demonstrable results to be worth its cost.

* * *

• KORTY: A good film must tell something about *people*. Example: *Nanook of the North* (Robert Flaherty), a film originally sponsored by a fur company, or the Johnson's Wax film (*To Be Alive!*) at the New York World's Fair. Our American Cancer film on the relation between smoking,

Chapter members and guests. Jim Wasson, national president, and Dr. Harold Dyrenforth, editorial vice-president, reviewed the plans and considerations involved in a proposed change in IFPA's membership policy.

Earlier in the evening program, three films which have won top awards at the 1964 IFPA, Colum-

Members and guests of IFPA's Northern California Chapter are attentive listeners as panel members discuss individual, specialized use of audiovisuals.

Panelists above are (l. to r.): producer John Korty, W. Phil Herriott, United Airlines; Jim Allen of BBD&O; Dr. Jerrold Kemp, San Jose College; Al McNay, Standard Oil (Calif.); and moderator Saul H. Jacobs.

sor of production and distribution of films for Standard Oil of California.

Panel moderator was Saul H. Jacobs, free-lance writer and director. Each panelist reviewed his own uses of the film medium, citing the aspects of films which made them valuable in particular applications as well as the elements which make a film effective in reaching a particular type of audience.

Panelists agreed that certain common denominators are present in all effective motion pictures. The film must be properly planned with specific objectives in mind and it must be properly constructed to achieve those objectives. They also noted that resultful films must be aimed at *specific* audiences and that the audience must be able to *identify* with the material being presented.

No matter what purpose the film serves — it must first put the audience in a receptive mood in

Northern California Chapter Meeting:

(CONT'D FROM PREVIOUS PAGE) cancer and tuberculosis used a deliberately sophisticated approach in order to reach teen-agers; a ponderous, moralizing approach would have been fatal. A film must also create a mood: *The Cinema l'erite* provided good examples for this.

* * *

• DR. KEMP: I would emphasize the importance of learning. We must not indulge our artistic yearnings for entertainment and for drama at the expense of getting the information across. The humorous approach, no matter how good, may backfire. Example: a well-known VD film used by the Armed Forces. As far as a change in behavior is sought, it should be based on a *single concept*.

* * *

• MCNAY: Citing examples of Standard Oil institutional films, he noted that one of these cost \$200,000, but played to enormous audiences in 22 countries and was therefore considered a very good investment. *The cost per viewer was far lower than that per reader of newspapers or magazines.*

* * *

New Aerospace A-V Service to Consolidate APCS Photo Units

☆ Consolidation of the photo units of the Air Photographic and Charting Service into a new unit to be named the Aerospace Audio Visual Service (AAVS) has been announced by the Military Air Transport Service. The new unit will be formed sometime before July 1,

1967 and will be located at Norton Air Force Base, California.

The Aerospace Audio Visual Service will be staffed by approximately 1,500 military and civilian personnel, including photographic, administrative and supply experts. In addition to continuing the photo mission of APCS, the new service will also have its own film depository and film distribution function.

By joining these photo units, the Air Force will concentrate its photographic capabilities and facilities which are annually responsible for more photo work than the largest Hollywood studio. In addition to Air Force missions, these MATS photo units are regularly called on for photo work by the other military services, the State Department and the National Aeronautics and Space Administration.

AAVS' primary concern will be "on-location" documentation and instrumentation photography. APCS currently supports the Air Force ballistic missile research and development program with instrumentation photography. Another important pictorial mission, which AAVS will continue, is photographic documentation, including U. S. space activities.

Since 1958, APCS has supported every major U. S. space project, from the Pioneer lunar probes to the Project Mercury series.

AAVS, through its APCS-born units, will continue to produce films for the Air Force Systems Command, films for the Chief of Air Force Chaplains, and other Air and Joint Staff components. •

Below: scene during the Northern California Chapter's panel discussion of audiovisual utilization as presented by experts from various fields.

THE WRITER'S FOURTH DIMENSION

by Michael H. Halperin

A NEW DIMENSION has been added to the classification of "writer" in industrial, government and documentary films, as well as in the new field of industrial closed-circuit television: The writer is also an assessor of learning goals. The writer must answer the question: what kind of behavior do I want from my viewers after they have seen a program? That's a pretty big order, but a necessary one, as we shall see.

Our task goes beyond taking a package of data and merely transforming it into a visual medium. Our job is to do the best we can for the people who need our material. But how is the job to be done unless we know what the requestor wants?

Is the Requestor Clear?

The requestor will state his goals and be absolutely convinced he knows the kind of behavior he wants from those who are going to watch the film. However, the goals stated are often an oversimplification of the problem. After all, a problem exists only if there is more than one solution. If there's only one answer then there is no problem.

The writer's job, working with his technical advisors, is to determine what is the *best* answer to a given problem.

An Example of the Problem

As an example: I recently wrote a series about a form which engineers utilize to implement design changes. The stated goal of the requestor was "we want the engineer to fill out the form properly." Fine. This sounded good. But on examination I discovered that the

form was quite clear. It had little blocks with titles in them defining usage. An engineer, whom we presume to be educated, would find it difficult to fill out the form *improperly*.

The goal, as I discovered, was not how to fill out the form. The requestor wanted the engineer to *utilize the various aids made available to him by the company*. Further, the engineer was to realize the importance of proper *implementation* of the form. The writing of this particular script could have been slanted one of two ways — either "how to" or "why?" As it turned out, the requestor wanted "why?"

THE CENTRAL FIGURE

• The writer in industrial films is the central figure in determining content and style of presentation. There are times when we are responsible for designing the visuals to be presented on the screen. Because of the vast amount of research we must do on each subject, we become quasi-experts on that subject. Therefore, the director, the art director, and sometimes the requestor will rely on our judgment in areas which are normally not our domain.

I would like to dwell on this for a moment. I have found that nothing substitutes for practical experience. But how many writers have run engine lathes, or designed a spacecraft, or are graduate engineers? Some have the experience, but they are a small minority. I feel it is necessary for me to make an attempt to experience part of the knowledge the potential viewers share.

For instance, a year ago I wrote a series of scripts on manufacturing. I know very little about machines or manufacturing processes. I spent several weeks in the factory researching material, absorbing the jargon and getting a general feel for the subject in order to write about it with some degree of accuracy.

THEATER TECHNIQUE

• Yet, we must remain aware of techniques utilized in theatrical films and commercial television. These techniques have proven effective time and again. Cartoons, special effects, rapid cutting, lim-

A Word About the Author

☆ MICHAEL H. HALPERIN is a writer-director for the TV Film Department of the Space and Information Systems Division of North American Aviation in Downey, Calif. He has been writing industrial and documentary films for the past three years. Previous to this he was in the theatrical motion picture and commercial television field as writer, director and film editor. Mr. Halperin is also a charter member of the Industrial A V Programmers section of the Audio-Visual Education Association of California (AVEAC). •

What **Kodak** has done for people who *run* movie projectors

→ We've made a projector that comes closer to guaranteeing a smooth performance under variable conditions than any other projector we know of.

It is the KODAK PAGEANT 16mm Sound Projector, Model AV-126-TR.

Setting up is as simple as opening a suitcase (you sort of unfold it). All parts are assembled so you don't have to guess where anything goes. Film threading is as easy as following a red line. Push one button and get instant high-fidelity sound, with no wait for warm-up. Move one lever; you get edge-to-edge brilliant pictures.

The reason everything happens that should (and nothing happens that shouldn't) is the care Kodak has taken to consider the needs of people who use projectors. Take the sound system . . .

We use transistors instead of tubes. Transistors usually last for the life of the projector.

The sound exciter lamp we use is designed so that it should last for the life of the projector.

We use a space-age solar cell instead of a photocell in this projector. This makes for clean, clear sound . . . for the life of the projector.

This projector's 12-watt amplifier can put the sound where you want it with perfect clarity at low volume or turned way up. Want a P.A. system to use before, during, or after your movie? Buy a Kodak microphone, and this projector can be your P.A. system. You can also buy a matched set of four more 11 x 6-inch speakers that will fill an auditorium with commanding sound.

If you would like to read about this projector in complete detail, or would like to see it demonstrated, please check the proper box in the coupon and mail it to the address below. There is no obligation whatsoever.

THE WRITER'S FOURTH DIMENSION

(CONTINUED FROM PAGE 46)
ited animation, fine art — all make an impression on the viewer, positive as well as negative.

These elements should not be used indiscriminately. Just as in writing a theatrical screenplay, the writer must determine when these techniques or "tricks" add to or detract from the *story*. In the case of industrial film and television we have to determine when these techniques add to or detract from the *learning process*. And when we consider the industrial film and television philosophy we discover that we are indeed engaged in teaching.

This teaching is a two-edged sword. Cutting one way we find that we are teaching the audience about something which is important (otherwise, why write it in the first place?); and we teach ourselves by constantly remaining aware of the rapid strides being taken in the fields of audio-visual learning and programming.

• To sum up: I find that the writer is no longer an interpolator

of facts. He acts as a force in *defining what the facts really are*. Another task is to assess the end behavior — or result — of the production presented. The writer takes on the aspect of a quasi-expert upon whom the director, producer and others can depend for general answers concerning the particular script. The writer must be aware of theatrical film and television techniques and utilize them when they enhance the learning process.

The writer's first concern must not be with the beauty of his script. He must not fall in love with his own words. Rather, he must look upon his work as part of the overall program of teaching which involves motivation, indoctrination and training.

R. A. Nelson Heads Expanded A-V Program at Beech Aircraft

☆ The Beech Aircraft Corporation, Wichita, Kansas, has expanded its audiovisual services, appointing Robert A. Nelson as manager of that activity. The announcement was made at year-end by James Yarnell, manager of advertising.

Nelson will be responsible for the organization, administration and supervision of all company a-v operations, including photographic services, motion pictures, slides,

Nelson . . . of Beech Aircraft

filmstrips, sound recordings and various types of graphic presentations. Until recently he was secretary-treasurer and operations manager of Horizon Productions, Kansas City, Mo.

The new Beechcraft a-v manager brings 15 years of experience in this field to his new post, having produced, directed and consulted on scripts. His other activities include extensive experience in still photography, advertising, sales and public relations. He is a graduate of the University of Missouri at Kansas City with a degree in economics and has taught mathematics in the evening division of Rockhurst College and photography at the Kansas City Art Institute and School of Design, at the college level.

Board Elects Streitmatter Asst. Vice-President at Kodak

Alvin W. Streitmatter, general manager of the professional, commercial and industrial markets division of the Eastman Kodak Company, was elected an assistant vice-president at a meeting of the Kodak board of directors on December 17th.

Streitmatter has been associated with Kodak since 1940 when he began as a sales representative in the Detroit area. He came to Rochester and the color sales division in 1945. Two years later he organized and became supervisor of the professional studio at Kodak's office. In 1949 he was appointed manager of the studio and of the company's convention activities; later also headed the industrial photographic laboratory and the graphic arts studio.

Streitmatter attended Bradley University. Before joining Kodak, he was associated with an industrial motion picture company and for a number of years managed a large portrait studio in Peoria. At that time he and his associates experimented extensively with various color processes. A member of the Photographic Society of America, he was awarded the Honorary Master of Photography degree by that organization in 1951.

Duryea Named Chief Engineer at Movielab, Inc., New York

A veteran engineering executive and consultant has been named as chief engineer of Movielab, Inc., one of the nation's largest professional motion picture film laboratories. The appointment of Albert A. Duryea to that post was announced in January by Saul Jeffee, president and board chairman.

Duryea has served in executive capacities at MGM Laboratories, Republic, Pathe and Consolidated Film. While associated with Pathe Laboratories, where he served as chief engineer, assistant vice-president and vice-president, he was in charge of engineering, plant maintenance and technical service. He supervised design and construction of processing facilities, also becoming head of the company's TV studio and film processing facilities.

During his career in the industry, Duryea has also been a consultant to leading companies in and related to the motion picture field. He is an alumnus of New

Hodge Now Executive Director of the Rank Film Library

A. R. (Reg) Hodge has become executive director of the Rank Film Library, one of Europe's largest 16mm film distribution centres. His appointment to the newly-created post in London was announced in December by J. P. Collis, managing director of the

A. R. Reg Hodge

British company's Audio Visual Division.

Hodge, who is 48, joined the Library in 1958 as its general manager. Under his management there has been an overall expansion of its activities by 45%, with particular emphasis on training films, teaching and industrial production services were also developed.

A typical instance of growth was the large-scale use of some 600 Library films introduced in 1964 aboard Shell's entire U.K. fleet of more than 90 tankers. There are now 220 people employed full-time at the company's headquarters at 1 Aintree Road, Perivale, Middlesex; to meet the expanding service requirements, a new 8,000-square foot building was opened four months ago.

The Library's new executive head was general manager of Ron Harris Cinema Services until he joined the Rank Organization. From 1940 to 1946 he held an officer's commission with the Royal Air Force with active service over the United Kingdom and Europe. He is married and the Hodge family has one daughter.

Charles Beck to Direct Sales of Reevesound Company, Inc.

Expansion of technical operations and services at the Reevesound Company, Inc. were highlighted last month by the appointment of three new executives. The appointments were announced by Boyce Nemec, president of the Reeves Industries' subsidiary in New York.

Charles Beck, Jr. has been named manager of marketing and sales. Victor Gee has joined the company as a design engineer and Allan Whitney has been appointed manufacturing superintendent.

Beck, a graduate engineer, has had wide experience in the marketing and sales of engineering systems and electronic components. A former sales manager of Hydromatics, Inc., he has also served as general manager of the Moeller Instrument Co. In his new post he will have full responsibility for both national and international marketing and sales of Reevesound's custom-designed motion

Charles Beck at Reevesound

picture technical systems and the company's professional sound recording and reproduction systems.

A product and systems design engineer, Gee was formerly associated with the International Telephone & Telegraph Company's Data and Information Division. Reevesound's expanded manufacturing facilities have been placed under the direction of Whitney, a former supervisor at Dusal Tool and Mold Company.

* * *

R. B. Martenson to Direct Sales of Sylvania Photolamps

Richard B. Martenson has been named general sales manager of the Photolamp Operation of Sylvania Electric Products, Inc. His appointment was confirmed last

R. B. Martenson, in charge of sales for all Sylvania Photolamps

month by Robert L. Kleinfeld, the company's vice-president for marketing.

Martenson will be responsible for field sales, merchandising, advertising and sales promotion with headquarters in New York City. Since 1961 he has been general marketing manager for Sylvania's Special Products; previously served (for 10 years) as product sales manager for the Photolamp operation.

The new Photolamp sales executive attended Mechanics Institute and Pratt Institute in New York City and Penn State University. He is a member of SMPTE, the American Management Association, Institute of Electrical and Electronics Engineers, American Ordnance Association, National Management Association and the Air Force Association.

* * *

3M Appoints Wm. J. Brown as Head of Photo Equipment Div.

The new general manager of the 3M Company's Photographic Equipment and Optics division, headquartered at Rochester, N. Y., is William J. Brown. G. J. Wachholz, vice-president of the company's Photographic Products group, made the announcement on January 5th.

Brown is assuming the new post in addition to his responsibilities as president of Dynacolor Corp., the 3M subsidiary which produces and processes 35mm and 8mm color films and supplies a line of processing chemicals, photographic papers and microfilm. His office remains at the Dynacolor plant, 1919 Mount Read Boulevard, in Rochester. In addition to this activity, he will direct the Wollensak plant at 850 Hudson Avenue in that city.

Approximately 500 persons are employed at the Rochester Wollensak facility which manufactures high-speed movie cameras.

Bell System Builds Interest With a "Ballad for the Fair"

SPONSOR: The Bell System Telephone Companies

TITLE: *A Ballad for the Fair*, 14 min., color, produced by Owen Murphy Productions.

This new film is intended to bring the excitement of the World's Fair to audiences all over the country during the fall and winter months while the Fair is closed in mid-October.

Oscar Brand is a folk-singing narrator who sings an original ballad to describe the Fair's wonders and its "Peace Through Understanding" theme.

Two minutes of the Bell System "ride" through communications have been recreated in the film. Nicely angled shots, particularly in night time scenes, make up the rest of the footage.

The sounds and feeling of the Fair are captured in a script by Stanford Sobel.

* * *

Jackson & Church Premieres Film on Tempered Makeup Air

A 12-minute color film has been chosen as the medium on which the Jackson & Church department of York-Shipley, Inc., York, Pa., will base its efforts to explain what is a relatively new and often misunderstood concept in the heating and ventilating field, according to Richard J. Hoover, manager, Warm-Air Sales department. The motion picture was premiered to the American Society of Heating, Refrigerating and Air Conditioning Engineers in Chicago on January 25th.

Produced by the Walter G. O'Connor Company, Harrisburg, the film, *Make-up — The Missing Half*, explains the need for supplying tempered make-up air in connection with exhaust in industrial and commercial establishments. It features the Jackson & Church packaged make-up units and their operation.

"We have felt the need for some time," Hoover said, "for a simple way to explain the problems of 'air starvation' and the advantages of the Jackson & Church method of combating it. While it is necessarily a capsule treatment, we feel this film will arouse considerable interest among heating and ventilating engineers, as well as among owners of establishments where powerful exhaust systems are used."

The film shows, through live action sequences as well as animated diagrams, some of the results of

WIDE WORLD OF CURRENT SPONSORED PICTURES

Night view of the Bell System's "floating wing" Pavilion at the New York World's Fair, featured with other pavilions in the new picture.

THE WHITE GLOVE TREATMENT

You and your film always receive "The White Glove Treatment" at the Geo. W. Colburn Laboratory.

You'll find this type of personal care and handling in each and every service performed at Colburns.

"air starvation" caused by powerful exhaust systems. It explains the need for extremely high "turndown ratios" (temperature variations) in supplying make-up air, and demonstrates how the direct fired gas burners used by Jackson & Church provide them.

Emphasis is placed throughout on the many safety factors of the system and the new units. Gordon M. Parker, advertising manager, Hoover, and F. E. Snyder, Chief Engineer for Jackson & Church furnished technical supervision for the motion picture.

Much of the film was shot in the York-Shipley Plant, with additional scenes taken in varied locations, such as steel mills, restaurant kitchens, auto body shops and dry cleaning establishments, as well as in the O'Connor Company studios in Harrisburg. The picture was completely staff-produced by the O'Connor Company. Supervising production was James R. Lee, executive producer. Script was by James S. Campbell and cinematography by Donald B. McElwain.

Special 8 millimeter prints will be made for showing in portable, continuous-run projectors by the company's sales department to prospects in all sections of the country.

Jewish Child Care Group Has Film on Foster Parents' Role

The Jewish Child Care Association has sponsored a new 13½-minute b&w motion picture, *A Family for Now*. Produced by Harvest Films, Inc., the picture tells the story of nine-year-old David, the innocent young victim of a broken home. He deeply feels the impact of his father's desertion and his mother's nervous breakdown.

Placed in a foster home through the Association, David is given the love and attention he craves, but both he and his foster parents have many adjustments to make. The film is available from the Jewish Child Care Association, 345 Madison Avenue, New York City.

AUDIOVISUAL GOALS FOR 1965:

(CONTINUED FROM THE PRECEDING PAGE 16)
and state extension services as well as the nationwide free sponsored film distributors.

We Put Priority on Inexpensive Film Guides

The Editors of BUSINESS SCREEN have made a beginning in this direction: the "paperback" editions of a "Management Film Guide" will be followed this Spring by a comprehensive "Farm Film Guide" which supplements a similar volume issued by the U. S. Department of Agriculture. We are giving *first priority* to the next critical area: a revision of our earlier "Index of Training Films" which furnishes objective synopses and sources of work-films from "aircraft skills" to "welding, x-ray inspection of metals, etc."

With such "blue-prints" of what *has* been done, the task of filling in the many gaps in available audiovisuals will be eased for the producer, the potential sponsor or for government production. We note with interest the emergence of a new policy at General Elec-

Audiovisuals from industry are needed in the schools to help prepare youth for careers . . .

tric, for example, which has made available a new motion picture on *Careers in Engineering* for outright print purchase. The schools need *Bunny Rabbit*, other elementary titles, but the unemployed and the job-seeking youth of tomorrow also need to be motivated and instructed in the basic vocational pursuits. Members of today's Job Corps won't produce tax revenues, they must be quickly returned to the private sector as workers and taxpayers.

Decline in Morals an Alarming Trend

This is *one* phase of education, one of the imperative Goals for 1965. Let us turn to the broader spectrum of the American program. As always, it is the hard facts, the statistics which must be taken into account in a systematic approach to meeting these problems.

Moral decay is terribly evident in the crime statistics affecting every large U. S. city. America is not unique in this problem. England, France and other European countries are rife with crime. But the cost to the U. S. is our immediate problem, not only in wasted human lives and the cost of imprisonment. Arson and suspicious fires have increased from a yearly average of 5,600 in 1950 to more than 24,000 in 1960. They are still increasing. Embezzlements almost doubled in the years between 1956 and 1962. Robberies have almost tripled between 1956 and 1962. Auto thefts also doubled between 1954 and 1964, with a majority of cars being stolen by teenagers. One

AUDIOVISUAL GOALS FOR 1965:

(CONTINUED FROM THE PRECEDING PAGE 51)
insurance company concerned has already slated a nationwide advertising campaign to deal with the problem. But jobless teen-agers don't read these books; we need to motivate within the hearts and minds of youth; we need to begin creating motion pictures, for example, which alone possess the emotional impact to "get inside" the spirit of these young people.

Highway Accidents Take Terrible Toll

America's streets and highways are strewn with the lifeless bodies of accident victims. The task of safety education is more imperative than ever before. Minutes and hours available to impress this ghastly, wasteful killing by careless drivers upon viewers in theaters, on television and among 16mm viewer groups must be used by hard-hitting films. The automotive industry has made some contributions in films of this kind, but not enough. The insurance industry also has an economic as well as a social stake in sponsoring more safety education films.

America's mental hospitals are crowded with these unfortunate patients. Every five minutes in 1965, a mentally-retarded child will be born among us. There are already five and one-half million Americans whose minds are retarded, many of them not under institutional care but potentially useful citizens who can be trained for skills. The President's Committee on Mental Retardation, sparked by the late President Kennedy, has put the problem before the people. There have already been created some extremely useful, informative films. More are needed to serve today's needs.

Here Are Other Vital "Human Equations"

These, briefly touch upon, are a few of America's "problem" goals. There are others which are less of a problem than an opportunity. The facts and figures are again important.

Our present population includes 18 million persons who are 65 years or older. By 1970, the figure will have increased to 20 million. The proposals for Medicare, to alleviate the problems of illness among the aged, are before the Congress. But there are other, *much more positive* factors to be taken into account:

Films to Prepare Elderly for Retirement

Are we properly preparing our pensioned and retired oldsters for their new leisure?

Are we aware that the statistics show that a large proportion of them are a lot better off than advocates of medicare would have us believe? For instance: the *average* net worth of families in the 65-and-over category is \$30,718. The government-preferred figure of their *median* net worth still shows that these families have \$10,450, nearly \$3,000 more than the median net worth of all U. S. families. 82% of these elderly families have no installment debt (compared to 50% or less in all families under age 55). These 65-and-over families earn less than \$2,875 annually but they are still remarkably secure. One effect of the medical care for the aged bill, if it passes, will be to increase funds available for other spending.

Overseas "Trade" in Films Must Be Eased

And, for our economic survival which depends on trade abroad, the nation will continue its awareness of our customers and friends

SOUND RECORDING

FOR STRIP FILMS

Now you can sell professional recorded sound with your strip films. Let RPL handle this entire phase for you.

Just send your script, marked with slide changes and we will record the narration with sound effects and music as desired. If you prefer, submit your recorded tapes—

RPL will insert synchronizing signals—audible or automatic for all makes of projectors—produce for you one or thousands of tapes, tape cartridges or discs.

You can sell to your clients strip-films with professional sound that solves the mysteries of the new and various automatic frame change systems—at a surprisingly low cost.

AUDIOVISUAL GOALS FOR 1965:

beyond these borders. Nearest at hand are Canada and Mexico. The increasing exchange of films between the U.S. and these neighbors must be encouraged, barriers lowered and awareness increased in all three countries of our common interests.

Canada's forthcoming EXPO: 67 (see page 64) will certainly provide an upsurge of new audiovisual ideas. Our friends to the North are encouraged to outdo the best which New York's Fair offered. But we have given too little attention to the rapid development of our No. 1 Latin American customer: Mexico.

Increase Film Traffic With Latin-America

Mexico's economic output has doubled since 1940. Compared to the 1930's, Mexico now has six times as much electric power, 11 times as much cement production; 11 times its former highway mileage and 13 times greater steel output. President Johnson has done much already to improve relations between our countries. But are we thinking about Mexico as a viewing audience for more U.S.-sponsored films? And are we encouraging these Latin-American neighbors to send us more films about their country, its customers, people and products?

"Operation Goodwill" begins close to home and fans out to Central America and to the vast continent to the South. It extends, at jet-age speed, to England and the continent of Europe. It wings its way across the Pacific to all of Japan and to Australia. Greater concentration of the final development of 8mm equipment and films will make such low-cost, low-weight prints as practical as an airmail letter. Films can span the oceans within hours.

"Bend This New World to Hopes of Man"

These are some of the Goals for 1965. Attainment must be based on facts and figures, on awareness of realities and the understanding of both producers and sponsors who have the power to help do something about all of this on the lighted screen.

The Goals for 1965 are stimulating to every American. As President Johnson's Inaugural Address expressed it, "Is our world gone? We say farewell. Is a new world coming? We welcome it — and we will bend it to the hopes of man."

The operation was a success...but the patient died

You, too, can lose "patients" through some small detail . . . such as titles not up to the standard of the rest of your production. . . Guard against loss of clients by protecting your large investment in time and money by a very small investment in Knight titles.

NASA "Control" Uses Genarco 3,000-Watt Slide Projector

On a recent visit to the presentation (control) room of the National Aeronautics and Space Administration, editors noted the use of the extremely powerful Genarco 3,000-watt slide projector. It is used for top-level showings, attended by the Recovery Commander, Operations and Flight Directors, the Flight Surgeon and other v.i.p. personnel who may have to make immediate, vital decisions when a satellite flight is in progress.

Images projected show maps of the earth on which the space vehicle track has been traced in advance. Images must be very bright (Genarco unit puts up to 6,000 lumens on screen 20-feet wide) because room is seldom darkened. Precise projection on screen is a "must" with reference to screen edges.

In addition, if the same slide is carried on screen for a long period of time, slides must remain cool and not overheat. These qualities have earned this top-quality unit repeat orders for this kind of application. The specifications are worthy of note for industry applications, as well.

* * *

Kodak Magnetic Sound Tapes Now Being Widely Marketed

☆ A major change in marketing of its magnetic sound tapes has been announced by the Eastman Kodak Company. Since October, all EK tapes are being marketed through electronic supply houses, audio departments and similar outlets where they are being sold under the name, Kodak Sound Recording Tape.

"The consolidation of all tapes under one brand name will allow us to offer through all sales outlets both our high output tape and our low print general purpose tape," notes Eric Johnson, Kodak manager of magnetic product sales. "Both the high output tape and low output tape are offered at the same price."

1964 News and Sports Review from Productions Unlimited

Productions Unlimited, Inc. has been selected to distribute the two annual documentary review films produced by UPI Newsfilms. The two titles now available in both 16mm (sound) and 8mm versions are *Diary 1964* and *Sports Year 1964*.

Diary 1964 is a half-hour film which presents the top news stories of the year. It includes the U. S. Presidential campaign and the election, the ouster of Khrushchev, Warren Report, conquests in space, the hot and cold wars, the deaths of former President Herbert Hoover and General Douglas MacArthur as well as the story of the British elections.

Sports Year 1964 is narrated by Mel Allen. It presents highlights of the recent Olympic Games at Tokyo, the major league baseball seasons and the World Series, championship events in yachting, boxing, auto racing, hockey, football, golf, tennis, and horse racing.

The two pictures may be purchased for sponsor library use with credit titles available at modest additional cost. They are fully scored, plus voice narration, natural sound effects and cover events through November of the past year. Further details on print costs, etc. are available from Productions Unlimited, Inc., 1564 Broadway, New York, N. Y. 10036.

"Riverside-Atlanta 500" Shows Stock Car Racing At Its Best

Two of the best-attended 500-mile stock car races of 1964 (at Riverside, Calif. and Atlanta, Ga.) are covered in a new color-sound 16mm motion picture, *Riverside-Atlanta 500*, recently released by The Firestone Tire & Rubber Company.

Stock car drivers put their abilities and equipment through grueling tests on the Riverside course and along the high-banked asphalt track at Atlanta. The reel is available for free loan to interested group audiences via Association Films' libraries at Ridgely, N. J., LaGrange, Ill., Dallas, Texas, and Hayward, Calif.

See the '64 "Canadian Open"

Highlights of the 1964 "Canadian Open" golf championship are shown in *Charge From Down Under*, sponsored by Seagram's; produced by Crawley Films. 25-minute prints are available for free loan from Modern Libraries in Canada and U. S.

Football coaches who help pick "Best Plays" are pictured (l to r): Dave Nelson, Darrell Royal, Ara Parseghian, Jack Curtice, and Bobby Dodd. Standing (right rear) is Ted Harding, of the Du Pont Co., sponsors.

FILMS SHOW COACHING SKILLS

A Growing Library of Fine Instructional Sports Films
Serves the National Collegiate Athletic Association

USEFUL NEW SPORTS instructional motion pictures are building a large library of films for coaching and other athletic group uses served the National Collegiate Film Service, working on behalf of the National Collegiate Athletic Association.

The films are a part of the regular NCAA service to its members and are distributed without charge to all NCAA member institutions. Sponsor participation helps make the program possible. In addition, they are made available to all other schools and organizations on a minimum rental basis through the Film Service library at 1030 W. Chicago Avenue, in Chicago.

Nicklaus Star of Golf Film

One of the latest productions will feature the well-known golfer and former NCAA champion, Jack Nicklaus, with his former coach at Ohio State, Bob Kepler. Kepler is chairman of the NCAA Golf Committee. The other new picture

to be released in '65 will show the *Best Football Plays* of 1964.

An example of outstanding films available from this source is the 28-minute 16mm color picture, *High Speed Basketball*, which retells the success story of Loyola University's Ramblers of 1963, the NCAA championship basketball team that averaged 91.8 points per game to lead the nation in scoring for two consecutive seasons.

Shows Practice Techniques

The techniques of Rambler coach George Ireland, which helped to produce a 1963 record of 29 wins against only two losses in his 12th season as head coach, is pictured in *High Speed Basketball*. His game has been referred to as "organized confusion." The film shows such fundamental practice techniques as drilling with smaller basket rims, "falling in love with the basket" (in which players practice tip-ins and lay-ups from every angle), dunking, rebounding for

The NCAA film "High Speed Basketball" features the Loyola Ramblers.

scores, and use of an automatic ball retriever.

Panels of well-known coaches select the "Best Plays" for the annual football film. The 1963 film panelists included Dave Nelson of Delaware, Darrell Royal of Texas, Ara Parseghian of Notre Dame, Jack Curtice, University of California, and Bobby Dodd, Georgia Tech coach.

All Produced by Bill Ganz

High Speed Basketball was sponsored for NCAA release by the MacGregor Division of Brunswick Sports; *Best Football Plays* of 1963 was sponsored by the Photo Products Department of E. I. duPont de Nemours & Co.

Producer of all these pictures as of all new NCAA motion pictures is William J. Ganz, of the Institute of Visual Communications, New York City.

J. C. Penney Builds Library With Release of "Ski Happy"

Another release in its stepped-up use of informational films is announced by the J. C. Penney Company. *Ski Happy* is a 14-minute winter sports film laid in the Chilean Andes. Women's ski champion Penny Pitou and TV personality Fred Foy are co-narrators of the action which centers on a ski school at the Lake of the Incas.

Ski Happy was produced by Rodney Chalk of Show Associates and is being offered to TV stations nationally by Sterling Movies U.S.A.

Three Popular Ski Pictures Available for Club Showings

Groups of ski enthusiasts can obtain three popular color films to show this season. Current and very choice are: *Ski With Buick*, starring Stein Eriksen (at Modern TPS libraries); *American Ski Techniques* (from National Ski Patrol System, Inc.); and *Ski Sense*, an excellent film on safety habits (available from local offices of Aetna Life Affiliated Co's.).

Ski Sense emphasizes 10 points which lead to greater enjoyment through safe skiing. Most important of these is physical condition (take brief daily exercises). But also get proper equipment, have it fitted by an expert.

Take lessons, *Ski Sense* notes, to ski properly. And be sure you know the area where you're on skis. It's best to ski in groups, especially in case of an accident. Lifts and tows have posted rules which should be followed.

Delbert Smith, Al Lofquist in New Posts at Technicolor

Two key appointments by Melvin H. Jacobs, president and chief executive officer of the Technicolor Corporation were announced on January 4th. Delbert K. Smith has been named a corporate vice-president and A. P. (Al) Lofquist is now vice-president for production in Technicolor's Motion Picture Division.

Smith was formerly vice-president in charge of the Consumer Photographic Division. His full time duties will include investigating merchandise for the company and evaluating possible acquisitions.

Lofquist was formerly plant manager. His new duties place him in charge of all production for the Motion Picture Division in Hollywood.

George Gill to ColorTran as Manager of Eastern Offices

George Gill is the new Eastern manager for ColorTran Industries, in charge of that company's recently-opened New York office. He will work directly with motion picture and television producers on special installations and applications, according to ColorTran's executive director, Milton Forman.

His extensive experience in studio lighting will also be utilized to help direct the company's new product program. Gill has served in the industry since 1935 and previously held several key posts with Century Lighting, New York.

Doud Back from Mexico City: Joins Wilding-Fedderson, Inc.

Active in commercial film production in Mexico City for the past seven years, Bob Doud has returned to the U. S. to join Wilding-Fedderson, Inc. in Los Angeles. His appointment was announced last month by Jack W. Minor, president of the West Coast subsidiary of Wilding, Inc.

While in Mexico, Doud served as producer, director and a sales executive for R. K. Tompkins Commercial Productions. He also headed his own commercial photography studio in that country.

Dobro Joins Da-Lite Screen

Dave Dobro is the new district sales manager in the northeastern states for the Da-Lite Screen Company, Inc., Warsaw, Indiana. He was formerly a representative of the Polaroid Corp in that area. Dobro resides in North Attleboro, Mass.

NEWS of Distribution and Production

This large new film depot is located at Bonded Park, Ft. Lee, N. J.

Bonded Opens "World's Largest" Film Depot at Fort Lee

TODAY TRAFFIC in motion picture film prints has become a big business. Adding to continuing volume of titles constantly on the move for entertainment theater exhibition are the thousands of prints of filmed television programs and of TV commercials. Finally, the growth of both 35 and 16mm

sponsored film distribution is indicated by commonplace print orders of 300, 500 and 1,000 prints in circulation in these fields as well as moving to group audiences and schools.

The opening last month of what its management calls "the world largest film exchange depot" lo-

cated on a five-acre tract in Fort Lee, New Jersey, reflects this growth trend. In a modern, low-slung building in Bonded Park, Chester M. Ross, president of Bonded Services Division of Novo Industries, said:

"We've built the newest, most modern facilities available for film handling. We now have 25,000 square feet of working area with more than sufficient room for expansion when required."

The new depot is on the site of the birthplace of American motion pictures. Here, an original two-story stucco building was erected by Universal Pictures in 1914. On this site Pearl White, Mack Sennett's Keystone Kops and such stars as Rudolph Valentino performed.

The new location is adjacent to Newark Airport and both LaGuardia and Kennedy airports are closer in time than from the midtown Manhattan area.

Yung, Ravitz Are Principals of Newly-Formed Nova Studios

Nova Studios, Inc., has been formed in New York for the production of industrial, documentary, educational, public relations and promotional motion pictures and related visual materials.

Peter Yung and Lawrence Ravitz are principals of the new concern, which has offices at 145 East 49th Street.

Two motion pictures for the Bureau of Advertising of the American Newspaper Publisher's Association have already appeared under the Nova name. Production is currently under way on film projects for the Bureau of Advertising, the American Institute of Architects and other clients.

Munisteri to Manage Sales for TelePro Industries, Inc.

TelePro Industries, Inc., manufacturers of studio projection and prompting equipment, has appointed Joe Munisteri as sales manager of its Broadcast Sales & Manufacturing division at Cherry Hill, N. J. TelePro is a division of Defiance Industries.

The former service manager of this activity since 1955, Munisteri is an authority in the field. His line includes TelePro's twin doublers, rear screen projectors, and cueing systems used in film tape production and broadcast studios. The company also manufactures TelePrompTer units for public and business speakers as well as film and television studio use.

AV rear projection cabinets protect the investment you have in your projectors.

The AV rear projection cabinet lets you use any projectors you now own

Exclusive Buhl lens (optional) gives full-screen presentation from all projectors.

You can install this remarkable audio-visual tool with no need to replace costly projectors. The AV rear projection cabinet accommodates most all projectors commonly in use. For projectors with two-inch lenses and larger (including slide and filmstrip projectors) we provide an exclusive built-in Buhl lens (optional) to give full

screen picture. Riser modification for certain projectors (Bell & Howell, etc.) available. Cabinet delivered with all modifications made. Just tell us what kind of projectors you use.

The AV rear projection cabinet gives you a distortion-free 22" x 28" picture on a new Polacoat non-glare screen. It ends the need for costly darkened rooms. The lights stay on, the blinds stay up. It is self-contained with your projector installed and a big speaker built in. The AV cabinet is the very model of convenience!

Send for free folder containing complete information and specifications. Order direct from factory or your AV supplier.

AV rear projection cabinets make any room a visual aids room.

NEW PRODUCTS & ACCESSORIES FOR PRODUCTION AND PROJECTION

'Lumascribe' Overhead Projector

Beseler Unveils "Lumascribe" Models of Overhead Projectors

The Charles Beseler Co. has introduced three new models of portable overhead projectors, all under their Lumascribe brand name. Models 30000, 30010 and 30015 all weigh only 23 pounds. Each unit has full-sized projection stage (accepts standard 10" x 10" transparencies, mounted or unmounted). Special locating pins position transparencies accurately.

Projection head lenses are major difference between each model, accounting for price differentials. Model 30000 has a 14" F4.0 Bestar lens (prices start at \$187); Model 30010 has 14" F4.0 Actar; and Model 30015, with a 12½" F3.5 Actar lens, affords larger images from closer-up.

Lumascribes are powered by 1,000-watt CTS lamps; operation is said to be safe, vibration-free, cool and quiet. Write Beseler Co. at 291 S. 18th, East Orange, N. J.

* * *

"Transist-O-Sound" Amplifier for Magnetic Tracks in Field

Portability is important in both television news and one-man documentary film production. A helpful answer to sound amplification is the Transist-O-Sound magnetic amplifier, exclusively offered by SOS Photo-Cine-Optics, Inc. and designed for use with Auricon cameras. The previous optical amplifier under the same name has been widely employed.

The new two and one-half pound amplifier provides crisp magnetic sound. It is powered by

SOS: Transist-O-Sound Amplifier

a single miniaturized battery. Magnetic amplifier response is flat from 20 to 15,000 cps within 2 db. Built-in speaker is disconnected when earphones are used; a limiter circuit is standard equipment. Write SOS, 387 Park Ave., South, New York City or the company's Western office at 6331 Hollywood Blvd. for a specification sheet.

* * *

Kalvar "16" Printer-Processor for Dry-Process Print Stock

The unique plastic film developed by Kalvar now has a new 16mm motion picture printer-processor which is said to produce "release prints" up to 70 feet per minute. The new machine, unveiled in New York recently, copies silver negative films onto Kalvar's dry-process print film in a single continuous operation.

The equipment was developed and field-tested by Metro Kalvar, Inc., a joint venture of Metro-Goldwyn-Mayer and the Kalvar

Prototype of Metro Kalvar's new 16mm plastic film printer-processor. Corporation. The prototype unveiled was built under a development contract by Calvin Productions, Inc., of Kansas City.

In Kalvar film the image is formed by microscopic plastic bubbles instead of by silver particles in conventional film. Its other differences from silver film are its saran-type emulsion (compared to gelatin), its plastic base compared to acetate, and its exposure by ultra-violet light and dry development by heat. Its proponents claim that it eliminates the darkroom, chemicals and much equipment.

The new printer-processor, noted executive vice-president Noel Bacon, "can be run by a single operator, whose only requirement is good judgment and relatively simple training. He does not have to be a photo technician."

Movie-Mite's Model LV-250

Improved Lamphouse on 16mm LV-250 Movie-Mite Projector

A new Movie-Mite 16mm sound projector, Model LV-250, is said to provide "big projector performance at a budget price," according to its maker, the Movie-Mite Corporation, Detroit. A major change has been made within the lamphouse of this new model.

The LV-250 uses the new low-voltage, high-performance and cooler operating 250-watt Tru-Flector lamp. At normal (medium) setting, this transformer-operated lamp is said to provide light output the equivalent of a 750-watt lamp and has approximately 100-hour life.

This new single-case model operates on AC only, weighs 32 lbs. List price (educational) is \$349.50 net. Write Movie-Mite Corp., 8811 Puritan Ave., Detroit, Michigan 48238 for technical literature, nearest source.

* * *

Mitchell Camera "System 35" Provides Video Pix of Action

The Mitchell Camera Corporation has premiered a new "System 35" which employs a "building block system" which includes the Mark II reflex 35mm camera, an electronic "door" to the camera's sound blimp to provide a high-resolution closed-circuit TV picture of exactly what the camera lens sees, and a small, semi-portable videotape recorder to make

Scene at right: camera director and operator can both check scene-by-scene action during takes through "System 35's" new video viewfinder

an instantaneous transcript of the shooting action.

It employs a Sony unit for its videotape system (with "hold" action); the vidicon camera in the electronic door is said to eliminate "rack-cover." The closed-circuit elements add about \$5,000 in cost, over a Mitchell BNC; the videotape recorder, modified to be adaptable to use on sound stages, adds about \$12,000 in cost. The expressed thought is such costs would be repaid very quickly on production work through savings in raw stock and in reduction of rehearsal and retake time.

The unit demonstrated on the West Coast (November 30) was a prototype. Customer requirements will affect the final designs of this 35mm equipment.

NEW PRODUCTS & ACCESSORIES FOR PRODUCTION AND PROJECTION

C O C "Rotator" for 35mm Slides

"Rotator" is Fully-Automatic Rear-Screen Slide Projector

☆ What the C.O.C. Time-O-Lite company calls a "first, fully-automatic portable rear-screen slide projector" is now being offered through audiovisual dealers. The C.O.C. "Rotator" has a 36 slide capacity rotating drum which accepts all types of standard 2" x 2" mounts.

The screen is 11" x 11" dimension when lifted for action and the blower-cooled unit is equipped with a 300-watt, 300-hour lamp. Two-inch f3.5 lens and 15-foot remote control cord are all built into luggage-type carrying case. A unique method of retaining slides in the compact drum is provided by a series of plastic frames which supply gentle pressure to slide mount on one side (Pat. Pend.) and press the drum on opposite side making both slides and frames spill proof in the field.

Unit weighs only 18 lbs. Model A-111 with automatic and remote control) is listed at \$149.50; manual slide advance model lists at \$99.50. Write New Products Desk @ BUSINESS SCREEN headquarters for literature.

Ampex 322V Television Camera Is Equipped With Viewfinder

Flexibility for closed-circuit applications is a key asset of a new "viewfinder version" of the Ampex 322 vidicon television camera. The new 322V includes the 322 cam-

322V viewfinder television camera

era, a seven-inch high-intensity monitor, a four-lens turret and provision for two-way communication and remote control.

The self-contained viewfinder mounts directly above the basic camera, enabling the operator to focus and compose pictures precisely. It is automatic, solid-state and self-contained Write Ampex Corp., 401 Broadway, Redwood City, Calif. for additional details.

* * *

Cordless "35" Slide Projector

☆ An inexpensive grey-plastic, cordless 35mm slide projector is offered by Value Village, P. O. Box 501-CP, Buffalo, N. Y. 14-205. It requires only three ordinary "D" cell flashlight batteries, sells at \$7.95 and accepts all 35mm slides. There is also a special side loader for 35mm strip film, focus control, precision lens. Price is less batteries.

Precision Instrument Offers a 75 lb. Television Recorder

☆ A Model PI-3V portable television recorder with a stop-motion feature has been announced by the Precision Instrument Company. It was designed for instruction, training and related applications in industry and education.

The PI-3V uses the one-inch width magnetic tape, said to be easier to store, thread on machine

PI-3V portable television recorder is easily transported into field.

and ship. Total weight of unit is only 75 lbs; takes only two cubic feet of space for portability in field or location. It will operate wherever ordinary 50 or 60-cycle 110-volt power is available.

Write Precision Instrument Company, Stanford Industrial Park, Palo Alto, Calif., mentioning BUSINESS SCREEN for full details, price and availability.

* * *

Slow Motion Playback Now on Ampex Videotape Portables

☆ Useful to industrial and sports users of closed-circuit Videotape equipment equipment is a new optional feature now offered for Ampex portable Videotape recorders. It provides for slow-motion playback for observation and analysis of motion in detail.

Ampex VR-1500 closed-circuit recorders and VR-660 broadcast models previously offered stop motion playback permitting sustained viewing of a single frame. The new feature permits playback at any degree of speed from half-speed to full stop motion with a single front panel control.

The feature is optional on new recorders and available in kit form for recorders now in use. Price is \$340. Write Robert Weismann, vice-president, video and instrumentation division, Ampex Corporation, 401 Broadway, Redwood City, California for further details.

3M Model 66 Overhead Projector

3M's "66" Overhead Projector

☆ The 3M Company has remodeled its "66" overhead projector to provide brighter images and easier focus. The re-model is said to have 50 per cent more light; and fine knob focusing facilitates sharper images on screen. The 10" x 10" stage remains the same; the unit has a tilting head which allows raising and lowering of the image while projector stage remains horizontal.

* * *

Low-Cost Transparency Film

☆ Also new from 3M is a "direct-reading" economy-type positive transparency film. This black line film, Type 133, costs from 9 to 12¢ per sheet, depending on quantity purchased. It can be "imaged" by being passed through a "Thermo-Fax" Copying Machine with the original in a four-second operation.

* * *

Four-Up 16mm Prints from the "Quad-16" Optical Printer

☆ Four 16mm images in one pass from a 35mm original are produced by a new TIPRO 35-QUAD-16 optical printer offered by Andre Debie. The Paris-based firm notes that the QUAD-16 has an effective output of 120-feet-per-minute of 16mm. It prints on 35 16-3R stock, later slit to 16mm.

Two basic models are offered. One serves for black and white and subtractive color printing, utilizing the Debie pocket band system of scene-to-scene light changes and color correction. The second model is for additive color work and is controlled by punched tape reader, using modified American-made additive color lamp-houses. Write Andre Debie of New York, College Point 56, N. Y. for definitive technical literature and prices.

MENTION BUSINESS SCREEN IN REQUESTS TO MANUFACTURERS

Kodak Standardizes Cores on Professional M. P. Films

Effective January 1, Eastman Kodak has standardized the core for its professional motion picture films.

The use of a universal film core offers cinematographers the triple advantages of durability, adaptability and increased efficiency in motion picture film handling.

It is the Eastman Kodak Type U 35mm Film Core, a female core which can be installed on film spindles normally used for most of the motion picture industry's 35mm camera negative and sound recording films.

By making this conversion to the Type U Core, a more standardized world practice can be established in the handling of motion picture film, Kodak announced. In addition, when film is wound on the Type U Core, it can be placed on a spindle designed for the earlier Type R Core. A simple key can be made to make this adaption.

Additional information may be obtained from the Motion Picture and Education Markets Division of Eastman Kodak Company, Rochester, New York.

Preview Adds Taped Sound to Technicolor 8mm "Instant"

Preview Productions, Inc. has added sound to Technicolor's Automatic Display Projection System. With approval of Technicolor, the developer is marketing the unit as Preview's Technicolor 700-S. A sound tape cartridge repeater is enclosed neatly within the unit; easy access is gained through a hinged door on the right side of the housing, just as access for film

cartridge positioning is through the door on the left.

From a master sound tape, the company duplicates, loads and cartridges the tape for accompanying sound, in the same manner in which Technicolor loads the film cartridge. These 700-S sound cartridge tapes perform synchronously with any number of auto-stop notches which may be incorporated into the film footage sealed inside the Magi-Cartridge.

List price for the equipment, which will be sold by audio-visual dealers, is \$379.50. Additional information is available from Preview Productions, Incorporated, 6927 Varna Avenue, Van Nuys, Calif. or write the New Products Desk, c/o BUSINESS SCREEN.

Triple-Play Recording Tape New from Reeves Soundcraft

A new Mylar-base recording tape which triples the playing time of each reel without sacrifice of quality has been announced by the Reeves Soundcraft Division, Reeves Industries, Inc. The TP-18 tape meets increasing demand for five-inch reels used on portable and miniature recorders.

Use of a new oxide formulation with an output of 5 db. more than any other extended-play tape is said to assure consistent high output without distortion. The new Reeves tape may be interspersed or programmed with standard tapes without differences in playback level. TP-18 provides 1800 ft. of 0.5 mil Mylar on each five-inch reel, providing three hours and 12 minutes of playing time at the 1 7/8 speed; one hour and 36 minutes at 3 3/4 speed.

Here's the sight-sound Automatic Display Projector described above.

FILMS FEATURED AT THE NEW YORK WORLD'S FAIR

The pages of Issue 3, Volume 25, provided our readers an intensive overview of "Films at the New York World's Fair." Some of the outstanding New York World's Fair films are listed below from this report:

SPONSOR	FILM TITLE	Page No.
Bell Telephone System	<i>From Drumbeat to Telstar</i> (film & live)	30
Du Pont Company	<i>Wonderful World of Chemistry</i> (film & live)	32
Eastman Kodak Company	<i>The Searching Eye, 70mm</i>	33
Festival of Gas	<i>Tale of Truthful George, multi-screen</i>	41
General Cigar Company	<i>Patterns in Sport—circular screen</i>	45
Billy Graham Pavilion	<i>Man in the 5th Dimension</i> (70 mm, Todd-Ar)	55
Greyhound Corporation	<i>Travel film, 35mm, Cinemascope</i>	40
Heinz, H. I. Company	<i>Heinz Magic of Food</i>	45
Johnson's Wax	<i>To Be Alive, multi-screen</i>	44
Jordanian Pavilion	<i>This is Jordan</i>	59
KLM-Royal Dutch Airlines	<i>To the Moon and Beyond, Cinemascope</i>	45
New York State Pavilion	<i>A-Round New York, Cinemascope</i>	47
Port of N. Y. Authority	<i>From Every Horizon, 360 degree theater</i>	51
Protestant Council of Greater New York	<i>Parable</i>	53
Travelers Insurance Co.	<i>The Triumph of Man</i> (choramas and film)	60
United Air Lines	<i>From Here to There, 35mm Cinemascope</i>	50
United States Army	<i>Man on the Moon</i>	52
United States Navy	<i>Cine-Globe Cruiser films</i>	52
United States Pavilion	<i>The American Journey, Cinemascope</i>	52
United States Rubber (Maryland Pavilion)	<i>O'er the Ramparts</i>	49

"TRANSLATIONS CAN BE TRICKY"

— says Mr. David Rockefeller, President, Chase Manhattan Bank, New York. "Advertising should be meticulously translated for foreign use."

As examples of misunderstandings which can occur, Mr. Rockefeller cited popular slogans which emerged as "CORSPES BY FISHER" and "HERTZ MAKES YOU A CHAUFFEUR."

"TRICKY IS A MILD WORD. FAULTY TRANSLATIONS CAN BE DISASTROUS"

Here is a recent example:

THE CASE OF THE CASTRATED AIRPLANE

An aircraft manufacturer requested us to furnish a narrator to record Spanish to a film track for Latin-American distribution. The script had been translated by the manufacturer's employee "WHO KNOWS SPANISH PERFECTLY."

There were many language and grammatical errors, but in particular this LULU:

ENGLISH: "This airplane is capable of climbing to an altitude of ..."

SPANISH: "os translated by the manufacturer's employee "Este avion es CAPABLE de SUBIR a UNA ALTITUDE de ..."

The above translation re-translated to English "This airplane is CASTRATED TO MOUNT to ONE altitude of ..."

CORRECT TRANSLATION: "Este avion ESTA CAPACITADO PARA ASCENDER A UNA ALTITUD DE ..."

Thanks are due Mr. Rockefeller for bringing the matter to the attention of those interested. However **FAULTY TRANSLATION** can be more than **TRICKY**. OFTEN IT IS **DISASTROUS** TO THE **SPONSOR'S IMAGE AND INTERESTS**.

OUR TRANSLATIONS and ADAPTATIONS are GUARANTEED FAULTLESS!
... BECAUSE our translators are EXPERTS

The Magic Key...

TO FOREIGN MARKETS

BREAK THAT LANGUAGE BARRIER!

OUR POLICY:

"World of Interior Design"

Presented by Armstrong Cork

A new color film, *The World of Interior Design*, offers many exciting decorating ideas for the unconventional look in home furnishings. Presented by the Armstrong Cork Co., and distributed by Association Films, Inc., the 13½-minute motion picture is available for free-loan use to TV, college level home economics students, women's clubs and home-making groups.

In a capsule tour of Armstrong's World of Interior Design in Rockefeller Center, New York, a variety of model rooms are shown featuring unusual decorating ideas from different countries of the world. Colors, fabrics, wall fixtures, and furniture layouts are all combined to achieve a tasteful and unique effect.

Although the emphasis is on basic American furnishings, the foreign touches afford a distinctive flavor. Models range from a cozy Canadian lodge to a richly decorated coffee room of Turkish motif.

The World of Interior Design was produced by the Armstrong Cork Company in co-production with Telic, Inc., New York.

* * *

Instructo Products' Film on "Magic of the Flannel Board"

The Magic of the Flannel Board, a new film sponsored by Instructo Products Company, features the use of the flannel board as an effective teaching tool. The 19-minute color film is available for free-loan use by teacher groups, administrators and teacher training programs. It was produced by the Calvin-DeFrenes Corp. and is distributed by Association Films, Inc.

The film uses live learning situations to illustrate how the flannel board has been successfully incorporated into teaching programs in all subject areas. Designed to aid elementary school teachers in planning their own classroom lessons, it shows how cutouts may be used to stimulate student curiosity and motivation, as an effective drill in mathematics, to introduce abstract ideas and difficult concepts, and it suggests many other ways this visual aid increases student response and the rate of learning.

JUST RELEASED...
2 PRESTIGIOUS FILMS
TO PROMOTE YOUR FIRM

THE YEAR 1964

Produced by UPI NEWSFILM
Exclusive Non-Theatrical Distribution:

**PRODUCTIONS
UNLIMITED, INC.**

Available in 8 mm. and 16 mm.

Now... a living record of our time, the world in review, the leaders and events which shape our destiny and that of generations ahead.

At a slight additional cost we can prepare a personalized credit title showing your firm's name. These prints can be donated to your local schools, churches or charitable organizations. Or, you can use these in your own local promotions, or in your company's own film library.

1. DIARY 1964 — AVAILABLE UNDER NDEA — the highlights and events of the year, reported in depth — the American and British elections, the Khrushchev ouster, the Warren Report, the hot and cold wars, space, civil rights, many more, through November 1964.

2. SPORTS YEAR 1964 — narrated by Mel Allen — Olympic highlights, baseball season and World Series, championship events in yachting, boxing, auto racing, hockey, football, golf, tennis, horse racing. Now, the tumultuous year 1964, dramatically reported with music and natural sounds. A living report that will take its place in your film library along with each year's history.

Each film runs 26 minutes. List price: \$150 per print. All brand-new laboratory prints. Action included in both subjects runs through November 1964. Immediately available. Order this unique Living History today.

THE EDITORIAL VIEWPOINT:

(CONTINUED FROM THE PRECEDING PAGE 18)
myriad of educational and industrial applications continued to increase in the past year. And so did film use in television, industry and education. These two methods of programming each seem to have their special places in the pattern of audiovisual communication.

The figures for video tape recording equipment, associated editing equipment and tape itself, approached \$65 million in 1964, with anticipated growth in 1965 to more than \$70 million, according to William H. Madden, the 3M Company's product sales manager for video tape.

2,860,000 Color Television Sets in U. S. Homes; Predict Five Million by Year's End

We can update our previous forecast of color television set sales (Issue 7, Volume 25, 1964) with the figures provided by Hugh M. Beville, Jr., vice-president in charge of planning for NBC. Beville notes that 2,860,000 color television sets are now in use in the United States. He says this represents a 77 per cent gain over the sets in use at the outset of last year and predicts that nearly five million homes will have color television sets by late '65.

More factual evidence of color television progress was confirmed in the report by B. S. Durant, president of RCA Sales Corporation, that this company alone had shipped 500,000 color sets to distributors in a "zooming" fourth quarter of 1964. He noted that color sales last year were slightly over 1.3 million units. And he backs up Beville's estimate of a still greater year ahead with the estimate that two million color-TV sets will be sold in 1965. Both Zenith and Philco officials agreed with this estimate and with the total sales figures for '64.

Critical Acclaim for "Nothing But a Man." First Feature by Bob Young and Mike Roemer

Congratulations to those two young movie-makers, Robert Young and Michael Roemer, for their widely-praised production, *Nothing But a Man*, which was a highlight of the New York Film Festival last September and has just gone into commercial theater release.

These two documentary film makers went into the South to create their feature. Their film is about a young man's coming to terms with himself and with society — a young man whose universal problems are intensified because he is a Negro in today's South. New York Herald-Tribune reviewer Judith Crist praised *Nothing But a Man* as a fine film — "a first one that sets a towering standard for its makers."

Sterling-Movies Appoints Midwest Manager, William J. Troy, a Vice-President of Firm

And kudos to William J. Troy, the midwest regional manager of Sterling-Movies, USA, Inc., who has just been named a vice-president of that national film distribution company. Bill came to the Sterling family from the General Electric Company, where he was the New England advertising manager. He is a graduate of the University of Massachusetts and received his master's from Boston University.

A Name with a Purpose

The objectives of Comprehensive Service Corporation are, as the name implies, to render the most comprehensive and satisfying service, with complete understanding of the needs of all who require motion picture equipment, accessories and supplies.

We point with pride to our long list of large and small customers all over the world, who have been coming to us, again and again, over the many years. Our ever expanding business is proof of their confidence in the quality of our products, our dependability and expert knowledge.

CANADA PREPARES FOR "EXPO 67"

Theme of "Man and His World" Will Celebrate the 100th Anniversary of Confederation in April '67

CANADA WILL OBSERVE its Centenary Year in 1967 and many of its prominent citizens are already at work on plans for that country's EXPO 67, an official, first category World Exhibition which has the blessing of the powerful International Bureau of Exhibitions. That premise escaped the organizers of the current New York World's Fair and was costly in terms of overseas participation.

On April 28, 1967, a man-made island complex in the middle of the St. Lawrence River, in full view of Montreal's skyline, will be the setting for the EXPO's theme, "Man and His World." The project has been under construction since 1963, when dredgers began the island-building project. The site will cover 600 acres of exhibition and amusement areas, plus 334 acres for parking.

Saw "Quality of a Nation"

A preview of Canada's celebration of the one-hundredth anniversary of Confederation might well have been provided in the Crawley-produced film (1962) titled, *Quality of a Nation*. This film, sponsored by the E. B. Eddy Company, was created to get citizens thinking

about the birthday year ahead. Well over a million had seen the film in 1963-64 and more thousands will see it now.

Both Budge and Judy Crawley of this famed Canadian film company are the audio-visual consultants to the Canadian International Exhibition Corporation which is guiding the affairs of EXPO 67.

Films' Role at N.Y. Fair

Canadians are well aware of the dominant role played by films at the New York Fair, where nearly 50 of the 150 pavilions have used motion pictures in their exhibits, many of these as principal attractions. But EXPO 67 will strive to outdo the techniques, circular and otherwise, at New York. The artists and designers of that country, working with such new organizations as Reevesound of Canada, will be encouraged to seek new ideas.

"Man and His World" will be brought into focus in a multitude of ways. In "The Labyrinth" visitors will become involved with the story of man from the earliest times to the present through a combination of motion pictures and architectural reconstructions.

"Habitat 67" will offer a model community of the future, to be permanently occupied after the close of the Exposition.

Harvests Out of the Seas

"Man and the Ocean" will forecast the ways in which we may farm the seven seas for food in the years to come. Among other exhibits will be a three-story model of a human cell, an ancient harbor with the replicas of man's earliest ships, and a Terrace of Nations.

The Centennial year will also bring forth motion pictures with this theme. Such national organizations as the Canadian Nurses Association, the Canadian Council of Professional Engineers, the Life Underwriters Association, St. John Ambulance and several industrial sponsors have been mentioned. The Province of Saskatchewan has a major Centennial film in work at Crawleys.

Present Operas and Ballet

Artistic events at the six-month exposition will include Milan's La Scala, the Metropolitan Opera, Bolshoi Ballet and the Vienna State, Paris and Covent Garden Operas.

As the host nation, all of Canada is taking part in EXPO 67 with an investment that is expected to reach \$800 million. The Commissioner General for EXPO 67 is Pierre Dupuy.

Master plan of exhibition site for Canada's EXPO 67, which will occupy an island in the St. Lawrence River.

CORRECTING THE RECORD

Eclair Corp. of America Has a New Address in Hollywood

The correct address for the Eclair Corporation of America, mentioned as the key U. S. source for the new Eclair Camerette "T" in our recent No. 7 issue (page 82) is 7262 Melrose Avenue, Los Angeles 46, California. We're indebted to J. P. Carson, president, for calling this new location to our attention.

* * *

BNA's Management Films Are Not Available on Free Loan

In our well-filled Reference Shelf page in the No. 7 edition, subheads were "switched" on page 116 to infer that the excellent management, supervisory training and employee communications films offered for outright print sale by the Bureau of National Affairs, Inc., Washington, D. C. were available for "free loan."

They're not, of course, but you should have this company's free list of these titles. Write them at 1231 24th Street, N. W., Washington, D. C. and address your inquiry to the attention of manager Fred Joiner, of BNA Incorporated, which handles this good library.

Here's Right Title of Ethyl's New Refinery Safety Picture

And the correct title of that recent Ethyl Corporation film (the third in a series of safety films on refinery operations) is *Safe UPS and Downs for Refinery Units*. On page 34 of the No. 7, 1964 issue we called this excellent Audio Production *Safe Opens and Downs for Refinery Units*. The copyreader must have been thinking of some kind of "after-hours" job! It wasn't that kind of safe, Joe!

15th Production Review Will Give Details of Film Awards

Among the many features of the 15th Annual Production Review issue, completing next month, will be the detailed listing of all national and international film award programs, entry dates, fees and other important data.

A concise index of such awards programs, by closing dates for entries, will supplement these detailed columns on the events and their host groups. This is one of the most-asked-for Review features.

An important announcement to the film industry.

Movielab is proud to introduce its Multi-Rank Release Printing method for 8mm and 16mm black and white and color prints on 35mm film. This significant innovation will give Movielab customers better picture quality, better sound quality, better service and better price. For further information, please phone or write Sales Department

That is one big difference when you call on The Jam Handy Organization for help with your picture productions. □ 136 varied skills help make effective the economical presentations that are yours all under one roof, with a single responsibility. □ You can be assured of security and competence to provide the help you want when you want it, and fast.
